This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

CHAMBERS' EDINBURGH JOURNAL

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS, EDITORS OF "CHAMBERS'S INFORMATION FOR THE PEOPLE," "CHAMBERS'S EDUCATIONAL COURSE," &c.

PRINTED BY BRADBURY AND EVANS, WHITEFRIARS, LONDON.

NUMBER 417. SATURDAY, JANUARY 25, 1840. PRICE THREE HALFPENCE.

NATIONAL DESPONDENCY.

IT seems that mankind are for ever destined to live under the nightmare of some alarming apprehension. The ancients were kept on the alert by ominous prognostications, derived from the entrails of beasts, from the flights of birds, or the equivocal responses of the nymph Egeria and the Delphic oracle. A fear of ghosts, witches, and apparitions, and a belief in the magic power of fairies, Pucks, charms, and incantations, were the penalties paid for ignorance by our more immediate ancestors. In the present day, the prevailing bugbear seems a dread of poverty, either individual or national. At every interval of three, four, or five years, the community is plunged in the greatest tribulation from the number of bankruptcies and general mercantile stagnation; pecuniary ruin stares every one in the face; innumerable pamphlets and periodical essays are shot forth, explaining the causes and remedies of existing disasters; and then, after the gloom and controversy have continued for a while, the nation, from some imperceptible causes, emerges from its difficulties, the banks resume payments in specie, all the mills and factories are working full time, the wharfs and docks are crowded with merchandise, exports and imports increase enormously, and, in short, every thing is joyous, hearty, and progressive—

"Richard is himself again!"

These alternations of commercial prosperity and depression form a remarkable feature of modern times. Revulsions in trade are nearly as punctual, though not quite so frequent in their advent, as spring and autumn; and there is little doubt that their periodical return is governed by fixed laws, as well as the movements of the heavenly bodies. Like the plague, the sweating sickness, and cholera morbus, formerly, they occur at regular intervals, sweeping off their millions, not of human beings, but of sovereigns, and leaving woful blanks in our ledgers, that require years of anxiety and patient toil to fill up. They are the fevers of commerce, mostly brought on by the intemperance of enterprise and speculation; and as the researches of medical science have lessened both the frequency and intensity of epidemic maladies, there is no reason why our sages in political economy may not render a similar service to traffic, by explaining the causes which influence the fluctuations of the mercantile cycle.

The vicissitudes of trade form only one of the many sources of those fits of despondency that have been wont to overshadow the realm. No lady or gentleman has been so frequently ruined and undone as poor Old England. How many inquests have been held over her remains by political soothsayers during the last century! Yet somehow or other she has always risen again in her might, to tower majestically onward in her prosperous course, like the Great Western across the Atlantic; or rather she has been like the patient supposed to be in the last stage of existence, and who, while the physicians were gravely debating about the symptoms of her malady, rose up and deliberately walked out of the apartment.

Almost ever since the Revolution of 1688, the increase of the national debt has formed a constant theme of lugubrious forebodings. One now laughs at the ominous predictions and calculations of Davenant, Stewart, Hume, Price, and other writers of the last century. It is not, however, intended to underrate the ruinous tendencies of governments anticipating their resources by laying the burden on posterity. Recklessly incurring debt is a pernicious practice, either in individuals or nations. In the latter, it is among the greatest of public calamities, by affording too readily the means of lavish expenditure, and for beginning wars oftener, and continuing them longer, than would have been the case had the authors of such afflictions been obliged to find immediately the means of defraying the current cost of their follies.

Leaving the consideration of these consequences, it is, however, amusing to revert to some of the mistaken prophesyings of national ruin by the last generation. They will show that some very eminent writers of the preceding century were as little prescient of the strength and resources of this empire, as Mr Murphy and other almanack-makers are about the future state of the weather.

Here is an extract from the celebrated Dr Davenant:—"Unless this can be compassed (reducing the public revenue to L.2,300,000 per annum), it will be found that in no long course of time we shall *languish and decay* every year, by steps easy enough to be perceived by such as consider of these matters. Our gold and silver will be carried off by degrees, rents will fall, the purchase of land will decrease, wool will sink in price, our stock of shipping will be diminished, farmhouses will go to ruin, industry will decay, and we shall have upon us all the *visible marks of a declining people*."—An Essay on the Balance of Trade, printed in 1699.

Another writer opens eleven years later with the following alarming interrogatory:—"*Are we not driven almost to the very brink of destruction?* Our treasures are riotously wasted, our constitution in danger of being subverted, and the nation almost in general corrupted."—Printed in 1710.

Next follows a chapter of lamentations from the Craftsman (No. 502, February 14, 1736):—"The vast load of debt under which the nation still *groans*, is the true source of all those calamities and gloomy prospects of which we have so much reason to complain. To this has been owing that multiplicity of burdensome taxes, which have more than doubled the price of the common necessaries of life within a few years past; and thereby distressed the poor labourer and manufacturer, disabled the farmer to pay his rent, and put even gentlemen of plentiful estates under the greatest difficulties to make a tolerable provision for their families. From this have proceeded those infinite swarms of *locusts and caterpillars in office*, who not only prey on the *vitals of industry*, but render even our liberties precarious and dependent on the will of those who have the sole nomination and direction of them."

A brilliant paraphrase of the above passage appeared some years since in the Edinburgh Review; it ran through the newspapers, was printed on cards for effective circulation, lithographed, and surmounted with the head of Mr Brougham, to whom common fame imputed the honour of its invention:—"For my part, I do not know of one necessary of life upon which we have not some tax or another, except *water*; and we can put no ingredient I know of into water, in order to make it palatable and cheerful, without paying a tax. We pay a tax for air, and for the light and heat of the sun in the day-time, by means of our tax on windows; and for the light and heat in the night-time by means of our duties on coals and candles; we pay a tax upon bread, meat, roots, and herbs, of all kinds, by means of our salt duty; we pay a tax upon small beer by means of the malt tax; and a heavy additional tax on strong beer by way of excise. Nay, we cannot have any clean thing to put on our backs, either of woollen or linen, without paying a tax by means of the duty on soap, &c."—Torbuck's Debates, xv. 209.

The most portentous sign in the air—the fiery cross—the impending avalanche that was to overwhelm us, was, however, always the debt, concerning which dire infliction, Samuel Hannay, Esq., in 1756, reasons and concludes as under:—"It has been a generally received notion among political arithmeticians, that we may increase our national debt to *one hundred millions*; but they acknowledge that it must then cease by the debtor becoming bankrupt. But it is very difficult to comprehend if we do not stop at *seventy-five millions*, where we shall stop."—A Journal of Eight Days, 4to, p. 218.

Mr Hume, who was cautious, and exempt from gloom and rashness, observes, that the first instance of a debt contracted upon parliamentary security, occurred in the reign of Henry VI. The commencement, he continues, "of this pernicious practice deserves to be noted; a practice the more likely to become pernicious, the more a nation advances in opulence and credit. The ruinous effects of it are now become apparent, and threaten the very *existence of the nation*."—History of England, 8vo. edit. 1778, iii. 215.

His illustrious contemporary appears to have caught a gleam of hope from past experience, but evidently labours under fearful misgivings for the future:—"Great Britain," says Dr Smith, "seems to support with ease a burden which half a century ago nobody believed her capable of supporting. Let us not, however, upon this account, conclude that she is capable of supporting any burden; nor even be too confident that she could support without great distress a burden a *little greater* than that which has been laid upon her."—Wealth of Nations, ii. 363.

Another trump or two only remain to be sounded on this painful subject. Pending hostilities with America, the ingenious Dr Price observes, "We are now involved in another war, and the public debts are increasing again fast; the present year (1777) must make another great addition to them, and what they will be at the end of these troubles no one can tell. The union of a foreign war to the present civil war might perhaps raise them to *two hundred millions*, but more probably it would sink them to *nothing*."—Additional Observations, &c., third edition, p. 148.

The following is the funeral knell of this unhappy kingdom, and all that remains is to call in the undertaker:—"If the premises are just, or nearly just, and nothing effectual is done to prevent their consequences, the infallible, the inevitable conclusion that follows is, that the nation is a BANKRUPT, and that those who have trusted their all to the public faith are in very imminent danger of becoming (*I die pronouncing it*) BEGGARS."—An Argument to consider the State of the Nation. By John Earl of Stair. 1783.

This is sixty years since, and how awfully solemn the noble earl's valedictory ejaculation! In death, truth and a veracious second sight are usually expected, and John Earl of Stair dies exclaiming more than half a century ago, that if his premises be just, we are in very imminent danger of becoming beggars.

These excerpts are enough to inculcate caution in political prophesyings. It savours of presumption in the wisest attempting to predicate the fate of a nation. The most perspicuous are often baffled in their anticipations on the fortune of individuals, but how much more are they likely to be at fault in endeavouring to trammel up the issues of a community! It is a vast and complicated question, into the calculation of which the ablest arithmeticians can never bring all the elements essential to infallible conclusions. A nation is a giant of vast proportions, whose limbs and sinews, faculties and resources, can hardly ever be wholly comprehended. It is centuries in growing to maturity, and often as long in decaying, and many and heavy blows are necessary before life is extinct. Tak-

Digitized by Google

ing off the head is not enough. Governments may change often; commerce, trade, industrial pursuits, and manners, may alter; but the nation, or what really constitutes the nation, its people, morals, religion, usages, spirit, and municipal polity, still live under new dynasties. It is pride unbearable to arrogate the gift of foresight, to assume a prescience of the phases, progress, and destiny of empires. History is replete with examples of the fatuity of mal-assumptions, as the vicissitudes of Europe during the last fifty years abundantly testify. To compare the actual results of her revolutions with the hopes and anticipations of the acutest contemporary intellects, is quite enough to put an end to all speculation about a moral, religious, or political futurity.

The use of the foregoing retrospection is to show the vanity of political dreaming, and the unreasonableness of despondency. The future must always lie hid below the horizon, and if it rises charged with public calamities, they will doubtless be accompanied with their appropriate remedies and alleviations. Our business is not with it, but with our own times and our own evils, which we feel and can best comprehend, leaving posterity to grapple with theirs, as they will be better enabled to do than we can, having the benefit of our experience for guidance.

RECOLLECTIONS OF AN AUTHORESS.

BY A. OPIE.

HARRIET COUNTESS OF ROSSLYN.

"I, too, have recollections of this lovely and fascinating woman," said I to myself, while reading the mention made of Lady Rosslyn in the interesting memoirs of Sir Walter Scott. And here they are:—

In the summer of 1806, my husband and myself, accompanied by Wilkie, now Sir David Wilkie, went on a visit to Southhill, the seat of our highly valued friends Samuel Whitbread and Lady Elizabeth Whitbread.

As I went to the chamber allotted to us, I saw in the long gallery or corridor leading to it, a nurse-maid and two children, and concluding that one of the latter was the youngest child of the family, I addressed her by her supposed name. "You are mistaken, madam," replied the nurse; "this is Lady Janet Sinclair, and this young gentleman is Lord Loughborough." At this last information I was seized with an almost irresistible desire to laugh, for, when very young, I had gone into the assize court at N——, where Lord Loughborough was sitting as judge, and his peculiarly bright eyes shining from under the judge's wig over a nose like a parrot's beak, had made an indelible impression on my memory; and now I beheld before me Lord Loughborough of three years old, the great nephew of the judge, in all the bloom of childish beauty.

The contrast was indeed ludicrous, but the rencontre was welcome, because, as the children of Lady Rosslyn were at Southhill, no doubt she was there herself, and I should at length see and know this much admired woman. When we met, I was at first rather disappointed in her beauty, but there was a charm in her manner and conversation which soon won my regard.

Our dear host drove us out together more than once in his phaeton, and as we could not conveniently have the pleasure of conversing with him, we were obliged to converse with one another; consequently, we did not long remain on distant terms. We visited the new jail at Bedford, in which we found but one inmate, a man, of whom we bought some pincushions, the fruits of his industry and his solitude. We drove also to some gentlemen's seats in the neighbourhood. At one of these, where our host left us while he transacted some business, Lady Rosslyn asked the woman into whose care the house had been left, and who was then basting a leg of mutton, to fetch her a draught of new milk. Accordingly she laid down the basting-spoon, and eagerly ran to get it. "What a pity it would be," said the considerate Lady Rosslyn, "if the mutton should burn while the good woman is employed in my service! I will baste the meat till she returns." So said, so done—and the graceful countess, seizing the ladle, commenced operations.

"Well," cried I, admiring her benevolent care, "among the pleasing and curious sights of this morning I shall number that of seeing Harriet Countess of Rosslyn basting a leg of mutton!"

That evening, while talking over the beauties of the Lay of the Last Minstrel with Lady Elizabeth, Lady Rosslyn told us that the ballad of Rosabel was written at her instigation. She said that Sir Walter Scott was staying at Roslin, while, as it afterwards appeared, he was writing the Lay, and she told the bard that, as her lord was a St Clair, he ought to write a ballad or a tale about the St Clairs who were buried in the chapel, adding, that Rosabel was one of the family names. The very next evening (as I think) Sir Walter led her into one of the oriel windows, and to her delighted surprise read to her the exquisite ballad in question, "for which," said she smiling, "the world is indebted to *me*." When Lady Rosslyn bade me farewell before she quitted Southhill, she kindly reminded me that she had heard me express a wish to visit Edinburgh and Roslin, adding, "I sincerely hope that, whenever you do come to Roslin, I may be there to show you all its beauties."

Ten years after, that is, in the year 1816, I *did* visit Roslin, but SHE was in her grave! In that ever beautiful, though dilapidated chapel, I stood on the stone which covered her remains! Yes; that still young, and fair, and beloved being, was already joined in death to "the lordly line of proud St Clair!" and I had come too late to see her in her castle! But I elicited from the "auld wifie" who was our guide, an interesting tribute to her merit. I, very stupidly, asked her if she knew Lady Rosslyn. "Knew her!" she replied almost contemptuously, "to be sure I did, and mony others knew her too; and there were as mony tears shed at her death as would have washed out a shirt or a sack."

I turned away with a quivering lip, for it was, though a simple, a *touching* and *enviable* eulogy.

SIR WALTER SCOTT.

In the year 1816, I was invited to meet this celebrated but then untitled man, at *breakfast*, at the house of Sir George Ph——, in Mount Street. I had met him several times before, but had never had an opportunity of conversing with him. I therefore looked forward to this visit with unusual pleasure, taking care to arrive in Mount Street precisely at the time specified. Sir Walter, however, was there before me; and for some time, to my great satisfaction, no other guests came to interrupt the *flow* of conversation from the eloquent man's lips, who seemed to me to talk not with any view of display, but merely because his mind was full, and he could not help it. I know not what led to the subject, but he gave us a most animated description of a Cockney's hunting in the Highlands. I think the person was a militia officer, but that is immaterial; suffice, that whoever he was, he seemed to live before us, as the narrator described his terrors when he found himself going full gallop up and down crags, steeps, and declivities, of which he had before no idea.

I cannot pretend to do justice to the spirit with which he gave this narration, but I know that it was so delightful to listen to him, that I congratulated myself on our superiority in punctuality to the other guests. At length, however, the rest of the company arrived. I think we were in all two-and-twenty, and Sir Walter Scott, to my great joy, was desired to hand me down stairs; consequently I sat by him at table. On my other hand was a young clergyman, who had lately published a prize poem.*

As the company was so large, there could not be much general conversation, which was a subject for regret, as that distinguished poet and converser, Wordsworth, who came late, was one of the guests; but I own that I had no leisure for regrets, as I was enjoying an opportunity which never might be mine again—that of being able, owing to the size of the party, to keep Sir Walter Scott's conversation to myself. One subject succeeded another from his lips; and as he condescended to mention one of my productions to me, telling me I had made him shed many tears, I felt emboldened to refer to his own writings, and I asked him why, with such evident powers to produce dramatic effect, he had never written a tragedy? He replied that several reasons had prevented him from coming forward as a dramatic writer. Amongst others, he was, he said, a proud man, and his pride would have made him unable to dance attendance on managers, or consult the varied tastes of actors, and others, or words to that effect. But he owned that he had once serious thoughts of writing a tragedy, on the same subject as that which had been already so ably treated by his friend Joanna Baillie—namely, "The Family Legend," founded on a true story—that of a lady having been exposed by her husband on a rock in the Sound of Mull, and left to perish there, while he reported her to be dead, and had a mock funeral for her. Sir Walter Scott said that if he had written on this legend, he should have had no *love* in his drama. His hero should have been the *uncle* of the heroine; "a sort of misanthrope, with only one affection in his heart—love for his niece—like one solitary gleam of sunshine gilding the dark tower of some ruined and lonely dwelling!"

Never can I forget the fine expression of his lifted eye as he uttered this! The whole face became elevated in its character, and even the features acquired dignity and grace from the power of genius!

How fortunate did I consider myself in having this morning been favoured with specimens of his *two manners*, if I may so express myself, as exhibited in his acknowledged and unacknowledged writings!—for so convinced was I that he wrote the popular prose as well as the admired poems, that, while I listened to his varied converse, and heard him go "from grave to gay, from lively to severe," I could scarcely forbear to exclaim, "you are the great unknown (as he was called); "you are indeed the man!"

It was the last time I ever saw him, and the first also, according to the idea of him who said on the introduction of a stranger, "Speak! that I may see thee!" for as the face of Walter Scott, when speaking and animated, and the same face in a quiescent state, were two different things, I might say, with some truth, that when we met at Sir George Ph—'s, I saw him for the *first time*.

I went to Edinburgh in the autumn of that year, and if I had then never seen Sir Walter Scott, I should have found means to be introduced to him at his own house; but as I never like to force myself on the acquaintance of distinguished persons, as my time was limited, and I had had the pleasure of enjoying Sir Walter's society so very recently, I was contented with seeing the tops of his chimnies and the roof of his house as I passed it on my road to the beautiful city. He then lived near Gala water, and Abbotsford was not even begun. He did not visit Edinburgh during the nine days of my happy residence there; but I had the pleasure of sitting opposite his picture by Raeburn every day at my kind friend Constable's, whose guest I was. Eagerly did I tell every one who would listen to me of my meeting him in London; but I was mortified, when, on my praising the beauty of his countenance while under strong excitement, and the fire of his blue-grey eye, Dr Brown, the celebrated professor of moral philosophy, interrupted me with, "Nay, nay; do not go on with these flights of fancy; the face is only a roast-beef and plum-pudding face, say what you will!" Probably that loved and lamented man (Dr Brown), cut off in the prime of his life and talents, said this merely to bring me down from my romantic exaltation on this subject; but whatever Sir Walter Scott's face was, would I had had the pleasure of seeing it again!

* I allude to Edward Smedley, who was taken away not long ago from his wife and family, in the prime of his life and his usefulness, universally loved, honoured, and lamented.

MR BRUCE'S REPORT ON ASSAM TEA.

THE difficulty of carrying on dealings with China, which seems to be always increasing, has of late years led to an anxious discussion of the possibility of obtaining tea from a different source. A kindred plant, used as a tea in Paraguay, has been pointed out to the attention of British speculators; and of this article, it will be recollected, we lately gave an account from the writings of a great variety of travellers. It must be generally known that a prospect has also arisen of obtaining the ordinary tea from an Asiatic soil, near to, but independent of, China. In 1834, a committee was formed at Calcutta, for the purpose of promoting the culture of the tea-plant in British India, and steps were immediately taken for introducing seeds and plants from China. Before these were procured, it became known that the tea-plant grew naturally in Assam, a large region five hundred miles to the north of Calcutta, situated on the great Bramah-pootra river, and, though not subject to the East India Company, yet under British influence. Mr C. A. Bruce (who, it appears, made this discovery fourteen years ago) was immediately appointed by the committee to survey the district, and report on its capabilities of producing the plant, under culture. A report from Mr Bruce, dated at Jaipore, June 10th, 1839, has just reached this country, and, having been favoured with an early copy of it, we propose making our readers acquainted with some of the principal facts which it presents.

The districts of Muttock and Singpho, to which Mr Bruce's inquiries have as yet been confined, lie between the 26th and 28th degrees of north latitude, and the 94th and 96th degrees of east longitude, a situation corresponding, in one important respect, to the best tea-districts in China, which lie between the 27th and 31st parallels. It is a country, with respect to agriculture and social institutions, in a very deplorable state; the people are of migratory habits, and dreadfully addicted to opium. It is amidst the widespread natural woods or jungles which cover a large portion of the country, and under favour of their shade, that Mr Bruce has found the tea-plant growing. It generally grows in tracts, a few hundred yards in extent, with occasional trees forming a sort of connection between one tract and another. Mr Bruce has now found a hundred and twenty such tracts. They are all on plains. The following extract will afford some idea of his procedure in searching for tea-tracts:—

"Last year, in going over one of the hills behind *Jaipore*, about 300 feet high, I came upon a tea-tract, which must have been two or three miles in length—in fact I did not see the end of it; the trees were in most parts as thick as they could grow, and the tea seeds (smaller than what I had seen before), fine and fresh, literally covered the ground: this was in the

Digitized by Google

middle of November, and the trees had abundance of fruit and flower on them. One of the largest trees I found to be two cubits in circumference, and full forty cubits in height. At the foot of the hill I found another tract, and, had time permitted me to explore those parts, there is no doubt but I should have found many of the Naga Hills covered with tea. I have since been informed of two more tracts near this. In going along the foot of the hills to the westward, I was informed that there was tea at *Teeseak*, or near it: this information came too late, for I had passed it, just a little to the east of the Dacca River, at a place called *Chiridoo*, a small hill projecting out more than the rest on the plain to the northward, with the ruins of a brick temple on it; here I found tea, and no doubt, if there had been time to examine, I should have found many more tracts. I crossed the Dacca River at the old fort of *Gheryong*, and walked towards the hills, and almost immediately came upon tea. The place is called *Hauthowsah*. Here I remained a couple of days going about the country, and came upon no fewer than thirteen tracts. A Dewanish who assisted me to hunt out these tracts, and who was well acquainted with the leaf, as he had been in the habit of drinking tea during his residence with the Singphoes, informed me that he had seen a large tract of tea-plants on the Naga mountains, a day's journey west of *Chiridoo*. I have no reason to doubt the veracity of this man; he offered to point out the place to me, or any of my men, if they would accompany him; but as the country belonged to Raja Poorunda Sing, I could not examine it. I feel convinced the whole of the country is full of tea.

Again, in going farther to the south-west, just before I came to *Gabrew* hill, I found the small hills adjoining it, to the eastward, covered with tea-plants. The flowers of the tea on these hills are of a pleasant delicate fragrance, unlike the smell of our other tea-plants; but the leaves and fruit appear the same. This would be a delightful place for the manufacture of tea, as the country is well populated, has abundance of grain, and labour is cheap. There is a small stream called the *Jhanga* river, at a distance of two hours' walk; it is navigable, I am informed, all the year round for small canoes, which would carry down the tea, and the place is only one and a half day's journey from *Jorehaut*, the capital of Upper Assam. South-west of *Gabrew Purbut* (about two days' journey) there is a village at the foot of the hill, inhabited by a race called Noraha; they are Shans, I believe, as they came from the eastward, where tea abounds. I had long conversations with them, and the oldest man of the village, who was also the head of it, informed me, that when his father was a young man, he had emigrated with many others, and settled at *Tipum* opposite *Jaipore*, on account of the constant disturbances at *Muscham*; that they brought the tea-plant with them, and planted it on the *Tipum* hill, where it exists to this day; and that when he was about sixteen years of age, he was obliged to leave *Tipum*, on account of the wars and disturbances at that place, and take shelter at the village where he now resides. This man said he was now eighty years of age, and that his father died a very old man. How true this story is, I cannot say, and do not see what good it would do the old man to fabricate it. This was the only man I met with in my journeys about the country who could give any account of the tea-plant, with the exception of an Abum, who declared to me that it was Sooka, or the first Kasharry raja of Assam, who brought the tea-plant from *Muscham*; he said it was written in his *Putty*, or history. The *Abum-Putty* I have never been able to get hold of; but this I know, that the information about the tea-plant pointed out by the old Noraha man, as being on the *Tipum* hill, is true; for I have cleared the tract where it grew thickest, about 300 yards by 300, running from the foot of the hill to the top. The old man told me his father cut the plant down every third year, that he might get the young leaves.

To the west of *Gabrew* I did not find any tea; but to the westward of the *Dhunseeree* river I found a species, though not the same as that we use. If the people on the west side of the *Dhunseeree* river were acquainted with the true leaf, I think tea would be found. I planted it all along the route I went, which may lead to its eventual discovery; but people should be sent to search for the plant who are really acquainted with it. I think a vast quantity of tea would be brought to light if this were done."

Mr Bruce has also been engaged in experiments on the character of the tea produced in Assam. Ninety chests of the article prepared by him and his assistants were imported into London in 1838, and found, we are told, to be of good quality. In his report we find some notices respecting these operations:—

"Until lately, we had only two Chinese black tea makers. These men have twelve native assistants; each Chinaman, with six assistants, can only superintend one locality, and the tea-leaves from the various other tracts, widely separated, must be brought to these two places for manufacture. The consequence is, that an additional number of labourers must always be employed to bring the leaves from so great a distance. The leaves suffer when brought in large quantities from a distance, as they soon begin to ferment, and the labour of only preparing them so far in process, that they may not spoil by the morning, is excessive. The men have often to work until very late to accomplish this. When labour falls so very heavy, and on so very few, it cannot be expected that it can be equally well executed, as if more had been employed. The leaves last gathered are also much larger than they ought to be, for want of being collected and manufactured earlier; consequently the tea is inferior in quality. I mention this to shew the inconvenience and expense of having so few tea-makers.

The samples of black tea made by the twelve assistants having been approved of by the Tea Committee in Calcutta, it was my intention to have distributed the men among the different tracts; but the late disturbances on our frontier have prevented this arrangement, and I have been obliged to employ ten men in Assam (two others having gone to Calcutta in charge of tea) at the tract called *Kakung*, which is becoming a very extensive and important tea locality, so many others being near it, which can all be thrown into one. When we have a sufficient number of manufacturers, so that we can afford to have some at each tract or garden, as they have in China, then we may hope to compete with that nation in cheapness of produce, nay, we might and ought to undersell them; for if each tract or garden had its own tea-maker and labourers, the collecting of the leaves would not perhaps occupy more than twelve days in each crop; after which the men might be discharged, or profitably employed on the tea-grounds. But now, for the want of a sufficient number of labourers and tea-makers, there is a constant gathering of leaves throughout the month; and, as I said before, those gathered last can only make inferior teas; besides the great loss by the leaves getting too old, and thereby unfit for being made into any tea, and all this entirely for want of hands to pluck the leaves. It is true we have gained twelve black tea makers this year, in addition to the last; and twelve more native assistants have been appointed, who may be available next year to manufacture tea independently, as they were learning the art all last year. We have also had an addition to our establishment of two Chinese green tea manufacturers, and twelve native assistants have been placed under them to learn; but what are these compared to the vast quantity of tea, or the ground the tea-plants cover, or might be made to cover, in three years, but a drop of water in the ocean! We must go on at a much faster pace in the two great essentials—tea manufacturers and labourers—in order to have them available at each garden, when the leaves come into season."

Mr Bruce has been engaged in extensive operations in introducing tea-plants from China, and transplanting those which are indigenous. Many, from various causes, have failed; but he mentions his belief, that the tea-plant is so hardy that it will live in almost any soil, provided it be planted in deep shade, and with plenty of water near the root. The reason for these transplantations seems to be that the tea-tree is only of use within a certain age. Many of the indigenous trees of Assam are beyond this age and otherwise unsuitable. On the other hand, planting seed is not calculated to be immediately satisfactory, as until the third year they produce nothing, and are only in maturity when about six years old. Mr Bruce argues for the propriety of burning or cutting down the old trees, in order to have fresh shoots from the stock, which he thinks would add greatly to their productiveness, and cause them to afford a fine and delicate leaf.

He confirms the fact lately made known, that the black and green tea are gathered from the same plant, and that the difference is entirely owing to the different states of the leaves and the different modes of preparation. His account of the manufacture of green tea by his Chinamen is extremely curious, but too long to be here admitted.

The demoralisation produced by opium, and a liking for independent labour which characterises the Assamese, throw difficulties in the way of a large production of tea in Assam. Mr Bruce looks to the introduction of workmen from other parts of India, for the means of carrying on the manufacture on a large scale. He also thinks it not impossible that the leaves may be sent home in a certain state to this country, and here subjected, by the cheap means of machinery, to those nice and tedious processes which they have to undergo from manual labour in China. "After a year's instruction under Chinamen," says he, "it might be left to the ingenuity of Englishmen to roll, sift, and clean the tea by machinery, and, in fact, reduce the price of the green tea nearly one-half, and thus enable the poor to drink good unadulterated green tea by throwing the indigo and sulphate of lime overboard."

Five tea tracts were under culture in Assam in 1838, the produce of which amounted to 5274 pounds. Seven new tracts will be under culture in 1840, when Mr Bruce thinks the total produce will be 11,160 pounds. These operations are at the cost of the company; but it is designed ere long to throw the business open to private speculation. Mr Bruce enters into some calculations to show the probable profits of private adventures in this line. He takes ten tracts, each 400 by 200 yards, and reckons the whole expenses of cultivation the first year at 16,591 rupees (which we believe is the same as £1659), of which 4304 will not need to be repeated the second year; and the value of the produce he estimates at 35,564 rupees, thus giving a profit of upwards of cent. per cent.

Upon the whole, there seems little reason to doubt that Assam is physically capable of producing that important article, on which eight or nine millions of money are annually spent in the United Kingdom. It may, however, be long before such a system for its manufacture be established in the country as to ensure the culture of the plant on a large scale, the selection of the proper leaves, and the many niceties required in drying and manipulating.

THE HOUSE OF DISASTER,

A STORY.

In one of the retired corners of Paris there is to be found a house with a very remarkable traditionary name, "La Maison de Malheur des Flamands," which, being translated into English, bears the meaning of "The House of Disaster of the Flemings." For centuries the dwelling in question has been familiarly known by this strange appellation. It is now one of the meanest and ugliest structures in the whole of the crowded quarter where it is placed, though it was once one of the finest and richest. The beauties of its elaborately sculptured front of wood, and its oaken doors, have been defaced and removed by the influence of time, chance, and change. Still, the incidents which connected the mansion with the Flemish people, and gave to it the title of *their* "House of Disaster," are not yet consigned to oblivion, though they may be known, indeed, to few of those who have the traditionary designation most commonly in their mouths.

Michel Watremetz, a native of Flanders, was the occupant of this mansion some centuries ago. Like many other Flemings, he had come to Paris to exercise his trade or profession, which was that of a transcriber or manufacturer of bibles, and he had risen in the course of time to be the most wealthy and famous artisan in that department in the French capital. He had fifteen apprentices or assistants, who laboured continually in transcribing copies of the sacred writings, and also in *painting* them, for the majority of bibles in those days were *illuminated*, as it was called, or, in other words, illustrated by figures painted on the margins. The copies executed by these assistants were carefully revised by Michel himself, that the text might be preserved in perfect correctness. In this task Watremetz was always aided by his young and pretty daughter Odette, who, whilst her father had the new manuscript copy before him, read aloud from an old and standard transcription, that no forgotten words or mutilated passages might remain unnoticed. Yet Odette herself was often the source and origin of such errors, seeing that, when she was present, the young transcribers were apt not only to make ungainly spots upon the vellum, but also to copy incorrectly the words of the work before them. Though idolised by some of these youths, Odette, however, did not expend a thought on them. The cause was, that she had fixed her whole heart and affections on a stranger, a young German who had come to Paris, and requested work from her father as a transcriber of bibles. In making this request, he had stated one condition necessary to be conceded ere he could accept work from Michel Watremetz. This condition was, that Michel should allow him to work at home, at his own lodgings. Michel, knowing the professional skill of the Germans, agreed to the terms of the stranger, who left in the other's hands a massive gold chain by way of security for the vellum which he of course received to work upon.

Gaspard Hautz, as the young German was named, in place of passing the whole of his daily time in toiling like the rest of Michel's operatives, seemed as if he had little else to do but to walk about and enjoy himself like a gentleman of fortune. With his handsome person elegantly attired, he strolled much about the city, viewing all its curiosities and wonders. He even came often to the very workshop of Michel Watremetz, and there, seated on the corner of a table, he smiled upon Odette, and murmured in her ear words which were to her a lasting pleasure and a trouble. Every now and then, on making these visits, Gaspard Hautz would carry off some of the apprentices with him to supper, and entertain them gallantly. All this sort of work Master Michel Watremetz noticed, and internally felicitated himself on having in pledge the chain of Gaspard, as the vellum which the latter had got seemed to the Fleming to be most decidedly lost. In this conclusion he was far wrong. Scarcely had one month passed away, when Gaspard Hautz arrived one morning with his bible finished. Never had the characters presented such regularity; never had there been fewer errors in any copy. As he counted out his golden crowns, Michel shook his head, and exclaimed, "This bible, young man, was surely never wrought by your hands. A whole year would scarce have sufficed for such a labour in the hands of the most experienced workman, and you bring it complete in a month?" "The work is so certainly mine," said Gaspard, "that I will produce you another ere fifteen days be over." Michel accepted the offer. In fifteen days the young German produced a second bible, not less perfect than the first.

Old Watremetz had found in the first Bible but three errors, and in the second he found the very same. But this did not strike Michel with any great surprise, as he knew how apt the hand is to get into a habit of making fixed slips. At the end of a year Gaspard had furnished to Michel thirty bibles, being as much work as thirty other workmen could have executed. On account of this new and every way superior source of supply, Watremetz dismissed several of his ordinary assistants, who in consequence were

Digitized by Google

discontented, and menaced Gaspard with their bitterest vengeance.

After their connection had subsisted for the time mentioned, Michel proposed that Gaspard Hautz should come and reside at his house. Gaspard yielded to this request the more willingly because he loved Odette tenderly and deeply, and because she had acknowledged an equal affection for him in return. The unsuspicious young German was not aware of the motives of the old Fleming for giving the invitation. Michel had become perfectly assured that Gaspard's bibles were not transcribed by him as they were done by others; he saw that there was a secret—a mystery, and it was to have it in his power to act as a spy on Gaspard, that he brought the latter to stay with him. When that step had been for some time effected, the old Fleming watched Gaspard by night and by day. The young German said always that he wrought while others slept, and, in reality, a lamp was kept continually burning in his chamber. But Watremetz soon discovered this to be a mere feint, by watching at the youth's chamber door. Gaspard was always motionless—in fact, asleep. Not being able to penetrate the mystery notwithstanding all these discoveries, Michel began openly to press the young man for an explanation, till at length Gaspard said, "Well! it is true that there *is* a secret; a secret which may make the fortune of any man, or perhaps of two men. Give me your daughter Odette's hand, and I will tell you my secret, and we may soon become rich enough to require to sell no more bibles."

Gaspard received the old man's promise, and then told him that a wonderful art had been invented in Germany, which enabled any one to produce bibles and other books with inconceivable rapidity, and that the mobility of the stamps or characters employed permitted the easy correction of any blunders. "I have yet thirty bibles thus made," said Gaspard, "in the keeping of a friend; I may have a hundred, whenever I wish them, from the same friend who made the others. Not daring to sell the works myself, because they here punish, as magical, all that they do not comprehend, I applied to you, and became ostensibly a transcriber." Gaspard at the same time told Michel that the name of the fabricator of the bibles was Schoeffer, and pointed out the means which had been established for carrying on a correspondence with him, and procuring as many bibles as might be required, at such a price as would leave the second venders a princely profit.

Michel only consented to the immediate marriage of Gaspard and Odette, on receiving a load of bibles which had been sent for from Schoeffer, who lived without the bounds of France. Thus satisfied, old Watremetz gave permission for the celebration of the wedding within eight days. But two or three mornings ere the day came, one of Michel's former apprentices entered his house magnificently dressed, and informed the old Fleming that he—the apprentice—had recently got a handsome fortune by the death of a relation, that his father had just been named "Master of the Merchants," and that he himself had come to place his wealth and hand at the disposal of Odette. The dark shade in Watremetz's composition was avarice. He grew pale at the thought of his being under the necessity of renouncing an alliance with so rich a family—with the son of the chief of the merchants. Almost audibly he cursed the cause of all this, poor Gaspard. "Gaspard!" cried the enriched apprentice, comprehending the truth at once; "what! have I a rival in Gaspard, the miserable wretch who has sold his soul to the devil for the power of multiplying manuscripts? The hand of justice hangs over him, and will crush him soon! You, too, were accused of being his accomplice, Michel; happily, through my father's credit, I got the charge against *you* suppressed; but as for Gaspard, nothing can save him!"

All this, unhappily, proved but too real. Gaspard Hautz was seized and cast into prison, and the charge against him was supported by the former workmen of Watremetz. In vain did the poor young German invoke the testimony of Michel; Michel kept an obstinate silence. In vain did Gaspard wish that his own explanations should be heard. The cry of his judges was, "The torture!—confess!" And when subjected to the horrors of the question, poor human nature sank under it, and to ensure a speedy death and the cessation of his agonies, Gaspard Hautz admitted his association with the devil. He was condemned to death, and also to make an *amende honorable*, before his execution, in front of the house of Michel Watremetz, whom he had endeavoured, his judges said, to implicate in a matter where the Fleming was perfectly guiltless. All the Bibles which had been found in Gaspard's possession were given to the convent of the Benedictines, who exorcised, blessed, and then sold them for high sums.

When the day of execution came, Gaspard Hautz was carried to the front of the house of Michel Watremetz, and there the cavalcade stopped. The doomed youth arose from his seat, pale and wasted, with the irons rattling still on his limbs. But in place of making the expected amende, which the solemnity of the ceremonial had compelled Michel to appear for the purpose of listening to, Gaspard exclaimed, "I am the victim of treachery and ingratitude, and this *thou* knowest well, Michel Watremetz, who art here to listen to me, and who strugglest to appear composed. Glad wouldst thou have been had my judges spared thee this last interview. But I am here to say farewell, and to give thee thanks! Woe upon that house," continued Gaspard, raising his hand and pointing to the dwelling of Michel, "woe upon it! I need not say woe upon thee, Michel Watremetz, for it is come already on thee and thine; but woe upon all of thy race who shall enter or dwell beneath that roof, for ever and ever! Now, lead on to the funeral pile!"

Three months afterwards, Michel Watremetz wept and tore his hair over the tomb of a broken-hearted girl, his daughter, his only daughter. Six months afterwards, a fire destroyed the dwelling and all the effects of Michel Watremetz. The growing insanity or fatuity of the old Fleming was the cause of the fire, and by the same agency he was soon brought to the streets, where he passed the remainder of his days, a beggar and an idiot. The prediction of Gaspard Hautz was certainly strangely realised by this and other events that signalised the future history of the house of Michel Watremetz. Being a spot where Flemings loved to abide, in the same manner as we find localities taken up by Jews and by other particular races, the dwelling under notice was repeatedly inhabited by Flemings after the occurrence of the events related. *Eleven* Flemings, says the tradition of the neighbourhood, came successively to occupy the "Maison de Malheur des Flamands," and of all the eleven not one escaped a sudden and violent end. Some who have paid especial attention to the circumstances, can enumerate the various modes in which the doom fell upon the inhabitants of this House of Woe. One perished by assassination, another by the waters of the Seine, a third was broken on the wheel, a fourth died within the walls of starvation, and so on. One of the last of the unfortunate Flemings who tenanted the house of disaster, was Jean-Paul Labadie, a man whose fate was particularly hard, and who lived so recently that his story could have been authenticated but a short time ago by living persons. He was a flourishing man. A large sum of money which he had brought with him from his native Flanders had been embarked by him in trade, which he carried on in "La Maison de Malheur." He married a most beautiful girl, who commonly received the title of the "belle" of the neighbourhood. But, soon after his marriage, he was arrested, and thrown into the Bastille. There he lay for *twenty years*, totally ignorant of the crime for which he was thus punished. At length a great person who chanced to visit his cell was seized with pity, and got Jean-Paul liberated, when he learned for the first time the cause of his confinement. A court marquis had seen and admired his wife, and had taken the way related of getting the husband disposed of. Subsequently, Jean-Paul had merely lain in prison because the marquis had utterly forgot him.

These stories of misfortune befalling the occupants of the fated house, may be connected or not by our readers, just as they please, with the dying words of Gaspard Hautz. We have our own ideas about the matter, and, no doubt, they will also have theirs. Enough has been said, however, to explain satisfactorily the origin of the name of the Flemings' House of Disaster.

OCCASIONAL NOTES.

ANONYMOUS WRITING IN COUNTRY TOWNS.

THERE is prevalent in small towns a frequent and mischievous practice of holding private individuals up to public ridicule, by which the inhabitants in general are grievously annoyed. The practice to which we allude, consists chiefly in conceiving reports of births, deaths, and marriages (which, of course, are matters of pure fiction), and in sending them under fictitious, and frequently forged signatures, to the conductors of local newspapers, for publication. We seldom take up a newspaper in which we do not find the editor intimating to his "readers and correspondents," that the report of a particular birth, marriage, or death, to which he had previously given insertion in his journal, is a fabrication, and stating (by way, we suppose, of satisfying the aggrieved parties) that he will endeavour, by every possible means, to discover and punish the fabricator. But we seldom hear of any instance of this editorial search proving successful. However, we learn that a young man in Perth was a short time ago committed to jail, and afterwards held to bail, for imposing on the conductors of the "Perth Constitutional," by causing them to announce the demise of a well-known gentleman in Edinburgh. The fraud, it appears, was accomplished by forging the signature of an official gentleman in Perth. We mention this by way of warning to those individuals who are addicted to the practice now under notice, and who shall read this paper. They occupy a conspicuous position amongst the "monsters of society," those reporters of births, deaths, and marriages.

The object, of course, of jokes of this kind, is to produce a general laugh at the expense and pain of private individuals; and what makes them the more cruel is, that in nine cases out of ten a female is made the victim. We believe that such jokes are most frequently conceived and executed more in a spirit of sheer wantonness, than with any deliberate intention of annoying the parties upon whom they are practised. Yet it is obvious that this must always be their effect, and it is on this ground that we condemn the practice. We confess we cannot understand how persons addicted to this habit can derive any gratification from its exercise, seeing its evil tendency, and that they cannot, from the fear of exposing themselves, even enjoy the reputation of the authorship of the fun which they occasion. Nor could we ever join in the laugh raised at jokes of this kind, though we have been often called upon to do so. On such occasions we have thought only of the state of the feelings of persons thus wantonly and maliciously outraged, especially when we found that one of them was a female, which, in the case of a marriage or a birth, must always be the fact. Sorrow and pain, by whatever cause produced, are sacred subjects, and it were in the highest degree indecorous and unfeeling to make them matter for indecent levity. Would every one regard the practice in question in this light, we feel convinced that this would deprive the individuals addicted to it of half their encouragement, and, therefore, tend to put a stop to it in some degree.

To their want of respect for, or their reckless indifference to, the feelings of others, the individuals who practise this habit, as might be expected, add cowardice, accompanied frequently by crime. In order to succeed in the execution of their hoax, without at the same time affording any means by which they themselves may be discovered and punished, they have recourse to the anonymous by way of protection, or, rather than be baffled in their enterprise, they adopt a fictitious name, or counterfeit a real one. By this means they impose upon the genius who presides over the broadsheet, and effect their unworthy purpose, without, in by far the majority of cases, being so unfortunate as to draw down upon themselves the retributive consequences of their guilt.

The writer of these observations lately resided in an English country town, and knows that hoaxes of the kind of which he speaks are there of constant and common occurrence. In that town, indeed, the itch for personal public attacks of all kinds is beyond all bounds. We believe, in this respect, we decidedly out-do the Americans, who are notorious for *black-balling* their public men. The English Corporation Reform Bill, as is well known, changed our municipal constitution, and called into power a new order of men. Since then, party spirit of the bitterest kind has been exhibited in the above hitherto peaceful borough, and the privacy of domestic life is daily invaded. In corroboration of the truth of these observations, we may mention, that the common council of the place recently elected from among their number an individual to fill the office of mayor, who is a master painter and glazier in the town. This circumstance occasioned the following paragraph in a local newspaper, evidently written by a partisan. After reciting the fact of the person mentioned having been elected to the office of mayor, the paragraph goes on as follows:—"The mayor of every borough is, during his office, and for one year after, a justice of the peace; and formerly it used to be the opinion that such an office ought to be filled by a person moving in a respectable station of life, and who could fill the duties of it with impartiality and dignity. Whether Mr —— —— will do either the one or the other, remains to be proved. * * * Really, to raise such a man to the magistracy, is too bad. Fancy —— ——, Esq. dressed in a fustian jacket, daubed with all the colours of the rainbow, a paper cap on his head, and a paint pot in his hand, working at his business all day, and refreshing himself with a pot of ale in the kitchen of the Bay Nag's Head in the evening, discussing the proceedings of the Commons; and the same —— ——, Esq., the next day, dressed in his Sunday clothes, seated on the judgment seat, and dealing out fines and imprisonment before the eyes of his admiring fellow-townsmen."

Now, is not this as base as any thing which could be told of the American press, and which Mrs Trollope and others have taken care to trumpet? Such personalities are a disgrace to our newspaper literature, and cannot meet with sufficient reprobation from every right-thinking person.

This species of mean party warfare is, of course, a different kind of anonymous writing with reference to its objects, from that with the consideration of which we began these observations, inasmuch as it is directed against public men, who are, or at least ought to be, prepared to lay their account for annoyances of this kind. It is, nevertheless, highly objectionable, as is every other kind of anonymous writing, the object of which is to ridicule or slander individuals, on the ground that it is an obvious violation of our duty towards our neighbour, whom we are enjoined not to hurt by word or deed.

We cannot help giving our opinion that the conductors of newspapers, and others connected with the printing-press, are nearly as blameable as the writers of anonymous attacks themselves, in giving publicity to them. We are well aware that in the case of false reports of births, deaths, and marriages, they are frequently imposed on, and cannot always avoid being entrapped into the publication of these reports; yet, even in this, they should exercise great carefulness, and should on no account insert reports which are not properly authenticated, or which have not come through the hands of their

Digitized by Google

agents, or of parties above all suspicion. With reference, however, to slanderous paragraph-writing, they can easily put a stop to it; and it is earnestly to be wished, for the advantage of all parties, that they would.

In calling attention to this subject, we are only actuated by the desire to put down such practices, and we sincerely hope that what we have written may have this effect in some degree.

THE POETRY OF SIR ALEXANDER BOSWELL.

Some of the fugitive compositions of the biographer of Johnson were lately adverted to in this work: we now propose to give some notices of the humorous poetry of his eldest son, the late Sir Alexander Boswell, of Auchinleck, Baronet. The claims of this gentleman to a place amongst the poets of Scotland are by no means inconsiderable; yet his name is not nearly so much known as it deserves to be, and no collection of his many clever verses has as yet been given to the world. Sir Alexander was the eldest son of James Boswell, and was born in 1775. He and a younger brother, the late Mr James Boswell, barrister (well known as one of Shakspeare's many commentators), were, in consequence of the high-church prepossessions of their father, educated at Westminster School and the University of Oxford. The subject of this notice succeeded his father at his death in 1795, and, for the ensuing twenty-seven years, no country gentleman of the county of Ayr was more generally beloved and esteemed. A never-failing flow of pleasantry and good humour, great kindness of nature towards all dependent on him, and a certain lively enthusiasm which pervaded all he said or did, made him a general favourite, both in his own class and in those beneath it. He was a zealous literary antiquary, and long kept a printing-press in his own house, from which emanated many curious reprints, as well as several compositions of his own. He was an ardent admirer of Burns, and originated the beautiful monument to that poet at Alloway Kirk—a transaction respecting which a very curious anecdote is related. He and another gentleman, being anxious to see a proper memorial of the Ayrshire bard erected in his native county, advertised a meeting for that purpose to be held on a particular day in the town of Ayr. The day and the hour came; Sir Alexander and his friend assembled, but no one else appeared. Not at all disheartened, the one gentleman took the chair, and the other proceeded to act as clerk. Resolutions were passed and duly minuted, thanks were voted by the clerk to the chairman, and the meeting separated. These resolutions, being advertised, became the means of collecting the two thousand pounds or thereby, out of which the monument was erected! Sir Alexander married early, and became the father of a large family. The title of a baronet of Great Britain was conferred upon him in 1821, but he did not live to enjoy the honour much more than a year.

One of the earliest compositions of Sir Alexander which we have seen, is a translation of *Frew't euch des libens*, executed at Leipsig in 1795, when he was only twenty years of age. He aimed at being literal, but is also not inelegant, as the following verses will show:—

Taste life's glad moments,
Whilst the wasting taper glows;
Pluck, ere it withers,
The quickly fading rose.

Man blindly follows grief and care,
He seeks for thorns, and finds his share,
While vi'lets to the passing air
Unheeded shed their blossoms.
Taste, &c.

* * *

Who fosters faith in upright breast,
And freely gives to the distress'd,
There shall Contentment build her nest,
And flutter in his bosom.
Taste, &c.

And when Life's path grows dark and strait,
And pressing ills on ills await,
Then friendship, sorrow to abate,
The helping hand will offer.
Taste, &c.

She dries his tears—she strews his way,
Ev'n to the grave, with flowerets gay;
Turns night to morn, and morn to day,
And pleasure still increases.
Taste, &c.

* * *

Some other of his poetical efforts in earlier life were of a sentimental kind, but in these in general he did not succeed nearly so well as in those of an humorous character. Yet he occasionally hits on a good thought, which he expresses with force, as in *The Old Chieftain to his Sons*, a Scottish song:—

The auld will speak, the young maun hear;
Be canty, but be gude and leal:*
Your ain ills aye hae heart to bear,
Another's aye hae heart to feel.

It was in humorous poetry, in the homely dialect of Lowland Scotland, that Alexander Boswell chiefly shone. Some of his songs in this style were written and had attained popularity while the author was still a very young man—for example the two following, which are set to lively Scotch airs:—

JENNY DANG† THE WEAVER.

At Willie's wedding o' the green,
The lasses, bonny witches,
Were busked out in aprons clean,
And snaw-white Sunday's mutches.

Auld Maysie bade the lads tak tent,
But Jock wad na believe her,
But soon the fool his folly kent,
For—Jenny dang the Weaver.

In ilka countra dance and reel
Wi' her he wad be babbin';
When she sat down, then he sat down,
And till her wad be gabbin';
Whare'er she gaed, or butt or ben,
The coof wad never leave her,
Aye cacklin' like a clockin' hen,
But Jenny dang the Weaver.

Quoth he, "My lass, to speak my mind,
Gude faith I needna swither,
Ye've bonny een, and gif ye're kind,
I needna court anither."
He humm'd and haw'd—the lass cried pheugh,
And bade the fool no deave her,
Then crack'd her thumb, and lap, and leugh,
And dang the silly Weaver.

JENNY'S BAWBEE.*

I met four chaps yon birks amang,
Wi' hingin' lugs and faces lang;
I speer'd at nesbour Bauldy Strang,
Wha's thae I see?

Quo' he, ilk cream-fac'd, pawky chiel,
Thought himsel' cunnin' as the de'il,
And here they cam, awa to steal
Jenny's bawbee.

The first, a captain till his trade,
Wi' skull ill lin'd, and back weel clad,
March'd round the barn and bye the shed,
And pap'd on his knee.

Quo' he, "My goddess, nymph and queen,
Your beauty's dazzled baith my een;"
But de'il a beauty he had seen
But—Jenny's bawbee.

A lawyer niest, wi' blathrin' gab,
Wha speeches wove like ony wab,
In ilk ane's corn aye took a dab,
And a' for a fee:

Accounts he had through a' the town,
And tradesmen's tongues nae mair could drown;
Haith now he thought to clout his gown
Wi' Jenny's bawbee.

A Norland laird neist trotted up,
Wi' bawsen'd naig and siller whup,
Cried "There's my beast, lad, hand the grup,
Or tie't till a tree.

What's gowd to me?—I've walth o' lan';
Bestow on ane o' worth yer han';"
He thought to pay what he was *own*
Wi' Jenny's bawbee.

A' spruce, frae ban'boxes and tubs,
A THING cam neist (but life has rubs),
Foul were the roads, and fou the cubs,
Ah! waes me!

A' clatty, squintin' through a glass,
He girn'd, "I'faith a bonnie lass!"
He thought to win, wi' front o' brass,
Jenny's bawbee.

She bade the laird gang comb his wig,
The soger no to strut sae big,
The lawyer no to be a prig,
The fool cry'd "Tehee,
I kent that I could never fail!"
She prin'd the dishclout till his tail,
And cool'd him wi' a water-pail,
And kept her bawbee.

We copy these pieces from a small volume, which the author published anonymously in 1803,† with a preface, stating that "several of the following songs having been printed without his permission, and with alterations which he did not consider as improvements, he had been induced to present them to the public in a more correct form." He here published a song to an Irish air, "by the late James Boswell, Esq.," apparently a composition of the younger days of that gentleman, and bearing reference to his courtship of Miss Margaret Montgomery of Lainshaw, the lady who afterwards became his wife. His courtship took place in Ireland, while the parties were visiting a common relation in the county Down. There is more sentiment in the song than might be expected from a person usually esteemed so whimsical:—

O Larghan Clanbrassil, how sweet is thy sound!
To my tender remembrance as Love's sacred ground;
For there M'arg'ret Caroline first charm'd my sight,
And fill'd my young heart with a flutt'ring delight.

When I thought her my own, ah! too short seem'd the day
For a jaunt to Downpatrick, or a trip onthe sea:
To express what I felt then, all language were vain,
'Twas in truth what the poets have *studied* to feign.

But too late I found even she could deceive,
And nothing was left but to weep, sigh, and rave;
Distracted I fled from my dear native shore,
Resolv'd to see Larghan Clanbrassil no more.

Yet still in some moments enchanted I find
A ray of her fondness beam soft on my mind;
While thus in bless'd fancy my angel I see,
All the world is a Larghan Clanbrassil to me.

Sir Alexander's fancy seems to have been struck by the changes which took place in his early days in Edinburgh—an old and dense city deserted by all persons of genteel condition—an elegant new one built and occupied—the former mansions of the fashionable filled up by the humble—and a new and less simple style of manners generally introduced. He alludes to these circumstances in a song published in the volume above described, beginning, "Hech! what a change ha'e we now in this town!" A verse or two of his praises of the past may be quoted:—

Little was stown then, and less gaed to waste,
Barely a mullin‡ for mice or for rattens;
The thrifty housewife to the flesh-market pacod,
Her equipage a'—just a gude pair o' pattens.

Folks were as good then, and friends were as leal,
Though coaches were scant, wi' their cattle a-cantrin;
Right air* we were tell't by the housemaid or chiel,
Sir, an ye please, here's your lass and a lantern.

* * *

—Whar is true friendship, and whar will ye see
A' that's gude, honest, and modest, and thrifty?
Tak auld age and wrinkles and hirple wi' me,
And think on the seventeen hundred and fifty.

In 1810, he followed up and expanded these ideas, in a poem which he then published in a small volume, under the title of "Edinburgh or the Ancient Royalty, a Sketch of Former Manners, by Simon Gray."† We have here some highly humorous and quaint recollections of the circumstances which characterised the old town in its days of glory, and of the manners of its strangely mixed inhabitants—for example, the following description of the High Street:—

Tier upon tier I see the mansions rise,
Whose azure summits mingle with the skies;
There, from the earth the labouring porters bear
The elements of fire and water high in air;
There, as you scale the steps, with toilsome tread,
The dripping barrel madifies your head;
Thence, as adown the giddy round you wheel,
A rising porter greets you with his creel!
Here, in these chambers, ever dull and dark,
The Lady gay received her gayer Spark,
Who, clad in silken coat, with cautious tread,
Trembled at opening casements over head;
But when in safety at her porch he trod,
He seiz'd the ring, and rasp'd the twisted rod.‡
"No idlers then, I trow, were seen to meet,
Link'd, six a-row, six hours in Princes Street;"
But, one by one, they panted up the hill,
And picked their steps with most uncommon skill;
Then, at the Cross, each joined the motley mob—
"How are ye, Tam? and how's a' wi' ye, Bob?"
Next to a neighbouring tavern all retir'd,
And draughts of wine their various thoughts inspir'd.
O'er draughts of wine the Beau would moan his love;
O'er draughts of wine the Cit his bargain drove;
O'er draughts of wine the Writer pen'd the will:
And Legal Wisdom counsel'd o'er a *gill*.

* * *

Yes, mark the street, for youth the great resort,
Its spacious width the theatre of sport.
There midst the crowd the jingling hoop is driven;
Full many a leg is hit, and curse is given.
There, on the pavement, mystic forms are chalked,
Defaced, renewed, delayed—but never balked;
There romping Miss the rounded slate may drop,
And kick it out with persevering hop.
There, in the dirty current of the *strand*,
Boys drop the rival corks with ready hand,
And, wading through the puddle, with slow pace,
Watch in solicitude the doubtful race!—
And there, an active band, with frequent boast,
Vault in succession o'er each wooden post.
Or a bold stripling, noted for his might,
Heads the array and rules the mimic fight.
From hand and sling now fly the whizzing stones,
Unheeded broken heads and broken bones.
The rival hosts in close engagement mix,
Drive and are driven by the dint of sticks.
The *bicker* rages, till some mother's fears
Ring a sad story in a bailie's ears.
Her prayer is heard; the order quick is sped,
And, from that corps which hapless Porteous led,
A brave detachment, probably of two,
Rush, like two kites, upon the warlike crew,
Who, struggling, like the fabled frogs and mice,
Are pounc'd upon, and carried in a trice.
But, mark that motley group, in various garb—
There vice begins to form her rankling barb,
The germ of gambling sprouts in *pitch and toss*,
And brawl, successive, tells disputed loss.
From hand to hand the whirling halfpence pass,
And, every *copper* gone, they fly to *brass*.
Those polish'd rounds which decorate the coat,
And brilliant shine upon some youth of note,
Offspring of Birmingham's creative art,
Now from the faithful button-holes depart.
To sudden twitch the rending stitches yield,
And Enterprise again essays the field.
So, when a few fleet years of his short span
Have ripen'd this dire passion in the man,
When thousand after thousand takes its flight,
In the short circuit of one wretched night,
Next shall the honours of the forest fall,
And ruin desolate the Chieftain's hall;
Hill after hill some cunning clerk shall gain;
Then, in a mendicant, behold a THANE!

Or the description of a dancing assembly of former days:—

Then were the days of modesty and *mien!*
Stays for the fat, and *quilting* for the lean.
The ribbon'd stomacher, in many a plait,
Upheld the chest and dignified the gait;
Some Venus, brightest planet of the train,
Moved in a lutestring *halo* prop'd with cane.
Then the Assembly Close received the fair;
Order and elegance presided there;
Each gay Right Honourable had her place
To walk a minuet with becoming grace;
No racing to the dance, with rival hurry—
Such was thy sway, oh fam'd *Miss Nicky Murray!*§
Each lady's fan a chosen Damon bore,
With care selected many a day before;
For, unprovided with a favourite beau,
The nymph, chagrined, the ball must needs forego;
But, previous matters to her taste arranged,
Cortes the constant couple never changed;
Through a long night, to watch fair Delia's will,
The same dull swain was at her elbow still.

We would gladly quote more of these curious reminiscences, local as they are, if space permitted. As the case is, we must pass on to a conclusion, and do little more than allude to a facetious tale written by Sir Alexander Boswell in 1815, and printed by him in the

* True or faithful.

† *Ding*, preterite *dang*—to overcome or get the better of.

* *Bawbee*, literally a halfpenny, but here meaning a young lady's fortune.

† Songs chiefly in the Scottish Dialect. Edinburgh, Manners and Miller. 1803.

‡ Crumb.

* Early † Edinburgh, Manners and Miller.

‡ An ancient and now disused mode of requiring admittance; a ring being slung upon a piece of iron rod, which was either twisted or notched, so as to produce a grating sound when the ring was drawn up and down alongst it.

§ A venerable sister of the Chief Justice Earl of Mansfield, who presided over the Edinburgh assemblies of those days. She died in 1775.

Digitized by Google

words, the young messenger of good put into the hands of the father five francs, and then, turning round to cast a look of pity and satisfaction on the poor family, who were dumb with emotion, she disappeared.

The history of these five francs is the most remarkable part of this affair. This little benevolent fairy was, it is almost unnecessary to say, the same pitying spectator who had been addressed by the abstractor of the loaf at the police office. As soon as she had heard what was said there, she had gone away, resolved to take some meat to the poor family. But she remembered that her mamma was from home that day, and was at a loss how to procure money or food, until she bethought herself of a resource of a strange kind. She recollected that a hair-dresser, who lived near her mother's house, and who knew her family, had often commended her beautiful hair, and had told her to come to him whenever she wished to have it cut, and he would give her a louis for it. This used to make her proud and pleased, but she now thought of it in a different way. In order to procure money for the assistance of the starving family, she went straight to the hair-dresser's, put him in mind of his promise, and offered to let him cut off all her pretty locks for what he thought them worth.

Naturally surprised by such an application, the hair-dresser, who was a kind and intelligent man, made inquiry into the cause of his young friend's visit. Her secret was easily drawn from her, and it caused the hair-dresser almost to shed tears of pleasure. He feigned to comply with the conditions proposed, and gave the bargainer fifteen francs, promising to come and claim his purchase at some future day. The little girl then got a basket, bought provisions, and set out on her errand of mercy. Before she returned, the hair-dresser had gone to her mother's, found that lady come home, and related to her the whole circumstances. So that, when the possessor of the golden tresses came back, she was gratified by being received into the open arms of her pleased and praising parent.

When the story was told at the police office by the hair-dresser, the abstraction of the loaf was visited by no severe punishment. The singular circumstances connected with the case raised many friends to the artisan and his family, and he was soon restored to health and comfort.

A NEW GAS FOR LIGHTING.

It has long been known to men of science, that, if pure water could be decomposed into its two constituent gases at a cheap rate, the hydrogen would afford means of lighting much superior to the gas formed from coal, now in general use. The great difficulty is to obtain the hydrogen at an economical rate. Are we to suppose, from the following paragraph, which lately appeared in the *Times*, and was quoted into the *Athenæum*, that a cheap means of disengaging the hydrogen has at length been discovered? We present the paragraph, as one having some claim to attention, from the importance of the result aimed at, though how far it is entitled to credit we are altogether ignorant:—

"An experiment in gas-lighting, by —— ——, was made on Thursday evening on a piece of waste ground at —— in presence of several scientific gentlemen, who were invited to witness the result. A small gasometer was erected for the purpose, which was connected by tubes with a furnace built of brick, and containing three retorts, one of which was supplied with water from a syphon, another was filled with tar, and both being decomposed in the third retort, formed the sole materials by which the gas was produced. The process appeared to be extremely simple, and the novelty of the experiment consisted in the fact, that the principal agent employed to produce the gas was common water combined with tar; but, according to the theory of the inventor of this new species of gas, any sort of bituminous or fatty matter would answer the purpose equally as well as pitch or tar. After the lapse of about half an hour employed in the experiment, during which time the process was explained to the company, the gas was turned into the burners, and a pure and powerful light was produced, perfectly free from smoke or any unpleasant smell. The purity and intenseness of the flame were tested in a very satisfactory manner, and those who witnessed the experiment appeared perfectly satisfied with the result. The great advantage of this sort of gas over that produced from coal, consists, it was said, in the cheapness of the materials employed in its production, the facility with which it is manufactured, and the perfection to which it is at once brought, without the necessity of its undergoing the tedious and expensive process of condensation and purification; for in this instance, as soon as the preliminaries were completed, the light was produced in a perfect state within a few feet of the gasometer, which, although of inferior size, was said to be capable of affording light for ten hours to at least five hundred lamps or burners. With regard to the comparative expense, it was also stated that one thousand cubic feet of gas manufactured by this process could be supplied to the public for about one-third the price now charged by the coal-gas companies; and it was said to be equally available for domestic use, and more safe than the common gas, inasmuch as small gasometers might at a trifling expense be fixed at the back of grates in private dwellings, from which the gas could be conveyed in India-rubber bags to any part of the house, thereby preventing the many accidents which occur by the use of tubes and pipes. —— ——, who has conquered the difficulty hitherto experienced in bringing this species of gas into use, superintended the arrangements, and evinced a natural anxiety to bring his experiment to a successful issue. He has taken out a patent for his discovery."

ADDRESS OF THE EDITORS.

Eight years have now elapsed since the commencement of Chambers's Edinburgh Journal. The present number is the first of the ninth annual volume. Again permitted by custom to enter for a few minutes into communication with our friends, we feel gratified in informing them that the circulation of our work continues undiminished, reaching from sixty-five to seventy thousand copies weekly. We need scarcely say that we accept this fact as the best evidence that could be given that our labours are upon the whole appreciated by the public. That we may frequently fail to please, is to be expected from addressing so large and varied an auditory; but we can confidently say, that our anxiety to render the work generally attractive has never from the first experienced the least abatement. The great leading principle on which we set out has never for a moment been lost sight of, namely, that of furnishing weekly a sheet of healthful moral instruction and innocent entertainment. We have not at any period of our labours felt inclined to alter the character of our work in any essential respect, except in as far as the exhaustion of one class of subjects, and the presumed mental progress of the class we address, may have led us into fields which we did not think of entering in the earlier part of our career. At all times the utmost care has been taken to prevent the intrusion of any article or paragraph which could be considered on any reasonable grounds objectionable. On this point, we believe we may challenge the most rigid investigation. Immodesty in all its shapes, slang, and vulgarisms, have been excluded with a rigour of watchfulness, more fixed and determined than any other principle which we are conscious of acting upon.*

Amongst other considerations which we continue to hold in view, is one bearing reference to the class we address. Though the work, as we have been assured, is read by a considerable number of persons belonging to the upper and leisurely classes, it is now, as before, framed chiefly for that large department of society, who, being engaged in the duties of the counting-house, the shop, the work-room, or those of their private dwellings, have little leisure for the cultivation of their minds. In seeking to improve the moral and intellectual character of this large class, we have disregarded all party considerations and party clamours, holding rigidly to our early conviction that the happiness of individuals depends chiefly on circumstances within their individual control—namely, on their own industry, skill, self-denial, and observance of the laws which regulate the economy of their being. We do not undervalue the importance of political regulations; but neither do we lament being forbidden to enter on the consideration of them, seeing that they already engross so much attention, while the other matters are nearly neglected. We may here advert to a misapprehension which we believe exists respecting the circulation of such works as the present. They are generally regarded as works perused by the labouring classes—a great mistake, we are convinced, as far at least as our own sheet is concerned. This paper is read, we believe, by a class who may be called the *elite* of the labouring community; those who think, conduct themselves respectably, and are anxious to improve their circumstances by judicious means. But below this worthy order of men, our work, except in a few particular cases, does not go. A fatal mistake is committed in the notion that the lower classes read. There is, unfortunately, a vast substratum in society where the printing-press has not yet unfolded her treasures. Some millions of adults of both sexes, in cities as well as in rural districts, are till this hour as ignorant of letters as the people were generally during the middle ages. To these, then, all appeals from such sheets as the present, are sounded in vain; and till it shall be satisfactorily arranged in what manner or form they shall be initiated in a knowledge of the alphabet, no possible benefit can be derived by them from all the efforts which may be made for their enlightenment.

A consideration of these circumstances will make it obvious, that the benefits supposed to be conferred by Chambers's Edinburgh Journal and other cheap publications are probably overrated. The benefits, if there be any, are confined to the respectable order of artisans and others to whom we have alluded; but to the bulk of the rural population, and to the large section composing the inferior class of labourers, they are not extended, simply because such persons either cannot read, or possess tastes altogether inconsistent with literary recreation. To those who entertain the opinion that in ignorance alone is there either happiness or security, this announcement will doubtless be agreeable. In us, it excites contrary feelings, and leads to the apprehension that, if this great empire is to be destroyed, it will be by an upward blow, imparted by a class who, to the scandal of the age, are left in utter ignorance of the first principles of social organisation.

Fully assured that, without a right and universal system of education, the community cannot advance either individually or in the aggregate, we have felt desirous of contributing to that object such assistance as was within our power. During the last four years, most of the scanty leisure left by the task of conducting this periodical sheet, has been devoted to the preparation of a series of Educational Treatises on what we conceive to be an improved plan. Aided in this task by gentlemen in whose abilities we had confidence, we have been enabled to issue twenty distinct books,* while others are in preparation to complete the proposed series. The success of these works, we are glad to say, has gone beyond our most sanguine anticipations. Of one of the treatises alone, the Introduction to the Sciences, upwards of thirty thousand copies have been sold, the work being now in extensive use in schools in every quarter of the United Kingdom.

Another task connected with popular instruction has occupied, for the last two years, a portion of our spare time. During that period we have superintended the republication, in a cheap form, of works of approved character, some of them furnished with elaborate annotation. Of these "People's Editions," many of which are of an informing, some of an instructive character, while others may have at least the effect of promoting a taste for polite literature, thirty-two have up to this date appeared.† We are happy to say that, notwithstanding a wide-spreading competition in the same walk—a competition, however, which perhaps flatters fully as much as it injures—these publications have also been very successful, as many as fourteen thousand having been sold of some of those first printed.

The quantity of printed paper thus sent abroad is enormous. That it may be for good, none can wish more earnestly than the individuals whose strange fortune it has almost involuntarily become to prepare and diffuse it.

Edinburgh, January 2, 1840.

* With the view of preserving, as far as possible, a unity of design and sentiment throughout the work, and of excluding every thing which might have a tendency to infringe upon its character, we have been under the necessity of rejecting the casual contributions of doubtless many kind friends, and of relying exclusively upon our own resources, with the assistance of individuals whose names and reputation are a guarantee for the purity and literary correctness of their writings. Among these valued assistants, we are happy in naming the venerable Mrs Amelia Opie, Mrs S. C. Hall, and Miss Agnes Strickland. Mrs Hall's "Stories of the Irish Peasantry," composed with the benevolent intention of improving the tastes and habits of her countrymen, we are glad to know have been received with pleasure by the majority of our readers; and we take the opportunity of stating, that tales to complete the proposed series will forthwith appear in the Journal.

* First Book of Reading—Second Book of Reading—Third Book of Reading—Moral Class-Book—First Book of English Composition—Introduction to the Sciences—Natural Philosophy. First Book—Natural Philosophy, Second Book—Rudiments of Chemistry—Animal Physiology—Euclid's Elements of Plane Geometry—Solid and Spherical Geometry—Elements of Algebra—Elements of Drawing and Perspective—History and Resources of the British Empire—History of the English Language and Literature—Principles and Practice of Elocution—History of Greece, its Literature and Arts—Exemplary and Instructive Biography—Directory of Infant Education—Also, School-Room Maps of England, Ireland, Scotland, Europe, Palestine, and North America, each about Five Feet square

† Addison's Essays, Moral and Humorous—Lamartine's Travels in the Holy Land—Paley's Natural Theology, with Additions—Lay of the Last Minstrel, Lady of the Lake, and Marmion, by Scott—Cottagers of Glenburnie, by Mrs Hamilton—Crabbe's Parish Register, and other Poems—Franklin's Life and Essays (greatly improved)—Life and Travels of Mungo Park—Butler's Analogy of Religion—Goldsmith's Vicar of Wakefield—Tennant's Anster Fair, and other Poems—Smollett's Roderick Random—Lord Bacon's Essays—Ramsay's Gentle Shepherd, and other Poems—Adventures of Robinson Crusoe—Life of Robert Burns—Poetical Works of Robert Burns—Prose Works of Robert Burns—Clarke's Travels in Russia, with Notes—Defoe's Complete English Tradesman—Imprisonments of Silvio Pellico—Locke's Conduct of the Understanding—Stephens's Incidents of Travel in Egypt, Arabia Petræa, and the Holy Land—Stephens's Incidents of Travel in Greece, Turkey, and Poland—Godwin's Caleb Williams—Grahame's Sabbath, and other Poems—Self-Control, a Novel, by Mrs Brunton—Guizot's History of Civilisation—Pico's Letters from Palmyra—Also, in connection with the Series, Chambers's Tour in Holland and Belgium.

London: Published, with permission of the proprietors, by W. S. Orr, Paternoster Row; and sold by all booksellers and newsmen.—Printed by Bradbury and Evans, Whitefriars.

Complete sets of the Journal are always to be had from the publishers or their agents; also, any odd numbers to complete sets. Persons requiring their volumes bound along with title-pages and contents, have only to give them into the hands of any bookseller, with orders to that effect.

CHAMBERS' EDINBURGH JOURNAL

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS, EDITORS OF "CHAMBERS'S INFORMATION FOR THE PEOPLE," "CHAMBERS'S EDUCATIONAL COURSE," &c.

NUMBER 418. SATURDAY, FEBRUARY 1, 1840. PRICE THREE HALFPENCE.

STORIES OF THE IRISH PEASANTRY.

BY MRS S. C. HALL.

"Mind not high things: but condescend to men of low estate."
ST PAUL.

"IT'S ONLY MY TIME."

"PADDY—Paddy Blake—Paddy, I say," called out Mr Manvers, seeing that Paddy Blake had left his long, heavy, narrow spade standing upright in the side of a *ditch* he was making to keep his neighbour's giddy young colt out of his potato garden, and having so done, commenced pulling his long "big coat" over his brawny shoulders. "Paddy Blake," repeated Mr Manvers, "where are you going to?"

"Is it where I'm going to, sir? Bedad, then, I'm just going over to Castle Connel wid a bit of a message for Mary Tomlins."

"And why cannot Mary Tomlins go herself?"

"Oh, she's busy, she says, at the squire's."

"Well, and you *were* busy at your ditch."

"Ay, yer honour, but that's *my own*, and poor Mary would lose her eightpence if she broke her day's work, and it's a good step to Castle Connel."

"Paddy Blake, how many children has Mary Tomlins?"

"Oh, thin, throth, I'm ashamed, sir, ye'd ask sich a question. Is it my sister's slip ov a girl! Childre! bedad she hasn't made up her mind to a batchelor yet."

"And how many children have you, Paddy Blake?"

"Why, thin, the Lord forgive me—I was going to say I had more than was good of 'em, and that would have been a lie, for they're all clane-skinned, wholesome, good-hearted childre, as ever broke a poor man's bread or cheered his heart wid their innocent ways. Let me count," and he held up his great thick red fingers. "I've five—Jim and Larry—no, Kathleen's next to Jim—thin Larry—thin—bedad, I don't rightly know whether Tommy or Lanty is next to Larry; but oh, I remimber now—Tommy and Lanty came together. Twins, the heavens look down on us! in the hard season too—and thin Shelah."

"But," said Mr Manvers, "you said *five*, and now you have counted six; I suppose you count twins as one."

Paddy laughed, scratched his head, and replied, "Bedad, yer honor, as far as the eatin' and the drinkin' goes, they are two; then—I'm all out together, for there's another besides Shelah, the darlint! Yer honor must have the wife to reckon the childre, if ye want to know their number—there's a houseful of 'em, any way."

"Oh," said Mr Manvers, "I only inquired because I wished to ascertain whether *you* or Mary Tomlins could best afford to waste a day."

"Sure, sir, as to *that*—poor girl! if she went to Castle Connel, havn't I tould yer honour she'd break her day, and lose her *eightpence*?"

"And if *you* go to Castle Connel, and break *your* day, what will you lose?"

"Loose! nothing, sir."

"Oh yes, you will!"

"Not a ha'porth, plaze yer honour—*sure it's only my time*."

"And is not your time worth a halfpenny, Paddy Blake?"

"Sorra a halfpenny I can get for it these bad times," replied the ready-witted Paddy, "fixing" his coat more firmly on his person, by shrugging his shoulders.

"Suppose you finish that fence," said Mr Manvers, "is not *that* worth something?"

"Finish the fence, sir! the ditch you mane. If I don't finish the ditch, that baste of a coult, to say nothing of the pigs, will be all over, and, indeed, I may say *under* every paytee we have to depind on for the winter; that coult has done me more than two pounds' worth of damage through the hole in the ditch, while I was seeing after Jerry Deasy's bit of business at Carrigagunnel."

"Then charge Jerry Deasy, or whatever his name is, two pounds for your time."

Paddy Blake looked exceedingly perplexed, and after staring at Mr Manvers as long as he could with propriety, he inquired, "What did ye say, sir?"

"Charge Mr Deasy two pounds for the colt's damage, or rather for the time you were occupied in his service, instead of mending the ditch."

"Lord, sir! is it a *tame nagur* you'd be afther making me? *Sure it was only my time*."

"And pray what property has a poor man but his time? What property has any man not born to fortune but his time?"

"It's a mighty poor fortune," replied Paddy, shaking up the handful of straw that kept the sun out of the crown of his hat in summer, and the rain out of it in winter, and which at all times was seen peeping out of the holes of his hat.

"It is a noble fortune, *if put out to proper interest*," observed Mr Manvers. An Irishman is quick of understanding, and Paddy replied, "*Irish* interest is *mighty small*, plaze yer honour."

"Granted; but though sixpence is not as good as a shilling, it is better than nothing; better for you to earn sixpence than nothing, my good friend."

"Tare an ages, havn't I just tould yer honour it's I don't know how many weeks since I earned the value of a *traneen*?"

"Then you have been idle all that time!"

"Well, I must say, it's yerself that's the provoking gintleman! D'ye think I sat down in the midst of my small starving childre, to sing ballads! Bedad, I looked afther my paytees, and put in the cabbage plants the coult ate—the devil give him the good of it! Not that I'd wish any harm to a neighbour's baste, only it's a poor case to think, that, instead of the beautiful *heads* I reckoned on, we'll be put off wid nothin' but *sprouts*. And sure I plazed the o'oman, too, in her fancy of what they've put in her head—green mate for the cow."

"Well, and suppose you had not so occupied your time, when you wanted potatoes and cabbages, and green meat for the cow," said Mr Manvers, "you would have been obliged to purchase it."

"Is it buy it, ye mane? Ah, thin, ye're a mighty pleasant gintleman; where would a poor craythur like me get the money?"

"Now," said the gentleman, "Paddy Blake, I have you. If you save money, you make money; if you employ your time in doing what would cost money, you save money; and yet it *is only your time* put out to interest, as it were, that returns you the profits of its industry. Do you understand me?"

"Oh! I see what yer honour's driving at, fast enough," answered Paddy Blake. "But, now, isn't it a poor case to see *a boy* like me, able and willing to work, that can't earn a penny? The o'oman and the childre could manage the bit o' land well enough, and if I had work, I could do as clever and dacent as any boy in the country."

"Much better than you do, undoubtedly; and it is a shame—a sin—a disgrace—to see so much unreclaimed land in Ireland, *and to think that a few thousands expended in employing the peasantry would reclaim it*, and give abundant blessings to the poor, in the way of employment and food. It *is* a shame; but, Paddy," added Mr Manvers, "remember what I said, that a shilling is better than sixpence; so, if you have not got the shilling, the sixpence is better than nothing. You can obtain no sale *for your time*, but you can *occupy* it yourself, and it behoves you to do so more industriously because of your difficulties. You can bestow additional care on your little half acre, or acre, or whatever it is, and make it produce better. A man with a small plot of land, *if he understands the value of time*, can, as I have already said, put it out to good interest. As long as the Almighty leaves the poor Irishman his health, and he is not rack-rented, it is marvellous what he can effect in a small way by industry—patient and steady industry, and attention to time—provided," continued Mr Manvers smiling, "he does not neglect the days of sunshine, and, leaving his little bit of ground unfenced, go scampering over the country, attending to the business of others, consoling himself when the night comes, and his work is still undone, with the exclamation, *Sure it was only my time!*"

"And, sir, would you never have us do a hand's turn for a neighbour?"

"Indeed I would. I have never loved Ireland so well as when I have seen a group of warm-hearted Paddys ——"

"They're a large family, sir," said Blake, smiling in his turn.

"Yes, and a fine one too, for I have seen them assemble by dozens to build a widow's house, to cut a neighbour's turf, to stack a neighbour's corn; to assist those who need assistance is one of the great and guiding principles of Irish life; God bless them for it!" added the Englishman, with a warmth that brought tears into the grey laughing eyes of Paddy Blake; "but that is altogether different from the habit they have of acting upon the saying, '*Sure it's only my time*.' Why, *time*—time, with its innumerable uses—time IS THE ONLY FREEHOLD MAN RECEIVES DIRECT FROM THE ALMIGHTY. I would not have you abstain from assisting a neighbour *because* it occupied your *time*, but I would have you, as the father of a family, consider whether you can spare your time from *that* necessary to their support, and if you did give it, I would have you understand that if you devoted a whole day, you bestowed a shilling, if a half day, sixpence. You need not hurt your friend's feelings by this calculation, but your duty to your family requires you to make it. You Irishmen, rich and poor, do not set sufficient value on your time; your gentry never care how long they keep a poor person waiting, when they could give him an answer at once; and when I tell them of it, they reply, '*Oh, sure it is only his time*;' he may as well wait; he has nothing particular to do.' But *why* has he not? Why don't you either give him work, pay him in a fair proportion for his time, or teach him how to employ it? Above all, set him a good example."

"That's it, sir!" replied Blake, much pleased at the course Mr Manvers's observations had now taken, and glad to escape from them himself. "That's it! they'll keep us waitin' and waitin', dancin' and dancin' afther them, and the *half* gentry altogether expecting twice as much *attintion* as the *whole*; and if we complain, which the heavens above knows we seldom do, we get as much abuse as would cover the rail-road from Dublin to Dunleary."

Mr Manvers looked, and felt sorry, for he knew there was a great deal of truth in this, but he also knew, that if the Irish peasant *felt his own value*, understood and managed his time, and, by so doing, became independent (for a poor man can be as independent as a rich one, if he manages properly), he could stand as erect, and complain of an injury with as great a certainty of redress, as an Englishman. I

wish I may live long enough to see the Irish peasant understand his own value; his doing so will make him a better man, and a better subject.

"Things are better for you than they used to be," observed Mr Manvers; "your children receive education if you choose to permit it; you are taught, or with your natural quickness you can learn without teaching, an improved system of farming; you can make your bit of ground produce three times as much as it did in former days. Prizes are given by agricultural societies to those who do best; Loan Societies* are established; a poor man can have (to him) the large sum of three or five pounds, and return it by *regular* weekly instalments of a few pence; but, Paddy, these good things would produce good *seven* fold, if you knew the *value of time*, and regulated your employments according to that value. Suppose, now, you go to Castle Connel, you leave that fence in so unprotected a state, that the colt or the pigs will be into the garden before you return."

"The o'oman would mind them, now she's aware of it," returned Paddy.

"To do which, she must leave her spinning."

"Well, then, Jim, he's not at the school this afternoon; he can keep them out as well as me, only he's as wild as a young hawk."

"And cannot he do your niece Mary's message?"

"God bless yer honour! you've a long head, so you have; think of my not thinking of that; he can do the message as well as me, and betther, for he's lighter footed. And as this is Sathurday, he'll be home from school, and 'll have a half holiday."

"His time," said the steadfast Englishman, "is of less value than yours; only such a journey will help to wear out his shoes."

Paddy Blake laughed. "Oh! no, God bless you, sir, whinever he's going a walk, he takes off the shoes; that is, *whin he has 'em*, which he hasn't had this two months back, though he soon will, plaze God, from the school, yer honour. He has a power and all of *good marks*; they count for something, and he'll have the price of a pair of brogues out of them one of these days."

"There!" exclaimed the Englishman, exultingly; "there! it is *only his time*, properly employed, that can win him not only education, but reward for diligence! Oh, Paddy Blake, I wish I had you in England for twelve months."

"I'll be happy to gratify or accommodate yer honour by any means in my power," said Paddy, slyly, while taking off his coat to resume his work.

"Very good, Paddy; I should like to show you what a fine family estate TIME is to the whole population. As I told you before, *it is the only freehold that man has direct from the Almighty*, and ought not to be neglected. They know how to employ the phrase 'it's only my time!' in a very different manner to what you do. 'How,' I inquired of a tradesman" ——

"A what, plaze yer honour?" interrupted Paddy.

"A tradesman. 'How is it that I left you a poor workman, and find you a prospering dealer!—had you a fortune left you?'"

"'No, sir,' he answered; '*I had only my time.*'"

"But sure he had the trade, any way," observed Paddy Blake, "and that was something."

"Nothing, unless he had applied *his time* to gain it. You cannot swallow a trade, as you can food; you must *take time* to learn it. One of my own labourers has managed, by industry, by carefulness, by never misapplying but always properly applying his time, to take a small farm."

"Ah, sir!" said poor Paddy, shaking his head, "in England I've heard tell the landlord builds the house, and the tenant gets his bit of ground, be it much or little, in good condition; he is not expected to lay out money on it at all, only keep it as he gets it; and above all, my o'oman heard tell at the big house that there's a *Labourers' Friend Society* in England to look afther the *cottchers*. Oh, if the Lord would put it into some kind Christian's heart to do the same thing here, wouldn't it be a fine thing?"

"So it would," said the benevolent gentleman; "and I assure you there is a great deal of kind feeling towards the Irish peasantry abroad in England."

"You may well say *abroad*, sir," chimed in Paddy; "it's so far *abroad* that it will be long before it *comes home* to us, any way."

"Now, Paddy Blake, do *not* be ungrateful; it is not an Irishman's failing. Your country is improving."

"It is, sir."

"Your condition is improving; I do not mean *your individual* condition, because as yet you do not manage your time as well as you might, nor have you as much employment as you ought to have, but your national condition is improved, and there is a school for your children, there is."

"I know, yer honour; we are better off on the whole than our fathers war; I'll not deny it."

"And will be still better; the constant communication between Ireland and England is of great advantage; the prices you obtain for your eggs, butter, and small merchandise, in that way, is much increased; you are more thought of; and if English capitalists can once be convinced, as I am, that they can live amongst you without danger, and you will resolve to make the best use of *time* and its advantages, why, please God, in a few more years you will be as you ought to be, as the great bulk of the English gentry desire to see you, as remarkable for your prosperity as you are for your ability."

"Many thanks to yer honour; I'll go to the ditch now and send the boy to Castle Connel; he'll be back in less than no time. And sure now I think of it, all Mary wanted of Katty Donovan (that's the o'oman at Castle Connel) was the loan of a 'beatle.'"

"A what?" inquired the Englishman; "a beetle! What can she want of a beetle?—one would think she could catch them in plenty."

"Oh, plaze yer honour, it's a *beatle;* a thing for beating linen—beatleing it in the wather; washing it clane, you know; thrashing the dirt out of it. Sure enough it *was* making little of my time to send me for that—great logs o' wood lying about the door, and Jim Brady the carpenter would make her one for a pinny or tuppence, or for nothing, for sure the wood is there, and *it would be only his*—— But I ax yer honour's pardon; I'll sind word to her to have some sinse, and get Jim Brady to make her a beatle of her own, and give *him a pinny for his time;* will *that* do, sir? And, look now, *does* yer honour see that coult in the far field jist watching till my back's turned that he may begin his *gammocks* agin—thim animals are mighty knowing, like Andy Murphy's pig."

"And what of it?" inquired Mr Manvers.

"It was so knowing, yer honour, it would root the paytees out of the ground and settle the earth afther that, so that if ye war on yer oath, ye couldn't tell where it had been. But there's my poor o'oman, sir, wants to show you her spinning; and she'll plaze ye if I don't, for though she hasn't much rason in her, she makes *much of her time.*"

Mrs Blake was a thrifty Irishwoman. When thrift and industry go hand in hand, they can remove mountains. She had not missed a word of the dialogue I have just recorded, and anticipating "the English gentleman's visit," had set her "little place" in order, and succeeded in getting two out of three of the younger children's faces washed. She dusted the best chair in the house with the corner of her apron, and invited Mr Manvers to be seated. She showed the effects of her industry with evident pride. "She had little time for spinning," she said, "except when the childre were asleep, but she blessed the Almighty he had shown her the value of time, and but for *that*, God knows they'd be bad off; not but Paddy was a good husband—'sorra a better ever broke the world's bread'—but 'he was too soft*' in himself intirely; too good-hearted; not a fault had he in the world but *that* one. Sure she thanked God it was no other, for, sure, every man must have some fault. He did a dale with *his time*, when he was let alone, but the neighbours knew how *'easy-going*, what a *knock-softly* he was, and played on him. He'd be sure to mend, now that his honour had took such pains to show him the rights of it, God bless him! Time was a fine thing, now that she had it set *afore* her; it was wonderful to see how it changed every thing, and while it took the beauty from the cheek, put wisdom into the head." She hoped also "it increased the fear o' God in the heart. Sure time was one of the Almighty's miracles." She would pray "to the Lord to forgive her for having thrown away so much of it, whin his honour had so clearly proved to any one of common sinse that mate, drink, and clothing, could be wove out of it! She'd set Kathleen to card flax to-morrow afther school hours, and sure that would save *her own time*, for while the little girl was carding, she could be spinning—and tache little Shelah to knit *ever*-hours: supposing she only began with garters, it was something. Sure that *would save her time*, and blind Abel would tache the twins to make baskets; that would turn a penny: and the two big boys could gather rushes and switches. And more she would do—and—sure—God look down upon his honour! She would strive to hinder any one belonging to her from saying or thinking, 'Sure it's only my time!'"

* I was greatly pleased to see one of those set on foot by Browne Clayton, Esq., near New Ross, and close to the unfortunate barn of Scullabogue. At that time, the autumn of 1838, it worked well, and in that spot was a beautiful type of Christianity—returning good for evil.

* Gentle, good-natured.

THE COLONY OF METTRAY.

BY GIBBONS MERLE.

THE colony of Mettray, or great juvenile penitentiary of France, no account of which has ever been presented in this country, is situated at a league from Tours, in the finest climate of the south-west of the kingdom, and in the centre of a population remarkable for the mildness and probity of its character. It is at present quite in its infancy, and but few buildings are erected; but when completed, it will be of an oval form, with a handsome central house commanding a view of a large number of detached buildings, each of which is to contain fifteen youths and their director (contre-maître). As the estate in which this establishment is situated is extensive, and the property of the Viscount de Bretignières, who is one of the founders, the number of youths will not be limited, for in proportion with the success of the experiment new buildings will be erected. At first, however, it is proposed to commence with about sixty, who are to be supplied from the prisons of Paris, or those of the department of the Indre et Loire. The youths who are to act as teachers or directors over the different families of colonists, have not been confined in any prison, but have, on the contrary, been chosen from respectable families, and have had no stain upon their own character. It was considered essential that, in the first instance, where example is of so much importance, the teachers should be respectable; but as the establishment goes on, the care of the different classes or families will be entrusted to the most exemplary among the reformed criminals. Equal care has been taken that the first colonists shall be youths who have been guilty only of slight offences, and whose minds have not been entirely corrupted by a long residence in prisons in which the separation system is not adopted. The founders of this colony intend for the present, at least, that it shall be entirely agricultural as to its objects; and they assign as the grounds for this arrangement, that as the towns in which manufactories are carried on, are crowded with a vicious population, their young colonists would, when dismissed, either experience difficulty in procuring occupation, or be exposed to the demoralising influence of improper persons. It is not intended, however, that they shall receive only the instruction necessary to enable them to cultivate the land as their means of subsistence, but that such of them as may show the greatest aptitude for the manufacturing arts which are in request in agricultural districts, shall have all the advantages of good training for those pursuits. Opinion seems to have been much divided amongst the founders and promoters of the colony upon this particular point, and I believe that the general consent as to its being exclusively an agricultural colony, was only obtained upon the understanding that this exclusiveness shall be departed from, if a few experiments should prove that it may be generalised without inconvenience. Connected with the buildings are gardens and grounds, and there is also a farm of sixty acres, which is to be used when the number of colonists shall render it necessary.

The colony will be under the government of a committee of twenty members, chosen from amongst the most eminent of its founders and promoters, and having for its president M. Gasparin, a peer of France, who has distinguished himself by his patronage of many useful and philanthropic institutions. The committee have decided that before any youth can be received from the prisons, the school of monitors, or *Ecole des Contre-Maîtres*, shall be in a perfect state. It has already commenced, and consists of twenty-five youths, of from twelve to eighteen years of age. The building in which they are placed is within fifty yards of the Chateau of the Viscount de Bretignières, who shares with M. Demetz, the original projector, the direction of the establishment; whilst the viscountess, with a zeal worthy of imitation by other members of the aristocracy, takes delight in the prospect of watching over the domestic comforts of the young colonists. A friend of mine, Dr Harrison Black, who lately paid a visit to the colony, informs me that this lady, who is still in the prime of life, assured him almost with tears in her eyes that she had never tasted of real happiness until she associated herself in the benevolent labours of her husband. To aid in the reformation of society—to turn from the paths of vice the poor children who must otherwise become hardened criminals—and to guide them to virtue and the means of honourable subsistence—is an occupation of which she may indeed well be proud. I would say to those dames of the aristocracy, who, in spite of the thousand schemes devised by the class to which they belong to command enjoyment, still find a void in

Digitized by Google

their minds—who exchange their fortunes for what the world calls pleasure, and are still not pleased—who pay dear for happiness and are not happy—who have balls and routs to cheer them, and yet are not cheered—to such as these I would pronounce the name of de Bretignières, and say, "Go thou and do likewise."

The expense of supporting the colonists at Mettray has been calculated at 160 francs per head per annum, which is much less than the expense to the government of maintaining them in prison, and it is hoped that their labour in the colony will after a short time cover the expense which they may occasion. The sum required from the government or the departments which may send young offenders from their prisons to the colony, is sixty centimes (sixpence) per day, which would, supposing that there are to be 300 colonists, as that is the number on which the estimate of 160 francs per annum is founded, give a profit to the establishment of 59 francs each per annum, to cover building and general expenses. The government has adopted this charge of sixty centimes per day, and has ordered a certain number of young offenders to be sent to the colony at that rate; but it will of course be reduced, if the success of the establishment should admit of reduction. The amount demanded from the government by the society was only fifty centimes per day, but this sum was considered by the Minister of the Interior as too small, and he proposed sixty centimes. There is every reason to believe, that if this first experiment should turn out well, the government will propose to the Chambers an annual grant for the parent colony of Mettray, and any others to which it may give rise. At present the government has done nothing more than engaged to send a certain number of persons at the sixty centimes a-day, unless we are to consider the present of a fire-engine to the establishment in the light of an encouragement. It is intended that the colonists of Mettray shall once a-week exercise themselves in the use of this engine, and in the event of any fire occurring within their reach, that they shall perform the service which in large towns is executed by the regular organised force of *sapeurs et pompiers*. This is a judicious arrangement, for it will have the double effect of giving to these poor outcasts the sentiment of their being of value in society, and will cause them to be looked upon with favour by those whom they may be able to assist.

With the view of providing a fund for the young colonists when discharged, it has been decided that about one-third of their entire earnings in the colony shall be put aside as a reserve fund, which is to be paid to them on their leaving; and as within the immediate neighbourhood of Mettray there are two or three manufactories, the proprietors of which have promised to employ them a certain number of hours daily, added to the fact that they will be taught to manufacture in the colony itself the various articles which are required in country districts, such as wheels, agricultural instruments, wine casks, &c., it is hoped that when their time is expired, they will have a sum of money sufficient to place them for some time above the reach of want, even if they should not immediately get into occupations. But the most important encouragement held out to them is the intention of M. de Bretignières to divide his property into small farms, and to let them to the most deserving of the colonists. Deserving young men will thus have an opportunity of establishing themselves; and when the first prejudice arising from their former condition shall be removed, they may marry advantageously in the district in which they are placed. Further, for the obliteration of feelings of disesteem in their own minds, it is intended that a certain number shall be annually removed from their classes into the school of monitors. Thus, in a single year, a certain number of the young criminals must exchange their condition according to their own good conduct, and in the event of other colonies being formed, the number of *contre-maitres* that will be required will be so large that there will be no difficulty in providing for the deserving, even in the second and third degree.

The society intend strictly to limit the number of colonists to those children who are ordered by the tribunals to detention, as having offended the laws without a knowledge that they had committed a crime. The committee in this respect seems rather to have given way to necessity than reason, for the law has laid down very imperfect rules as to offences committed by youth, with or without discernment. In France, all children under sixteen years of age may be acquitted on the ground of having acted without discernment, but unless claimed by their parents or friends, they are ordered to be detained in prison for any period of time up to the age of twenty, and in the majority of cases they are ordered to remain for the whole time.

The *Gazette des Tribunaux* gives a curious instance of the absurdity of this law. A boy was charged with having stolen a pair of trousers from another lad. When brought before the tribunal, and asked what his age was, "Ah," says he, "I know what you mean; you want to shut me up for four years, but it wont do. I know the law; and when I was on the point of stealing the trousers, I recollected I was not quite sixteen, and so I waited a few days; and I can now prove that when I committed the theft I was sixteen years and five days old." Now, here was a case which showed the existence of a moral turpitude, requiring the strong hand of correction. Four years of penitentiary discipline might not have been too much for this lad. The tribunal, however, sentenced him to twelve months, a sentence which was considered severe as to the nature of the crime; but if he had been under sixteen years of age, having no parents to claim him, he would, if acquitted on the ground of having acted without discernment, have been imprisoned for four years.

A few months ago, a boy eleven years of age was tried in France, upon his own confession of having stolen some rabbits from a neighbour. Now, according to the law, this boy might either have been convicted of the offence, and imprisoned as having acted with discernment, or acquitted as having acted without discernment; for although the jury have the power of returning a verdict of *sans discernment* when the prisoner is under sixteen, they are not compelled to do so. This child, if acquitted, could have been shut up, if not claimed by his parents, for nine years. It appeared, however, on the trial, and that by mere chance, that he had not committed the offence. His parents being exceedingly poor, and almost unable to obtain bread for his little brothers and sisters, he resolved that there should be one mouth less to feed; and having heard that a robbery had been committed, the perpetrators of which could not be discovered, he denounced himself. The mayor of the district in which the offence was committed, came forward and undertook, in the event of his acquittal, to provide for this interesting lad. We may be permitted here, *en passant*, to remark on the awful state of society which brings an innocent child to denounce himself as guilty of a crime, because his poor and industrious parents are not able with all their exertions to provide him with bread.

No females are to be received in the colony of Mettray, until the experiment shall have been fully tried upon boys. Should this experiment succeed, however, it is intended to erect another colony immediately adjoining that of the male youths, taking care of course that there shall be no communication; and the females are to be employed in washing for the boys, making and mending their linen, and in other useful occupations, which will enable the committee out of their earnings to lay by a sum for their benefit when their time shall have expired. I have not yet been able to ascertain what is the intention of the government as to the length of time during which the colonists are to remain at Mettray. I can hardly suppose that it will be rigorously required that they should there complete the whole period of their detention by order of the tribunals; the specific object being in all cases simply the reformation of the offenders.

The printed rules of the society state, that the boys who may be entrusted to their charge are to receive moral and religious instruction, and what is called primary education, and that they are to be taught some handicraft occupation connected with agriculture. By religious instruction, it is meant that they shall be brought up according to the Roman Catholic faith; and as a proof of this, a Roman Catholic chaplain is appointed to the establishment. In a country where freedom of faith has been established by constitutional charter, and where, although the Roman Catholic religion has been declared to be that of the majority of the nation, it is not the religion of the state, this exclusiveness in the colony of Mettray is calculated to detract from the general credit of the institution; but every allowance must be made for the obstacles which the founders have had to encounter. The Roman Catholic clergy in France, although not of the same influential character in society as the clergy of the established church in England, are still a powerful body, and it was essential to propitiate their good will in an institution of this nature. Moral instruction is the great object in the first instance, and the committee will take care that such instruction be not obscured or perverted by the religious dogmas of any church.

Under the head of attributes of the different officers of the colony, we find the following in the printed rules:—

The personnel will consist of a director, a chaplain, a schoolmaster, three females (*sœurs hospitalières*), an inspector of works, and twelve foremen or chiefs (*contre-maîtres*), to three hundred colonists, two servingmen, a gate-keeper, and a physician.

The *sœurs* will attend to the infirmary and all the domestic details of the establishment. The inspector will superintend the labour of the colonists under the orders of the director, and the contre-maitres will be held responsible for the conduct of the colonists in their respective divisions. They are to study the character of each, and report upon it to the inspector.

Amongst the regulations for the colonists we find it stated, that when first admitted, they are to be kept apart, until, by their good conduct, they shall have shown that they are worthy of joining with those who wear the uniform of the colony. When this proof shall have been given, they are to wear the uniform, and mix with the mass in their studies, labours, and recreations.

The food for each colonist is to be daily, on the week days, one pound and a half of bread made of wheat and rye flour, in the proportion of one part rye to two parts wheat flour, to be divided into four equal portions for breakfast, luncheon, dinner, and supper. For dinner on the week days, with the exception of Thursday, each colonist is to have a quart of *soupe maigre*, in which there shall be four pounds of wheaten bread to every twenty-five persons, and the necessary quantity of vegetables. Vegetables are also to be served separately at dinner and supper. On Sundays and Thursdays the *soupe maigre* is to be replaced by a small quantity of *soupe grasse* (made with meat), and two ounces and a half of meat without bone to each individual. Water is to be the only beverage. Appended to this regulation of diet I find the following note:—"The committee, avoiding mistaken notions of humanity, have considered it right in the interest of the public, and in the strict principles of social justice, that the food of the children of the colony should not be better than that of poor children residing with their families. The same principle will be applied in every thing except moral instruction, to which too great a developement cannot be given." In clothing, each colonist will receive a stout woollen cloth jacket and trousers, a jacket of coarse linen cloth, and two pairs of trousers of the same material, a linen or cotton blouse, two leather stocks, a felt or leather hat, a straw hat or a cap, three coarse linen or cotton shirts, two cotton caps, two pairs of cloth socks, two pairs of cloth half gaiters, one pair of braces, three pocket handkerchiefs, two aprons, and one pair of stout shoes. The following note accompanies this article of the regulations:—"If it be objected that his clothing is too common, and that such things as stockings and waistcoats might be added, it may be replied, that even upon the above list, there might be omissions, without withholding what is strictly necessary; for it results from information collected in many communes of the department of Indre et Loire, that in general the average expenditure of a peasant for clothing does not amount, including every article, to forty francs a-year." The bedding consists of an iron bedstead, a wool mattrass weighing twelve pounds, a flock bolster, a pair of coarse linen sheets, and a cotton counterpane, with the addition of a blanket in winter. The committee observe that they have purposely limited the instruction to the subjects ordered by the law of 1834 for primary schools, in order that the colonists may not, by receiving a superior education, acquire ideas incompatible with their probable destiny.

Such is a brief sketch of what may be considered a very interesting movement for the melioration of criminal punishment in France, and reclaiming to society a host of youths who would otherwise most likely go on from step to step in villany, and ultimately either expiate their offences on the scaffold, or perish in the criminal jails of the country.

FOREIGN AND BRITISH PICTURES.

We perceive in a late number of the "Art-Union, or Monthly Journal of the Arts," a rather curious statement respecting the importation of foreign pictures into Britain. It appears that from Italy, Holland, Belgium, and Germany, as reported in a return from the Custom-house, there were 7050 pictures imported in 1833; 7459, in 1834; 7591, in 1835; 10,421, in 1836; 6637, in 1837; and 6484, in 1838—making a total of 45,642 pictures in six years, and yielding a duty to government of L.12,108, 4s. 7d. "We did not (continues the writer of the article) consider it necessary to procure returns of the number of pictures imported from France and the other nations of the continent; but if we add to the above only a comparatively small amount of import, we shall arrive at the conclusion, that every year brings into England 3000 pictures, to be sold and distributed; and which, unquestionably, are sold and distributed. Now, it is assumed, as matter of course, that of these 3000, there may be 200 true pictures, which bring large prices, and find their way into the collections of connoisseurs; the remaining 2800 are miserable copies, desired only by persons who seek to furnish their walls, and are *for the present* content to supply A WANT upon easy terms. They are chiefly the produce of Flemish youths, copies from old masters, painted by direction of their tutors, and disposed of by these tutors to itinerant dealers, for little more than the cost of the canvass—which, by the way, is not subjected to A TAX, as it is with us. They are then fitted into ungainly and ungraceful frames—the older the better, or, if new, made to seem old—and shipped off to England—the worthy Hollanders considering them good enough for us. The duty paid at the Custom-house is merely nominal—one shilling for each picture, and one shilling per square foot of canvass. If, therefore, the 'Cuyps,' 'da Hooges,' and 'Ruysdaels,' including the frames, bring five or six guineas each, the speculator has made a profitable harvest, and prepares for another trip. Perhaps he goes to Italy, where studious lads are in abundance; and brings over a cargo of 'Raphaels,' 'Canalettis,' and 'Titians,' upon which to exercise the eloquence of some famous auctioneer. The business of preparation is easily learned—the process of making them aged is the work of a day; but this is a topic requiring more space than we can at present afford it; we may hereafter take occasion to illustrate this article, by some explanations concerning the tricks of a trade, notorious for resorting to them.

It is clear, then, that these 2800 pictures displace a proportionate number of works by our own artists. The evil demands a remedy. A very simple one is at hand. Let a large, and not a nominal, duty be levied upon all works entering England, except such as are produced by our own artists abroad; pictures of a genuine character, and of a high value, will not be prejudiced by it; it cannot add so materially to the cost of a true picture, as to prevent its transmission hither for sale; but it would altogether exclude from the market the miserable daubs which are sent to this country to pick our pockets, and, worse, to pervert our tastes."

The writer proceeds to make some further remarks on the impropriety of admitting foreign pictures into Britain at a low rate of duty, but on this point we entirely differ

Digitized by Google

from him. We say, let the traffic in pictures, like that of every thing else, be *perfectly free*. Let every one be at liberty to purchase foreign or British pictures as suits his taste and fancy, and the fair competition which ensues from such an arrangement will stimulate our artists to excel in their profession, and if possible to beat foreigners out of the market. We cannot agree with the writer that the present free trade in the article deluges the country with bad pictures. In general, the foreign pictures which are imported, laying aside the question of the deception of which they are the subject, are superior to those of native production at the same price. On a late occasion we purchased a Dutch picture by Offermans of the Hague, for L.10, 10s., and we feel quite certain that far inferior pictures are marked at fifty guineas in the annual exhibitions of British artists.

It is, we think, of the utmost importance to art, that the people of every country should see specimens of the productions of their neighbours; nothing being so effectual in breaking down local and personal prejudices. For example, there can be no doubt that art would be prodigiously improved in Edinburgh by the free exhibition of pictures from England, let alone continental productions, and that England might be similarly benefited by the public show of works of modern foreign artists; while Ireland, in its turn, may be advanced by the importation of pictures from all parts together. In fact, as long as each portion of the United Kingdom jealously excludes pictures from its neighbours, and all together exclude (from public exhibitions) works of respectable foreign painters, art must continue on a narrow and paltry footing, unworthy of the great and opulent people by whom it is expected to be supported.

THE WANDERING JEW.

THERE is something so striking and impressive in the idea of a human creature being doomed to wander perpetually over the earth, restless and without hope of rest, deprived of the prospect of peace which the grave holds out to all other terrestrial beings, fated to outlive every social tie, and to see generation after generation, of descendants it may be, passing away successively from before his eyes—there is something so striking in the idea of such a lot, that it is no wonder mankind should have had their interest strongly excited by the legend of the Wandering Jew, and that the subject should have been a favourite one with the lovers of poetry and romance. To fanaticism and imposture, the fiction has held out equal temptations. At various periods since the commencement of the Christian era, individuals have assumed the character of the Wandering Jew, and have succeeded in attracting notice, and gaining credence, to a greater or less extent, from their wondering contemporaries.

It is extremely probable that this legend had its origin in the words used by Christ to the Apostle Peter, on the latter asking what would become of John, the disciple whom Jesus loved. The answer was, "If I will that he tarry till I come, what is that to thee?" In consequence of this expression, we are told, "the saying went abroad among the brethren, that that disciple should *not die*." Although it is expressly pointed out, in the remainder of the same passage, that the language of Christ could not properly bear any such meaning, yet the conclusion of "the brethren," strangely modified and misapplied, seems to have been adopted by the primitive Christians, to have become intermingled with their traditions, and finally to have taken the form of the legend of the Wandering Jew. This, in its early or original shape, is detailed by Matthew Paris, monk of St Albans, who flourished in the thirteenth century. The story was current before his day, in England and elsewhere, but he was probably the first who regularly chronicled all the particulars. In 1228, the monk informs us, an Armenian archbishop came to England, to visit the shrines and relics preserved in our churches. Being entertained at the monastery of St Albans, this ecclesiastical dignitary was anxiously interrogated as to the religious condition of his country, and, among other questions, a monk who sat near him inquired "if he had ever seen or heard of the famous person named Joseph, who was so much talked of, and who had been present at our Lord's crucifixion and conversed with him, and who was still alive in confirmation of the Christian faith." The archbishop answered, that "the circumstances were all true;" and, afterwards, one of his train, interpreting the archbishop's words, told them in French that his lord knew the person they spoke of very well, that the latter had dined with his lord but a little while before they left the east, that the man had been Pontius Pilate's porter, by name Cartaphilus, who, when they were dragging Jesus out of the door of the Judgment Hall, struck him with his fist on the back, saying, "Go faster, Jesus, go faster; why dost thou linger?" Upon which Jesus looked at him with a frown, and said, "I indeed am going, but THOU SHALT TARRY TILL I COME!" Soon after this event, Cartaphilus, by his own account, was converted and baptised by the name of Joseph. He lives for ever, but at the end of every hundred years he falls into a severe illness, and ultimately into a fit or trance, on recovering from which he finds himself in the same state of youth which he was in when Jesus suffered, being then about thirty years of age. He remembers all the circumstances attending the crucifixion and resurrection, the composing of the apostles' creed, their preaching and dispersion, and is himself a very grave and holy person.

Such is the story of the Wandering Jew, as told by Matthew Paris, who was alive at the time of the Armenian's visit to St Albans, and who, there can be no doubt, relates the circumstances as they came from the mouths of the strangers. The deception lay, it is probable, not with the Armenians, but with the party who had passed himself off upon them as the porter of Pontius Pilate, thereby ensuring much good entertainment, doubtless, as well as unbounded reverence, from the followers of the church in the east. As Pythagoras, a very wise and clear-headed man, entertained the notion of his having personally gone through several existences on earth, so it is possible that the Wandering Jew of the Armenian archbishop may himself have laboured under a delusion. But the probability is on the other side, and the same conclusion may be drawn, without much uncharitableness, respecting the numerous persons who at later periods have personated the erratic Hebrew. There were considerable variations in the stories which these persons told of themselves. For example, one who appeared at Hamburgh about the year 1547, declared himself to have been a *shoemaker* in Jerusalem at the time of the crucifixion. A ballad, quoted by Bishop Percy from the Pepys Collection, details the particulars of this Hamburgh impostor's narrative. The following verses give the main thread of the story:—

When as in faire Jerusalem
Our Saviour Christ did live,
And for the sins of all the worlde
His own dear life did give;

The wicked Jews with scoffes and scornes
Did daily him molest,
That never till he left his life,
Our Saviour could get rest.

When they had crowned his head with thornes,
And scourged him to disgrace,
In scornful sort they led him forthe
Unto his dying place:

His own dear cross he bore himselfe,
A burthen far too great,
Which made him in the street to faint,
With blood and water sweat.

Being wearye thus, he sought for rest,
To ease his burthened soule,
Upon a stone; the which a wretch
Did churlishly controul;

And sayd, "Awaye, thou king of Jews,
Thou shalt not rest thee here!
Pass on: thy execution place,
Thou seest, nowe draweth neare."

And thereupon he thrust him thence;
At which our Saviour sayd,
"I sure will *rest*, but *thou shalt walk*,
And have no journey stayed."

From this hour forward, the ballad continues to say, this "cursed shoemaker" could find no peace any where, and finally, being brought to conviction by his own fate, became a convert and a witness for the religion of him who had pronounced his doom.

He hath past through many a foreigne place,
Arabia, Egypt, Africa,
Greece, Syria, and great Thrace,
And throughout all Hungaria:

And lately in Bohemia,
With many a German towne;
And now in Flanders, as 'tis thought,
He wand'reth up and downe.

Where learned men with him conferre,
Of those his lingering dayes,
And wonder much to hear him tell
His journeyes and his wayes.

All the alms given to him (the ballad further says) he gave to the poor, and no man ever saw laugh or smile upon his face.

The conferences with learned men mentioned in the ballad are no fiction of the minstrel's brain, as we learn from the work called the Turkish Spy, where an account is given of the impression made on the Parisian *savants* by the appearance among them of another Wandering Jew. Though the plan of this work is fictitious, like that of the Citizen of the World for example, yet the incidents narrated in it are in most instances real, and such is the case with the following story of the Wandering Jew, who figured in Paris about the year 1643. "Here is a man come to this city, if he may be called a man, who pretends to have lived about these sixteen hundred years. He says of himself, that he was usher of the divan (the Jews call it the court of judgment) in Jerusalem at the time when Jesus, the Christian Messias, was condemned by Pontius Pilate, the Roman president; that his name was *Michob-Ader*; and that, for thrusting Jesus out of the hall, with these words, 'Go, why tarriest thou?' the Messias answered him again, 'I go, but tarry thou till I come,' thereby condemning him to live till the day of judgment." Such was the account given by this personage of himself. He affected to heal diseases by a touch, and was deeply venerated both by the common people and others. "One day (says the Turkish Spy) I had the curiosity to discourse with him in several languages, and I found him master of all those that I could speak. He told me that there was scarce a true history to be found. He was in Rome, he said, when Nero set fire to the city, and saw him stand triumphing on the top of a hill to behold its flames. He saw Saladin's return from his conquest in the East, when he caused his shirt to be carried on the top of a spear with this proclamation: 'Saladin, lord of many rich countries, shall have no memorial left of all his glories when he dies but only this poor shirt.' He knew Tamerlane the Scythian, and told me that he was so called because he was lame. He seemed to pity the insupportable calamity of Bajazet, whom he had seen carried about in a cage by Tamerlane's order. He knew Mahomet's father very well, and had been often in his company at Ormus. He had heard the emperor Vespasian say, when he understood the temple of Solomon was burnt to ashes, 'he had rather all Rome had been set on fire.' Here the old man fell a-weeping himself, lamenting the ruin of that noble structure, which he described to me as familiarly as if he had seen it but yesterday."

This was, the reader will admit, a goodly range of experience for any one to lay claim to. The appearance of this personator of the Wandering Jew corresponded with his assumptions. "By his looks one would take him for a relic of the old world, or one of the long-lived fathers before the flood. To speak modestly, he may pass for the younger brother of Time."

Another Wandering Jew, and one of equal learning, seems to have excited the wonder of the people of Venice, in the year 1687. This new one was more remarkable than the others, in as far as he is said to have made no boast of his antiquity, but to have felt hurt, on the contrary, when it was accidentally discovered. "This personage (says the author of Hermippus Redivivus) went by the name of Signor Gualdi. He remained at Venice some months, and three things were remarked in his conduct. The first was, that he had a small collection of fine pictures, which he readily showed to any body that desired it; the next, that he was perfectly versed in all arts and sciences, and spoke on every subject with such readiness and sagacity, as astonished all who heard him; and it was in the third place observed that he never wrote or received any letter; never desired any credit, or made use of bills of exchange, but paid for every thing in ready money, and lived decently, though not in splendour." The story then goes on to tell that a Venetian nobleman, an admirable judge of paintings, was admitted to see Gualdi's collection, and admired them excessively. At the close of the visit the nobleman "cast his eye by chance over the chamber-door, where hung a picture of this stranger (Gualdi). The Venetian looked upon it, and then upon him. 'This picture was drawn for you, sir,' says he to Signor Gualdi, to which the other made no answer but by a low bow. 'You look,' continued the Venetian, 'like a man of fifty, and yet I know this picture to be of the hand of Titian, who has been dead one hundred and thirty years. How is this possible?' 'It is not easy,' said Signor Gualdi, gravely, 'to know all things that are possible; but there is certainly no crime in my being like a picture drawn by Titian.' The Venetian easily perceived, by his manner of speaking, that he had given the stranger offence, and therefore took his leave." The issue of the affair was, that the Venetian told the matter to all his friends. Curiosity was aroused, and various parties went to call upon Gualdi. They were disappointed, however; the stranger had left the city, and was never seen again.

Of course, the world of Venice came to the conclusion that this personage could be none else but the Wandering Jew, or a philosopher who had been fortunate enough to discover the elixir of life. The matter is certainly capable of a much easier solution, however, and Gualdi's own words afford a ready clue to it. It was on this story, Godwin tells us, that he founded his novel of St Leon, a work of great power and beauty. We have already mentioned the existence of numerous works of fiction which have a similar basis. Of all these, the most interesting, perhaps, is the Reverend George Croly's tale of *Salathiel*. Mrs Norton's poem of the Undying One deserves especial mention, also, among the compositions which this legend has suggested.

Those readers who are not wearied by this subject will find other impostors who have personated this imaginary Wanderer, pointed out in Calmet's Dictionary of the Bible. In the mean time, we shall conclude by quoting a little piece upon this subject from the French poet Beranger, using a version which appears in the "Minor Morals" of Dr Bowring.

One glass of water, Christian true!
To him that's weary—gracious Heaven
Reward thee—I'm the Wandering Jew,
By the eternal whirlwind driven;
By years not worn, but sore oppress,
And longing for the judgment day,
Praying for rest, to find no rest,
Cursing each morn's returning ray.
Ever, ever
Earth revolves, I rest me never—
Ever wandering—ever, ever.

And eighteen centuries now have sped
On the dark wrecks of Rome and Greece;
I have seen the ashes scattered
Of thousand shifting dynasties;
Seen good, unfruitful good, and ill
Prolific, while the tempest roll'd;
Seen two new worlds the circle fill
Which one world occupied of old.
Ever, ever,
Earth revolves—I rest me never.

The ceaseless change is Heaven's decree—
On dying things I fix my heart,
And scarce I love them ardently
Ere the wild whirlwind cries, "Depart!"
The poor man asks relief—my hand
Is stretched the debt of love to pay—
But ere sweet charity's demand
Is granted, I am whirl'd away—
Ever, ever.

Digitized by Google

On the soft grass, in flow'rets drest,
Near the fresh stream beneath the tree,
If from my misery I would rest,
The whirlwind howls and summons me.
O why should angry Heaven deny
One moment---one of sweet repose?
For were the grave eternity,
It would not rest me from my woes---
Ever, ever.

Those laughing girls, those sporting boys,
Remind me of mine own at play;
My heart would revel in their joys---
The whirlwind hurries me away.
Ye old, who die, O envy not
My miserable fate forlorn;
For I must tread upon the spot
Where yet shall sleep the child unborn---
Ever, ever.

I seek the venerable walls
Which in my early youth I knew---
I stop---the eternal whirlwind calls,
Tyrannic, "Onwards, onwards, Jew!
Onwards! Exist while all around
Is perishing; in this thy home---
Where all thy forefathers have found
A tomb---for thee there is no tomb;"
Ever, ever.

A cruel smile of scorn and hate
I at the godlike Jesus threw.
The earth is shaking 'neath my feet,
The whirlwind drives me on---adieu!
Ye pitiless, O tremble when
Ye think of me---the wretched me;
God in my fate avenges men
But not his own divinity---
Ever, ever.
Earth revolves, I rest me never---
Ever wandering---ever, ever.

NOTICES OF MONTHLY AND QUARTERLY JOURNALS.

[In consequence of a wish which they have frequently heard expressed, and in the hope of adding a feature of interest to their work, the editors have lately made arrangements, by which they expect to be enabled for the future to present occasionally a critical article on some new book. They beg it to be understood, that they design on no occasion to notice books of which they would be obliged in conscience to speak unfavourably, but only such as they think possessed of sufficient value, or written with sufficient talent, to be entitled to commendation. The reader will therefore not look here for the severe and sarcastic remarks which give much criticism its only interest, but only for descriptions of books which it is conceived have some claims on the respectful notice of the public. One feature of their plan is to admit occasionally notices of periodical works, avoiding all reference to the politics now so eagerly debated in them. The article which follows, is one relating to two of the principal periodicals of a late date.]

BLACKWOOD'S MAGAZINE for January 1840 opens with an interesting paper on one of the numberless comedies of Spain, Calderon's "Goblin Lady." There is much sameness in the plot-work of the Spanish dramas; but they are far from being deficient in spirit and humour, and this is well shown in the rhythmical translations which accompany the sketch here presented. "Goethe's Life and Works," "Thoughts on Asses," a paper entitled "Hints on History," with some poetical pieces, fill up the body of the number. All of these are more or less characterised by talent—a feature in which the contents of this journal are seldom deficient—but there are two other papers which require more especial mention. One of these, an article on "The Essenes," contains some novel and ingenious views respecting that remarkable Jewish sect, whose character and sentiments, as depicted by Josephus, have, as is well known, created much speculation in the Christian world. The writer of the paper before us holds, that Josephus meant to describe the Christians under that name. As the old Hebrew historian's slighting notice of the Christian faith and followers, or rather his silence regarding them, has been a matter of marvel and regret, the opinions advanced in the paper on the Essenes assume a very peculiar interest. We shall content ourselves with saying, that the question is ably discussed in Blackwood, and that the article well deserves a reading.

Decidedly the cardinal article of the number is the fourth paper of the series entitled "Ten Thousand a-Year," which is now suspected to be an attempt in a new manner by the author of the well-remembered Diary of a Physician." It is not only, if the public suspicion be correct, a new attempt by that author, but an absolute novelty in fictitious literature, the hero being the reverse in all respects of ordinary heroes, namely, a mean, brainless, selfish varlet, yet nevertheless, from the extraordinary power of the writer, a personage in whom it is impossible not to feel some interest. While occupying the humble station of a shopman in a draper's establishment in Oxford Street, a prospect opens to him of a succession to ten thousand a-year; and, instantly from being despised by all, his master included, he becomes an object of universal homage and adulation. The physician's series was not more remarkable for tragic, than this is for comic power; in proof of which, we cannot resist the temptation to extract a short passage respecting an attempt of the hero, Titmouse, to dye his hair. He has, it must be understood, gone to a shop in Bond Street, to purchase a certain divine fluid, styled the *Cyanochaitanthropopion*, with which to transform his carroty locks into dark tresses. He receives the bottle containing it from a gentleman-like man sitting behind the counter, with jet-black hair, which, he says, was once of light colour, but had been changed by the fluid. Titmouse is assured the change will be effected in two or three days. He goes home—he rubs his hair for hours with the fluid, in his extreme eagerness to make it succeed—he goes to bed, and dreams a rapturous dream, that he bowed to a gentleman with coal-black hair, whom he fancied he had seen before, and suddenly discovered that he was only looking at himself in a glass.

"This woke him. Up he jumped, and in a trice was standing before his little glass. He almost dropped down dead! his hair was perfectly *green*—there could be no mistake about it. He stood staring in the glass in speechless horror, his eyes and mouth distended to their utmost, for several minutes. Then he threw himself on the bed, and felt fainting. Up he presently jumped again—rubbed his hair desperately and wildly about—again looked into the glass—there it was, rougher than before; but eyebrows, whiskers, and head—all were, if any thing, of a more vivid and brilliant green. Despair came over him. What had all his troubles been to this? what was to become of him? He got into bed again, and burst into a perspiration. Two or three times he got in and out of bed, to look at himself again—on each occasion deriving only more terrible confirmation than before of the disaster that had befallen him. After lying still for some minutes, he got out of bed, and kneeling down, tried to pray; but it was in vain—and he rose half choked. It was plain he must have his head shaved, and wear a wig—that was making an old man of him at once. Getting more and more disturbed in his mind, he dressed himself, half determined on starting off to Bond Street, and breaking every pane of glass in the shop window of the cruel impostor who had sold him the liquid that had so frightfully disfigured him. As he stood thus irresolute, he heard the step of Mrs Squallop approaching his door, and recollected that he had ordered her to bring up his tea-kettle about that time. Having no time to take his clothes off, he thought the best thing he could do would be to pop into bed again, draw his nightcap down to his ears and eyebrows, pretend to be asleep, and, turning his back towards the door, have a chance of escaping the observation of his landlady. No sooner thought of than done. Into bed he jumped, and drew the clothes over him—not aware, however, that in his hurry he had left his legs, with boots and trousers on, exposed to view—an unusual spectacle to his landlady, who had, in fact, scarcely ever known him in bed at so late an hour before. He lay as still as a mouse. Mrs Squallop, after glancing at his legs, happening to direct her eyes towards the window, beheld a small phial, only half of whose dark contents was remaining—of course it was POISON. In a sudden fright she dropped the kettle, plucked the clothes off the trembling Titmouse, and cried out, 'Oh, Mr Titmouse! Mr Titmouse! what have you been' ——

'Well, ma'am, what do you mean? How dare you' —— commenced Titmouse, suddenly sitting up, and looking furiously at Mrs Squallop. A pretty figure he was. He had all his day-clothes on; a white cotton nightcap was drawn down to his very eyes, like a man going to be hanged; his face was very pale, and his whiskers were of a bright green colour.

'Lord a-mighty!' exclaimed Mrs Squallop, faintly, the moment that this strange apparition presented itself; and, sinking on the chair, she pointed with a dismayed air to the ominous-looking object standing on the window shelf. Titmouse from that supposed she had found it all out. 'Well, *isn't* it a shame, Mrs Squallop?' said he, getting off the bed, and, plucking off his nightcap, exhibited the full extent of his misfortune. 'What d'ye think of that!' he exclaimed, staring wildly at her. Mrs Squallop gave a faint shriek, turned her head aside, and motioned him away.

'I shall go mad—I shall'——

'Oh!—oh!' groaned Mrs Squallop, evidently expecting him to leap upon her. Presently, however, she a little recovered her presence of mind; and Titmouse, stuttering with fury, explained to her what had taken place. As he went on, Mrs Squallop became less and less able to control herself, and at length burst into a fit of convulsive laughter, and sat holding her hands to her fat shaking sides, as if she would have tumbled off her chair. Titmouse was almost on the point of striking her! At length, however, the fit went off; and, wiping her eyes, she expressed the greatest commiseration for him, and proposed to go down and fetch up some soft soap and flannel, and try what 'a good hearty wash would do.' Scarce sooner said than done—but, alas, in vain! Scrub, scrub—lather, lather, did they both; but the instant the soap-suds were washed off, there was the head as green as ever."

He goes in a furious mood to Bond Street—

"'Look, sir!—look! Only look here what your stuff has done to my hair!' said Titmouse, on presenting himself soon after to the gentleman who had sold him the liquid; and, taking off his hat, exposed his green hair. The gentleman, however, did not appear at all surprised or discomposed.

'Ah, yes!—I see—I see. You're in the intermediate stage. It differs in different people.'

'Differs, sir!—I'm going mad!—I look like a green monkey.'

'In *me*, the colour was a strong *yellow*. But have you read the descriptions that are given in the wrapper?'

'I should think so!—Much good they do *me!*—Sir, you're a humbug!—an impostor! I'm a sight to be seen for the rest of my life! Look at me, sir! Eyebrows, whiskers, and all.'

'*Rather* a singular appearance, just at present, I must own,' said the gentleman, his face turning suddenly red all over with the violent effort he was making to prevent an explosion of laughter. He soon, however, recovered himself, and added coolly, 'if you'll only persevere.'

'Persevere!' interrupted Titmouse, violently, clapping his hat on his head; 'I'll teach you to *persevere* in taking in the public. I'll have a warrant out against you.'

'Oh, my dear sir, I'm accustomed to all this!'

'The —— you are!' gasped Titmouse, quite aghast.

'Oh, often—often, while the liquid is performing the first stage of the change; but in a day or two afterwards the parties generally come back smiling into my shop with heads as black as crows.'

'No! But really—do they, sir?' interrupted Titmouse, drawing a long breath.

'Hundreds, I may say thousands, my dear sir! And one lady gave me a picture of herself, in her black hair, to make up for her abuse of me when it was in a puce colour.'"

The result is, that he buys a bottle of Damascus cream, to put all to rights; but for what followed, we must refer the reader to the Magazine itself, which, we can foretell, will for some time be in more than usual request on account of "Ten Thousand a-Year."

The British and Foreign Medical Review for January, a copy of which has been obligingly forwarded to us, contains, besides other articles worthy of the high character of the work, one of uncommon interest on the recent improvements in the management of lunatics. The atrocious cruelties of the old system have now for twenty years been scarcely known; but the rotatory chair, the bath of surprise, close-boxes for the furious, straps and strait waistcoats, are still common, even in the most respectable institutions. We were not till now aware that the experiment of a total abolition of personal restraint has been tried in the Lincoln Asylum, in the great pauper institution at Hanwell, and in America, and that we are likely soon to see the extinction of that last remnant of severity in the treatment of the mentally diseased. The last instance of restraint being used in the Lincoln Asylum was in March 1837, and the consequence has been a marked increase in the tranquillity of the establishment. There is now scarcely a noisy patient in it: "the patients," says the reviewer, "move about less, and talk less to visitors, than in any other asylum which is known to us." The succedaneum for the abolished restraint is an increase of watching and care, a greater number of attendants being required. Thus, of course, expense is increased; but a liberality on this point is often the best economy. The reviewer quotes a lecture on the subject, which has been published by Mr Hill, surgeon to the Lincoln Asylum, and to which we may refer our readers for full information. Meanwhile, the following passages from the review will probably go some way to produce a conviction in favour of the system of non-restraint:—

"Those who speak in terms of eulogy of the moral advantage of even temporary restraints, cannot divest themselves, one would think, of the apprehension that restraint once resorted to, and found convenient, will be not temporary, but continued for a hurtful period of time. To walk through a ward in which there is one noisy patient, and to order the patient to be instantly put in restraint, may pass for excellent discipline in the eyes of a hasty, frightened visitor; but if the visitor remained to see the order put in force, what would he behold? First, an ineffectual attempt of one or two keepers to effect the restraint; then a greater power brought to bear on the victim; and a scene of struggling, striking, kicking, biting, spitting, swearing, and screaming, which frights the whole ward from its propriety. Let him go again in an hour, and he will find the patient still noisy, shouting, and cursing all the powers that rule the asylum. In three or four hours it is still the same. At length, perhaps, the patient becomes silent. Happy it will be if even then restraint is removed and food is taken to him, or water to allay his thirst. But suppose no restraint is put on at all? Let the noisy patient's attention be diverted by being taken into the airing court; or, at the worst, let him be shut up in his room, the windows well secured, and the bedding removed. In that case we venture to say that in a much shorter time tranquillity will be restored. There will have been no struggle; and the punishment will leave no rankling sense of mortification; and the other patients will not be excited. Still, even in this case, the seclusion should not be prolonged. Many times, however, without any seclusion at all, a sensible keeper may so manage a refractory patient, that if the visitor were to return to the ward in a quarter of an hour, he would find the man whom he would have consigned to restraint quite tranquil, and civil, and cheerful.

In the acute stage of mania, one patient will doubtless require all the attention of one keeper, and perhaps of two, and for several days, or weeks, if the patient is not shut up. But in a well-regulated asylum this occasional attendance on troublesome patients should be a part of each keeper's duty, and taken by each keeper in turn for one or two hours. The attendants, if it is pretended that the patients are to be *cured*, should be sufficient to spare a keeper for an hour or two from any ward for such occasional duty. Then it will be seen that the acute stage (no other means of control being omitted) is not of such long continuance, and that the patient's temper is unspoiled. The patient will gradually subside into tranquillity, and retain a grateful sense of what has been done; every trifling incident in their management being commonly remembered by them. At the same time, the other patients will not have been familiarised with the wretched spectacle of a poor creature dancing about in a strait waistcoat, like an intoxicated mummy; nor will their ears have been assailed with shrieks and curses from the maniac's cell. They will even, to some extent, appreciate the kindness and patience shown to the new comer; for they are keen observers, and have not forgotten their own sufferings.

In almost every asylum there are patients who will destroy their clothes, and some who cannot, it is represented, be persuaded to wear them. In the latter case we are glad to see M. Esquirol speak in disapprobation of forcibly confining the patient. One of the most unsatisfactory customs in some lunatic establishments is to exhibit these unfortunate creatures strapped down in chairs, and to comment, in moving terms, on their violence. The remedy, M. Esquirol says, is as bad as the evil. A dress of strong materials, with a strap round the waist, the dress being entirely fastened behind by

Digitized by Google

a small look (as done at Hanwell), can scarcely be removed by the patient. Boots and shoes may be easily fastened on by a similar contrivance, and in other cases it would be better to let them for a time be without their clothes, secluded of course from the gaze of visitors, than to add to their irritation, when possibly the wearing of clothes is a source of torment which they can only manifest by tearing them off. Chaining a poor frightened lunatic to his bed, also, when he perhaps thinks the bed full of snakes and scorpions, is ill judged and cruel. If he persists in sleeping on the floor, having such notions, it is better to let him do so, and after a time he will be reconciled to his bed. It will doubtless be found that there are patients so ingeniously destructive as, with the help of hands and teeth, to tear up every article of clothing that can be devised. The absolute prevention of this can only be effected by putting the patient on straw, with body, and arms, and legs, strictly and painfully confined. But are a few blankets, or a gown and a cap or two, to be deemed of more value than the immunity of a poor creature from torture, of which the effect is only to subdue, and not to cure?

Of all the sights that can afflict a humane spectator in a lunatic asylum, none is so wretched as that of the patients who are confined in the wooden boxes, or coercion-chairs, where they sit from morning till night—nay, we fear, from month to month. So revolting is this custom, that it is difficult to persuade one's self it can ever be indispensable. The experience of the Lincoln Asylum, and, more recently, that of Hanwell, with its eight hundred pauper lunatics, encourages a hope that there are few cases, or none, in which the uncleanly may not be brought to decent habits, and the epileptic guarded, and the furious controlled, by better methods. But to effect these ends, which no superintendant should rest satisfied until he has tried to effect, the keepers must be patient, and very watchful, and sufficiently numerous. We sincerely trust it may be found practicable to abolish from all asylums an invention which we are loath to believe a needful accessory. It is no part of our wish to reflect in such a manner on any parts of the practice in asylums as to give offence to those whose days are devoted to the severe duties of such places; but it behoves them well to consider what might be done by a more liberal system, as regarded the keepers under them, and to appeal to the governing bodies for assistance towards improvements, which every man of humanity must wish for. There is no passage in the appendix to Mr Hill's lecture which we have read with more pleasure than the following:—'Ordered, that the chairs used formerly for the double purpose of night-chairs and restraint (long fallen into disuse) be worked up.' This working-up, and the formal destruction of iron hobbles and handcuffs, and even of strait-waistcoats, which we notice from time to time in the minutes, constitute triumphs in which we earnestly hope it may be found possible for all superintendants to share.

One of the items of recent expense, and which became a subject of comment and censure in a large asylum in the neighbourhood of London, was, 'For six deal restraint-chairs, L.30.' The asylum had previously thirty-five. At the present moment there is not one in use in the whole of the institution. Two hundred pounds worth of restraint-chairs is thus thrown away. But the poor creatures who sat all day in those disgusting chairs may, it is said, be seen jumping about the wards like liberated children; not yet sure, when approached, that a blow is not coming, and yet shrinking with such expectation, and deprecating the expected cruelty in simple, but in touching words; but gradually acquiring confidence, and regaining the almost lost traces of humanity."

THE SEVEN MEN OF GLENMORRISTON.

[In the extraordinary history of the wanderings of Prince Charles Stuart after the battle of Culloden, it is a part of peculiar interest, in which he is described as being succoured and faithfully protected for several weeks by a band of robbers. The civilised man of the present day is astonished to consider that, at the time when Sir Robert Walpole, speaking from his experiences amongst English gentlemen, declared every man to have his price, seven outlaws were found in the wilds of Inverness-shire, who had virtue enough to resist a bribe of thirty thousand pounds. Remarkable as this part of the history is, it is that which has been perhaps most obscurely related; a result probably of the difficulty which must have been experienced by contemporary writers, in obtaining proper information. The defect is remedied in a new and much enlarged edition, which is about to appear, of the History of the Rebellion, originally contributed by Mr R. Chambers to Constable's Miscellany in 1827. In that work, as now extended, the history of the Prince amongst the Glenmorriston men is almost entirely new matter, derived from the written reports of conversations held in 1751 with one of the men, these reports having been framed by the Rev. R. Forbes, Scottish Episcopal minister at Leith, whose manuscripts are now in the possession of Mr Chambers. We present this part of the work, both on account of its own apparent interest, and as a specimen of what the History of the Rebellion will be in its new form. The work is to appear in connection with the series of publications entitled "PEOPLE'S EDITIONS."

It must be premised that, towards the close of July (1746), after more than three months of incredible hardship, Charles found himself amongst the hills between Glenmorriston and Strathglass, in Inverness-shire. He was attended by two or three faithful adherents, to whom he had recently confided himself, the principal being Macdonald of Glenaladale, who had been a major in his army. Late in the evening of the 28th, they reached the highest, and consequently safest point amongst the hills, where, though drenched with rain, the prince could get no better lodging than a small chink in a rock, which gave him scarcely room to stretch himself, and where he had no fire, no food, and not the slightest comfort of any kind but a pipe of tobacco. At this time a great quantity of troops were quartered at Fort Augustus, in the centre of the county, and large parties daily scoured the glens, to lay waste the property of the disaffected, and use their best endeavours to capture the prince. The Duke of Cumberland had given them the significant order, with a view to the stability of his father's dynasty, "to make no prisoners."]

CHARLES had scarcely at any former period been in greater danger than now, and at no former time were his personal sufferings so great. It chanced that, a day or two before, there had been added to his party a Glengarry man, who had fled from the soldiery for his life, after they had put his father to death. This particular act of cruelty, by sending the Glengarry man in the way of the prince, had an effect very different from what the soldiery could have contemplated, for it was the means of his being introduced to the seven Glenmorriston men, who protected him effectually for the ensuing three weeks. At three in the morning of the 29th, the Glengarry man went with Glenaladale's brother to find out these men, and to negotiate for their receiving the distressed party under their care, but without the name of the prince being mentioned. It was also Charles's wish by their means to make inquiry respecting a French vessel which he understood had come to Pollew, on the west coast of Ross-shire, in order to carry him off. Some hours afterwards, by appointment, the party, including the prince, met the two messengers on the top of a neighbouring hill, to learn what success had attended the mission. The men had been found, and had agreed to take charge of the distressed party, the chief man of whom they understood to be Glenaladale. The party was to repair to a cave called Coiraghoth, in the braes of Glenmorriston, where the men undertook to meet them before a particular hour. Charles accordingly set out for this place, attended by Glenaladale, the brother of that gentleman, a son of Macdonald of Borodale, the Glengarry man, and two boys.

The men who had promised to entertain the party were only in a modified sense "robbers." They had been out in the rebellion, and had consequently seen their little possessions in Glenmorriston become a prey to the spoiler. About seventy of their fellow dalesmen who had been induced to obey an order of the Duke of Cumberland, for surrendering their arms at Inverness, had been seized and thrust on ship-board, to be deported to the colonies. These men, determined not to be dealt with after the same manner, had entered into an association of offence and defence against the duke and his army, binding themselves by solemn oath never to yield, to fight on any particular emergency to the last drop of their blood, and never till the day of their death to give up their arms. At first they were seven in number, namely, Patrick Grant, a farmer, commonly called Black Peter of Craskie; John Macdonell, *alias* Campbell; Alexander Macdonell; Alexander, Donald, and Hugh Chisholm, brothers; and Gregor Macgregor. Afterwards, in the course of their marches with the prince, an eighth, Hugh Macmillan, joined them, and took their oath. They lived at this time a wild life amongst the mountains, supplying themselves with necessaries chiefly by bold attacks upon the military parties, from whom they often retrieved cattle and other spoil.

It was into the hands of such men that the fugitive prince was now to pass. At the appointed time, he and his friends approached the cave of Coiraghoth, where only three of the men at this time were, namely, the two Macdonells and Alexander Chisholm. Glenaladale went forward to converse with them, and hinted that he had young Clanranald in his company. They professed that they would be very glad to see young Clanranald, and take all possible care of him. They were then brought out to meet the party; but they had no sooner set eyes upon the person who was to pass for young Clanranald, than they knew him to be the prince. He was received by them with the greatest demonstrations of fidelity and kindness, and conducted to their cave, where, at Charles's request, they took an oath, administered by Glenaladale, in the dreadful terms then customary amongst the Highlanders—"that all the curses the Scriptures did pronounce might come upon them and all their posterity, if they did not stand firm to the prince in the greatest dangers, and if they should discover to any person, man, woman, or child, that the prince was in their keeping, till once his person should be out of danger." This oath they kept so well, that not one of them spoke of the prince having been in their company till a twelvemonth after he had sailed to France. Charles proposed that he and Glenaladale should take a like oath of fidelity to the men—namely, that, if danger should come, they should stand by one another to the last drop of their blood; but the men refused to take this pledge from the prince and Glenaladale.

Charles now broke a fast of about forty-eight hours, by a refreshment of mutton, butter, and cheese, with some whisky. Next day, the other four, who had been absent in search of provisions, returned with a dead deer and a live ox. These men also knew the prince at first sight, and took the same oath with the rest. They killed the ox in his presence. They still wanted bread, and only had a little salt; but fresh water was supplied to them in abundance by a spring which glided through the cave.

When the four men had taken the oath, Charles told the whole seven that they were the first privy council he had had sworn to him since the battle of Culloden, and that he should never forget them or theirs, "if ever he came to his own." Hereupon one of them hinted to him, that a priest who used to come amongst them in Glenmorriston, frequently had told them that King Charles II., after his restoration, was not very mindful of his friends. Their guest said he was heartily sorry for that, and hoped he should act differently—for this he gave them his word, the word of a prince.

Three days of repose and good nourishment in Coiraghoth recruited the prince considerably, and, being afraid to stay too long in any one place, he and his attendants shifted their quarters (August 2) to another and equally romantic cave about two miles off, named Coirakreaoch. Here, after taking some food, and planting sentries at proper points of outlook, they made up a bed of heath for the prince in a small recess resembling a closet opening from the cave. He remained in this cave four days; when, hearing that one Campbell, a captain of militia, and factor to the Earl of Seaforth [a nobleman who had taken the government side], was encamped within four miles of him, he thought proper to remove. On the evening of the 6th, he and his attendants set out in a northerly direction, and by break of day on the 7th they had passed the height of the country, and come in upon Strathglass, a district belonging to "the Chisholm."* In the evening, two of the men who had been left as scouts, brought intelligence that they need be in no apprehension from the factor Campbell for that night; and they then repaired to a neighbouring sheiling, or hut, where, after kindling a fire, and taking some refreshment, they prepared a bed for the prince, composed of sods, with the grass uppermost, on which he slept soundly the whole night.

He remained in this place two days. During that time, he dispatched a messenger to Pollew, to make inquiry respecting some French vessels which were said to have landed there in order to carry him away from Scotland. That he might be ready to take advantage of these vessels, if it should be found that they had not sailed, he resolved to draw somewhat nearer to the west coast. His messenger, before setting out, had been appointed to bring him intelligence to a particular place, judged convenient for the purpose. Early in the morning of the 9th, he and his friends and attendants, about a dozen persons in all, set out to the northward by an unfrequented moor-road, and came that night to a sheiling, where they halted for a few hours. At two o'clock in the morning of the 10th, they once more addressed themselves to their journey, and at noon came to Glencannich, where they passed the remainder of the day in a wood, and at night repaired to a neighbouring hamlet. At two o'clock in the morning, they left this village, and climbed a hill called Peinachyrine, on the north side of Glencannich, where they passed the day, and sent off two of their party to obtain a fresh supply of provisions. This place, which is about forty Highland miles from Pollew, is the most northerly point which the prince reached on the mainland.† At night they repaired to a sheiling, in which they remained two days, waiting for the return of the messenger. At the end of that time, the man rejoined them, with intelligence that the only vessel which had ever touched at Pollew had sailed again, leaving a couple of men, who had set out for Locheil's country in quest of the prince. Anxious to know if these men had any dispatches for him, he resolved to return towards Locheil's country, in order, if possible, to meet them.

They set out at night (August 13), and recrossing the water of Cannich, and passing near young Chisholm's house, arrived about two in the morning at a place called Fassanacoill in Strathglass. Here it was thought proper to tarry, until scouts should bring back intelligence of the state of the country to the south, and if the search for him was over in that quarter, and the troops returned to Fort Augustus. While the scouts were absent, the party remained in a dense wood, completely concealed from the neighbouring people. They were supplied with provisions by one John Chisholm, a farmer, who had been in the insurgent army, but to whom they did not at first confide the secret of the prince being of the party. Charles having at length expressed a wish to see Chisholm, Patrick Grant and another were dispatched to bring him. They desired him to come along with them,

* The chief of this small clan, whose residence is at Erchless Castle in Strathglass, is so styled in the Highlands.

† So says Patrick Grant, in his report to our authority, the Rev. Robert Forbes of Leith. A cave is shown in Glenstrathfarrar, to the north of Glencannich, as having been used by the prince; but, if Grant be correct, the prince never was in Glenstrathfarrar, nor within the distance from it of seven miles.

Digitized by Google

to see "a friend whom they knew he would like well to see." Apprehending from this that they had a person of some consequence with them, he said he had a bottle of wine which a priest had left with him, and he should be glad to take it along with him. "What! John," said Grant, "have you had a bottle of wine all this time, and not given it to us before?" On coming into the presence of the prince, John knew him at first sight. Patrick Grant, according to his own simple recital, put the bottle of wine into the prince's hands, and requested him to drink to him, "for," said he, "I do not remember that your Royal Highness has drunk to me since you came among our hands." "Accordingly, the prince put the bottle of wine to his mouth, and drank a health to Patrick Grant and all friends. John Chisholm, having received good payment for any provisions he had furnished, and finding that they had been purchased for the use of his prince, immediately offered to return the whole price, and pressed the thing much; but the prince would not hear of it at all, and ordered him to keep the money." Chisholm took the same oath as the Glenmorriston men.

Some traits of the prince's personal condition and conduct while with the Glenmorriston men, as reported by Patrick Grant, may be appreciated by those who still regard with a feeling of melancholy interest the tale of the last Stuart. His clothes, which were of the Highland fashion, were coarse, tattered, and squalid, almost beyond description, and he constantly slept in them, seldom getting a clean shirt above once a fortnight. He suffered, from this, the *usual annoying consequences*. Notwithstanding this and other bodily afflictions, "he bore up under all his misfortunes with great resolution and cheerfulness, never murmuring or complaining of the hardness and severity of his condition." He was observed to make a practice of withdrawing himself every morning and evening to perform his devotions. "Glenaladale," said Patrick Grant, "was interpreter between the prince and us, and it was agreed upon that we should say nothing but what the prince should be made to understand, and that the prince should say nothing but what we likewise should be made to understand. By this means the prince discovered that we were much addicted to common swearing in our conversation, for which he caused Glenaladale to reprove us in his [the prince's] name; and at last the prince, by his repeated reproofs, prevailed on us so far that we gave that custom of swearing quite up." Patrick Grant stated that the prince walked so nimbly in the day time, that few persons could hold out with him; but he did not travel so well by night, when, being unaccustomed to the rough and boggy ground on the Highland hills, he was constantly getting himself immersed in some deep hole, from which his companions had to draw him out. All the time he was with the Glenmorriston men, his appetite was observed to be good. When the party were at their meals, they sat in a circle, each having his morsel on his knee. The prince would never allow them to keep off their bonnets when in his company—probably a precaution against his rank being detected, in the event of any hostile party approaching them before they were aware. He used to give directions about their homely cookery, and sometimes tended a roast himself.

It would appear that not exactly every thing said by the men was interpreted to the royal wanderer. After he had parted with them, and got into new hands, conversing about these faithful adherents, he spoke of one in particular as an uncommonly clever fellow, stating that the name this man bore among his companions was *Ho Sian*. In reality, this expression was *Aos Ian*, "Hark you, John," which they often had occasion to use to John Macdonell, perhaps the ablest of their number, and one to whose judgment they usually deferred in all important matters. It will amuse the reader to learn that Mr Forbes, with true Jacobite feeling, adopted the mistaken phrase of the prince, and advised Macdonell to assume it as his ordinary name, and hand it down to his children.

In due time, the spies returned with intelligence that the troops had returned to their camp at Fort Augustus, and that there was consequently a prospect of the prince being able to execute his design of crossing the Great Glen, and joining Locheil in Badenoch. They therefore set out at six in the morning of the 17th, and, travelling by an unfrequented road, at ten in the forenoon reached the braes of Glenmorriston. Having passed the day on the top of a hill, they set out at night, but had not travelled above a mile, when they learned that a strong military party had been sent to the braes of Glengarry, in quest of the prince. Upon this it was resolved to proceed no farther, until the motions of the enemy should be further known; and they repaired to a neighbouring sheiling, where they passed the remainder of the night. In the morning of the 18th, three men were sent off towards Loch Arkaig, in Locheil's country, two of whom were to seek out, and, if possible, form an appointment for the prince with Cameron of Clunes, while the other was to turn at Glengarry, and bring back intelligence of the movements of the party said to be in that district, so that Charles might perhaps be able to proceed even while the meeting with Clunes was in the way of being arranged.

We have here a remarkable anecdote of the prince, which may be best related in the language in which Mr Forbes has reported it from the mouth of Patrick Grant. When returned to Glenmorriston Braes, "The Prince was pretty positive to proceed forwards sooner than the Glenmorriston men thought it safe for him, and they would by no means allow him to go, till they should think it safe for him so to do. In a word, the kind contention ran so high, that they threatened to turn their backs upon him, and to leave him, if he did not listen to their counsel, as they knew the country best, and what dangers might happen to him in it; and immediately insisted upon his taking some little refreshment and rest, and staying there as long as they judged it safe for him. But the prince refused to eat or to drink, because they would not do as he desired. Upon this, they plainly told him, that if he did not eat and drink heartily, he could not well hold out with the fatigues he was obliged to undergo in his present situation; that if he should happen to turn faintish by abstaining from meat and drink too long, and then danger should come nigh them, he would not be in a condition either to get away from it, or to act his part in any shape so well as he would wish to do; and therefore they urged him more than ever (as being absolutely necessary for him) to take some refreshment and rest, which accordingly he did. The prince said, 'I find kings and princes must be ruled by their privy council, but I believe there is not in all the world a more absolute privy council than what I have at present,' &c. They added, they had rather tie him than comply with him, so well did they know his danger. The prince was at last obliged to yield the point, as he found them positive to the last degree, and as they assured him, if he complied with their requests in behalf of his safety, the enemy should not get within two miles of him without being discovered. This was the only time (said Patrick Grant) that we ever differed with the prince in any one thing, and we were very sorry for it." It is distressing to think that, on the very day when Charles was acting thus unreasonably with his humble but faithful followers on the braes of Glenmorriston, the brave Balmerino and the gentle Kilmarnock were laying down their lives in his cause on the ensanguined scaffold of Towerhill.

While the party rested at this place, Patrick Grant and Alexander Chisholm went out to forage for provisions, and in the course of their walk, met the Laird of Glenmorriston (Grant), who had been in the prince's army, and had had his house burnt and his lands pillaged in consequence. Glenmorriston asked them where they now lived, as they were seldom seen—what they were doing—and how did they obtain the means of subsistence. "What is become," said he, "of the prince? I have heard that he has passed the braes of Knoydart." Even to this gentleman, whom habit had trained them to regard with the greatest respect, they would not disclose any of their secrets, merely remarking that, as the enemy were plundering the country, it were a pity not to share in the spoil; and that they accordingly did so, and made a shift to live upon it. On their return to the prince, they informed him of this interview, and said that, if his royal highness pleased, they would bring Glenmorriston to see him, he being a faithful and trusty friend. "The prince said, he was so well pleased with his present guard, that he wanted none other; and that *he had experienced poor folks to be as faithful and firm, as any men, rich or high, could be.*"*

On the 19th, the man who was to bring intelligence from Glengarry came back, reporting that that district was clear of troops. The prince, therefore, with his party, now ten in number, set out in the afternoon, under the benefit of a fog, and passing through Glenmorriston and the minor vale of Glenluing, arrived late at night on the braes of Glengarry. When they came to the Garry water, it was found breast-deep with the rain; nevertheless, they crossed it in safety, and ascending the hill for about a mile, tarried there for the remainder of the night, in the open air, notwithstanding that it rained heavily. Early in the morning (August 20), the heavy rain still continuing, they advanced six Highland miles across hills and moors, and about ten in the forenoon came to the hill above Auchnasaul, where the two messengers had been appointed to meet them on their return from Cameron of Clunes. They passed the day in a most inconvenient habitation, "it raining as heavy within as without."† Towards the afternoon, after they had begun to despair of the return of their messengers, and were deliberating what should be done, the two men came in, bringing a message from Clunes to Glenaladale, to the effect that he could not wait upon him immediately, but had directed that the party should lodge for that night in a certain wood two miles off, where he would meet them in the morning.

Two of the men, Patrick Grant and Alexander Macdonell, were now dispatched to reconnoitre their proposed lodging-place, and finding it suitable, they quickly returned to bring forward the party. Their provisions were now reduced to half a peck of meal, and they had starvation staring them in the face. By the greatest good fortune, Patrick shot a large hart at the place where they were to pass the night; so that when the prince and the rest arrived, they had one of the finest meals they had as yet enjoyed.

Charles now fell under the care of other friends, and some days after dismissed all the Glenmorriston men except one, Patrick Grant, whom he kept for some time longer, and carried along with him, but only till he had got his purse replenished, so as to be able to send his preservers a pecuniary acknowledgment of their services. Grant returned to their haunt in Glenmorriston with twenty-four guineas, being at the rate of three guineas to each man.

[The Glenmorriston men remained for some time longer in arms against the government, but ultimately resumed their ordinary occupations. It has often been stated that one of them came to be hanged for stealing a cow; but this is a mistake, arising from a person of the same name as one of them having pretended to be the Glenmorriston man, in order to excite interest in his behalf, when condemned to that fate in 1754. Hugh Chisholm survived to 1812, and to the last day of his life would never allow any one to shake his *right* hand, that hand having been honoured with the royal gripe, on parting from Prince Charles.]

* Mr Forbes's report of conversations with Patrick Grant.
† Glenaladale's Journal.

WARM BATHS FOR THE WORKING-CLASSES.

On this subject there lately appeared in an Edinburgh newspaper, a letter by Dr Andrew Combe, which is here, with the valued permission of the writer, submitted to a wider circle of readers:—

"Sir, I was very glad to see a letter in your paper of Saturday, recommending the establishment of warm baths, at a cheap rate, for the use of the working-classes, and proposing, as the surest way of succeeding, that they should take up the matter for themselves. I sincerely hope that this excellent suggestion will be adopted, and that ere long the existing want will be supplied. The object of the present letter is, in some measure, to smooth the way, by offering a few remarks, and mentioning what has been done in other places.

That cheap and easy access to the use of the tepid or warm bath would be one of the greatest benefits which could be conferred on the working-classes, will be readily acknowledged by every one who has himself experienced its soothing and refreshing effects after the fatigues of a journey, or after the labours and cares of the day are over, and who has had occasion to remark the influence of personal cleanliness in the preservation of health, and in generating a feeling of self-respect, and consequently on moral conduct. When the exhausting nature of the occupations of many of the working-classes, and their limited command of the means of comfort and cleanliness, in the shape of ablution and change of clothes, are taken into account, it can scarcely excite surprise that they should so often result in a craving for support and excitement, which leads ultimately to intemperate indulgence in the use of spirits, beer, and tobacco, and by degrees also to permanent dissipation. The Temperance Societies have done much to mitigate this latter evil, by erecting an artificial barrier against it in the form of a vow; but unfortunately they have done little to remove the cause which leads to the abuse, and, consequently, have been far less successful in subduing the tendency than they might otherwise have been. From the known soothing and refreshing effects of the warm bath, I have no hesitation in expressing the opinion that its frequent use is, independently of its numerous other advantages, peculiarly calculated to supply the deficiency alluded to; and I feel assured that if a portion of the funds collected by the aid of these societies had been expended in erecting comfortable baths, accessible at a very small rate to the families of their members, they would have not only rendered the fulfilment of the vow far more easy and agreeable, by removing the temptation, but they would have conferred a return in positive enjoyment and moral comfort on *the wives and families* of the members, as well as on the members themselves, which could not have failed to ensure the hearty co-operation of all in widely extending their sphere of usefulness. In seeking the improvement of any class of society, whether high or low, it is not enough merely to lop off what is sinful or hurtful—we must endeavour to fill up the void with a positive good, otherwise the evil tendency will be apt to return in the hour of weakness, and resume its sway, strengthened by the consciousness of a now-broken resolution. For this reason, the Temperance Societies would do well to direct more of their attention to providing substitutes for the renounced indulgence, and to the use of tepid bathing as one of the safest and best of these substitutes. It will have the additional advantage of adding positively as well as negatively to health, and doing something to prevent the spread of fever and other epidemics among both rich and poor.

That there is a possibility of providing comfortable baths at a very cheap rate, seems to me proved by the fact, that in Paris, Brussels, and almost all the continental towns of any magnitude, in some of which, as in Paris, rents are very high and fuel very dear, baths are furnished in a style adapted for the middle classes at the rate of from eightpence to a shilling, and still yield such a profit to their proprietors as to induce them to keep up their establishments. In this country, consequently, where fuel is cheap, and rents, in many situations suitable for the purpose, are not high, and where moreover many manufactories have steam going to waste, it ought to be possible, by good management, to provide baths of a plain and comfortable kind for one-third or one-half of these prices, at least where the payers are themselves the proprietors, and look for no pecuniary profits. But to accomplish this most desirable end, a large number of persons must be interested, as the expense of providing ten baths per day would be nearly as heavy as for providing a hundred. It is from the very extensive use of baths on the continent that they are able to afford them at so low a rate. Brussels, for example, with a population not nearly equal to that of Edinburgh, possesses several bathing establishments, each containing from thirty to sixty baths; and from which a warm bath can be obtained in one's own house, at any hour of the night or day, without trouble or disturbance, for a sum not exceeding half a crown or three shillings. Every thing is provided and brought by the servants of the establishment on a spring cart at an hour's notice, and the whole carried away again without noise or confusion, and often to the unspeakable comfort of the traveller as well as of the invalid. So much is the use of the tepid bath considered as a matter of course on the continent, that few even of

Digitized by Google

the smaller towns are without them, and nothing surprises foreigners more than the cost and difficulty of obtaining similar advantages in this country. At present I need not encroach farther on your columns, but, wishing the projectors every success, remain, Sir, &c.

P. S. It ought, perhaps, to be mentioned, that in several manufactories where the waste steam has already been applied to providing baths for the work-people, the privilege has been duly appreciated, and their use attended with the best effects."

EXTENSION OF THE SOUTH AUSTRALIAN PRINCIPLE OF EMIGRATION.

The principle of selling the unoccupied lands of new countries, and of employing the proceeds of the sale as an emigration fund, for the conveyance to those countries of the skilled labour of Europe, must be regarded as the most important practical improvement which has hitherto been made in the science of political economy. [Should this principle be carried out in reference to all the colonies belonging to Britain, as there is now some reason to expect, emigration will proceed upon a ratio of which hitherto we have had no experience; and it will not appear extravagant to predict that such an improvement on the present wretched mode of disposing of colonial lands will] confer upon the industrious classes of the United Kingdom a degree of prosperity equal to that which has hitherto been enjoyed by the same classes in the United States of North America. Why are wages and profits higher in the United States than in England? Simply, because these states possess, in their western forests, extensive tracts of fertile territory, affording an unlimited field of employment for capital and labour. But England possesses, in her colonies, tracts of fertile and unappropriated territory, scarcely less extensive than those possessed by the United States. Why, then, do not the people of the United Kingdom derive from their colonial wastes advantages similar to those which the people of the United States derive from their western forests? Simply, because the transfer of labour and capital from England to the colonies has hitherto been more difficult than the transfer of labour and capital from the eastern to the western states of the American Union. This impediment to the prosperity of the industrious classes in England will now be removed. During the last year, the emigration fund obtained by the sale of public land in the single and infant colony of South Australia, has amounted to nearly L.200,000; and if similar effects may be predicted from similar causes, the systematic application of the South Australian principle to the vast colonial possessions of the crown, may be expected to realise an emigration fund amounting to millions. The action of this fund will cause the population of the British colonies to increase as rapidly as the population of the western states of North America; whilst it offers a free passage to the colonies to every industrious family in the United Kingdom desirous of bettering their condition, and settling in countries in which wages are high, because land is comparatively abundant, and labour comparatively scarce.—*South Australian Record for January.*

THE LOST DAYS.

Bradley, astronomer-royal, had a considerable share in the assimilation of the British Calendar to that of other nations. Lord Chesterfield was the original promoter of this measure, which was carried in 1751. The following curious anecdote happily illustrates the presumption and ignorance of the mob of those days:—Lord Chesterfield took pains in the periodical journals of the day, to prepare the minds of the public for the change; but he found it much easier to prevail with the legislature, than to reconcile the great mass of the people to the abandonment of their inveterate habits. When Lord Macclesfield's son stood the great contested election for Oxfordshire, in 1754, one of the most vehement cries raised by the mob against him was, "Give us back the eleven days we have been robbed of"—(the reader will recollect that Hogarth introduces this in his Election Feast); and several years after, when Bradley, worn down by his labours in the cause of science, was sinking under the disease which closed his mortal career, many of the common people attributed his sufferings to a judgment from heaven, for his having been instrumental in what they considered to have been so impious an undertaking.—*Edinburgh Review.*

AN UNFORTUNATE AUTHOR.

What truth there may be in the following paragraph from a recent newspaper, we cannot say. There is much of it, however, which we suspect to have a strong general resemblance to circumstances of actual daily occurrence in literature:—"A person who signs himself 'Samuel Hardman,' and dates from 'King's-Road, Brighton,' has addressed a letter 'to the editors of newspapers in Brighton,' in which he 'begs leave to acquaint' them that he has 'lost two hundred and odd pounds by publishing' his 'Descriptive Poem of the Battle of Waterloo,' his 'Petition to the House of Commons, and a few other little things.' He gives the following details of his fruitless exertions to force a sale:—'When I published my "Descriptive Poem of the Battle of Waterloo," I paid three pounds to some of the daily papers, and not less than one pound to all the daily and weekly papers; and also one to all the monthly and quarterly reviews. I placarded the streets from Whitechapel Church to Hyde Park Corner, and so on all round London. I presented a copy to the Lord Mayor in the Mansion House; I had three men walking the streets with boards on their backs three weeks; I had my house in Kennington Lane, close to Vauxhall Gardens, placarded all over; they were acting the Battle of Waterloo in the gardens; and after all this enormous expense I only sold one sixpenny number, and my publisher, Mr Chappell, of the Royal Exchange, only sold seven numbers; so that we got four shillings between us, for me laying out upwards of one hundred pounds. I expended the same sum on my "Petition to the House of Commons," thinking that I should recover some part of my former loss; but, alas! I only sold seventeen sixpenny numbers of that potition. I have now only sold sixteen numbers of my five letters.'"

GEMS FROM THE OLD ENGLISH POETS.

[It is our purpose, under this general head, occasionally to present specimens of the English Poets antecedent to the eighteenth century. We are partly induced to do so by a consideration that the present style of poetical composition is lamentably weak and mawkish, as far as it can be generally characterised at all, and that something may perhaps be done to the creation of a better taste by keeping in view the elder bards, who, though not without their faults, yet had many good qualities, as richness of language, nervous thought, and powerful metaphor. It is quite surprising, in looking into any tolerable selection of old English poetry, to find how much superior the matter generally is to the faint sentiment and eternally repeated ideas of modern versifiers.]

HYMN TO LIGHT.

By Cowley (1618-1667).

First-born of Chaos, who so fair didst come,
From the old Negro's darksome womb!
Which, when it saw the lovely child,
The melancholy mass put on kind looks, and smil'd.

Thou tide of glory, which no rest dost know,
But ever ebb and ever flow!
Thou golden shower of a true Jove!
Who does in thee descend, and heav'n to earth make love!

Hail, active Nature's watchful life and health!
Her joy, her ornament, and wealth!
Hail to thy husband, Heat, and thee!
Thou the world's beauteous bride, the lusty bridegroom he!

Say, from what golden quivers of the sky
Do all thy winged arrows fly?
Swiftness and power by birth are thine:
From thy great sire they came, thy sire the Word Divine.

'Tis, I believe, this archery to show,
That so much cost in colours thou,
And skill in painting dost bestow
Upon thy ancient arms, the gaudy heavenly bow.

Swift as light thoughts their empty career run,
Thy race is finish'd when begun;
Let a post-angel start with thee,
And thou the goal of earth shall reach as soon as he.

Thou in the moon's bright chariot, proud and gay,
Dost thy bright wood of stars survey;
And all the year dost with thee bring
A thousand flowery lights, thine own nocturnal spring.

Thou, Scythian-like, dost round thy lands above
Thy sun's gilt tent for ever move,
And still as thou in pomp dost go,
The shining pageants of the world attend thy show.

Nor midst all these triumphs dost thou scorn
The humble glow-worms to adorn,
And with those living spangles gild
(O greatness without pride!) the bushes of the field.

Night, and her ugly subject, thou dost fright,
And Sleep, the lazy owl of night;
Asham'd and fearful to appear,
They screen their horrid shapes, with the black hemisphere.

With them there hastes, and wildly takes th' alarm,
Of painted dreams a busy swarm;
At the first opening of thine eye,
The various clusters break, the antic atoms fly.

The guilty serpents, and obscener beasts,
Creep conscious to their secret rests:
Nature to thee does reverence pay,
Ill omens and ill sights remove out of thy way.

At thy appearance, Grief itself is said
To shake his wings, and rouse his head;
And cloudy Care has often took
A gentle beamy smile, reflected from thy look.

At thy appearance, Fear itself grows bold;
Thy sunshine melts away his cold:
Encourag'd at the sight of thee,
To the cheek colour comes, and firmness to the knee.

When, goddess, thou lift'st up thy waken'd head,
Out of the Morning's purple bed,
The choir of birds about thee play,
And all the joyful world salutes the rising day.

The ghosts, and monster sprites, that did presume
A body's priv'lege to assume,
Vanish again invisibly,
And bodies gain anew their visibility.

All the world's bravery, that delights our eyes,
Is but thy several liveries;
Thou the rich dye on them bestow'st,
Thy nimble pencil paints this landscape as thou go'st.

A crimson garment is the rose thou wear'st;
A crown of studded gold thou bear'st;
The virgin lilies, in their white,
Are clad but with the lawn of almost naked light.

The violet, Spring's little infant, stands
Girt in thy purple swaddling-bands;
On the fair tulip thou dost dost,
Thou cloth'st it in a gay and parti-colour'd coat.

With flame condens'd, thou dost the jewel fix,
And solid colours in it mix;
Flora herself envies to see
Flowers fairer than her own, and durable as she.

Ah, goddess! would thou could'st thy hand withhold,
And be less liberal to gold;
Didst thou less value to it give,
Of how much care, alas! might'st thou poor man relieve!

To me the sun is more delightful far,
And all fair days much fairer are:
But few, ah! wondrous few there be,
Who do not gold prefer, O goddess! ev'n to thee.

Through the soft ways of heav'n, and air, and sea,
Which open all their pores to thee,
Like a clear river dost thou glide,
And with thy living stream through the close channels slide.

But where firm bodies thy free course oppose,
Gently thy source the land o'erflows;
Takes their possession, and does make,
Of colours mingled, light, a thick and standing lake.

But the vast ocean of unbounded day
In th' empyrean heav'n does stay;
Thy rivers, lakes, and springs, below,
From thence took first their rise, thither at last must flow.

SALMON-FISHING ANECDOTE.

A tall, stout, young Campbell, from Glenorchy, celebrated for his success as a salmon fisher, left his native glen for the river Awe, which runs from the Loch of that name to Loch Etive, through a narrow ravine at the foot of the mighty Ben Cruachan. The bed of this river is stony, and in many parts the water is rapid and turbulent; but it subsides occasionally into deep pools, which are the favourite resorts of large fish. Our experienced Highlander reached a well-known deep of this description, with a strong eighteen-feet rod, and an immense wooden pirn, on which were wound eighty yards of strong line, and had only cast his fly a second time when he struck a fish. The fish ran out his line with such furious rapidity that he was obliged to follow with his utmost speed over rocks and stones, and frequently through the water also, for he soon found that he had no chance whatever of turning his fish until they should reach a broad deep pool, above a mile below him. At this haven he at length arrived, much exhausted with fatigue. Not so the fish, for he seemed to be as vigorous as ever; and the angler, on finding he had room to try his skill and the strength of his tackle, soon recovered his spirits, when, as if in derision of both, the fish, after a violent plunge or two, took to the bottom, and there remained immoveable, resisting every effort to rouse him. Suddenly, however, he again ran up the stream, carrying the Highlander after him through the same rugged route, to the imminent peril of life and limb, till he reached the pool where he was first struck. After a short struggle, in which the angler so far succeeded as to turn the fish down the stream, or rather submitted to be himself taken down, and that, as before, in no gentle fashion, they reached the deep pool once more, when, after a few fruitless efforts on the part of the Highlander, the fish again took to the bottom, where he lay in the most dogged sullenness, defying all the powers of his enemy to draw him from his retreat. Night was now coming on, and even our hardy angler was exhausted by his long contest; he therefore sat down between two rocks on the banks of the river, in a secure place, and determined to rest there till certain fishermen arrived, as was their custom at break of day, from whom he might obtain assistance. He fixed his rod in security, and contrived that his pirn should give out the line freely, and then placed the line between his teeth, so that if the fish should leave the bottom, the running of the line might awaken him. In this situation he slept soundly till three in the morning, at which time the fishermen found him. The rod and line were undisturbed, and the fish still at the bottom, but the Highlander was now awake; and with the assistance of the friends in question, he soon succeeded, with their nets, in capturing this doughty fish, which proved to be a fine salmon, weighing seventy-four pounds. The truth of the above anecdote was vouched by several respectable Highlanders, at the inn of Port Sonachan.—*Hofland's British Angler's Manual.*

COURTSHIP AMONG THE PAWNEE INDIANS.

Suppose the young lady arrived at the age when the short usurpation of Cupid is to be succeeded by the absolute monarchy of Hymen, the ceremony to be observed is (as far as I can learn) nearly as follows:—When the lover wishes to break the ice, he comes to her father's tent uninvited, and sits on the corner of the mat for a considerable time, then rises, and goes away without speaking. This is the preliminary step in courtship, answering perhaps to the first gentle pressure of the hand—the first blushing hesitation in address—the first mutual glance of understanding. But I am treading on dangerous ground, and must proceed no further with these drawing-room "preliminaries."

After a few days the young man returns, wearing his buffalo-robe with the hair outwards, and again sits down silent in the corner of the tent; this is a regular proposal; if the father is determined to reject him at once, no skin is placed for him to sit on, and no meat is offered to him; but if he approves of the match, these usual rites of hospitality are observed, and he tells the young man that he will give a feast to obtain the consent of all his daughter's connections, and advises him also to do the same by his relations; should both of these feasts terminate favourably, the young man presents himself once more before his bride at the door of her tent, then turns round and walks slowly off towards his own; she rises and follows him—the marriage is then complete. If she remain sitting, it is a sign that her family decline the match. As soon as he reaches home, he sends her father the marriage present, or, rather, the *purchase money for his wife* (indeed it is neither more nor less), the amount of which is already pretty well ascertained by the father-in-law, and which consists of horses, blankets, or robes, according to the wealth or respectability of the contracting parties.

The most extraordinary part of this matrimonial affair is, that, having married the elder sister, he has a right to marry all the younger ones as they successively attain the proper age. Nor is this at all unusual; on the contrary, it is a common practice, as the husband thereby secures so many additional slaves, and can obtain so much more corn, dried meat, dressed skins, &c., all of which are the result of female labour. When the second sister becomes marriageable, or, rather, when it suits his fancy or convenience to take her, he sends her father a horse, or other proportionate present, and she comes over to his lodge; and so on with the other sisters. I have seen several chiefs who have in this manner married a whole family; the eldest wife being the greatest drudge, and the youngest being generally the favourite sultana, and, consequently, doing the least work.—*Travels in North America, by the Hon. C. A. Murray*, 1839.

EDINBURGH: Printed and published by W. and R. CHAMBERS, 19, Waterloo Place.—Agents, W. S. ORR, London; W. CURRY Jun. & Co. Dublin; J. MACLEOD, Glasgow; sold by all booksellers.

Complete sets of the Journal are always to be had from the publishers or their agents; also, any odd numbers to complete sets. Persons requiring their volumes bound along with title-pages and contents, have only to give them into the hands of any bookseller, with orders to that effect.

NUMBER 419. SATURDAY, FEBRUARY 8, 1840. PRICE THREE HALFPENCE.

THINGS THAT MAY OR MAY NOT HAPPEN.

PROVISION against necessities which are sure, or at least very likely to occur, as against the burden of a young family, or the infirmities of old age, is so great and so respectable a duty, that the more prudent and well-meaning are sometimes found to carry providence of all kinds a little into excess. We then see the opposite folly, which President Jefferson used to remark upon, of an over-anxiety respecting "things that may or may not happen." The error, however, takes various forms. It sometimes consists in making a provision greater than is required for the necessity, supposing it should occur. Sometimes it consists in treating a very improbable occurrence as if it were certain, and thus taking a trouble almost sure to be found superfluous. Oftener, perhaps, it takes the shape of an anxiety to make sure of the provision within a very short space of time, when it is clear that a much larger space of time is necessary, and not less clear that a much larger space of time has been allowed for the purpose. In all this there is error, though of a kind which leans to the side of wisdom. We should be glad if we could, without risk of damage to those minds in which foresight is deficient, illustrate the faults of those in whom it is excessive, and a source of evil. We approach the task with a slight degree of fear, but yet would hope to be able in some measure to effect the good we have in view, without producing a corresponding amount of injury, or any at all, on the opposite side of the account.

In one of the most common and also most important occasions for the exercise of forethought, the forming of a matrimonial union, there is generally rather a short-coming of prudence than an excess. We have therefore nothing to remark on this point, except that we wish that fewer ill-provided marriages were effected. There are, however, conspicuous traces, in the English commercial class particularly, of over anxiety as to the remote provision of a family. Men toil at their professions with an eagerness and a degree of application ruinous to their own health, for the avowed purpose of ensuring the ultimate comfort of their children. The self-sacrifice is dictated by more than one good and laudable principle; but it is in many cases unreasonable, and calls rather for reproof than praise. It is quite proper that every fair exertion should be made for children during the time when they are helpless and dependent; but when the object is to render children, in their mature days, independent of the toils which are now wearing out the very vitals of their parents, the self-sacrifice is not only unreasonable, but highly culpable. One generation may thus be said to undertake the labours of two; one man tasks himself with the duty of many; than which nothing could be more inequitable. He is apt, besides, to defeat the very end he had in view, by exhausting himself in the middle of his days, and leaving his family dependent at a time when they ought not to be so. Clearly, his reasonable course is to toil more at leisure, with no other immediate view than to rear his children decently in the style of his own rank, till they shall be able to provide for themselves, though not without a hope of being ultimately able, by the improvement of his circumstances, to do more for them. By this leisurely method, the superior object is even more likely to be attained than by the other, for though he advances slowly, he probably advances surely, and, retaining health and strength, is longer able to exert himself in behalf of his children. It is, however, extremely questionable if these ultra exertions of one generation in the cause of another, are, in any great proportion of instances, of real benefit to the second party. That second party is perhaps only rendered by them slothful and luxurious, or at least easy and inenergetic, without being after all secured by them from want. Better it were for each generation in that rank of life in a great measure to depend upon, and only contemplate providing for, itself.

Provision against old age—the night that cometh when no man may work—is another of the more common occasions for the exercise of forethought. An infirm old age is a contingency to which all are liable, and it ought therefore, if men are to be self-dependent at all, to be provided for. How often, however, do we see disproportioned exertions even for this respectable object! With many it is looked forward to as an awful time, sure to occur, and sure to be attended with tremendous evils. Thus unduly fearful of the event, they make such excessive exertions to alleviate its woes, as at the least deprive them of all enjoyment of the present, and perhaps cut them off in the middle of their days. A recently deceased friend of ours was one of those who are unduly anxious about the future, to the neglect of the present. In his case, all the pleasures and recreations appropriate to adolescence and middle life were postponed for after-fruition; but unfortunately the beatific future, the tranquil haven of quiet enjoyment, which he had all along contemplated, he did not live to reach. Worn out by application to business, he fell a premature victim to loss of appetite and general exhaustion, leaving his vast pecuniary gatherings to a brother who had already more than enough, who was more sordid than himself, and with whom, during life, he had kept up barely a friendly, certainly not a fraternal intercourse. This man was never married; he had never had any to provide for but himself. So inordinate a provision for comforts which a single person at any age can obtain for a small annual sum, seems preposterous. If any are exempt from the obligation to get rich, it is surely the class of bachelors, and their co-ordinates of the female sex. If they live to be old, their surviving friends are probably few in number, and it is impossible they can have any save distant relations. Therefore, if they make a moderate provision for the probable duration of their own lives, they may be said to have done all that a regard to their happiness, and all that society, can fairly demand of them. Nevertheless, it is very often in this class that we find the most glaring instances of a disproportioned anxiety about the future.

With regard to old age, there is one important feature of the case which is too little considered. It is generally contemplated as a certainty, while in reality it is only a contingency. Out of twenty men of thirty years of age, it is certain that only some smaller number will reach sixty. No one knows, of course, that he is not to be one of those who will reach sixty, and it may be said that all are therefore bound in prudence to provide against old age. But if all do so, it is certain that some will have done it in vain, and that the provision will prove useless for this end. Here is a loss to be avoided. It is to be avoided in advanced communities by mutual assurance, in the form of deferred annuities—a plan under which each pays only so much as will serve, in the whole, to provide for those who really do reach old age. It is well, of course, when any one can, by reasonable exertion, provide himself abundantly against the infirmities of advanced life, without resorting to this expedient; but, supposing this to be impossible, it is of importance to be aware that the principle of the deferred annuity spares the necessity of contemplating age as a thing which must be provided for whether it is to occur or not, and which enables every man to make sufficient provision for it only in its limited and real character, as a contingency.

The difficulty of convincing any man at any time that he has enough, is common matter of remark; and it might almost appear visionary to entertain even a hope of producing this conviction in a single instance, much more so in a whole nation. The subject, nevertheless, seems to us capable of being considered in a point of view calculated to awaken, in many, a train of thought leading to this end. We would wish to take out of the scramble of life some who have no longer any just pretext for continuing in it, not only that more room might be afforded for those who really have reason to toil, but also to add to the number of that enviable class whose chief business is to enjoy and exemplify the art of enjoyment. It is not in cookery only, which administers to the physical appetites, that Udes and Glasses and Kitcheners are requisite, but there is a gastronomy in manners and living that requires to be cultivated. We are too little of epicures, not in the sensual, but the intellectual sense of that neglected branch of ancient philosophy. Political economy is the queen of social sciences no doubt, but some of her dogmas are more applicable to colonies and infant states than to old communities. There is in nations, as in individuals, a varying regimen suited to the different stages of their existence. In our case, the error seems to be in the thirst of accumulation; in our eagerness to amass, we overlook the end and aim of amassing, namely, distribution and conversion. We live as though we were merely the handmaids of the future, not the masters of the present; the pioneers whose sole business is to drain marshes and level obstructions for the convenience of ensuing generations. In this respect it might be well if we were, as the jockeys say, to "pull up," to inquire into the end contemplated in our Herculean labours, self-denials, and mortifications.

If youth be the season for exertion, it ought not to be forgotten that it is also the season for enjoyment. To make hay while the sun shines, is a good maxim in husbandry, and, doubtless, a good rule in conduct; but it means no more than that favourable opportunities ought not to be lost, whether for present indulgences or in providing for future ones. Some of the most notable examples of miscalculating providence are to be found in professional and commercial occupations. Of divinity and medicine little is to be remarked; in these pursuits success is frequently more a matter of grace and favour than of service and desert: but law is a real trial of strength. It is hardly possible that any, save the deserving, can win the legal prizes. Great natural gifts, improved and reinforced by laborious cultivation, are indispensable. A youth of severe study, a middle life of toil, and a premature old age of decay and lassitude, mostly form a transcript of the successful brief-monger's biography. And what are the rewards of his sacrifices and exertions? Wealth, perhaps, is certain; but the honours—the bench, the seals, and a coronet—which are the tempting baits, can be clutched by few of the struggling crowd of aspirants to these distinctions. It is said of lawyers that they have no pedigrees, and it is certainly as true that the more distinguished among them have rarely any descendants. They acquire money and titles, but seldom surround themselves with the more precious treasures of the affections. This was the fate of Dunning, Wedderburne, Thurlow, Stowell, and some others.

In the pursuits of commerce, abortive efforts of toil and anxiety are more common than at the bar. Here the sole aim is riches, and it is really enough to make angels weep, and laugh too—for the cases are ludicrous

Digitized by Google

as well as pitiable—to witness the miserable ends in which the blind heaping up of wealth not unusually terminates. A life spent in the drudgery of the counting-house, warehouse, or factory, is exchanged for the dignified ease of a suburban villa; but what a joyless seclusion it mostly proves! Retirement has been postponed until all the faculties of enjoyment have become effete or paralysed. *Sans* eyes, *sans* teeth, *sans* taste, *sans* every thing, scarcely any inlet or pulsation remains for old, much less new pleasures and associations. Nature is not to be won by such superannuated suitors; she is not intelligible to them, and the language of fields and woods, of murmuring brooks, mountain tops, and tumbling torrents, cannot be understood by men familiar only with the noises of crowded streets, loaded vans, bustling taverns, and postmen's knocks. London and the chief provincial towns are environed with luckless pyrites of this description, who, dropped from their accustomed sphere, become lumps of dross in a new element. Happily their race is mostly short; death kindly comes to terminate their weariness, and, like plants too late transplanted, they perish from the sudden change in long-established habits, air, and diet.

We once more entreat our readers to believe, that in these intimations it is not meant to disparage industry, application, or ambition. All that is intended is to caution against the folly of being so absorbed in the means that the ends of exertion are forgotten. There is a laudable temperance in the acquisition of riches and honours, as well as in the use of liquids and solids. Above all, Mr Jefferson's observation on over-anxiety regarding prospective calamities merits consideration. Some always meet evils half way, and live under constant apprehension of rain or foul weather, of disease or poverty, political revolutions and national bankruptcy. Sufficient for the day are the evils thereof. Let us wait—at least till the symptoms are certain and definite. Apprehended misfortunes may not come at all, or come in a shape much less appalling than that anticipated. A path will doubtless open as we advance, and, as the horizon recedes to the traveller, difficulties will disappear, or become less in the reality than the imagination had conceived.

A STORY OF THE ORLEANS REGENCY.

In the early part of the reign of Louis XV., when the government of France was entrusted to the Regent Orleans,* a young Breton gentleman named Montlouis, the descendant of an ancient but decayed family, came to Paris on receiving a commission in the guards of the young king. For some time he performed his duties without any thing occurring to render his career of marked interest. One evening, however, in the month of November 1726, while he was walking along one of the streets leading to the Louvre, wrapped closely up in his cloak to defend him from the severity of the weather, and with his hand upon his sword hilt by way of precaution, he felt his arm grasped suddenly by a passing stranger, and heard the whispered salutation, "You are here, George, punctual to the hour. Follow me." The Christian name of Montlouis was Pierre, and he therefore saw at once that the stranger had made a mistake; but the natural thoughtlessness and adventurous spirit of youth led him to form an instantaneous resolution of following the stranger at his invitation. Accordingly, without another word passing between them, the pair moved onwards along the street Saint-Honoré, and after a walk of about five minutes, came to an open alley, where the stranger stopped for an instant, and, merely remarking, "This is the place," turned down the passage. A sort of dark avenue was then crossed, and finally M. Montlouis was led by his guide down several steps, which conducted them into a dark apartment, or rather a cave, as the young officer thought. Though he could see no one, Montlouis was not long in discovering that he was in the midst of a pretty large assemblage of persons. He heard their whispers, and felt, from the heated atmosphere of the place, that many persons were breathing in it. In a few moments, moreover, his presence seemed to have been announced, for many individuals came up and grasped his hand, uttering friendly salutations at the same time in low and indistinct tones.

It may be imagined that the guardsman, who well knew the dangers of the times, was by no means satisfied with the result, as far as it had appeared, of his adventure. His first impression was, that he was in the presence of a band of robbers. But this suspicion was speedily removed. Some individuals of the party began noiselessly to light a number of candles, at the completion of which operation M. Montlouis was enabled distinctly to see the whole scene before him. The apartment was indeed a cave, a long cave, at one end of which a black curtain hung, concealing from view a small portion of the space. From behind this place, Montlouis heard the sobs and moanings of one or more female voices. In the open lighted space about thirty persons were assembled, all of them wrapt in long cloaks, similar to that worn by the young guardsman, and to which the mistake was doubtless owing which had brought him there. The party were all individuals of grave and sombre aspect.

Montlouis covered his face as much as possible, and kept back from view, in the hope that no one would observe the error which had been committed. After a time, a man of about fifty years of age, reverend in appearance, and having long hair falling upon his shoulders, came forward, and stood beside a dark object in the centre of the assemblage, which was covered with dark cloth, being evidently a bier or coffin. "My friends," said this person, "I think we are all present. Peace be with you." As these words were uttered, one of the party, an attendant seemingly, went to the door by which Montlouis had entered, and locked it. "Now," thought the officer, who began to see clearly the nature of the meeting upon which he had intruded himself so rashly, "now I cannot retreat if discovered, and may pay dearly for my folly." He had not much time to indulge these meditations. The former speaker continued his address. "My brethren," said he, "let us now offer up our prayers for our friend Bertrand de Brunen, who has quitted this vale of tears, and whose virtuous daughter, our beloved sister, entreats" ——

At this point, one of the attendants advanced to the clergyman, for such he evidently was, and whispered a few words in his ear. Instantly he turned his eyes upon Montlouis, with a degree of evident surprise and alarm. He attempted indeed to continue his address, but his voice faltered, and his thoughts were obviously occupied with another subject. The confusion of the pastor soon extended to the whole assembly. They separated from Montlouis, and stared on him with an expression at once of menace and dismay. Seeing this, the officer resolved to disclose the truth. "Gentlemen," said he, "I am no spy. I give you my word of honour, I am not." But there was no change in the looks of the party. "I am Monsieur de Montlouis," continued the guardsman, who, himself trained to respect his family name, believed that to others also it must convey an assurance of unblemished honour in the bearer.

What would have been the issue of this matter, it is hard to say. But just as Montlouis was repeating his assertion, a noise was heard, and from behind the black veil already mentioned, a young female hastily issued. "Extinguish the lights," cried she in tones of alarm; "we are in danger!" Montlouis was much struck by the face and figure of this lady. Before her request could be obeyed by these present, the noise increased, loud knocks resounded on the outer door of the cave, and a voice exclaimed from without, "Open, in the name of the king!" On hearing this summons, a general exclamation of "we are betrayed!" came from the lips of the persons present, and, snatching up the bier, most of them disappeared by a low passage which had been previously unnoticed by Montlouis. Scarcely had they effected their escape, when the outer door gave way before the strokes of its assailants, and the room or cave was instantly filled with men wearing the dress of the civil force. At this moment, Montlouis and the young female spoken of were almost the only parties present. One of the intruders, a person who seemed to be their leader, advanced with his sword in his hand to the female, and, touching her on the shoulder, exclaimed, "I arrest you in the king's name!" Then, turning to those who accompanied him, he said, "This is Mademoiselle de Brunen; take her in charge. Fear nothing," he continued, addressing her; "no outrage will be permitted; we have an order from the king to conduct you to the convent of ——."

Mademoiselle de Brunen took a close and agitated survey of the man who addressed her, and then, starting back as from a noxious reptile, she exclaimed, "Begone! touch me not! I know you, wretch," she continued; "you are no servant of the king. Help, friends! leave me not; let me not fall into this man's hands!"

The person of whom she spoke laid hands upon her, nevertheless, to drag her away, and no one would probably have interfered, had not her imploring looks, her youth, and her beauty, stirred the pity of Montlouis. "Let go the lady," cried he, unsheathing his sword, "or, whoever you may be, you shall have to answer to me." No reply was made by the other, who continued his attempts to carry off the lady, until forcibly thrown aside by Montlouis. Before any one could interfere, an active combat had commenced between the pair. Rapid passes were exchanged, and at length Montlouis laid his antagonist at his feet. In an instant afterwards the lights were extinguished, and the young guardsman found himself dragged backwards by unseen arms into the private passage by which the party had previously disappeared. A gentle voice whispered in his ear, "Follow me," and he felt the hand of Mademoiselle Brunen grasp his own, and lead him onwards through the darkness. When they stopped, Montlouis looked around him, and found that they had issued into one of the streets of Paris.

Several coaches stood at the spot. Mademoiselle de Brunen left him, and entered one of the vehicles, but immediately afterwards a person came up to the officer and said, "If Monsieur de Montlouis will do Mademoiselle de Brunen the honour of assisting in the completion of the sad ceremony which has been disturbed, she will feel gratified." He at once assented, and was conducted to one of the vehicles. "Forward!" cried a voice, and the whole of the carriages started at a rapid pace along the streets. After passing the barriers of the city, the travellers continued their route for a considerable distance, until they reached a lonely house surrounded by lofty walls. Here the carriages stopped, and the whole party left them. The bier was conveyed silently through the house into a garden, where a grave was found ready prepared. Rapidly and silently the ceremony of interment was gone through, and then, with mournful farewell signs, the whole assemblage separated, each apparently taking his own way.

M. de Montlouis stood in the mean time a little apart. At the close of the funeral rite, he was left alone with Mademoiselle Brunen. She came up to him, her eyes filled with tears. For a few minutes both were silent. "You have saved my life and honour, sir," said she at length, "but, I fear, at the cost, or at least the imminent risk, of your own." "Speak not of it, lady," said Montlouis. "You have been witness to an assemblage," continued she, "of our persecuted Protestant brethren," who, at great peril to themselves, have dared to perform the last rites to my father, though he was a victim marked out by Cardinal Dubois and his creatures. I know not how you came among us; but you have saved me from the power of one who, under the pretext of converting me, had previously endeavoured to tempt me to ruin. Whether he had the regent's authority for his late attempt, I cannot say, but I know well that he is one whose death will not be left unavenged by Dubois. You are lost, utterly lost, and I have been the unhappy cause!"

Montlouis endeavoured to assure her of the causeless nature of her fears, but he failed to make his argument good. "There is one way," said the lady, hesitatingly, "there is—there appears to me but one way in which you may be saved." The young officer conjectured the cause of her hesitation. "Dear lady," said he, "fortune appears to have thrown us strangely together, and to have united our fates at one decisive blow. But, believe me, if, to relieve us from this extremity, it be necessary to take steps which might appear improper at another moment, believe me, I will not presume upon them." "You partly comprehend me," said Mademoiselle de Brunen, "but I will speak plainly. It would be folly, as well as base ingratitude, to permit the indulgence of childish feelings at the cost of your life. I have passports for myself and servants to go to Holland. I have friends there. You must fly with me; it is our duty to recompense you for all you have lost by me. You will find an asylum there." After a pause, she added, with a tremulous voice, "You must fly! If not, I too will remain, for I could not live after having destroyed you!"

Need we tell the reader the issue? M. Montlouis fled to Holland. A short time after these events, he was hung in effigy by the Cardinal Dubois's orders in Paris, but he was consoled for it by the attentions of a lovely wife and kind friends in a foreign land.

SWAINSON'S WORK ON THE HABITS AND INSTINCTS OF ANIMALS.†

The common sense of mankind has often solved problems that have perplexed philosophers. Every body knows what he means by instinct as distinguished from reason; it is only when he comes to explain the difference, and to define the limits between them, that he experiences a difficulty. The obvious cause is, that language is not capable of expressing the minuter shades of thought; we often see things very clearly ourselves, which we are not able to explain to others. The tints of an unusual flower, the notes of a newly discovered bird, the taste of a strange fruit, or the fragrance of a new perfume, cannot be adequately described by words; and the difficulty is increased the more the novelties resemble things with which we are familiar. We may say in the words of Dryden, slightly altered,

> Instinct to Reason runs in near allied,
> And their partitions do their bounds divide.

There are many actions performed by animals so similar to those of men, in forethought, contrivance, and the adaptation of means to an end, that naturalists find themselves unable to tell where instinct ends, and where reason begins. As in the cases we have cited, of sight, sound, and smell, one single example or experiment is worth whole volumes of disquisition, so in the subject of instinct the authenticated facts of animal life are far more valuable than dissertation, we shall at once proceed to lay before our readers the most important elucidations of animal life, collected by Mr Swainson, omitting, for the present, any notice of the various theories by which the appearances have been explained.

Memory is notoriously an attribute of animals, and in the common cases of dogs, elephants, and other domesticated animals, we know that memory generates personal attachment, and if not gratitude, something so very like it, that it is not easy to point out the distinction. Stedman, a traveller whose general

* Orleans, though himself indifferent to religion, and disposed to tolerate the Huguenots or Protestants, allowed his ministers to keep up all the rigour against that party which had so infamously marked the preceding reign.

† On the Habits and Instincts of Animals. By W. Swainson, A. C. G. (Lardner's Cabinet Cyclopædia, vol. xxx.) London, Longman and Company.

accuracy Mr Swainson has verified by visiting the same country, assures us that the bees at Swainson become personally acquainted with those who live about their nests :—

"On one occasion I was visited at my hut by a neighbouring gentleman, whom I conducted up my ladder; but he had no sooner entered my aërial dwelling, than he leaped down from the top to the ground, rousing like a madman with agony and pain, after which he instantly plunged his head into the river. I soon discovered the cause of his distress to be an enormous nest of wild bees, or *sassee-wassee*, in the thatch, directly above my head as I stood within my door, when I immediately took to my heels, as he had done, and ordered the slaves to demolish them without delay. A tar mop was now brought, and the devastation just going to commence, when an old negro stepped up, and offered to receive any punishment I should decree, if ever one of those bees should sting me in person. 'Massera,' said he, 'they would have stung you long ago, had you been a stranger to them; but, being your tenants, and allowed to build on your premises, they assuredly know both you and yours, and will never hurt either you or them.' I now, at his own desire, caused the old black man to be tied to a tree, and ordered my boy Quaco to ascend the ladder, quite naked, which he did, and was not stung. I then ventured to follow; and I declare, upon my honour, that, even after shaking the nest, which made its inhabitants buzz about my ears, not a single bee attempted to sting me. I next released and rewarded the negro for the discovery. This swarm of bees I afterwards kept unhurt as my body-guard. They have made many overseers take a desperate leap for my amusement, as I generally sent them up my ladder upon some frivolous message, when I wished to punish them for injustice and cruelty to the negroes, which was not seldom.

The same negro assured me, that on his master's estate was an ancient tree in which had been lodged, ever since he could remember, a society of birds, and another of bees, who lived in the greatest harmony together. But should any strange birds come to disturb or feed upon the bees, they were instantly repulsed by their feathered allies; and if strange bees dared to venture near the birds' nests, the native swarm attacked the invaders, and stung them to death. He added, that his master's family had so much respect for the above associates, that the tree was considered as sacred."

The senses of animals vary in acuteness; they are providentially adapted to the natural modes of obtaining existence. But it is not generally known that animals enjoy the pleasures of certain senses not less keenly than human beings. The fondness of the serpent for music has been celebrated and doubted from the earliest ages, but the snake-charmers of India have now verified the fact. Mr Swainson has himself proved that the lizards are eminent for their love of music :—

"The elegant little species commonly called the *Lacerta agilis*, although rare in Britain, is found in such abundance in the south of Europe, that hundreds on a fine sunny day may be seen in a single walk, basking on the stones and walls, or pursuing their search after insects. In Sicily and Malta they are particularly numerous, and very beautiful. The habit they have of turning the head on one side, and some vague recollection of a story in the *Arabian Nights* about an attentive lizard, first induced us to try what effect the humming of a song would have upon these creatures, and it was really most entertaining. The little reptile, instead of running away with its usual swiftness, would remain perfectly still, inclining its head on one side, as if to drink in every intonation. The softer and more plaintive was the tune, the more intense was the attention it evinced; and if a whistle was substituted for a hum, it would suffer itself to be approached so near, that any one unacquainted with its astonishing swiftness would fancy he could capture it with his hand. This curious fact, once discovered, often proved a source of much amusement. Often, after a long ramble spent in sketching or botanising, we used to repose in a shady spot among the rocks, and charm those pretty little creatures so successfully, that we have known them even to come out of their holes, and thus form a little audience. On such occasions they sometimes stand remarkably upright on their fore-legs, the hinder ones lying almost flat upon the ground; the same attitude they also assume when reconnoitring, but then the head is never turned on one side as if for the purpose of accurately hearing. The same experiments were frequently made upon the smaller lizards of Brazil, which more or less exhibited the same fondness for tunes."

In no part of natural history are mistakes more common than in what relates to the motions of animals. As we generally see them in one element, we are led to believe that they are confined to it. Indeed, "a fish out of water" has become quite a proverb. Mr Swainson has, however, collected some observations, which will require the aphorism to be received for the future with considerable limitations.

"To include walking on land and climbing up trees as among the actual motions of this class of animals [fishes], will no doubt surprise many of our readers; yet there are not wanting several fishes which perform these apparently unnatural feats. The frog fishes of the Asiatic islands and the southern hemisphere can not only live several days out of the water, but can crawl about the room in which they are confined; this latter facility originates from the great strength and the peculiar position of their pectoral fins, which thus perform the office of feet. The whole aspect of these grotesque-looking creatures, particularly in a walking position, is so much like that of toads or frogs, that a careless observer would at first be at some loss to determine their real nature. The generality of the fresh-water eels, although from not possessing ventral fins they are unable to walk, yet they are well known to quit the water at certain seasons, and make their way over the grass to other ponds, at no great distance, for the purpose of seeking fresh habitations or depositing their spawn. Nearly all the Indian *Ophiocephali* (fresh-water fishes, not unlike our sea mullet) crawl from tank to tank, or from ponds that are nearly dried up, to others which, by a wonderful and incomprehensible instinct, they seem to know to be full. Such an unusual circumstance as fish crawling on dry land, has naturally excited the superstitious Hindoos to believe that they fall from heaven. The *Perca scandens*, which belongs to the same natural tribe as the last (Spirobranchidæ, Sw.), quits the water, and ascends the roots and branches of the mangrove trees, an effort it accomplishes by using its ventral fins as little feet: it is not clear, however, what purpose it has particularly in view, in thus quitting an element it is obviously to inhabit; yet that these terrestrial expeditions are perfectly natural to them, is proved by the fact of the whole of this tribe having a particular organisation. By this a provision is made for retaining a sufficient quantity of water in the gills, in order to keep them in a state of moisture while the fish is out of water."

These motions are connected with the safety of the animal, but there are others indicating sport and enjoyment, which go far to rescue the account of "the butterfly's ball," which amused our childhood, from the regions of fable.

"Insects have also their notions of gaiety or sport: among these none seem to vie in their singularity with the choral dances which so many of the *Diptera* and some of the *Neuroptera* maintain in the air, in which, however, it has been observed that males alone are engaged.

"These dances are kept up at all seasons of the year, only that in winter they are confined to the robust *Tipulidæ* or gnats, which, however small, are often seen in a sunny day of December, when snow is on the ground, sporting as merrily as in the spring. Sometimes these insects look like moving columns, each individual rising and falling, in a vertical line, a certain space, and which will follow the passing traveller often intent upon other business, and all unconscious of his aërial companions for a considerable distance.' Mr Kirby further remarks, 'that the smallest *Tipulidæ* will fly unwetted in a heavy shower of rain, as I have often observed. How keen must be their sight, and how rapid their motions, to enable them to steer between drops bigger than their own bodies, which, if they fell upon them, must dash them to the ground!'

The little water beetles of the genus *Gyrinus*, so frequently seen on the surface of fresh-water ponds in a bright summer's day, are as joyous a race as their brethren the gnats. The rapidity with which they skim in undulatory circles is not less admirable than the precision with which they tread the mazes of the aquatic dance, so as never to encounter and seldom to touch each other. Their flattened and oar-shaped hind feet are peculiarly adapted for these exercises, and they continue their diversion for hours with unwearied gaiety."

The attitudes which insects assume to screen themselves from observation, are very remarkable. We shall quote a few of the less known instances.

"Many of the weevil beetles (*Circulesmides*), particularly those with short thick bodies, on the least appearance of danger gather themselves into a heap, bend their snout under the thorax, and fall to the ground from the plants on which they happen to be feeding. It is then vain to search for them, for the colours being perfectly matched to those of the ground, the keenest eye will be completely baffled. There is a genus of this family found in the sandy tracts of Africa and of Sicily, which, although large, is so exactly coloured like the sand, that few entomologists would distinguish the insect from the surrounding soil.

One of the most singular attitudes of this sort is that assumed by nearly all the entiform types of annulose animals, and by many of these in the vertebrated circle; it is that of rolling themselves up in a perfectly spherical ball, like the common wood-louse. In this attitude, the legs, and all the softer parts of the body on the under side, are entirely covered and defended by the hard crust which forms the upper surface of the animal. Other insects endeavour to protect themselves from danger by feigning death. The common dung chafer (*Geotrupis stercorarius*), when touched, or in fear, sets out its legs as stiff as if they were made of iron wire—which is their position when dead—and remain perfectly motionless. The tree chafers elevate their posterior legs into the air, probably with the same view; while the *Scarabeus cæsar*, and its allies, if our memory serves us right, pack their legs close to their bodies in the same manner as do the Byrrhii mentioned by Mr Kirby. The same author relates, from the scarce volumes of De Gier, the extraordinary perseverance with which the little beetle, named *Anobium pertinax* by Fabricius, persists in counterfeiting death. 'All that has been related of the heroic constancy of American savages, when taken and tortured by their enemies, scarcely comes up to that which these little creatures exhibit. You may maim them, pull them limb from limb, roast them alive over a slow fire, but you will not gain your end—not a joint will they move, nor show by the least symptom that they suffer pain.' Many *Tenthredinæ*, or saw-flies, pack their antennæ and legs close together; and every one has witnessed the same remarkable habit in the majority of spiders."

Societies and associations of animals are not always the result of blind impulse; jackals unite to hunt in packs; birds form flocks to migrate; and in both cases the union is voluntary, for the jackals and birds are often found singly. But there can be no doubt of the voluntary principle in associations formed for recreation, as in the case of rabbits, marmots, parrots, &c. The meetings of these animals for sport are adverted to by Mr Swainson; but we must pass on to notice a small finch-like bird called the *republican grosbeak*, found by the late Colonel Patterson in the interior of Africa, which actually combines with those of the same species to build aërial cities. Critics have long abused the old Greek comedian Aristophanes for his extravagant fiction of a city built in the air by the birds, but even his fiction is surpassed by the account of the winged republicans given by the colonel, which we extract in his own words.

"The method in which these birds fabricate their nests, is highly curious. In that of which I have given a plate, there could be no less than from eight hundred to a thousand residing under the same roof. I call it a roof, because it perfectly resembles that of a thatched house, and the ridge forms an angle so acute and so smooth, projecting over the entrance of the nest below, that it is impossible for any reptile to approach them. Their industry seems almost equal to that of the bee; throughout the day they appear to be busily employed in carrying a fine species of grass, which is the principal material they employ for the purpose of erecting this extraordinary work, as well as for additions and repairs. Though my short stay in the country was not sufficient to satisfy me by ocular proof that they added to their nest as they annually increased in numbers, still from the many trees which I have seen borne down by their weight, and others which I have observed with their boughs completely covered over, it would appear that this really was the case.

When the tree which is the support of this aërial is obliged to give way to the increase of weight, it is obvious they are no longer protected, and are under the necessity of rebuilding in other trees. One of these deserted nests I had the curiosity to break down so as to inform myself of its internal structure, and I found it equally ingenious with that of the external. There are many entrances, each of which forms a separate street, with nests on both sides, at about two inches distant from each other. The grass of which it is built is called the Boshman's grass, and I believe the seed of it to be their principal food, though on examining their nests I found the legs and wings of different insects. From every appearance, the nest which I dissected had been inhabited for many years, and some parts of it were much more complete than others. This, therefore, I conceive nearly to amount to a proof that they added to it at different times as they found necessary for the increase of the nation or community."

The grosbeaks associate for defence, but we find that the ants associate for war. This is too bad; war, so long deemed the proud prerogative of man, a luxury worthy of being purchased by everlasting debt, is enjoyed by the ants without any compensating burthen of taxation. They actually anticipated the most celebrated contrivance of Napoleon, for they dispense with a commissariat, and make the war pay its own expenses. The history of one of their battles is to the full as interesting as any bulletin ever issued by Napoleon, or any dispatch published in a London Gazette Extraordinary.

"Figure to yourself two or three of these ant cities, equal in size and population, and situated at about a hundred paces from each other; observe their countless numbers, equal to the population of two mighty empires; the whole space which separates them for the space of twenty-four inches, appears alive with prodigious crowds of their inhabitants. The armies meet midway between their respective habitations, and there join battle: thousands of champions, mounted on more elevated spots, engage in single combat, and seize each other with their powerful jaws; a still greater number are engaged on both sides taking prisoners, which make vain efforts to escape, conscious of the cruel fate which awaits them when arrived at the hostile formicary.

The spot where the battle most rages, is about two or three square feet in dimensions; a penetrating odour exhales on all sides; numbers of ants are lying dead covered with venom; others, composing groups and chains, are hooked together by their legs or jaws, and drag each other alternately in opposite directions. These groups are formed gradually: at first a pair of combatants seize each other, and rearing upon their hind legs, mutually squirt their acid; then closing, they fall, and wrestle in the dust: again recovering their feet, each endeavours to drag off his antagonist. If their strength be equal, they remain immoveable till the arrival of a third gives one the advantage. Both, however, are often succoured at the same time, and the battle still continues undecided; others take part on each side till chains are formed of six, eight, or sometimes ten, all hooked together, and pertinaciously struggling for the mastery: the equilibrium remains unbroken, till a number of champions from the same nest arrive at once, compel them to let go their hold, and the single combat recommences.

At the approach of night, each party gradually retreats to its own city; but before the following dawn, the combat is renewed with redoubled fury, and occupies a greater extent of ground. These daily fights continue till, violent rains separating the combatants, they forget their quarrel, and peace is restored. In these engagements the combatants exhibit the greatest fury, being absorbed by one sole object, that of finding an enemy to attack. What is most wonderful in this history—though all are of the same make, colour, and scent—every ant seems to know those of its own party; and if by mistake one was attacked, it was immediately discovered by the assailant, and caresses succeeded blows.

Digitized by Google

Though all was fury and carnage in the space between the two nests, on the other side the paths were full of ants going to and fro on the ordinary business of the society as in times of peace, and the whole formicary exhibited an appearance of order and tranquillity, except that on the quarter leading to the field of battle; crowds might always be seen either marching to reinforce the army of their compatriots, or returning home with the prisoners they had taken, which, it is to be feared, are the devoted victims to a cannibal feast."

We might extend our views to the systems of emigration and colonisation adopted by the ants, and show that, like higher animals, they evince a haughty disregard for the rights of the aborigines; but we have given sufficient instances to show that animals the most mean and contemptible in vulgar eyes are endowed with qualities which have every semblance of reason. It remains only to point out the important distinction, which is at once most obvious and most satisfactory: there is no progress and no improvement in animals; a limit is set to the exercise of their faculties; nature has said to each, "thus far shalt thou go, and no farther;" but man has received from his Creator an impulse to an advancement whose final goal is placed beyond our ken; continued improvement is the law of his existence; the perfection of the animal is attained in this present life, but man presses forward to a higher destiny, feeling that intellectually and morally there is something beyond, higher and better than any thing which he has yet attained; that the full developement of his powers is not possible in time, but demands eternity.

RECOLLECTIONS OF AN AUTHORESS.

BY A. OPIE.

ALEXANDER WEDDERBURNE, BARON LOUGHBOROUGH AND EARL OF ROSSLYN.

As I have alluded to this nobleman in my recollections of Lady Rosslyn, the wife of his successor, I am inclined to follow up that allusion by some reminiscences of the judge himself. I find, in a slight sketch of his life, that he was born in Scotland in 1733, educated at the University of Edinburgh, and called to the Scotch bar in 1754.* The next year he was entered at the Inner Temple. He began his public career as member for Richmond in Yorkshire, was made Solicitor-General in 1771, Attorney-General in 1778, created Baron Loughborough in 1780, and then raised to the bench as Chief Justice of the Common Pleas.

This distinguished man soon paid the usual penalty exacted from the prosperous, as he became a mark for satire and detraction; and though he was reputed to have shown great mildness and moderation while he held the difficult and invidious office of Attorney-General, he was charged with being fond of *convicting capitally* when he became a judge. Whether this charge was true or not, I am not able to decide, but I trust that there are few judges of the present day who can be said with truth to *delight* in inflicting capital punishment. But the severest blow to his character was inflicted by Churchill in his poem of the Rosciad—as by

> "A pert, prim prater of the Northern race,
> *Guilt in his heart*, and famine in his face,"

he meant to designate Alexander Wedderburne. I conclude, that, when Attorney-General, he had been concerned in the prosecution of Wilkes, the friend of Churchill, and thence the bitter animosity which these lines portray. But whether the poet had just ground or not for thus attacking Lord Loughborough, I was particularly desirous to see him when I heard he was come to N—— to preside at our assizes, and with Churchill's portrait of him "in my mind's eye," I eagerly repaired to the Nisi Prius Court, to compare it with the original. But I saw neither "pertness," "primness," nor "famine," in the face before me. Of what "guilt" might lie in the heart of the accused, I could not judge; but now, when I daily see that even good men are led by political differences, and their result, personal hatred, to accuse and vilify their fellow creatures, I am inclined to hope that the guilt imputed to Lord Loughborough was the creature of the poet's rancorous revenge and his political dislike. However, I soon forgot Churchill's opinion in my eagerness to form my own of the interesting man I came to see; and I thought his appearance so singular, yet so distinguished, that he would have attracted and fixed my attention had I known nothing of his previous character.

I never saw a human face so much resembling a parrot as his was. The nose appeared to me like a beak, and the nostril was cut up like the beak of a parrot. The ball of the eye was very large and prominent, but the eyes themselves were so dark, bright, expressive, and intellectual, that I soon ceased to remember or notice any other of the features.

It was not long before I procured a seat on the bench beside the judge; and in the course of the morning I had the pleasure of hearing him converse, for Windham of Tulbrigg, who was then member for N——, came to pay his respects to him; and I was much gratified in remaking the flashing of their fine intelligent eyes, as, leaning across me, they talked together on interesting subjects.

This was a higher gratification to me than any thing I had as yet heard that morning; for it was always one of my greatest pleasures to see and hear Mr Windham, and now I was certainly hearing him to peculiar advantage. I was therefore sorry when he withdrew, and left the judge to resume his legal duties; but those duties soon became so interesting to me, that I had no remaining regret.

A young clergyman in the county had allowed passion, and a supposed sense of injury, to master him so completely, that in a public ball-room he pulled a gentleman by the nose; and the person assaulted was now about to seek legal reparation, and the moment was arrived. I was very attentive to what passed below me, but equally engaged in watching its effect on the speaking countenance of the judge, in which I fancied that I saw condemnation of the folly of bringing such an action. At length a witness was called to prove the assault. He was a tall, thin, sallow man, much respected in his neighbourhood, but he had a precise, slow, formal manner of speaking, very trying in a witness-box. However, the judge was patient, and evidently much diverted by the manner and matter of the witness. "But to the point, sir," cried the less patient examiner. "Did you see the assault or not?" "Yes, I did," he replied; "I was standing by the dance when Mr B—— drew near. He placed himself opposite to Mr L——, at perhaps twelve paces, or so, distant from him. He then put his hand to his head, and leaned his elbow on his other hand—*thus*. He seemed for some minutes, but I cannot say how many, absorbed in thought; I might say, in *intense thinking;* when, suddenly, he sprang forward, and pulled Mr L—— by the nose."

Universal laughter followed this testimony, which, though checked immediately by the call of silence, was renewed, when the judge, casting a satirical glance around, observed, in a loud voice, "The most singular result of *intense thinking* that I ever remember!" and the corner of his mouth still moved with internal laughter, even when he had resumed the listening attitude of the judge. In the meanwhile, I was delighted to find that a judge could *laugh*, in direct contradiction to the old saying "as grave as a judge." Little did I then foresee that in after years from that period, the same judge would have been led to excite as universal a laugh in the Court of Chancery, of which I was the *original cause*. Soon after these assizes he was made Lord Chancellor, and an application came before him, in which I was interested. A little ballad of mine, called "the Orphan Boy," which I had written for one composer, and therefore had made it his sole property, was set to music and published by another; and my friend applied to the Chancellor to grant an injunction, to forbid the rival composer from selling what he had set. The counsel for the contending parties had been warm and long in debate, when the Chancellor, assuming, I doubt not, the meaning satirical look which I had seen and *enjoyed* on another occasion, begged leave to ask whether it would not be better, and certainly it would be more amusing, if each composer was to sing his own song in court! This proposal excited a general burst of laughter; and as it was deemed an evidence that the judge was fatigued, it brought the business to a speedier decision, which was in favour of my friend, and the injunction was granted.

Soon after, Lord Loughborough was created Earl of Rosslyn, but his infirmities increased so rapidly, that he died suddenly of apoplexy in 1805, and was buried in St Paul's Cathedral.

As he was supposed by many to have been the author of the Letters of Junius, no mean opinion could have been entertained of his abilities, as it was a compliment to the *head* of any man to be supposed capable of writing so well, though it was any thing but a compliment to his heart. But I believe there is no tenable ground for supposing that he wrote these celebrated letters.

He certainly wrote, in 1793, a pamphlet on the state of prisons in England, and the means of *improving* them—a proof that he was anxious to mitigate the sufferings even of his *erring* fellow-creatures, and was therefore more deserving of esteem than if he had been the writer of a political work as much distinguished for bitterness of invective as for brilliancy of wit, and with this observation I shall conclude my recollections of the Earl of Rosslyn.

* ["He was rapidly gaining ground as a junior counsel, when an accident put a sudden stop to his practice in his native courts. He had gained the cause of a client in opposition to the celebrated Lockhart, when the defeated veteran, unable to conceal his chagrin, took occasion from something in the manner of Mr Wedderburne to call him 'a presumptuous boy.' The sarcastic severity of the young barrister's reply drew upon him so illiberal a rebuke from one of the judges, that he immediately unrobed, and, bowing to the court, declared that he would never more plead where he *was* subjected to insult, but would seek a wider field for his professional exertions. He accordingly removed to London, and enrolled himself a member of the Inner Temple."—*Scottish Biographical Dictionary.* It was Wedderburne who gave George III. the courageous advice to call in the troops for the suppression of the London riots of 1780.—ED.]

ANNALS OF THE POOR.

STORY OF AN OLD WIFIE—MERCANTILE INGENUITY—HOW CAPITAL IS FORMED.

What follows is an extract from a letter addressed by a lady, now residing in a large provincial town in Scotland, to her niece in Edinburgh, the latter being merely a child. Though intended only to amuse a little girl and her young companions, it seems to us calculated to give pleasure, and convey instruction, to a wider circle. The simple language of the original is retained, as the best that could be employed on the occasion:—

"Mr ——, who takes charge of the savings' bank here, was very much pleased with an old wifie, who came regularly every Saturday night and deposited a little sum. This careful decent wifie earned her bread by making *jib*, or what is sometimes called *black man*, but is here called *toffy*:* so her name was Toffy Betty. Well, Betty came regularly till she had fifty pounds in the bank, so that Mr —— was quite pleased with her, and one night he inquired how she contrived to save so much money. Betty told him that she made toffy, and sold it to the school-boys, and she always tried to save *a little* every week. At one time she got a rival in her business. Another woman, who saw that she was thriving in trade, opened a shop for jib just opposite to her; and she thought that she would have been ruined. But what do you think poor old Betty did? She bought a hobby-horse at a sale; and every boy who came to buy, got a ride upon the hobby-horse, and Betty's door was always crowded when the schools came out; and she made between four and five hundred pounds, and built a house, and now lives in it, and keeps a grocer's shop."

THE CHEAP POSTAGE.

A letter which one of the editors of this paper received from a gentleman who resides in the Highlands, soon after the commencement of the *fourpenny post*, contained the following passage:—"I quite enter into your feelings with regard to the great boon granted in the reduction of postage. It is a blessing which we can hardly conceive to the thousands who, till now, have been totally excluded from any intercourse with their distant friends. It is not at all unfrequent for the poor people in this country to ask for some means of '*buying a letter out of the post-office*,' which has been waiting there perhaps for weeks. The cost of a letter from England or elsewhere (one shilling or one and sixpence), from some of the friends of the labouring classes, has acted as an absolute prohibition of all intercourse between them." An illustration like this is fit to downweigh whole articles in wrong-headed reviews, written by gentlemen skilled to "make the worse appear the better reason."

WHAT IS THE PRACTICAL GOOD OF SCIENCE?

The common mind is little qualified to trace science to its results in the promotion of human happiness. In the following case, however, the benefit is so direct, that the simplest may comprehend:—

"On the occasion of a recent visit to the metropolis (Dublin), we had an opportunity of seeing and learning the particulars of one of those extraordinary proofs of the resources of medical, or rather surgical science, which, both in these countries and on the continent, have of late years surprised and gratified mankind, and which are among the best and noblest triumphs of the art. The case to which we refer is that of a child then, and probably still, in St Vincent's Hospital, Stephen's Green; and the particulars, as stated to us by a non-professional gentleman, by whom we were accompanied, and who had taken great interest in the case from the commencement, were as follow:—The wretched infant, the child of poor parents in the neighbourhood of Cabinteely, was the subject of one of those hideous malformations with which it occasionally pleases Providence to afflict and disfigure humanity, and which in the present case was what is usually termed 'pig's-face.' In this instance nature had failed to make either a front to the mouth or a bottom to the nose, and in the stead there projected a kind of proboscis or snout, like that of a pig, with two teeth pointing outwards from its end. The wretched child, as soon as it was able to make an effort to feed itself (for it never sucked), was in the habit of thrusting its arm, up to the elbow, into the hideous cavity in the lower part of the face, in order to place its food within the passage to the stomach. The feelings of aversion with which the miserable creature was regarded by their neighbours rendered the condition of the unfortunate parents most wretched, until at length the poor mother, sick of its constant presence and monstrous appearance, brought it to the hospital, declaring she would be quite resigned to the result of any operation, however hazardous to its life, if there were any chance of render-

* [A kind of tablet made by boiling treacle or coarse sugar.]

Digitized by Google

ing its appearance less miserable and disgusting. The child was in consequence admitted into the hospital, where, under the most discouraging circumstances, an operation was planned and performed by its distinguished chief surgeon, Mr Ferrall. We are of course unable to give any professional detail of the proceeding, but, incredible as it may appear, all the natural deficiencies of feature were under this gentleman's skilful management supplied from the flesh of the adjacent parts, and the infant, at the time to which we refer, when it was little more than a year old, already exhibited the appearance of perfect health and of a well-formed face. When the child was first seen by the parents after the decided success of the operation, it would, as we were assured, be quite impossible to describe the excessive joy of the poor mother, as on her knees she presented to the anxious father the altered infant, now become a really well-looking and comely child. Such, we repeat, are among the best and noblest triumphs of the profession."—*Leinster Independent.*

THE ALEXANDRINE COLUMN OF ST PETERSBURGH.

THE Alexandrine Column, or monumental pillar erected by the Russian czar, Nicholas, in honour of his brother Alexander, is one of the most magnificent objects of its kind in modern times. Like the power and empire of Russia itself, the Alexandrine column is, in conception and execution, massive and colossal, and impressive to the mind and eye from mere material bulk. The various processes attending its erection form a very remarkable history, interesting from the difficulties, foreseen and unforeseen, which stood in the way, and which were successively overcome by the patience and skill of the architect and his assistants. The architect himself, M. de Montferrand, a Frenchman by birth, has left such a history behind him. We translate, for the entertainment of our readers, some of the most important passages in this narrative.

The Alexandrine Column is a monolithe, or formed of a single stone. It is a fine species of granite, capable of taking on a beautiful polish, and of a red colour, being also exceedingly durable. The column, which is circular, and sculptured, generally speaking, after the Doric style, measures twelve feet in its greatest diameter, and eighty-four feet in height. It is thus twelve feet higher than the obelisk of Luxor, one of the finest ancient erections of this character, and it weighs thrice as much as the same Egyptian pillar. The Alexandrine Column was cut from the quarries of Pytterlaxe, in the neighbourhood of St Petersburgh, in the year 1831. These quarries are situated no great way from the shores of the waters enveloping that region and the Russian capital. While the stone was in the course of being excavated, a vessel was also in preparation for the conveyance of its enormous mass from its native site to that chosen for it in St Petersburgh. This vessel was broad and flat-bottomed, one hundred and forty-seven feet long, and calculated to draw only about seven feet of water under a weight of two million six hundred thousand pounds,* a weight considerably exceeding that of the monolithic shaft. With a greater draught, it could not have traversed the numerous shallows in the line of its intended course. On the 5th of June 1832, this vessel, in itself a work of huge bulk, was brought to anchor near to the quarries of Pytterlaxe.

Preparations on a vast scale had been previously made for the embarkation of the columnar shaft. A mole or causeway had been carried into the sea to the length of thirty fathoms, forming in itself a goodly pier, and requiring considerable labour. It was raised upon stakes, driven into the sea-bed, and consisted of strong interlaced or crossing beams, the interspaces of which were filled with stones. At the end of this mole, a transverse embankment was formed, and by the side of this, or rather inside of it, the vessel was moored. It was necessary, however, first to deepen the channel by two feet, in order to admit of the free passage of the vessel. On the transverse mole were placed the capstans by which the embarkation was to be effected. By land, preparations on an equally large scale were made in the meantime. In order to advance the column from the spot where it had been formed, it was necessary to clear the intermediate ground, about a hundred yards in extent, and very rocky and uneven. The exploding, cutting, and smoothing required for this purpose, was in itself a great work. When a pathway had thus been made, the stone was slowly raised by the action of eight powerful capstans, and propelled a little way, rolling over and over breadthways. The greater diameter of one end made this a difficult process, for the narrow end, rolling over less space, necessarily fell behind. A peculiar application of the capstans, with the assistance of strong iron wedges, was required to bring it forward to a straight line. After four hundred men had laboured at the task for fifteen days, without any intermission, the column was at length placed at the end of the mole, in a direction parallel with the sides of the vessel upon which it was to be lodged.

The column now lay transversely upon twenty-eight beams, thirty-five feet long, and two feet square, the end of which passed from the mole to the vessel, or at least over it, and which were intended to bow down to the vessel at a very gentle slope, as the column descended to the vessel. On the 19th of June, at four in the morning, all was ready for the embarkment of the column. Ten capstans, placed on the transverse mole already spoken of, began, at a given signal, to act upon the massive freight; while sixty workmen were placed at the cables which aided in the operation, and also in keeping the ship in its place. The column was set in motion; every thing went on well and securely; it had just touched the sides of the vessel, when, in a moment, an accident occurred which threw all into consternation. The beams upon which the column rested in its passage, cracked; the alarmed workmen fled; and the column, breaking at once through the whole of the supporting beams, fell with a terrible crash among their fragments, having one end in the boat and the other sunk deep in the bed of the sea.

It was some time before the architect and his workmen could look about them. When they did so, it was gratifying to discover that not one life had been lost, notwithstanding the numbers about the spot at the moment. Without delay, the superintendant of the embarkation commenced to remedy the evil. In consequence of the weight falling obliquely on it, the vessel was turned over sideways, and partly forced into the clayey bed of the sea. The whole power of the machinery was applied to raise the column to a fair and proper position on the vessel. The 400 fatigued labourers could not have accomplished this alone, but it chanced that some visitors of distinction had arrived from St Petersburgh to witness the operations, and one of these took it upon him to order in the immediate assistance of 600 soldiers from a garrison near the spot. With this reinforcement, after forty-eight hours of almost incredible toil, the column was safely raised, and laid straight upon the vessel. The latter machine, to the delight of all, floated lightly and easily with its burden.

On the 1st of July, after four days' slow sail in the Gulf of Finland, the vessel was safely towed into the required place in the harbour of St Petersburgh. The column and its vessel were now visited by immense crowds, the grandees and royal family of the country among the number. The next operation was to convey the stone to land. For this purpose, a new work of great strength, inclined in its shape, had to be constructed, into the particulars of which it is needless to enter. Suffice it to say, that on the 12th of July the debarkation of the monolithe took place. A great crowd had assembled to witness it. The emperor and empress appeared on the scene. The signal was given, and the importance of the operation may be guessed by the fact that all the workmen fell involuntarily and simultaneously on their knees before venturing on the task, and prayed for its success. Fourteen capstans were set in action to move the column, while six were devoted to the keeping of the vessel, otherwise bound also, in its place. The result was fortunate. Slowly, and amid profound silence, the column began to move, and in ten minutes, without accident, it was safely brought to a spot beneath the window of the palace, whence the empress had beheld the scene.

An inclined plane was now to be made, to bring it up to the level of the spot, where its pedestal was erected, in the centre of a square; and 600 carpenters addressed themselves to this task. The inclined plane was 490 feet long, and 100 feet in breadth, and, at its greatest elevation, rose to thirty-five feet. The same difficulty which obstructed the rolling of the column to the water, impeded its progress up this plane. This was the inequality in thickness, and it was always necessary, when the thick end of the column got in advance, to make it pause and revolve upon itself till the lesser end was brought forward also. After a time, the inclination was safely surmounted, without any accident happening to the wood-work. Before the passage of the inclined plane, it ought to be mentioned, workmen, to the number of 150, were busied in giving the finish to the figure of the column. When he had brought it to the top of the plane, the architect then prepared a car for its transportation along the horizontal space which still lay between it and the proposed site. This car was in two pieces, and in all eighty-two feet long by eleven in breadth. It had seventy-two cast-iron wheels, and was composed of metal-bound beams. By means of this machine, the column was securely moved to the necessary spot.

Perhaps the hardest task of all now commenced. This was the conception and erection of the great scaffolding by means of which this immense mass of stone was to be safely lodged on its pedestal, there to remain till time should work its fall. This scaffolding, we shall only say, was 154 feet high, and partly composed of mason-work, and partly of wood. The mason-work formed an inferior platform, and on this sixty capstans of great power were placed for the raising of the column. Each of these machines, with the appendages belonging to it, was first tried, and found to resist a weight of 60,000 pounds. The correspondent ropes were made by machinery, each rope containing 522 threads of hemp, so strong that every thread sustained singly a weight of 180 pounds. With such preparations, the placing of the column could not fail to be successful. Yet the architect took the precaution to try all his apparatus more fully, by raising the column twenty feet in the air, and then replacing it, previously to the final attempt at fixing it in its site.

The architect, in the beginning of September, brought his work safely to a conclusion, placing it on its pedestal amid the acclamations of the Russian people. A statue was afterwards placed on the top of it, and the Alexandrine Column now stands in the northern capital, a credit to the nation and to its erectors. As a monolithic pillar, it has no equal among the erections of modern times.

* As this is translated from the French, it is probable that the weights and measures mentioned are French, which differ a little from the British.

LETTER OF AN AUSTRALIAN SETTLER.

ANY thing beyond common experiences which children see for the first time, never fails to make a permanent impression upon them. I [the reader must understand that one of the editors of this paper now speaks in his proper person] can never forget the first time I beheld a scientific instrument used. It was a theodolite belonging to a gentleman who was taking levels along the vale of Tweed, with a view to the construction of a railway between Glasgow and Berwick—a work which never was commenced. This was in the early days of railways, about the year 1810 or 1811, when they were not so readily entered upon as they are now. Mr K——, a land-surveyor settled in Roxburghshire, had been employed to make the necessary surveys through Peeblesshire, and when he came, in the course of his operations, to the little sequestered town in which I spent my first years, he became acquainted with my father, who was then almost singular in the place for a love of science; a feeling which he early imparted to myself, along with much valuable instruction. At his request, our surveying friend erected his theodolite in the street, and explained its uses to my brother and myself, to our infinite pleasure, and with the effect of awakening in our minds a reverence for the instruments of exact science, and indelibly impressing upon us a pleasing recollection of the kind demonstrator himself.

I am tempted to mention these circumstances, in order to give the greater assurance of the genuineness of a very interesting letter, which it has been thought worth while to communicate to the public in this sheet. Having lost much capital in farming in his native county, Mr K—— emigrated in 1824, with a number of sons and daughters, to New South Wales, where, his scientific acquirements having recommended him to the friendship of the governor, Sir Thomas Brisbane, he very quickly found himself settled in an agreeable and lucrative situation on the Emu Plains. The letter in question is one written by Mr K——, at his settlement of Cardross, Goulburn, on the 5th of July 1839; the object of which was to acquaint one of his sons, who still resides in this country, with his present circumstances. It was of course not meant for publication; but as it possesses a general interest, as an account of the career and present situation of a prosperous emigrant, it is here, with the permission of his friends, laid before the public:—

"We [Mr K—— and one of his sons named James] have been striving very hard for the last twelve years, and vesting what money we could realise in the purchase of land and live stock. We have now as much stock as is required for the foundation of a splendid fortune for those I leave behind; and in regard to land, we have abundance, and I only wish to obtain 850 acres more, to render my establishment on the sea-coast one of the most perfect in the colony: this must fetch a high price at auction, still it is worth double to me that it would be to any other purchaser.

Our different estates at present stand as follow:—to wit, 1st, Cardross, where I now reside, contains 2000 acres, with 200 acres in cultivation; my grant.—2d, Cardross Grange, adjoining the above, contains 1000 acres, with 100 acres in cultivation; a purchase.—3d, Maxton, on opposite side of Wolondilly, contains 2000 acres, with 200 acres in cultivation; grant to James.—4th, Strathallen, adjoining on east, late Howey's, contains 960 acres, with 150 acres in cultivation; a purchase, 1000 guineas.—5th, Raine Ville, on Fish River, near Bathurst, contains 2000 acres, with 200 acres in cultivation; a purchase.—6th, St Boswell's adjoining, and east from the last lot, contains 1221 acres, with 70 acres in cultivation; a purchase.—7th, Mount Jervis, on Jervis's Bay, twelve hours' sail from Sydney, contains 2560 acres; just commenced improvements.—Total, 11,741 acres. On Cardross we have a post wind-mill, fine garden and vineyard of 2 acres, the scenery and surface soft and undulating, and 800 acres of rich land might be cultivated without removing a tree.

I intend making Mount Jervis my principal residence. James and the captain [another son] have been there since February, busy in clearing and inclosing a fine park and paddock of 150 acres, with vineyards and orangery of 5 acres, paddocks for tobacco, maize, hops, &c. &c., and laying the foundation of an observatory on the exact parallel of 35 degrees south latitude, and 150 degrees 50 minutes of longitude east from Greenwich. This estate commands thirty miles of sea-coast, namely, fifteen miles on the Pacific Ocean, and fifteen miles on Jervis's Bay, which is perhaps the finest harbour in her majesty's dominions, where the whole British navy may find anchorage and ride in safety from every wind. The site of the mansion cannot be excelled in grandeur by any place I ever saw. There is a natural port, called Bunda by the natives, just under my windows, at a quarter of a mile's distance, where vessels of 200 tons anchor within a cable's length of the shore. The bay and coast abound with fish of every delicacy and variety—oysters, both rock

Digitized by Google

and mud, schnapper, mullet, bream, whiting, and a thousand other varieties. You may often see half a dozen whales spouting about in the bay in the calving season. Part of my northern boundary is formed by an extensive and picturesque lagoon or lake, two and a half by one and a half miles in extent, which abounds with wild geese, ducks, black swans, pelicans, &c. &c., swimming about in vast numbers, also plenty of mullet, perch, and bream. Whatever we want for breakfast or dinner is brought in by the black fellows absolutely in loads. We have the chief or king (Wagamy), and his two black queens or *jins*, always with us, who have their camp just beside us; he can command us the services of a dozen more of his tribe when they are wanted to shoot, fish, strip bark, or go in their canoes messages for many miles by sea; they are the most faithful, gentle, and useful blacks I ever met with. King Wagamy has been a-whaling in the Pacific, has been at New Zealand, Hobart Town, and other places, and speaks English very correctly. They have their slops and rations of flour, tobacco, tea, and sugar, served out to them by us every day, and government furnishes each of them a blanket every winter. Their value to us in catering, fishing, &c., is worth double their rations. Their accuracy in shooting and throwing the spear cannot be surpassed. They bring in a kangaroo for soup whenever wanted. Wagamy is a most portly figure as he walks about armed with his double-barrelled musket, shot belt, and powder flask, with my two noble kangaroo dogs Camp and Tweedo following along, with the two jins carrying his tomahawk, boomerang, fishing lines, and spears; he has generally a bark canoe ready for launching in every creek and inlet.

Now for our live stock. We have 1000 head of horned cattle, depasturing on land rented from government at Boorowy, about 150 miles west from this; 150 head at home here; 350 head at Jervis's Bay; being 1500 head in all, of cows, heifers, bullocks, and steers of a fine breed. One of my grass-fed bullocks, Strawberry, five years old, was slaughtered at Sydney in 1835, and weighed 1470 pounds, sinking the offal. His picture, in oil, was drawn by Mr Hippkiss, and presented by your brother William to a gentleman in Van Diemen's Land.

Our sheep stock at the different stations amounts in whole to 5500, all Merinoes and fine woolled. My last clip, 14,000 pounds, sold in Sydney at 1s. 3d. per pound, and brought me L.1166, payable in three and six months after delivery. Our cattle profits bring nearly as much more. We employ 20 shepherds and watchmen, 3 overseers, 3 gardeners, 15 farming men, 1 blacksmith, 1 carpenter and wheelwright, 2 brick-layers, 2 grooms, and 2 house-servants, being 49 in all; of whom 7 are free, and the remainder prisoners or ticket-of-leave holders. The expenses are enormous, besides what we lose by pilfering and stealing; but the annual *female* increase of our sheep, horse, and horned stock, which we never sell, helps well. Each man has a weekly ration of 9 pounds of beef or mutton, 10 pounds of flour, a quarter of a pound of tea, 2 pounds of sugar, 1 ounce of tobacco, and 2 ounces of soap, with two full suits of slops every year. Thank God, we have got on hitherto without ever allowing ourselves to borrow or run into debt, and we have L.1000 vested in bank shares, which yield a dividend yearly of 16½ per cent."

Such have been the felicitous consequences attending the step which Mr K—— was induced to take about fifteen years before the date of his letter. It only remains that we caution our readers against receiving the history of this gentleman as any thing more than a single fact. He has been prosperous; but we do not know how far he may have been so in consequence of his own particular talents and cast of mind, of his family circumstances, or of good fortune. Similar prosperity might befall others; but it cannot be expected to be the fate of all.

NATIONAL ADVANCEMENT BY A PROPER USE OF MEANS.

The following valuable paper is extracted from a pamphlet recently published (Blackwood, Edinburgh) under the title of the "Ninth Annual Report of the Proceedings of the Glenkens Society for Improving the Condition of the Working Classes." The Glenkens Society, to which we have already oftener than once made reference, is one of truly philanthropic character, and it has the merit, too rarely allied with benevolence, of doing good by right methods, its great aim being to direct and encourage the humbler classes to do good to themselves, and that simply by making a proper use of the means which Providence has placed within their power. The report is the composition of Mr Grierson of Gasroch, the society's secretary, to whom it does great credit:—

"All are agreed regarding the leading points in physical science. They have been ascertained by diligent observation and careful experiment, and no room has been left for doubt. But if we turn from these subjects to the investigations which have been undertaken with the view of improving the condition of the mass of mankind, nothing can be more striking than the contrast. Here philosophers of the highest name have arrived at conclusions directly at variance with one another, and in some instances not a little astounding to the common sense of plain men. Is there no rule, then, to direct us in this matter? We see different communities, in circumstances apparently altogether similar, possessed of very different degrees of comfort; and we see differences equally great in the situation of the inhabitants of the same country at different periods of their history. May the probable causes of these differences not be discovered, and suggest what ought to be sought and what avoided, and may the actual truth not be ascertained in this as in other matters, by experiment? The statistical reports of the Scottish parishes which were completed about fifty years ago, and are again in course of publication, furnish excellent materials for such an inquiry; and what are the changes which they exhibit?

In the first place, it may be observed, that since 1791 the wages of agricultural labour have undergone a rise of from 50 to 100 per cent. At that period, from 8d. to 1s. per day was about the average summer wages of a country labourer, out of which he had to provide himself with every thing. The summer wages of the same class at present run from 1s. 6d. to 2s. In some counties they are a little higher, and in others a little lower, but these rates may be considered a fair average. The wages of the manufacturing classes are in general much higher than those of agriculturists; and manufactures, which in 1791 were in their infancy, now employ a large portion of the population. The wages of tradesmen have also undergone a similar rise. While the whole of our industrious classes are thus receiving much greater wages per day than their predecessors in 1791, their employment has become much more constant, and the wages earned by each individual in the course of the year have risen in a much higher proportion. No less remarkable an improvement has taken place in the pecuniary circumstances of their employers. Many, in fact, of our most respectable commercial men, have, much to their credit, raised themselves from the humble rank of operative tradesmen to the possession of splendid fortunes; and the land rentals of the country have in many cases tripled and quadrupled, and scarcely any where less than doubled.

If we look again at the articles of necessary consumption which must be purchased, we find the present average price of oatmeal, potatoes, and wheat, little if at all different from their prices in 1791; every article of dress is both much cheaper and much better; and many foreign products, which at that period were within the reach of few, are no longer esteemed luxuries, but so much reduced in price as to be enjoyed by all; yet, with these low prices, our merchants and manufacturers have made their fortunes, and our farmers, notwithstanding the high rents and high wages paid by them, and the comparatively low prices which they receive, are in much better pecuniary circumstances than in 1791. So much for the food and clothing of the population at these two periods.

The rents paid for lodging do not admit of being compared in the same way, the accommodation being entirely different. But we can be at no loss to perceive that in this respect even a more wonderful change has taken place for the better. We have before our eyes some of the town-houses occupied, at the former period, by people of the highest distinction; these houses are now possessed by persons in a very humble rank, not a few of them by beggars; while, in the same towns, families in very moderate circumstances are in possession of houses greatly superior to what they ever were. The country-houses of the higher orders have been either entirely built or altogether renovated within that period. In many counties new steadings have been erected almost on every farm, superior to the former mansions of the proprietors; and the accommodation of the cottars, though still very inferior to what we could wish, is now greatly better than most of the farm-houses of that period. There can be no doubt, then, that all classes are now infinitely better fed, clothed, and lodged, than the population of 1791. The consequences are apparent in their improved health. Ague and many other complaints then prevalent have either disappeared or become greatly mitigated, and there is scarcely a parish which does not lay claim to great salubrity of climate, and adduce in proof the longevity of its inhabitants. Many of the reporters state that morals and religion have advanced along with these physical improvements, and almost all declare that in these respects their flocks are deserving of commendation. Indeed, the solemn stillness of a Scottish Sabbath, and the almost total absence of military from the country, would attest the high moral and religious character of the nation to a stranger unacquainted with the language.

Whence this astonishing improvement? Certainly it has not arisen from the adoption of Godwin's principles of political justice, for they have been entirely forgotten. Neither can we derive any aid from Malthus in answering this question, for although the country has had the benefit of his theory for the greater part of that time, all his cautions have no way retarded the progress of population. In 1755, the population of Scotland was 1,255,663, and in the thirty-six years which expired in 1791, it had only advanced to 1,514,999, being an increase of 259,336. But in the succeeding thirty years which expired in 1821, it had become 2,093,456, showing a rise of 578,457, considerably more than double that which had occurred in the preceding thirty-six years. In the next ten years, ending in 1831, it had increased to 2,365,807, the addition in that period being 272,351, considerably beyond the increase in the whole thirty-six years from 1755; and, since 1831, the progress of population has certainly not been less. Yet, rapid as its progress has been during the whole period from 1791 down to the present time, contrary to all the prognostications of Malthus, the increase of the means of subsistence has been greatly more rapid still.

The general opinion is, that this prodigious improvement can be ascribed to nothing but a better use of the gifts of Providence. The country is the same now as it was in 1791; the materials which it contains are the same. The sole difference consists in the uses to which they are applied. In the first place, the present generation possess much more intelligence; education is both more general and better conducted, and parish libraries, and private collections of the best authors, every where afford the means of obtaining information on all subjects. This enlargement of mind has led to better arrangements in every department of business; banishing superstition, it has diffused more correct views of the solemn truths and duties of religion, and it has withdrawn our countrymen from the gross and expensive indulgences of former times, to cheaper and more refined recreations. In the second place, our tradesmen have become much more dexterous at their different occupations. They are not only more rapid, but they are enabled to execute works to which their predecessors were altogether unequal. In the third place, they are more industrious; many no doubt are still subject to indolent habits, but, generally speaking, there is much less time now thrown away in absolute idleness than at the former period. To all this must be added, that our countrymen have not been wanting in economy. The capital of the country has very much increased. It is from the savings of individuals that this increase has arisen, and the growth of Savings' Banks is a proof that these economical habits reach to a very humble class.

These causes combined are quite sufficient in our opinion to account for the very great increase which has taken place in the produce of the country, and the general comforts of its inhabitants. With the machinery furnished by the skill, dexterity, and industry of modern tradesmen, from the capital thus accumulated, one man is enabled to throw off as much cotton thread as two hundred could produce sixty years ago. Weaving, bleaching, printing, have made similar progress. Hence the low price of all kinds of cotton fabrics, and hence, too, the multitude supported by that branch of manufacture. The same may be said of all our other manufactures. Agricultural machinery may not be as yet quite so perfect, but the improvement of all the arts connected with agriculture has been very great, and the works which have been executed in that period have been wonderful. Great part of the land has been divided and fenced—much of what was waste has been reclaimed—the best implements of husbandry in the world have been introduced—ploughing has been brought to perfection—the proper succession of crops has been carefully studied, and in the opinion of Mr Dudgeon, since 1784, by a mere change in the rotation, the produce has in many places been increased tenfold—almost universally the thrashing-machine has superseded the imperfect and expensive mode of separating the grain by hand-labour—and, finally, the live stock of the country has completely changed its character. As we are indebted for all this to the improved intelligence, dexterity, industry, and increased capital of our countrymen, so are we also for our improved lodging, and improved means of transit by common roads, steam-boats, and railroads, which have made it an easy matter for districts the most remote to exchange their surplus produce, and to command the luxuries of the most distant climes.

If the remarkable improvement which has taken place in the circumstances of the great body of the people is sufficiently accounted for by their improved use of the materials afforded by Providence, we believe that the misery which is still to be found in some districts may, with equal certainty, be traced to the neglect or misuse of means quite as well adapted to the supply of their wants, and many have little idea to what extent this negligence prevails.

The reports from the Lewis [an island of the Hebrides] state that the huts of the peasantry are 'in general indescribably filthy. There is only an annual sweeping of their houses. The people and cattle are under the same roof, and on the same area. Very few of the country dwellings have a single pane of glass. There is one hole in the roof to allow the excess of smoke to escape, and another on the top of the wall; the latter at night, or during a storm through the day, being stopped with a wisp. * * Wood is so scarce and so dear that it cannot be had in sufficient quantity to make a good roof. * * The roofs have no eaves. The thatch in general is made of stubble or potato stalks, which are spread on the scanty wooden roof, and bound by heather or straw ropes, which again are at each side of the roof fastened by stones, called anchors, resting on the top of the broad wall. On this wall it is no unusual sight to see sheep and calves feeding, and making a short passage into the byre through the roof. The doors of the houses are so low, that whoever would gain admittance must humble himself, and continue in that posture till he reach the fire, which is always in the middle of the floor, and very often he must grope his way, or be led by the hand. From the slightness of the wooden rafters, much straw or stubble cannot be laid for thatch, but just sufficient to exclude the daylight. The thatch is not expected at first to keep out much rain until it is properly saturated with soot, but to compensate for this defect, the inmates are practical chemists; they keep plenty of peats on the fire; the interior is soon filled with smoke; the smoke and increasing heat repel the rain, for a great proportion of what falls on the roof is returned to the atmosphere by evaporation. These houses after a smart shower appear like so many salt-pans or brew-houses in operation.'

This account is said to apply very generally to the

Digitized by Google

habitations of the whole of the small farmers. Good management of any kind is not to be expected from people whose domestic habits are so barbarous. They depend upon the produce of the place for almost every thing. Even their clothing is almost exclusively of their own manufacture. Their time, when occupied at all, is 'devoted indiscriminately to the mixed avocations of husbandry, fishing, kelp-making, grazing,' &c. Their agriculture is wretched. 'The women are miserable slaves; they do the work of brutes, carry the manure in creels on their backs from the byre to the field, and use their fingers as a five-pronged grape to fill them. The thatch of the houses saturated by the smoke with sooty particles is considered valuable, for every summer the roof is stripped, and the inner layer of straw, which contains the soot, is carried carefully to the potato or barley field, and strewed on the crop. Small tenants and cottars generally till the ground by the Chinese plough of one stilt or handle, and the cas-chrom, a clumsy instrument like a large club shod with iron at the point, and a pin at the angle for the labourer's foot. It is a disgrace to see women working with it. No sickle is used for the barley among the small tenants. The stalk is plucked, the ground is left bare.' The return is very scanty in some places, occasionally insufficient for the consumption of the population. It can excite no surprise that, with all these discomforts, the inhabitants of the Lewis, in the opinion of a medical man resident on the spot, 'may be said to die at an early age.' Still they are deeply attached to the land of their birth; a great proportion of them are altogether uneducated, and it is said that the people of Barvas even keep their children from school, lest, being thus made acquainted with better countries, they should be induced to leave their own inhospitable home.

While the inhabitants of the Lewis are left in their present wretched condition, by neglecting to cultivate the means of subsistence which are within their reach, there is another much more numerous class who are from time to time reduced to even greater want, through total mismanagement of those means after they have been realised. We allude to a large portion of the manufacturing classes, who, though earning much higher wages than the best paid of the agriculturists, are such slaves to intemperance, that they and their families are frequently left without the necessaries of life. In fact, those among them who have the best wages are most prone to this vice, and, as a necessary consequence, are really the most miserable. The child is fixed upon a loom or in a mill at nine or ten years of age without the vestige of education; he is placed among seniors as ignorant as himself, and learns like them to consume in intoxication whatever spare money and spare time may be at his disposal—the rest of the Sabbath forming no exception. Not unfrequently the father of a family makes his home the scene of his debauch, and assumes his wife and children as his associates.

The amount thus squandered is almost incredible. The value of ardent spirits consumed in the parish of Stevenston in Ayrshire, with a population of 3681, exceeds the whole land-rental of the parish, L.3836. In Lochwinnoch, in Renfrewshire, 'as in the neighbouring parishes, three or four times more money is expended in this manner than is required to support the churches and schools, and all the religious and charitable institutions.' In Glasgow there is a spirit shop for every fourteen families. In 1834, it was given in evidence to the Committee of the House of Commons on drunkenness, that the amount thus squandered in that city alone was 'nearly equal to the whole amount expended on public institutions of charity and benevolence in the entire United Kingdom.' It was ascertained by this committee that, throughout England, Ireland, and Scotland, there is a place for retail of spirits for every twenty families, and the conclusion at which they arrived was, that, looking at the value of grain destroyed, the abstraction of labour from its proper employment, the property sacrificed by sea and land, the deterioration of mental and physical powers, the increase of pauperism, and spread of crime, and the retardation of all kinds of improvement, the loss to the country from this cause alone 'might be fairly estimated at little less than L.50,000,000 per annum, exceeding the whole revenue of Great Britain, and ten times greater than the amount of the poor-rates. The evil is complained of in all parts of the country, but the manufacturing classes are its principal victims. No wonder that extensive misery should be the consequence, but the existence of this misery will not be received as a proof that the produce of the country has been insufficient for the support of its population. It has evidently not arisen from a deficiency of produce, but from the destruction of what has been produced.

Our conclusion, then, on the whole, would be, that the same Providence which brought man into the world has provided amply for his wants, and that if they remain unsatisfied or imperfectly satisfied, it is because man does not apply the materials afforded to the uses for which they were intended. Had the energy of the present generation been possessed by their fathers, they would have enjoyed equal comforts. Were the inhabitants of the Lewis endowed with the intelligence, dexterity, industry, and economy, which distinguish a large portion of our countrymen, their miseries would be at an end; so also would those of the manufacturing classes, could they only be taught to apply the money in their hands to its proper use. And even that portion of the community who have done most, we feel assured, are capable of doing a great deal more, and of adding still further to their own comforts and the comforts of society. The knowledge of the wisest comprehends but a small portion of the riches of creation, and the most dexterous are far from having reached perfection. It follows that the most effectual way of benefiting either an individual or a community, is to induce them to cultivate those mental attainments which are alike necessary for the conduct of business and the enjoyment of leisure, and those arts which are required for converting to use the materials within their reach. The desire for this would make them industrious, and if industrious they could scarcely be otherwise than economical.

But how is the aversion to labour, either mental or bodily, with which all are more or less infected, to be overcome? We must answer this question by another. What has been the motive for all the exertions already made which have wrought such a change upon this country? Not certainly the mere pressure of physical want, for we see many spend their whole lives in a state of misery without making the slightest effort to relieve themselves; neither has it been the wish for expensive animal enjoyments, else the struggle would end when the means of gratifying that wish have been realised. But the desire to rise becomes stronger with every advance. The grand motive for all these exertions has plainly been to command that respect which never fails to accompany success in any honourable undertaking. It is equally prized by the humble artisan and the rich merchant; and the labours of both only require a beginning; as a few pounds saved by the merchant lead to the accumulation of thousands, so one difficulty conquered by the tradesman carries him on to grapple with another, till he arrives at proficiency. The great object, then, is to give the first impulse; and experience has shown, that if a man can be induced to place himself in competition with others of his own standing at any kind of work whatever, that object will infallibly be gained. The expedient has accordingly been resorted to in all ages. Sometimes this stimulus has been applied to promote the arts of war, sometimes those of peace—sometimes to the fine arts, sometimes to the useful. We are indebted to it for the unrivalled excellence of our ploughmen, for our improved management of green crops, for all our improvements on stock, and we see no reason why it may not be applied with equal success to every art which can benefit society. Were the whole population trained by these means to the arts required for converting to use the materials afforded by each locality, we do not think it possible that any portion of them could remain without profitable employment; and were the same care taken in the cultivation of their minds, their labour would be applied with infinitely more effect, and a security would be obtained against the misapplication of their means."

THE ROAD-SWEEPER.

[BY MRS S. C. HALL.]*

THERE he stands, leaning against the palisades opposite a long rambling edifice, called, time out of mind, B—— Hall. There stands Darby Moore, the legitimate sweeper of "the long crossing," his broom resting on his arm—for he has but one—and the corresponding sleeve of his coat pinned by a large corking-pin to the fold of his red waistcoat; his hat is so evidently, if not of Irish manufacture, twisted by Irish hands, that, even if our sweeper's name was not Darby Moore, or we had never heard his mellifluous brogue, no doubt could be entertained as to where he came from—the brim of the hat is bent over his left eye, impressed by the mark of his finger and thumb, pinched in by perpetual bowing, so as to have a knowing, roguish twist; the crown has disagreed with the round, or they have come to an almost separation by mutual consent. I have seen "a handful of hay," symptoms of a red handkerchief, crusts of bread, and even a mutton bone, peeping through the slit—nay, even staring out—for Darby says, "that sorra a pocket has he, but the crown of his hat; for Judy says she can't *affoord* pockets to his coat!"

The weather has been so fine, that one might imagine

"Othello's occupation o'er."

Not so—in winter Darby sweeps the mud from "the long crossing," and in summer waters the dust. I found he had been so liberal of the pure fluid, that I said,

"Darby, why, you have converted the dust into mud."

"Mud! oh, ma'am dear! do ye call that 'sprinkling' mud? Ooh hone! well, but *my ladies* is hard to plase! The pleasure I takes in making 'the long crossing' agreeable—just a little thickening, and softening, and cooling, and to call it mud! Oh my, my! Well, to be sure! Why, thin, how would yer honour like it? Sure, it isn't in regard of the halfpence I get—and sure enough the sight of a silver fourpence would do the sight of my eyes good—'tisn't in regard of the halfpence, but the honour of sweepin' for the best and handsomest ladies, and the finest gentlemen in England, that's what I think of; and, my lady, if ye'll plase to bespake *the natur of the dump*, it shall be as ye like, ma'am; good raison I have, too. I always says to Judy, 'Judy,' says I, 'the Irish lady always brings me good luck; if it's only twopence she gives me, it's the regular seed of wealth—it grows, so it does, God bless her!' And now, my lady, how would you like 'the long crossing' to-morrow?"

It would be impossible to describe the shades of expression that passed over Darby Moore's face during this piece of eloquence; the merry twinkle of his keen grey eye; the movement of the muscles which contract, expand, and twist his mouth; the action of his hand, which does duty for two; the shrug of his shoulder, and the anxious leer from under his eyelid, to see how the hint about the twopence takes.

"Darby, I do not think I ever gave you more than a penny at a time in my life."

"Well, the masther gives me a penny, and yer honour gives me a penny, and sure that's twopence; bedad! if yer ladyship will give me the twopence now, I'll tell the masther next time—*if yer ladyship wishes it*—if not, why, as the fool said, 'We'll let it stand a penny for Johnny, a penny for Jacky.'"

Darby, as he says himself, "is not altogether beholdden to sweepin'," he has been a "souldier"—talks with contempt of the "Fremch," and declared the other day, "that th' Almighty never created but one real man in the world (barrin' her majesty, for whom he had great respect), and that man was the great Juke of Wellington, God bless him!" So Darby has a pension. What it is, he has never been heard truly to declare; it may be much, it may be little: if you inquire, he has the most ingenious way of telling and not telling.

"The pension, ma'am? Oh, bedad! it's little I get for the beautiful arm—flesh, blood, and bone, it was, my lady, that I lost

'For my country's cause,
And England's glory!'

as the song says."

"But how much is it, Darby?"

"Faix! my lady, it's a mere nothing, and the wife and childre to the fore."

"But how much?"

"To my sorrow, my lady, I've no larning—I've no hand at the figures; and I'm thinkin' they do me out of some in it. Ye see I managed finely, until afther Miss Joy, round the corner, was married."

"How was that?"

"Why, ye see, her sweetheart always came to see her twice a-day, and though *the baste* (house) *was nothing but a hack*, still I'd a regular sixpence to hould it. She's married now, and faith *I don't think he's pleased with his bargain*; for when *they* come to see the ould lady and gentleman in the stay—which is more responsible to hould than the baste—I never get any thing *but coppers!*"

Pray mimic Darby's "taste;" it is so Irish! how well he manages to turn curiosity from his pension to Miss Joy that was—the proprietor of "the stay" that is—and the bridegroom's probable unhappiness, either present or to come.

The little match-children who made up such a piteous story to our cook, about their father *having left his bones at Waterloo*, were Darby's offspring. I reminded cook that the battle had been fought more than twenty-three years ago, and she was so angry, that, even at the risk of spoiling our dinner, she pursued the urchins, and found them in the very act of dutifully sharing the pie-crusts and meat she had bestowed, with my old friend Darby Moore. This was not to be borne; she called them little story-tellers, but not in those words—and their father took their part.

"I ax yer pardon, ma'am, but here is some of what ye gave them. God bless ye!" and he held up the remains of a shoulder of mutton. "That's a bone, ma'am. Sorra a much mate on it; ye'll not say *that's not a bone!*"

"Certainly not."

"Well, then, the childre could no lie; *they said their father left his bones at Waterloo*, and so I did. God help me!—*the bones of my beautiful arm and my five fingers*; they could no lie, ma'am. It wasn't their fau't, ma'am, *if ye could'nt understand English.*"

* We extract this little sketch of a point in town-life from the *Britannia*, a London weekly newspaper, to which it had been contributed by Mrs Hall.

MY NEIGHBOUR.

There are some troublesome neighbours who are the plague of a man's life. They borrow your umbrella when you want to go out, come and pay you a visit when you want to work at home, play the French horn when you want to go to sleep, and give a party on the very evening you want to finish a tragedy. My neighbour has none of these faults, but he contrives to incommode me every moment. He pries into every thing in my room, destroys my papers, and devours my breakfast. Butter, cheese, poultry, game, almost every thing is acceptable to him; and he never eats bread when he can get cake. He is neither a landowner nor elector, he pays no rent for his apartments, yet lives very comfortably. My neighbour is very gentlemanly in his habits, but never comes home till after midnight, and is fond of serenades and nightly meetings with the objects of his affections. In other respects, his character is good; he is neither a fop nor a bully, and avoids rather than seeks quarrels. He bears no malice towards those who treat him ill, and if you turn him out at one door, he will come back by the other. He goes from house to house, making himself comfortable wherever he goes, and staying till he is tired, without ever waiting for an invitation. Familiar as he is with your provisions, only take the trouble to put the stoppers in your decanters, and he will not meddle with them. He is always well dressed, his boots never creak on the floor, for their soles are of the finest chamois, and the upper leathers of India-rubber. My neighbour, though he knows I must wear a coat out at the elbows, never wears any thing but the softest furs. He never lays in fuel, but spends the cold season in my chimney-corner. All this I have to put up with. In fact, I think myself lucky, if he does not invite his friends to his nocturnal orgies, but contents himself with abusing my hospitality rummaging among my furniture, and plundering my larder. My neighbour is one of those personages who must be well treated. It is well known that whenever he leaves a residence, it is sure to tumble down soon. This troublesome neighbour, dear reader, is—a mouse.

BATTLE SCENES.

THE following is an account given by Major Bevan, in his work, "Thirty Years in India," of a scene which occurred at the conclusion of a battle in which he was engaged:—

"Near midnight, when about to retire to rest, an order was received from the commander-in-chief to detach an officer and one hundred pioneers for the purpose of collecting the wounded, and also such arms and accoutrements as could be found on the field of battle. This severe duty devolved upon me, as the other officers were all laid up from the fatigue they had undergone throughout the day. Several palanquins belonging to the head-quarters and staff were kindly sent to bring in the wounded, as none of the public dooly boys could be procured, they having dispersed in search of plunder.

The scenes of woe and misery I experienced during this dark and dismal night, in my progress over the field of battle amidst the carnage of the day, will never be effaced from my memory.

The groans and screams of the wounded and dying constantly struck my ear, as also the piteous wailings of the wives, daughters, fathers, or sons of those who had fallen, or the cries of others in search of their missing relatives. With these heart-rending sounds were often mixed the wild execrations of the dying, who were attempting to repel the marauders who came for the purpose of plunder and rapine.

We found many bodies of our own soldiers in a perfect state of nudity, which plainly evinced they had not escaped those indignities offered to the dead and dying by the profligate followers of a camp.

Our enemies were treated in the same manner; the wretches who wandered over the field in search of plunder spared neither friend nor foe when there was a prospect of booty. We rescued a considerable number of the wounded from this lonely death, the most terrible to the imagination; but several of them had fallen victims to the cowardly assassins or the inclemency of the weather before we could afford them rescue or relief. The ground was soft clay, which had been saturated by the heavy rains and trodden into a quagmire by the passing and repassing of men, animals, and carriages; a misty, drizzling rain fell incessantly, and these circumstances rendered our toil exceedingly difficult and tedious. We had to wait a considerable time for the return of the palanquins from the field-hospital, whither our wounded were conveyed, so that the morning dawned ere our task was completed.

The scenes which I witnessed in the hospital were scarcely less harrowing to the feelings than those in the field. Dr A. and the rest of the medical staff employed all that skill and energy could suggest for the relief of the sufferers. I saw them perform several very difficult operations and amputations, and especially one on Lieutenant H., whose knee was severely shattered. He sustained the operation with unflinching courage, but expired soon after it had been completed. Few, indeed, of those who had received gunshot wounds survived, for the fractures they had suffered were generally so extensive as to bring on lock-jaw. Many young aspirants for military fame, dazzled by 'the pride, pomp, and circumstance of glorious war,' would have their ardour sadly damped by witnessing the scenes on the field and in the hospital of Mahedpoore."

Captain Patterson of the 50th, or Queen's Own regiment, presents in his "Adventures" a description of what came under his observation during the war in the Peninsula, which is equally affecting. As the narration of such incidents may be of use in creating a just horror of war, we here offer it for the perusal of the reader:—

"Soon after nightfall, and when the clash of arms was no longer heard, an interment of the dead took place, and many a poor fellow, who had a few hours before been full of life and strength, was now deposited in his narrow bed. The remains of Major Stanhope were lowered to the grave by his brother officers and comrades, with their sashes. He had worn this day a suit of new uniform, and a pair of bright silver epaulets; in which, with his military cloak around him, upon the same hour as his lamented chief, he was consigned to an honourable tomb.

While we were engaged in the performance of this melancholy duty, the Honourable Captain Stanhope of the Guards, aide-de-camp to Sir John Moore, rode up, directed by the torch-light, to the mournful group. It was the first intimation which he received of his brave relation's fate. Dismounting, and overcome with grief, he took a last farewell; and having obtained his ring, together with a lock of hair, he tore himself hastily away from the heart-rending scene.

On our march across this ground, an incident occurred which made a deep impression on the minds of those who happened to be present at the time. Across the pathway, and on either side, men and officers were lying; and one of the latter was extended on his face among the heath and brushwood, so close to where we passed, that Major Malcolm Mackenzie of the 70th, prompted as it were by intuition, suddenly dismounted to ascertain who was the individual. Stooping to observe the features, that were partly concealed by the long broom, he started back with grief and consternation, on perceiving that the young soldier, who had thus fallen an early victim, was his brother, Lieutenant Colin Mackenzie, of the same regiment.

A party of the officers of the 50th, who were collected in a knot discussing the affairs of the eventful day, were quickly seen by those marksmen, who, from behind the rocks, despatched with deadly aim a few rifle missiles, each with its billet; and the balls were so faithful to their errand, that the congress was soon dissolved, some of the members being sent to 'that bourne from which no traveller returns,' and the remainder wounded. Among those who fell on this occasion, was Lieutenant Hugh Birchall, of the fourth battalion company, which he had commanded for some time. Having fallen ill, he was in his bed at Elisonda when the battle commenced; and hearing the noise of musketry, he thought that something was going forward in the lines in which he ought to bear a part. With a mind endued with strength superior to that of his weakly frame, he arose from the couch of sickness, and calling all the vigour that he could muster to his aid, tottered with feeble pace to the field of action, arriving at a late hour upon the hill. Exhausted, pale, and like one risen from the dead, he resumed his former place; and scarcely had he joined the group assembled in the front, when, by a fatal bullet, this spirited young man was numbered with the slain."

LINES

ON HARVEY'S PICTURE OF THE COVENANTERS WORSHIPPING, AMONG THE HILLS OF SCOTLAND.

[BY S. C. HALL.]

It came from out the silent glen
The mingled prayer of armed men;
Their swords in sheath for one calm day,
"And let us worship God," they say.
They met—in fear, but not of man;
In hope—but not of human aid;
In faith—that dreads no mortal ban;
In trust—mid perils undismayed.
As wearied travellers seek the brook,
They ask refreshment from "the Book!"
The fountain gives them strength for strife,
And Freedom will be bought with life.

No Temple made by human hands
Is that in which the Pastor stands;
Around him mighty mountains rise,
Pillars to yon vast roof, the skies;
But Freedom consecrates the glen;
And girlhood, boyhood, age, and youth,
Utter or breathe a stern "Amen"
To words that Reason stamps with Truth;
For God and Nature bade them be
All—like their free forefathers—free;
Such message yon good Pastor brings—
A message from the King of kings!

Say, grandsire—thou should'st know it best—
Say, matron, with the babe at breast;
Say, girl—thy lover still is near—
Can Patriot-passion banish fear?
Old man, what councils thy grey hairs?
Mother, what dost thou tell thy son?
Boy, knowest thou what thy father dares?
Girl, say how must thy heart be won?
ALL answer, with a shout and sigh,
"Go strike for freedom—do or die!
Nor let your children's children name
Old Scotland's mountain-men with shame!"

Thanks, Painter, for a lesson taught!
Thanks for a pictur'd store of thought!
Thus ART works out her great design,
Shapes the rough ore of Nature's mine;
Gives Beauty a perpetual youth;
Bids Virtue teach and never tire;
Shows that a halo shines round Truth;
Tells what to shun and what desire;
And makes EXAMPLE bear to ages—
More forceful than a thousand pages—
Of good or ill, a painted story
To warn from shame or win for glory.

—*From the Art-Union.*

AFFECTATION IN ENGLISH MANNERS.

The following remarks on the love of affectation and show in English fashionable life, are made by Count de Melfert, in his "Impressions of England:"—

"If, in order to attain pleasure and really to enjoy it, it was only necessary to make continual sacrifices of time and money, then the English would be the gayest people in the world—the people who best know how to amuse themselves. The persons in different classes who thus run after pleasure, are indeed innumerable in England; it is like a determination, a continual desire, a real *entêtement*. Let it cost what it may, gaiety must be had: but, through all these efforts, the coldness and reflectiveness of the national character always pierce; and one might almost suspect that this undeviating constancy only arises from the impossibility of ever attaining the desired end. In the highest, as well as in the least distinguished society, I have always received the same impression: there exists always in every *reunion* a restraint, an indifference too marked (particularly towards those who do not form the same *clique*, and in that case it goes so far as to become rudeness); there is a want of general ease and of general amiability, and this only becomes the more apparent from one's seeing all the trouble which has been taken that every one should be gay, very gay, and very much amused; which, alas! happens but rarely, not to say never.

One might add, on the subject of the fashionable circles, that the principal thing is not precisely to enjoy personally, but to have it believed that you do so; that every body should know or think you do so, this is the important thing. There is not a brilliant party in London, or at one of the magnificent country seats, or at the mansion of a man of fashion, which is not immediately detailed in the newspapers; even the great dinners are described. After a royal drawing-room, the name and toilet of each lady who appeared is mentioned, one after another; ribands, laces, feathers, diamonds, pearls, even to the kind of silk or satin of which the dress was composed, how it was trimmed, with the technical and scientific expressions in French of the Parisian *marchandes des modes*—all is printed in the papers, and sometimes fills two or three of their enormous pages: if the occasion be a fancy or masked ball (where no masks are worn), then the dress of the gentlemen shares the same publicity, even to the form and colour of their inexpressibles; every thing being thus exhibited to the face of day, placed under the public eye, and detailed to attract the attention of the millions—even of those who, banished to the Indies, receive and devour the English papers. There must exist then, I think, more vanity and show, prepared for public effect, than for the pleasure of the moment; besides, it is absolutely *de rigueur* in the supreme *bon ton* to have an air of indolence, satiety, and nonchalance, which implies that all this is not enough, that show and magnificence are so habitual that they are become quite fatiguing."

THREE BAD HABITS.

There are three weaknesses in our habits which are very common, and which have a very prejudicial influence on our welfare. The first is giving way to the ease or indulgence of the moment, instead of doing at once what ought to be done. This practice almost diminishes the beneficial effects of our actions, and often leads us to abstain from action altogether; as, for instance, if at this season of the year there is a gleam of sunshine, of which we feel we ought to take advantage, but we have not the resolution to leave at the moment a comfortable seat or an attractive occupation, we miss the most favourable opportunity, and, perhaps, at last justify ourselves in remaining indoors on the ground that the time for exercise is past. One evil attendant upon the habit of procrastination is, that it produces a certain dissatisfaction of the mind which impedes and deranges the animal functions, and tends to prevent the attainment of a high state of health. A perception of what is right, followed by a promptness of execution, would render the way of life perfectly smooth. Children should be told to do nothing but what is reasonable, but they should be taught to do what they are told at once. The habit will stand them instead all their lives. The second weakness is, when we have made a good resolution, and have partially failed in executing it, we are very apt to abandon it altogether. For instance, if a person who has been accustomed to rise at ten, resolves to rise at six, and after a few successful attempts happens to sleep till seven, there is great danger that he will relapse into his former habit, or probably even go beyond it, and lie till noon. It is the same with resolutions as to economy or temperance, or any thing else; if we cannot do all we intended, or make one slip, we are apt to give up entirely. Now, what we should aim at is, always to do the best we can under existing circumstances; and then our progress, with the exception of slight interruptions, would be continual. The third and last weakness to which I allude, is the practice of eating and drinking things because they are on the table, and especially when they are to be paid for. How seldom it happens that two men leave a few glasses of wine in a decanter at a coffee-house, though they have both had enough! and the consequence of not doing so is frequently to order a fresh supply; but, at any rate, even the first small excess is pernicious. Excess, however slight, either in solids or liquids, deranges the powers of digestion, and of course diminishes the full benefit of any meal. A very small quantity will cause the difference between spending the remainder of the day profitably or agreeably, and in indolence and dissipation.—*The Original.*

TRAVELLING IN AMERICA.

He who is of the silver fork school, will not find much comfort out of the American cities and large towns. There are no neat quiet little inns, as in England. It is all the "rough and tumble" system, and when you stop at humble inns, you must expect to eat peas with a two-pronged fork, and to sit down to meals with people whose exterior is any thing but agreeable, to attend upon yourself, and to sleep in a room in which there are three or four beds (I have slept in one with nearly twenty), most of them carrying double, even if you do not have a companion in your own.

A New York friend of mine travelling in an extra with his family, told me that at a western inn he had particularly requested that he might not have a bedfellow, and was promised that he should not. On his retiring, he found his bed already occupied, and he went down to the landlady, and expostulated. "Well," replied she, "it's only your *own driver*; I thought you would'nt mind him!" Another gentleman told me, that having arrived at a place called Snake's Hollow, on the Mississippi, the bed was made on the kitchen floor, and the whole family and travellers, amounting in all to seventeen, of all ages and both sexes, turned into the same bed together. Of course this must be expected in a new country, and is a source of amusement rather than of annoyance.—*Marryat's Diary.*

NITRIC ACID IN RAIN WATER.

In the celebrated French scientific periodical, the "Annales de Chimie," there was published some years ago an account of some interesting experiments made by M. Leibig on rain water, with the view of ascertaining its various impurities. Among other foreign matters a perceptible quantity of nitric acid, combined with lime or ammonia, was found in all the specimens of rain water collected during storms. The same was the case with regard to snow and hail. Small traces of iron, manganese, and muriate of soda, are generally found in rain water during thunder-storms. The formation of the nitric acid in rain water is referred by M. Leibig to the agency of the electric fluid in passing through the atmosphere. It is well known that nitric acid and common air are composed of the same elemental gases, oxygen and nitrogen—but of course they are combined in different proportions in the two different substances.

In Number 413 of the Journal, published December 28th last, appeared a paragraph quoted from a newspaper, and entitled "Railway Compensations," referring to the Directors of the Lunatic Asylum of Glasgow. We have been satisfied by documentary evidence, that the statements made in that paragraph are not correct; and we have therefore to express our regret for having added to their publicity.

We may at the same time state, that we some time ago, and with the best intentions, copied a paragraph from a London newspaper, purporting to describe some remarkable cures in deafness, performed by a doctor of medicine whose name was mentioned, and which we are now satisfied had been originally put in circulation as a quackish puff. The very vile practice of which nearly all newspapers are guilty, of inserting paid puffs, renders it extremely difficult to know what is true from what is false, in our public prints. In future, we shall endeavour to be more cautious in quoting any piece of information from them which appears worthy of a wider circulation than their pages afford.

STORIES OF THE IRISH PEASANTRY.

BY MRS S. C. HALL.

"Mind not high things: but condescend to men of low estate."
ST PAUL.

GOING TO LAW!

PART THE FIRST.—Showing how John Leahy, commonly called Johnny the Giant, *would* go to law.

"WELL, well, John Leahy, will you just stick to the one point, and before you take an oath, explain to me what you want to swear to?"

John Leahy, a tall muscular Irishman, stood before the gentleman who put this question (a good-natured magistrate, Mr Richard Russel, who resided for the shooting and hunting season on his estate called Russel Court, not quite three miles from the ancient city of Limerick); John Leahy stood before the fox-hunting but most peace-loving magistrate, his long grey frieze coat thrown back from his ample chest, his green neckerchief, so loosely tied that the brawny muscles of his neck, heaving and swelling with the impetuosity that sent the red blood rushing to his face, were fully seen; while that face, so powerful, and yet generally so pleasing in its expression, was wrought into painful distortion by exceeding wrath; his nostrils were distended, like those of a war-horse scenting the battle from afar; his large grey eyes were absolutely flashing; his mouth was not only closed, but clenched. And so firmly did he grasp his shillala, in a "fist" that would have served Vulcan as a sledge hammer, that his fingers had become perfectly white from the exertion. He had removed his hat upon entering the magistrate's breakfast room, but in his eagerness had crushed "the bran new beaver" into a most unnatural shape.

Mr Russel was so accustomed to these vehement displays of temper, or whatever they may be called, that he proceeded very quietly to finish his breakfast, regardless of the half-open door, through which five or six anxious faces were seen poking one over the other—all friends and allies of Johnny Leahy's; and regardless also of the widely opened window that was only between five and six feet above the level of the lawn, for every now and then a head popped up, and then as quickly disappeared, anxious to ascertain what was going on within.

John Leahy remained silent after Mr Russel had put his question, not for want of words, but literally because he could not speak, from the quantity and quality of those which arose to his lips, and well-nigh choked his utterance. Mr Russel repeated the question.

"Well, now, let me understand what it is you want to swear?" At last out it came, like a thunderbolt from the angry heavens—

"*Any thing, any thing, by the blessed book! for satisfaction!*"

"Oh!" said the magistrate, upon whom the confession had no effect, "oh! it is I suppose the old story about the quarter of an acre; any thing particularly new?"

"If yer honour will be plazed to hear me, and listen to *rason*, I'll put the rights of it before you at onst; and there's my mother, poor ould craythur, without, and two or three more neighbours, and its ourselves that have been waiting on yer honour since break of day, and got into the house, hoping favour from yer honour, seeing you ought to lane towards *ould* residenters, that have a natural claim on the gintry."

"Hav'nt I often told you," interrupted the magistrate peevishly, "that all this has nothing to do with the justice of the case? Where is Abel Carr?"

"Oh, the little bla'guard (saving yer honour's presence), it's without he is. He thought to make his way in, but I did'nt want yer honour to be put in a passion with his lies—the thief of the world!—so I jist made bould to draw the boult of the hall door."

"Draw the bolt of my house against your neighbour, who has as good a right to justice as yourself?" Mr Russel rang the bell after so saying, and John Leahy, not aware that he had done what was exceedingly improper, exclaimed, "As good a right to justice as me! Oh, mother honey, hear to that! You who lived under his honour's father and grandfather a'most before the world was a world, hear to his honour saying that Abel Carr, the circumvinter, the depopulating vagabone, the fella' who could never count back to his grandfather, the half-withered little leprehawn, that's grow'd up like a musharoon under our noses, the little insinuating bla'guard, stealing my beautiful strame of spring wather, turning it away from my meadow, and laying claim to as beautiful a half acre of bog—not only axing the right of turbary, but wanting the half acre, to the very foundation of the earth—only jist, mother honey, think of his honour's saying that that *scum o' the earth* has as good a right to justice as *me*—his father, his grandfather, his *great-grandfather's* tenant's son, John Leahy!"

"His honour manes no sich thing," said Mrs Leahy, advancing into the room by a series of curtsies; "his honour manes no sich thing as *that*, I'll go bail! not he indeed. Let *me* spake, and I'll lay it out afore him like print. We're ould tenants, yer honour; and setting a case, that yer honour will give Peggy's husband, that *is* to be—but I'm not at that yet. Ye see it come altogether of that vagabone threat of Aby Carr's wife before she was married—she wanted Peggy's batchelor for her own, and the turf bog that is'nt big enough for a" ——

At this moment, and just as Mr Russel was going to desire Mrs Leahy either to come to the point at once or to hold her tongue—neither of which, experience might have taught him, she would do—the servant forced his way through the crowd at the door to answer the bell.

"Unbolt the hall door," said the magistrate; "unbolt the hall door directly, and call to Abel Carr to come in."

"It's not naided—many thanks to yer honour all the same. It's not naided by any manner o' manes," exclaimed a squeaking voice from the open window. "I'm here, yer honour's worship, to the confusion of my inimies, and the establishment of law and justice. I'm here, yer honour!"

And, truly, astride on the window seat, one leg in, and the other out of the window, flourishing his hat above his shaggy crop of yellow hair, was Abel Carr, forming in voice, manner, and appearance, a singular and ludicrous contrast to the Herculean Irishman who complained of his "innovations." Any one with the commonest observation could perceive, that though Abel was but a pigmy to his giant foe, yet the full broad forehead—the blue, cold, almost *cruel* eye that twinkled beneath the overhanging brows of the little man—the firm, inflexible mouth, that could close in its thoughts as if with the seal of death—any one, I say, could see that Abel "had a head," while John Leahy's powerful frame was only surmounted by a handsome "animal developement." Strong passions, rash, daring, were stamped upon a high but narrow brow, over which his rich brown hair curled in profusion. I beg the English reader to understand, that a few years ago no man ever went near a magistrate without being accompanied, at all events to the hall steps, by a tribe of "friends," who either had, or fancied they had, something to do with the affair in question; while others followed because they had nothing to do; thus, two contending factions have frequently met, and not unfrequently "done battle" upon a magistrate's lawn; this has occurred within my own memory; they are better behaved now-a-days, and would wait, at all events, until beyond the entrance gate. Having said so much, it can be easily imagined that when Abel Carr's "friends" saw him waving his hat triumphantly, they set up a yell of delight and defiance, while "John the Giaunt," as he was called, made a plunge towards the window, which caused the worthy Mr Russel to spring from his chair, and to declare, heading his declaration with an oath that would have shaken into atoms the whole bench of Middlesex magistrates, that "if they did not keep the peace, he would give them forty-eight hours in Limorick jail."

"Axing yer honour's worship's pardon," observed Abel Carr, speaking with great rapidity in a thin shrill voice, bringing his other leg into the room, and edging round so as to interpose the worthy magistrate's person between himself and his foe, "axing yer honour's pardon, it's *you* ought to be sint there, or pay a fine—that is, if the swearing of a justice of pace is as sinful as the swearing of a poor man, which in coorse it is not; if it was, yer honour's worship would'nt have rapped out sich a one as that, yer honour!"

The scene was curious. The room was hung round with sporting prints, of various dates and orders of merit. Above the long narrow glass which surmounted the old black marble chimney-piece, were suspended a couple of fowling-pieces, crossed above a couple of swords; and each side of the glass was garnished by what I should call a horse pistol—I mean a large determined pistol, done up with bright steel; not one of the finikin gilt-edged little gentlemen which I see in London, seeming only fit for Cupids to shoot with, but a sturdy, blood-thirsty looking fellow. Not even a good-tempered magistrate in that fire-eating county Limerick would consider himself quite safe without fire-arms in his sitting-room. And the wild group outside, backed by the distant mountains, while the noble Shannon—that most boisterous yet most gracious of rivers, foamed and fretted as it dashed over its native rocks in the foreground—always confirmed my imagination in the belief, that the county Limerick, rich in the bounties of overflowing nature, is still an awkward place in which to pitch a tent, and play at Arcadians. Within the magistrate's room the scene was as wild as without; the furniture seemed well fitted to bear the knocking about of careless guests; the shaggy wolf-dog and the sleek pointer were stretched with a couple of superannuated fox-hounds upon the ample hearth.

John Leahy seemed as though the concentrated anger of half a century had exaggerated his features, and agitated his entire frame; if looks could have destroyed, Abel Carr would have been annihilated; but he had crept round with the stealth of a cat, and the crawl of a reptile, behind Mr Russel's chair. Mrs Leahy's figure and face were a study; the hood of her genuine Irish cloak had fallen from the rich and abundant lace that garnished her lawn cap; her withered arms were thrown forward in the attitude of entreaty, and her features expressed both rage and anxiety. Those of "Johnny the Giaunt's" friends who had remained in some degree outside the breakfast room, had entered when Abel Carr made his descent, and a little in advance of the rude group was Alice Leahy, the plantiff's wife, as lovely a specimen of fair Irish beauty as ever spun at a wheel or plaited a hat. Alice's fair hair was banded beneath a cap of finer texture than that of her mother-in-law; her cloak was of bright scarlet, and a little girl of five or six years old clung to it so as to draw it more than half towards her, leaving the womanly symmetry of her mother's perfect form, which otherwise would have been quite concealed, somewhat exposed. There was no bitterness, no revenge, no strong passion, written on that gentle woman's face. The one expression was interest in her husband, towards whom her eyes were directed; while the child looked with evident terror up to her mother, and then, as if reassured by her gentleness, advanced a little more into the room; not, however, loosing her hold of the cloak.

Mac Manus, who has painted some Irish scenes most capitally, would do admirable justice to such an interior; but I do not know of any living artist who could faithfully set upon canvass the extraordinary beauty of Alice Leahy. Her clear and lovely features were perfect, and, hallowed by an expression of the most

Digitized by Google

heavenly purity; it was next to impossible not to wonder who she was, and how she came there, and this feeling would have been increased if her cheeks had been as pale as they were in general; but the agitation of the scene had called into them a rose-like colour. Irish gentlemen, polished as they are when mingling with those in their own sphere of life, are by no means gracious to their inferiors. There are some exceptions, to be sure, but Mr Russel was not one; and yet he bowed to Alice; not the leering bow of a fox-hunter, but the respectful salutation which is man's natural tribute to beauty and virtue. He even asked her to sit down, but she gathered her cloak gracefully round her, and shrinking, as it were, within its folds, drew back her little girl, who had renewed an acquaintance with one of the dogs,* which licked her little fat hands, moving his tail with great dignity, as if to intimate that he did the little maid an honour.

"Stand back every one of ye!" said John to his faction; "have ye no manners? No more manners than to dar to come without invitation into his honour's own room! I'm ashamed of ye, I am, to *dar* to come into his honour's place; stand back, I say, and show that little carroty-headed *spalpeen* a patthern of gen-til-lity; if we are strong in our cause, boys, let us be marciful! Now, yer honour, now that that Omadawn has got his dirty mane-spirited *soul* into yer presince, I should like to tell him a piece of my mind."

"You can do *that* at any other time quite as well," observed the magistrate.

"Only if I had yer honour's glory for a witness."

"I tell you what," said Mr Russel, sternly; "you, John Leahy, commonly called Johnny the Giant, and you, Abel Carr, commonly called Aby the Goldfinch, if you exchange either words or blows within the precincts of my house or domain, I'll commit you both for forty-eight hours to the body of Limerick jail; and what will be worse, I'll confine you both in the same cell, where you may eat each other, like the Kilkenny cats, and a good riddance the country will have of a pair of fools—who are eternally GOING TO LAW."

"Oh, my Lud a'mighty!" exclaimed the old woman, "did any body ever hear the like o' that! His honour a *justice o' peace*, and to see him set agin the law!"

"It is because I am a justice of '*peace*,' as you call it, that I *do* my best to prevent my tenants from going to law. Why, you people can never enter into a lawsuit without committing assault and battery upon each other during its progress, so as to create half a dozen actions out of one. You bring ruin and degradation upon yourselves, and frequently, too frequently, disgrace the records of your country by murder!"

"Oh, bedad, yer honour!" said the Giant, "ye may make yer mind aisy as to *him*: sorra take me if I'd dirty my fingers with such a *grasnaugat* as Abel Carr. The only way I can touch him, sir, is with the arm of the law, and by the holy" ——

"Stop now, gently," said Mr Russel, "no swearing; but if you can come to the point at once, I will hear you, and little Abel shall afterwards tell *his* story; and I must say Aby comes more quickly to the point than you do."

"Aisy for him!" muttered old Mrs Leahy; "he's been at a point all his life—the point of the gallows!"

Mr Russel had resumed his seat with the air of a man determined to be patient; "the Goldfinch" had watched with cat-like observance the words and gestures of the whole company; he now folded his arms and seemed resolved upon patience also, only saying, in a whining tone, "I'm a fair-daling, fair-maning little man, yer honour, wishing to earn a bit of bread for myself, my wife, and five little childre, and never quarrelling with any one except for what's *my own*, yer honour!"

"Hear to that, father of justice!" exclaimed the Giant. "But yer honour sees how paceable I am—(oh, you false-hearted little leprehawn!)—I'm as aisy as a cow in clover—(I'm not done nor begun wid ye yet). There, now, I'll tell ye all—I'll begin at onst at the beginning."

"Ay, do!" groaned the magistrate.

"Well, sir, my great-grandfather's new *lase* is dated, as I daresay yer honour knows, 1722—a ninety-nine years' lase it was—which yer honour had the goodness to renew for three lives and thirty-one years. Sure we're bound to take good care of yer honour, for your own life and Masther Arthur's are first of the three.‡ Well"——

"Good heavens!" exclaimed the gentleman, "I've heard that twenty times, and all about the half acre of bog which Abel Carr says is on his land, and you say is on yours, as if you could ascertain which land was under the bog, fools that you are; and I have besought you over and over again, if you could not agree as to who had a right to it, just quietly to divide it."

"Is it give up me right!" exclaimed John Leahy indignantly, and flinging down his hat and shillala, he dropped suddenly upon his knees, snatched the Prayer-book from off the table, pressed it to his lips, and began, "I, John Leahy, will never cease by day or by night, at home or abroad, rich or poor, houseful or homeless, to have the law, or my vengeance out"——

Before he could proceed farther with his fearful oath, the hand of his beautiful wife was pressed upon his lips. To rush forward, sink upon her knees by his side, encircle his neck with her arm, and close his lips as I have described, was but the work of an instant. "You shan't swear like that," she exclaimed, "and I to the fore. You shan't indeed, John asthore. Cor-a-ma-chree! you wouldn't break the heart of yer poor Ally, John darlint! Sure it is'nt for you to demane yourself like a poor ignorant craythur that knows no better, only flying in the face of the Almighty with an oath, as if you had'nt the courage of a man, John, in yer own brave breast, to keep your promise without that—sure if the law and the justice is on our side, darlint, is'nt that enough? Let *them* take oaths and swear that won't be believed without," she added proudly, while her husband rose with her, half ashamed of his impetuosity. "Let *them* swear whose word is lighter than the down of a thistle in a high wind, but John Leahy's word is the word of an honest man; tell his honour ye'll have yer rights and keep them!—though, God knows," she added, while her voice faltered, "God knows his honour's advice was best—it's better to divide what one has, than"—— She saw the keen eye of the Goldfinch fixed upon her, and she paused; then curtseying to Mr Russel, she added mildly, "I ask yer honour's pardon, but I could'nt help it. He's my husband—and—but I hope yer honour will excuse me; I know yer honour does not like swearing no more than me, if I may make bould to say so."

"Well, plaze yer honour," said John, "I only mane that while I've a shilling in my pocket, a coat on my back, or a straw in my thatch, *I'll have the law*; and if yer honour (*whom I'd rather trouble by day or by night*—on account of the respect I have for yer honour, and me and mine having done so for the last hundred years *and more*—than any other magistrate in the county)—but if yer honour wont listen to rason, and see me righted, and punish that desaver, that has never had the courage to *open his face* since he came into yer honour's house, why, I'll go to Limerick—I'll put myself under the care of 'Turney Botherum. If I starve, I'll have justice—if I die, I'll have *lase!*"

"And the devil give ye good of it," squeaked out the Goldfinch. "Now, if yer honour's glory will listen to me—see that now! if he'll give up the half acre, that, according to a covenant in my uncle Tom's will, was to be mine, if his aunt Biddy on the mother's side died without childre—which she did, poor unhappy cuid craythur"——

"What's that he says?" interrupted the old woman, setting her "talons" in order. "What's that he says about my aunt Biddy?"

"Wisht!" interposed the Giant; "I'm aisy now—jist give him rope enough, and he'll hang himself—go on, if it's plazing to ye, Misther Abel Carr—sir, if you plase?"

"I'd scorn to talk to you, you unedicated bog-trotther!" quoth the Goldfinch.

"Who do you call unedicated?" returned Leahy; "*I* did not get my larning off the pack-saddle of a broken-down exciseman, nor in the office of a dirty 'turney."

"Shame on you both!" interposed the magistrate; "and you, Abel Carr, stick—if it be possible for an Irishman to stick to the one point; do so, in God's name, and say what you propose."

"He has tould yer honour, I suppose, about the strame? Ye understand, it runs through my ground before it comes to his, little as it is; and it was my convanyance to make a ditch across the dawshy strame"——

"He owns to that, yer honour—hear to that; he owns to making the ditch," said the Giant.

"To be sure I do! Sure I've a right to make a ditch on my own land; but this man, as soon as my ditch is finished—in the night-time or day-time, it's all one to him—shovels it down again."

"And you thought to take a dirty advantage of me whin my foot slipt, and smother me in it," added Mr Leahy.

"Oh, heavenly father!" exclaimed the tiny red-headed man, "listen to that, and me trying to get him out, and he so tossicated with the liquor, that *his breath crossing a sunbame would have set the heavens in a blaze*; the Lord above purtect us from drunkards!"

It required all Mr Russel's influence to prevent John Leahy (who might really be called a sober man) from seizing and annihilating the provoking little farmer. The quarrellers had tormented Mr Russel touching this half-acre business at least twenty times, and always with the same result; asking his advice, and following their own. It is odd enough that a people so fond of breaking the law, should be so fond of going to law, and generally end by being dissatisfied with the law's result, and then take it into their own hands. An Englishman, if he is insulted, walks off as quietly to a police-office as if he were going to a funeral, makes his charge, and is, generally speaking, well satisfied with the result. He does not do as a huge Wexford farmer, Jasper Coriah by name, once did. "How have you managed with Lawrence Costello?" he was asked one day.

"Why," said Jasper, "I took the law of him first, and then I bate him just within an inch of his life."

"And what followed?"

"Bedad! he took the law of *me* then, and I was cast."

"Well?"

"Why, then, *I bate him again*." And for this, Jasper added, "he was murdered intirely, for he was bound over to keep the pace for two years, *and was losing the use of his limbs for want of practice*." It is impossible not to laugh at Jasper's perseverance and pugnacity, but it is too true that we often laugh where reflection would make us weep. Whoever would check the spirit of litigation which fills the pockets of the Irish pettifogging attorneys who dwell in county towns, on fair and market days, with crown and half-crown fees, would do almost as much towards the salvation of Ireland, as he who checks the progress of intemperance.

Mr Russel knew perfectly well that in cunning Abel Carr was as much an over-match for John Leahy, as John Leahy was in bodily strength for Abel Carr. He knew that Leahy had embroiled himself for the last year with the crafty Abel, and yet Abel was, in the sight of the country, getting the advantage of his opponent at every hand's turn; working him out of his land, not only on this but on other occasions. It was neither Abel's interest, nor his intention, to suffer any matter pending between them to be clearly understood. He was the sort of person who would bear a beating for the sake of the damages; and Mr Russel knowing this, was anxious that, while he yielded him the free-born right of answering his accuser, that accuser should hold his tongue, for Abel was proud of his knowledge, proud of "his law;" and the magistrate knew that, as John himself said, "if he had rope enough given, he would hang himself." But this giving of rope was what, with all his knowledge, John would not do, and so he foiled the magistrate's kind intention.

John called Abel Carr "the artfulest thief under heaven," and yet he met him, as it were, open mouthed. He knew he had spent all his early days in the chicanery of an attorney's office, yet he ran into law with him with as much avidity as if he had been coursing a hare.

After much stormy discussion—for at every second sentence Mr Russel was obliged to interpose his authority—the magistrate came to the conclusion, that, in addition to the disputed half acre, the Giant charged the Goldfinch with turning a stream he had no right to turn, and for an assault; and the Goldfinch avowed his right to turn the stream, and denied the assault; and upon this there were half-a-dozen of the clan Giant ready to swear it had been made, and half-a-dozen of the clan Goldfinch ready to swear it had not been made. And this tangled net of bog, and stream, and battle, was crossed and recrossed by several webs of minor but not less perplexing import; how Aby Carr's brother Mike had laid a plan of abduction, in which Alice's sister Anne was to have been the victim; how John's brother's boat on the Shannon had a hole knocked through its side by Aby's sister's son; how—but I shall never get to the end of my story at this rate. The worthy magistrate saw it was impossible to unravel their mysteries; the best advice, to make it up amongst themselves, they would not take; and so Mr Russel, his whole morning wasted (but as he was an Irish country gentleman, *that*, in his estimation, did not signify very much), desired them all to go about their business, and trouble him no more. And Abel Carr, well pleased, said he would never have troubled his honour, but for the necessity there was of clearing his character to so good a "jontleman." And John Leahy declared there was no use in going to a landlord, and a magistrate, who had no "laning towards an ould residenter," but that he'd "take the law of the leprehawn, if it left him a beggar on the face of the earth." And it was piteous to see the expression of agony that passed over Alice Leahy's face, as she glanced from her husband to her child.

And now, how were the contending factions to disperse? The women of both begged that his honour's glory would prevent the spillin' of blood, and keep one set prisoners till the other was gone. But Mr Russel, by a skilful manœuvre, dispatched the Giant's friends by the stable entrance, and those of Abel Carr through the hall door, and finished his morning by arranging, in a more satisfactory manner, some trifling disputes amongst some of his humbler neighbours, who had the good sense *not to go to law*.

But his trials for the day were not over. Neither an Englishman nor an Irishman likes to be disturbed immediately after dinner; yet Mr Russel had not finished his second tumbler, when the servant said Mrs Leahy wanted to speak a word with his honour, and would not keep him a minute.

"Is it the young or the old one?" inquired the magistrate. The servant said "it was Alice," and Mr Russel said she must be shown up immediately, and the two young ladies nearly quarrelled as to who had the best right to place a chair for the farmer's sweet wife: a legal question, which papa decided by declaring *both* had the right—the eldest, because she was the eldest; and the youngest, because she was the youngest. As soon as this point was settled, Mrs Leahy was introduced. She sat down, for her trembling limbs appeared scarcely able to sustain her weight; but after resting a few moments, she rose, curtsied, and advanced to the table, upon which she placed her fingers, as if fearful that, unsupported, she could not stand; she then, in the low soft tones of suppressed feeling, apologised for her intrusion, and commenced

* In Ireland a sporting landlord sends out his young dogs "to be nursed" at the farm-houses; and I have seen many recognitions between the peasants and dogs, which, however, I believe the huntsman does not approve of.

† Hedgehog.

in the earnest language of a warm but untutored heart, to ask counsel of Mr Russel, and state her fears and anxieties.

"Plase yer honour, and you, ma'am, who knew me before I knew myself, and you, young ladies, growing up before my eyes in beauty, garden roses that ye are, my husband is gone over to Pether Pendergrast, and the ould woman along with him, and the child—the only blossom left us—asleep, the Lord look down on her! and so I thought I'd make bould to come over and open my mind, on account of the notion John has in his head of going to law. Ye see, yer honour, Pether Pendergrast pushes him on to it; and his mother, living so long on the land, poor woman, it's no wonder she should take on about every blade of grass, and think a dale of every green shamrogue that springs from the sod. It's as good as four year since the first notion took him about law. Yer honour minds the fair that time, and how he was brought in about a bit of a dispute; well, every thing went so much to his mind then, sir, that he unfortunately took a liking to the law; and little Aby Carr urged on his claims to this weary bit of bog, and my trouble is, that through the half acre we shall be broke altogether."

"How do you mean?" inquired Mr Russel; "my agent has said nothing of your husband's being in arrear."

"Thank God, he's not *that*, sir," replied Alice, almost proudly; "we paid the agent up, sir, though some of the cattle, the brindled cow I reared from a calf with my own hand—the same age as little Peggy she was—went with the rest to make up the last gale."

"I should have been told this," said Mr Russel, who, though a magistrate when present, was generally *an absent* Irishman, and knew but little of his estate, except during the hunting season.

"I don't complain of that, yer honour; there's no use crying afther the snow that fell last year; but I *do* complain of the money that goes in law, and, above all, of the time spent about it for nothing. Never a cause in the coort-house of Limerick that comes on, but he's off to hear tried, saying if it does not do him good one time, it may another; and then, yer honour, his people and neighbours, knowing his way, get round him, and he treats them, and"——

"This is very bad indeed," said Mr Russel, for poor Alice's emotion overcame her.

"This is very sad; I thought John was an excellent husband," said Mrs Russel.

"A good husband!—Oh, then, the Lord guide and purtect him, that he is, and always was; never an unkind word did he ever give me; but for all that, he's a man, and will take his own way, though when he gets into any little distress, he's sure to bemoan himself, and say, if he had took my advice he'd not have had that trouble; but sure he does the same thing over again the next minute. There's many idle bad-minded persons going, that don't care a mite what comes of any one, so their own turn's served; and it goes to my heart to see such as my husband put upon by some, and tormented by others, who have nothing betther than him—*but cunning*. I can see through Aby Carr. If my husband gave up that half acre quiet and aisy, it would break his heart. He knows he has a hould over it, and it's just a bare bone of contention. As long as he keeps him in contention about that and the little strame of water, that's good for nothing in the world but the wild birds of the air to drink of, he knows that he must fall into trouble, because he neglects his farming that he does understand, for the law which he does not understand, thank the Almighty! I'd sooner see him—dear as he is, and wrapt up within my heart ever since I heard the first sound of his voice, as the misthress remembers me, a little *colleen* at my mother's door—I'd sooner see him dead—I think I would—than the mean bad thing the law turns many an honest man to."

"You are quite right; but what can I do more than advise him against this going to law which he is so fond of?" inquired Mr Russel. "I never knew a rich man take to law, that he was not made much poorer by it, nor a poor man, that he was not ruined."

"Well," said the wife, with a look of beautiful resignation, "if it must be so, it must, that's all; I'll do my best to prevent it; but if it comes, why, *the worst will be over*—the grace of God is above us all—I'll never reproach him by word or look, and I'll work with him and for him, and for the *bird of my bosom*—work for them—or"—— She could not say REG; the word was stayed in her throat, and instead, she added, "*Travel* with them to the grave."

"Not while we have a house on our estate to shelter you," said Mrs Russel, kindly.

"May the great God bless you for that!" murmured Alice through her tears. The prayer came warm and pure from her heart, and as such was registered in heaven.

"But a poor woman like me," she resumed, endeavouring to smile, "has no right to be troubling the quality with her troubles. Yer honour understands that there isn't a *jookeen** attorney in the town that hasn't given him half-a-crown, or five shillings, or may be seven-and-sixpence worth, of bad advice, either upon this or something else, and called it law; and now he has the notion of going to 'Turney Betherum, who they say any day is as good as a counseller, only he wont do any law, not open his lips, under ten shillings, to the poorest; and though his tongue is as glib as an eel, it 'ill tell no law till he has the bit of yellow goold; and he wont let me go with him, because his people say I tell all, but he takes his mother, and one or two more. Now, the 'turney, if he was as great a lawyer as King Solomon, would never make out the rights of it from John; and to get rid of the trouble of thinking, he'll maybe give an encouraging answer, and that will be worse than ever. So, I had a thought, if yer honour, who knows the 'turney so well, would be so good as to give him an idea of how it really was; maybe HE might get him to give up the weary bit of bog without risking all we have in a lawsuit, for men of my husband's temper *will often take an advice from a stranger that they would not listen to from their own people.*"

Mr Russel could not help admiring the wisdom of Alice Leahy; it was so simply and modestly spoken, and yet replete with the difficult knowledge of human nature—that knowledge which books cannot teach.

"Well," he said, "I will call upon my friend Betherum the first thing to-morrow morning, but you must explain to me exactly how it is. I have heard the half-acre affair six times at least, without being much the wiser." Alice did so, and increased the astonishment of the worthy lady and gentleman by her clearness and perspicuity. Mr Russel renewed his promise of being with the attorney the first thing in the morning; and as she was about to withdraw, he put to her an experimental question, "Mrs Leahy, are you quite right to do this without your husband's knowledge?"

"If yer honour had a relation gone mad, wouldn't you strive to hinder him from doing any harm to himself or another?" He replied, "But my tenant, your husband, is not mad, surely?"

"Plase yer honour, I do not think any man going to law can be in his senses."

"What a sensible as well as a beautiful woman that is!" observed the magistrate, as Alice curtsied herself out of the room.

"So she is, my dear," answered his wife; "do you remember what she said about the obstinacy of all men, and being obliged to regret afterwards that they did not follow their wives' advice?"

"Humph!" said the magistrate. And here we conclude the first part of our story.

* Petty, low, sharp, cunning, pettifogging.

MR MARSHALL'S EXPERIENCE WITH THE MARINE BAROMETER.

It will perhaps be recollected that in our 349th number a short paper was presented, detailing, according to the views of Lieutenant Colonel Reade, the manner in which violent storms and hurricanes usually act in tropical climates, and the laws by which they are regulated. Storms, it was explained, do not advance, as is commonly supposed, in a direct line, but in a circle or parabola like a whirlwind, and by the timely consultation of the marine barometer, may be in a great measure avoided by ships which are liable to be overtaken by them. A confirmation of Colonel Reade's valuable theory is found in a letter from Mr Marshall, formerly commander of one of the Honourable East India Company's ships, which was published nearly fourteen years ago in the journals of the Cape, and transferred a few weeks since into the Athenæum. The following abridged account of Mr Marshall's experience will be read with interest by all who take pleasure in the triumphs of science over ignorance and prejudice.

Mr Marshall strongly recommends commanders of vessels to pay the most pointed attention to the indications of the marine barometer, which never fails, by the fall of the mercury, to indicate an approaching storm. The seaman is thus enabled, by bringing his ship to the wind, and other preparations, to secure to himself the best chance of escaping damage. "Even if at the moment the sky should be cloudless, the atmosphere motionless, and no other indication of a storm throughout the whole visible horizon, than that which this invaluable instrument affords him, still he will take his measures with the same degree of promptitude and energy as though the danger had already commenced; and when the flattering gale springs up to favour his course, he will not be tempted to pursue it through any fallacious notion of shortening the period of his voyage; for if my theory be correct, he may rest assured that the farther he advances, the greater will be the fury of the tempest; that it is a principle of every hurricane to narrow its sphere in proportion to its duration; that wherever the storm commences, there it will soonest terminate; and, consequently, that his easiest way to escape from its fury is to remain as stationary as possible. I should not have dwelt on some of these points, had I not been aware that a notion is but too prevalent among seamen, that scudding before the storm is the shortest way to get out of it; an error which is attended with this additional evil, that those precious moments which intervene between the fall of the quicksilver and the rising of the storm, are expended (perhaps never to be retrieved) in a proceeding which, in my opinion, is fraught with nothing but mischief.

It was in October of the year 1808, that I left Madras on board one of the East India Company's ships [the *Diana*, of which he was commander], with eight others, under the convoy of a seventy-four gun ship. On reaching the latitude of 8 degrees south, and the longitude of 88 degrees east, we unfortunately encountered one of the most tremendous hurricanes that was perhaps ever experienced by a ship that did not actually founder. It is impossible to convey to the minds of those who have never witnessed such a storm, any adequate idea of the fury with which it blew during the three days and nights of its continuance, the sound resembling more a succession of peals of thunder, or the roaring of cannon, than of wind; whilst the sea formed one continued breach over the ship, sweeping every thing moveable before it. During nearly the whole of this period, the passengers, officers, and crew, were, without distinction of persons, employed in pumping or baling, cutting away masts, securing guns, or in other work essential to the safety of the ship; whilst, owing to the impracticability of getting into the hold through the body of water always lodged on the gun-deck, the chief part of the period was passed without food, or even a drop of water to allay the thirst of the men at the pumps, who were with difficulty, and occasionally could not be, prevented from swallowing the bilge water as it ascended from the well. And had it not been for the fortunate circumstance of a quantity of this precious beverage being found in the lockers of the great cabin, which was latterly served out at the pumps in wine-glasses, the probability is, that we should have literally perished through the want of a liquid, of which there was an abundance in the hold. Our distress, too, was not a little aggravated by two of the twelve-pounders being adrift at once on the gun-deck, causing the greatest consternation lest some port should be stove in by their means. Notwithstanding, the fore-mast, mizen-mast, main-top-mast, and bowsprit, were, at the peril of our lives, successively cut away. At the close of the third day, we were left with seven feet of water in the hold, and four feet in parts of the gun-deck, frequently with three out of the four pumps choked at a time, and without the slightest prospect of any abatement of the storm.

I have been a witness to many a distressing scene on the ocean, but never in the course of my practice have I been present at one so distressing, at least to my own feelings, as that which I have more immediately under consideration. The scene I am now drawing to a close was one of peculiar excitement, painful feelings, and of heavy responsibility. Well may the Psalmist say, 'These men see the works of the Lord, and his wonders in the deep.' But to return from this digression. At the close of the third day of this awful hurricane, the cabins below being no longer habitable, the passengers were crowded into one side of the round-house, as being the only cabin from which the water could be effectually excluded. Here, then, a scene of woe was exhibited which baffled description—a scene sufficiently appalling to rend the stoutest heart in twain, especially of his on whom all eyes were turned for that relief which it was not in his power to afford—even to her, who had the strongest of all claims on him for consolation, and whose peculiarly interesting situation demanded the utmost stretch of his sympathy.

The ship, apparently water-logged, was now observed to be settling fast forward. Every countenance exhibited a picture of despair; when, at this critical moment, the wind rapidly began to subside, which was no sooner announced to the people at the pumps, than their labours, which, from a feeling of despondency, had previously languished, were resumed with renewed vigour; and such was the rapidity of the change in our favour, that one of the most dreadful of all storms was speedily lulled into a perfect calm; the ship once more rose freely to the sea, and by daylight on the following morning all the water was discharged from her." But the vessel now "lay a helpless wreck on the water, exposed to every surge of the sea, which had not subsided so rapidly as the wind, and which occasioned her to roll most awfully; and now, as she rose on the mountainous billow, every eye eagerly swept the horizon in search of the fleet, but all in vain, for not a ship could be seen; upon which we trembled for their fate. The bowsprit, fore-mast, mizen-mast, and main-top-mast, as before intimated, were all gone by the board; the whole of the live stock (with a trifling exception), consisting of 150 sheep, 30 pigs, 4 cows, 3 calves, 8 goats, and many hundred head of poultry, were washed overboard, or otherwise destroyed; nearly all the captain's stores, the medicine chest, and seamen's chests, with their contents, were in the same predicament. After an anxious scrutiny of the charts, no friendly port was found to be within reach of us; the nearest towards the east was Bencoolen, which, on account of the season of the year, was difficult of approach, and incapable of affording the relief we stood in need of. Towards the west was the Isle of France, then in possession of the French. To proceed direct to the Cape was an undertaking which, at the first blush of our situation, nobody conceived to be practicable. Still, upon a closer inspection of our resources, many difficulties were obviated, and our situation appeared to be far less desperate than we had at first imagined. Our stock of water and salt provisions, which was considerable, was happily found to be uninjured: we had rice and spirits in abundance. Our spare stock of spars, which was also considerable, and well secured before the storm commenced, was safe; we had spare sails, canvass, and cordage suffi-

Digitized by Google

cient, and we knew our situation to be on the verge of the south-east trade-wind, which blew direct towards the Cape, and the season for entering Table Bay was favourable. After due deliberation at a meeting of the officers of the ship, and the principal passengers, it was unanimously resolved to undertake the voyage to the Cape; and, as an encouragement to the crew to give their spontaneous exertions in favour of this great undertaking, a subscription was immediately entered into, with a view to replace their chests, clothes, &c., on our arrival at the Cape, which were lost in the storm. L.700 were raised for this purpose in the course of a few minutes (perhaps an unprecedented act of similar liberality), which was no sooner communicated to the crew, than they gave three hearty cheers, and declared their readiness to perform every duty required of them; and never was a promise more rigidly fulfilled: however, in spite of these but seldom paralleled exertions, we were eleven weeks in reaching the destined port, after suffering many privations. Still I consider this as one of the happiest periods of my life; and judging from the number of cheerful countenances, and the unanimity which reigned throughout the ship, I much doubt whether it were not the lot of every soul on board. I cannot account for the fact, unless it were owing to the particular frame of mind we had imbibed from our recent deliverance—a frame of mind which philosophy might spurn at, but which religion might have hailed as the precursor of the only solid happiness destined for man.

The day of our arrival in Table Bay was one of intense excitement, anxious as we naturally were to ascertain the fate of a fleet from which we had separated eleven weeks before under such unpropitious circumstances. This suspense, however, was of short duration; our worthy commodore, with five of his convoy, were soon discovered to be safe at anchor in the bay; the remaining three ships were missing, and, sad to tell, have never since been heard of. Of those which were safe, four, including the seventy-four gun ship, had been in more or less danger of foundering in the storm; whilst two escaped with but little injury, owing, as it appeared from a comparison of journals, to their having escaped the brunt of the storm by being considerably to windward of the others; thus corroborating the theory with which I commenced, in my endeavours to prove that where the storm begins, there it will soonest end. During a greater part of the third day, which was by far the most tempestuous with us, these two ships lay nearly becalmed.

Such were the disastrous effects of this memorable hurricane, from a summary of which I think myself at liberty to draw the following practical inference, namely, that had we instantly attended to the timely warning of the barometer, by bringing the ship to the wind, and making preparations for the storm, instead of scudding before it until we could scud no longer, we should have escaped with as little injury as the two ships I have just alluded to; and that, had the three unfortunate ships which foundered in the storm pursued a similar course, which it may be fairly presumed they did not, a very different fate might have befallen them too."

HOWITT'S VISITS TO REMARKABLE PLACES.*

We consider this as one of the most pleasing of Mr Howitt's fast increasing catalogue of productions. First, with regard to its externals, it is an octavo of extra size, and above five hundred pages, beautiful in paper and print, and enriched with about forty most exquisite wood engravings by Samuel Williams. It is the more important to be exact in these matters, as the volume appears to be of the kind designed for presents, and whose fate it is to be fondled in lady's bower, for such we take to be the old reading of a modern drawing-room. Of the places visited, it is proper that we furnish some account. The book opens with Penshurst in Kent, the ancient seat of the Sydneys, endeared on account of Sir Philip—on account of his sister, "Pembroke's mother"—on account of Ben Jonson, and other English worthies of the sixteenth and seventeenth centuries. Soon after this follows "Stratford-on-Avon," one of the longest and most elaborate papers in the book. "Combe Abbey" and "Compton Winyates," both in Warwickshire, are the principal old English residences, besides Penshurst, of which Mr Howitt presents any account. He has a long and very good paper on "Hampton Court." A visit to the Great Jesuits' College at Stonyhurst in Lancashire is the subject of a very interesting article. Edge-Hill and Culloden are the only battle-fields adverted to. He has a long but perhaps too purely antiquarian paper on Winchester. Tintagel, the ancient rock-perched sea castle of King Arthur in Cornwall, is strikingly handled, and brings forth some eloquent remarks, which we should be happy to quote. There is also a paper on Staffa and Iona, and one of a more original kind, descriptive of a Highland sacrament at Kilmorack in Inverness-shire, on which, however, we could give some rather odd marginal notes.

The book is one entire and perfect chrysolite of pleasant reading, yet not without gradations of interest, though arising rather from the nature of the subjects than from the mode of treating them, which is uniformly in that style of mingled sentiment and familiar remark which so agreeably characterises Mr Howitt's writings. Of the descriptions of old residences, that of Compton Winyates is decidedly the best, the house being not only a perfect specimen of that Elizabethan kind of mansion known in England by the term "hall," but very singularly situated, and having some uncommon features of decoration. Of the visits to "remarkable places," we think Stratford the best, notwithstanding the previous paper of Washington Irving on the same subject.

In this portion of Mr Howitt's book we find, of course, no new fact in Shakspeare's biography (that, we suppose, is past praying for); but he nevertheless throws some light on the mental history of the man by his local observations. At Shottry, near Stratford, where the house of his wife Anne Hathaway still exists, he discovers some natural objects which Shakspeare has alluded to, and which his commentators have been at a loss to explain—mysteries to Steevens and Malone, but familiar to the fellow-villagers of the poet. He is at some pains to do away with the impressions which Shakspeare's satire has communicated respecting the Lucys of Charlcot, whom he found to have been all along an amiable and every way respectable family. The portrait which he gives of the Sir Thomas who is supposed to have been the original of Justice Shallow, exhibits a head which never *could* have belonged to a man liable to be with truth so described. There is some amusing matter respecting the commercial importance which Shakspeare's fame has conferred on the house in which he was born.

"Opposite to this town-hall is a house occupied by a Mr Reason, who has a sign in front of it, announcing that there is kept a collection of articles which were in the house where the poet was born, and remained there till Mary Homby, the mother of the present Mrs Reason, was obliged to leave it on account of the proprietor raising the rent so much in consequence of the numerous visits to it. She at first gave ten, then twenty, then forty pounds a-year for it; but the tide of visitors increasing, the demand of the landlord still rose with it, till either the man outvalued the income, or the patience of Mary Homby gave way. She gave notice to quit the house, and another person immediately took it. A violent feud arose between the outgoing and the incoming exhibitor. Mary Homby, of course, stripped the house of every article that had been shown as Shakspeare's. But she did not stop there. She deliberately, or perhaps, as will appear probable, rather hastily, took a brush and a pail of whitewash, and washed over all the millions of inscribed names of adoring visitors on the walls! At one fell swoop, out went the illustrious signatures of kings, queens, princes, princesses, ambassadors and ambassadresses, lords, ladies, knights, poets, philosophers, statesmen, tragedians, comedians, bishops, lord chancellors, lord chief justices, privy councillors, senators, and famous orators; all the sweet tribe of duchesses, countesses, baronesses, honourables and dishonourables—out went they altogether, with as little remorse as if Death himself had been wielding the besom of destruction, instead of Mary Homby her whitewash brush.

Mary Homby having executed this sublime extinction of so many dignities, marched out with a lofty sense of the vacuum she left behind, carrying away with her the Albums into the bargain. The new tenant on entering was struck with a speechless consternation! In 'the immortal bard's' own words, all the precious relics had

> Vanished like the baseless fabric of a vision,
> And left not a wreck behind.

Nothing at all but four bare walls! What was to be done? It was still Shakspeare's birth-place, but it was a very naked one indeed—all the imposing relics were gone, and a rival shop was set up with them! She looked upon herself as swindled. She had a higher rent to pay, with a diminished stock, and a formidable rival, and she accordingly raised a loud clamour in the ears of the landlord. The landlord began to bluster with Mary Homby, and claimed the goods as heir-looms—as part and parcel of the property; but the lawyers told him a different story. He then claimed the Albums, and commenced proceedings to recover them, but with no better success. Money was then offered for them, but money could not buy them; so it was absolutely necessary to commence anew with blank walls and blank books. It was a melancholy coming down. Where was the chair called Shakspeare's chair, which had stood in a niche in the room, and the arms of which alone had been sold for twenty-three guineas? Where were those two fine old high-backed chairs which were *said* to be given to Shakspeare by the Earl of Southampton, with the earl's coronet and supporters (animals having an odd look, between lions and men, with big heads) upon them? Where was the little chair of the same kind, called Hamnet's chair—the son of Shakspeare, who died when twelve years old? Where was that precious old lantern made of the glass of the house where Shakspeare died? The bust, taken and coloured accurately from the bust in the church? The portrait of a boy, with a curious high-laced cap on his head and an embroidered doublet, *called* John Hathaway, the brother of Ann Hathaway? The painting said to be done by Shakspeare's nephew, William Shakspeare Hart, representing Shakspeare in the character of Petruchio? The cup, and the knotted walking-stick made from the crab-tree under which he slept in Bidford Fields? Where the various pieces of carving from his bedstead? That old basket-hilted sword which *looked* as though it had lain buried for a century or two on the field of Edge-Hill or Worcester, but which was, in fact, no such thing, but the veritable sword with which Shakspeare performed in Hamlet, and which the Prince Regent had wanted so much to buy in 1815, saying, '*he knew the family very well that gave it to Shakspeare?*' Where was that? Ay, and still more, where was that grand old piece of carving which used to be over the mantel-piece, coloured and gilt, and representing David fighting with Goliath between the adverse armies; and over their heads, on a flying label or garter, this inscription, *said*, and sufficiently testified by the splendour of the verse, to be written by 'the immortal bard' himself?—

> Goliath comes with sword and spear,
> And David with his sling;
> Although Goliath rage and swear,
> Down David doth him bring.
> SAMUEL, xvii. An. Dom. 1606.*

The iron box that held the poet's will; Shakspeare's bench; pieces of his mulberry-tree; the box given to him by the Prince of Castile; a piece of the very matchlock with which he shot the deer; the portraits of Sir John Bernard and his lady Elizabeth, the grandaughter of Shakspeare; the portrait of Charlotte Clopton in her trance; the pedigree, and the will—where were they all? Carried off by the indignant and vindictive Mary Homby, who was too selfish to pay more than L.40 a-year for the house in which so great a genius was born; for all the great names of all the illustrious people, from all quarters of the world, written by the blacklead pencils of every known manufactory, and all these precious relics to boot—such a collection as was never yet seen on this side of Loretto.

But the ravages of this modern Goth and Vandal, Mary Homby, could not be entirely repaired—they might, however, be in some degree mitigated; and as the disconsolate successor ruminated on the means—lo! a most happy and inspired idea occurred to her. Mary Homby had been in a passion, and perhaps she had forgotten to put any size into her whitewash. A brush was instantly applied to the walls—the hope became at once a certainty!—Mary Homby *had* omitted the size, and by gentle and continued friction of the brush, the millions of pencilled names once more appeared in all their original clearness! The relics were at once pronounced—humbug;—new Albums were opened, and the Shakspeare show-room was restored to its ancient value. In fact, this house, which was some years ago purchased of Joan Shakspeare's descendants, the Harts, with other property, for L.250, is now said to be worth L.2000."

In the same article Mr Howitt takes particular notice of Clopton Hall, near Stratford, the residence of the chief family of the district in Shakspeare's time, and apparently as good a specimen as any of the old halls which it is partly the purpose of the book to describe. Respecting this mansion, Mr Howitt prints a letter by a lady of his acquaintance, which conveys the matter in so pithy and so generally interesting a shape, that we are tempted to extract it:—

"I wonder if you know Clopton Hall, about a mile from Stratford-on-Avon. Will you allow me to tell you of a very happy day I once spent there. I was at school in the neighbourhood, and one of my schoolfellows was the daughter of a Mr W——, who then lived at Clopton. Mrs W—— asked a party of the girls to go and spend a long afternoon, and we set off one beautiful autumn day, full of delight and wonder respecting the place we were going to see. We passed through desolate, half-cultivated fields, till we came within sight of the house—a large, heavy, compact, square brick building, of that deep dead red almost approaching to purple. In front was a large formal court, with the massy pillars surmounted with two grim monsters; but the walls of the court were broken down, and the grass grew as rank and wild within the enclosure as in the raised avenue walk down which we had come. The flowers were tangled with nettles, and it was only as we approached the house that we saw the single yellow rose and the Austrian briar trained into something like order round the deep-set diamond-paned windows. We trooped into the hall, with its tesselated marble floor, hung round with strange portraits of people who had been in their graves two hundred years at least; yet the colours were so fresh, and in some instances they were so life-like, that, looking merely at the faces, I almost fancied the originals might be sitting in the parlour beyond. More completely to carry us back, as it were, to the days of the civil wars, there was a sort of military map hung up, well finished with pen and ink, showing the stations of the respective armies, and with old-fashioned writing beneath, the names of the principal towns, setting forth the strength of the garrison, &c. In this hall we were met by our kind hostess, and told we might ramble where we liked, in the house or out of the house, taking care to be in the 'recessed parlour' by tea time. I preferred to wander up the wide shelving oak staircase, with its massy balustrade all crumbling and worm-eaten. The family then residing at the hall did not occupy one-half—no, not one-third of the rooms; and the old-fashioned furniture was undisturbed in the greater part of them. In one of the bedrooms (said to be haunted), and which, with its close pent-up atmosphere and the long shadows of evening creeping on, gave me an 'eerie' feeling, hung a portrait so singularly beautiful! a sweet-looking girl with paly gold hair combed back from her forehead, and falling in wavy ringlets on her neck, and with eyes that 'looked like violets filled with dew,' for there was the glittering of unshed tears before their deep dark blue—and that was the likeness of Charlotte Clopton, about whom there was so fearful a legend told at Stratford church. In the time of some epidemic, the sweating-sickness, or the plague, this young girl had sickened, and to all appearance died. She was buried with fearful haste in the vaults of Clopton chapel, attached to Stratford church, but the sickness was not stayed. In a few days another of the Cloptons died, and him they bore to the ancestral vault; but as they descended the gloomy stairs, they saw, by the torch-light, Charlotte Clopton in her grave-clothes leaning against the wall; and when they looked nearer, she was indeed dead, but not before, in the

* Visits to Remarkable Places: Old Halls, Battle-Fields, and Scenes illustrative of striking passages in English History and Poetry. By William Howitt, author of "the Rural Life of England," "Boy's Country Book," &c. London, Longman and Company, 1840.

* This was there at the time of Ireland's visit.

Digitized by Google

agonies of despair and hunger, she had bitten a piece from her white round shoulder! Of course, she had *walked* ever since. This was 'Charlotte's chamber,' and beyond Charlotte's chamber was a state-chamber, carpeted with the dust of many years, and darkened by the creepers which had covered up the windows, and even forced themselves in luxuriant daring through the broken panes. Beyond, again, there was an old Catholic chapel, with a chaplain's room, which had been walled up and forgotten till within the last few years. I went in on my hands and knees, for the entrance was very low. I recollect little in the chapel; but in the chaplain's room were old, and I should think rare editions of many books, mostly folios. A large yellow-paper copy of Dryden's 'All for Love, or the World Well Lost,' date 1686, caught my eye, and is the only one I particularly remember. Every here and there, as I wandered, I came upon a fresh branch of a staircase, and so numerous were the crooked, half-lighted passages, that I wondered if I could find my way back again. There was a curious carved old chest in one of these passages, and with girlish curiosity I tried to open it; but the lid was too heavy, and I persuaded one of my companions to help me, and when it was opened, what do you think we saw—BONES!—but whether human, whether the remains of the lost bride, we did not stay to see, but ran off in partly feigned and partly real terror.

The last of these deserted rooms that I remember, the last, the most deserted, and the saddest, was the nursery—a nursery without children, without singing voices, without merry chiming footsteps! A nursery hung round with its once inhabitants, bold, gallant boys, and fair, arch-looking girls, and one or two nurses with round, fat babies in their arms. Who were they all? What was their lot in life? Sunshine or storm? or had they been 'loved by the gods, and died young?' The very echoes knew not. Behind the house, in a hollow, now wild, damp, and overgrown with elder-bushes, was a well called Margaret's Well, for there had a maiden of the house of that name drowned herself.

I tried to obtain any information I could as to the family of Clopton of Clopton. They had been decaying ever since the civil wars; had for a generation or two been unable to live in the old house of their fathers, but had toiled in London, or abroad, for a livelihood; and the last of the old family, a bachelor, eccentric, miserly, old, and of most filthy habits, if report said true, had died at Clopton Hall but a few months before, a sort of boarder in Mr W——'s family. He was buried in the gorgeous chapel of the Cloptons in Stratford church, where you see the banners waving, and the armour hung over one or two splendid monuments. Mr W—— had been the old man's solicitor, and completely in his confidence, and to him he left the estate, encumbered and in bad condition. A year or two afterwards, the heir-at-law, a very distant relation living in Ireland, claimed and obtained the estate, on the plea of undue influence, if not of forgery, on Mr W——'s part; and the last I heard of our kind entertainers on that day, was, that they were outlawed, and living at Brussels."

We must conclude; but, before doing so, would express the very great gratification which the following remarks have given us—a gratification in which we are sure every one of our readers will participate:—

"The palace [Hampton Court] has only been fairly thrown open this summer, and for some time the fact was but very little known; yet through spring and summer the resort thither has been constantly increasing; the average number of visitors on Sunday or Monday is now two thousand five hundred, and the amount of them for the month of August was thirty-two thousand!

And how have these swarms of Londoners of all classes behaved? With the exception of some scratches made on the panels of the grand staircase—for the discovery of the perpetrator of which an ominous placard is pasted on the door-post as you enter, offering five pounds reward, but of which slight injury no one can tell the date (the police, who are always on the spot, never having witnessed the doing of it since they were stationed there), I cannot learn that the slightest exhibition of what has been considered the English love of demolition has been made. Never have I seen, at all times that I have been there, a more orderly or more well-pleased throng of people. I happened accidentally to be there on Whit-Monday, when, besides the railway, upwards of a dozen spring-vans, gaily adorned with ribbons and blue and red hangings, had brought there their loads of servants and artisans, all with their sweethearts, and in fine spirits for a day's country frolic; and not less than two thousand people were wandering through the house and gardens, yet nothing could be more decorous than their behaviour. Never, indeed, did I behold a scene which was more beautiful in my eyes, or which more sensibly affected me. Here were thousands of those whose fathers would have far preferred the brutal amusement of bull-baiting or the cock-pit; who would have made holiday at the boxing-ring, or in guzzling beer in the lowest dens of debauch—here were they, scattered in companies and in family groups; fathers, mothers, brothers and sisters, old people, and children of all ages, strolling through the airy gardens, admiring the flowers, or resting on the benches, or watching the swarming shoals of gold and silver fish in the basin of the central fountain, and feeding them with crumbs of bun amid shouts of childish delight. Here were these poor people, set free from the fret and fume, the dust and sweat and mental and bodily wear and tear of their city trades and domestic cares, well dressed, amongst their more wealthy neighbours, clean, and jocund from the sense of freedom and social affection, treading walks laid down only for royal feet, listening to the lapse of waters intended only for the ears of greatness and high-born beauty, though all constructed by the money of their forefathers; and here were they enjoying all these more than king or cardinal ever could do, beneath a sunny sky, that seemed to smile upon them as if itself rejoiced at the sight of so much happiness. There, too, through the open windows, you saw the passing crowds of heads of men and women wandering through the rooms intent on the works of Raphael, Titian, Correggio, Lely, Vandyke, Kneller, Rembrandt, Rubens, Ricci, Giulio Romano, and many another master of the sublime and beautiful; pausing to behold forms of power, and grace, and loveliness, and to mark many a face of man or woman whose names are so bruited in our annals that even the most ignorant must have heard something of them. Here surely was significant indication of a change in the popular mind in the course of one generation, which must furnish an answer to those who ask what has education done for the masses, and most pregnant with matter of buoyant augury for the future. Those who do not see in such a spectacle that the march of intellect, and the walking abroad of the schoolmaster, are something more than things to furnish a joke or a witticism, are blind indeed to the signs of the times, and to the certainty that the speed of sound knowledge amongst the people will yet make this nation more deserving of the epithet of a nation of princes, than ever Rome deserved from the Parthian ambassador. I could not help asking myself, as my eye wandered amid the throng, how much more happiness was now enjoyed in any one day on that ground, than had been enjoyed in a twelvemonth when it was only the resort of kings and nobles, and the scene of most costly masks and banquets. Nothing more than the sight of that happiness was needed to prove the rationality of throwing open such places to diffuse amongst the million at once the truest pleasure and the most refining influences."

EXHIBITIONS ILLUSTRATIVE OF SCIENCE AND THE ARTS.

PARIS, London, and perhaps some other large cities, have for some years enjoyed the advantage of popular exhibitions illustrative of science and the arts. The Adelaide Gallery of the British capital is an example of what we allude to. The value of such exhibitions, taking advantage of the sight-seeing propensity every where prevalent, and turning it to rational and improving objects, is very great; and we think it extremely desirable that something of the kind, on a scale of greater or less magnitude, should be established in every considerable seat of population, more particularly, and in the first place, in Dublin, Manchester, Bristol, Liverpool, Glasgow, Edinburgh, and afterwards perhaps in a class of smaller towns. We are enabled to give a few hints, both as to the means of getting up such exhibitions, and the chances of their success and usefulness in the larger British cities, in consequence of an experiment which has recently been made in the Scottish capital.

This experiment owed its origin, we believe, and was mainly indebted for its success, to one active and enlightened person, Dr D. B. Reid, lecturer on chemistry—the same gentleman who was employed to heat and ventilate the houses of parliament. Such a circumstance ought, we think, to encourage other active and enlightened persons in the different cities to exert themselves in the like manner. The exhibition was prepared in a suite of rooms, named the Assembly Rooms, which are designed chiefly for balls and concerts, and therefore are not particularly well adapted, with respect to light, for the purpose to which they were now applied. The preparations were also made in a hurried manner, and the exhibition was limited to about ten days, in consequence of the rooms being engaged for a concert which was to take place at the end of that period. Nevertheless, the inhabitants of Edinburgh have rarely expressed themselves more unequivocally pleased with any exhibition than with this, of which we are now to give some description.

A large room on the ground floor, generally used for lumber, was fitted up on this occasion for the exhibition of two modern instruments of a remarkable nature, the hydro-oxygen microscope, and the polariscope, the latter being altogether a novelty in Edinburgh. These were shown and illustrated by Mr E. M. Clarke of London, who had been invited to our capital for the purpose. Two large screens, containing each a disc or white circle of twelve feet diameter, together with a square screen of nearly similar bulk, were erected, for the exhibition of the effects of both instruments. As the hydro-oxygen microscope has been shown in many places, and is comparatively well known, little more need be said than that its wonders consist in the casting of an enlarged shadow from minute objects upon the discs, by means of a very intense white light and a lens. Small insects are thus magnified to the size of the largest animals, and leaves, mosses, and the smallest fractions of plants, become susceptible of the minutest inspection. The lecturer, after showing many natural objects, introduced a small and exquisitely finished glass cameo of Leander in the waters of the Hellespont; and it was interesting to find, that, while the magnification could not in the slightest degree impair the delicacy of a leaf or an insect's wing, it reduced this work of man's ingenuity, exquisite as it appeared before the naked eye, to the coarse appearance of stucco-work! The highest magnifying power exhibited by Mr Clarke, extended, if we heard aright, to twelve thousand times; but the lecturer mentioned that the same instrument had operated on a disc of thirty-two feet, in which case the magnification must have been very much greater, though necessarily less distinct, and with a greater violation of proportions towards the extremities of the figure. The polariscope has been constructed on the same principle as the hydro-oxygen microscope, being designed to present on the discs, and thus make visible to a large audience at once, the beautiful phenomena of the polarisation of light. In this case, three discs are employed, one at each side of the instrument and its demonstrator, and one behind.

Mr Clarke first proceeded to illustrate the simple prismatic phenomena, throwing enlarged shades of the iris upon the discs, and then presenting small circular shades of two colours complementary to each other, which, being made to converge, displayed, in the overlapping part, a perfect white, thus making visible to hundreds at once the fact, so astonishing to the unlearned mind, that the colours are but parts of pure white light. The demonstrator then made equally visible to the large assemblage which filled the room, the phenomena of polarisation, chiefly using for the purpose various pieces of celenite. A shade, for example, from a piece of this mineral first exhibited, on one screen, a particular assemblage of colours, being then under refraction. It was then removed to another screen, and shown under the law of reflection, when every colour was seen to be different from what it had been before. Finally, he removed the shade to a third screen, where it was again under refraction, and it then of course showed the same appearances as in the first. Mr Clarke concluded the exhibition by a display of the chromatic fire cloud upon the ceiling, certainly one of the most startlingly brilliant of all the wonders of chemical science.

In another room on the ground floor, pottery manufacture was seen in operation, as well as glass-blowing and basket-making, the operators in the last instance being blind men from the Edinburgh Asylum. The pottery manufacture seemed to be a very attractive part of the exhibition, as it was visited by great crowds. An electro-magnetic machine, made by Mr Clarke for the Duke of Roxburghe, was shown in the pottery room.

The great hall on the second floor presented a magnificent spectacle, crowded as it was with curious objects of art, many of them imposing to the eye even at a first and distant glance. Such an object was the "model of a proposed restoration of Glasgow Cathedral," executed by Mr G. M. Kemp, the ingenious self-taught artist who planned the monument to be erected to Sir Walter Scott. There is not only wonderful neatness of execution visible in this model, but the artist has also given evidence of fine inventive powers as an architect, in his conception of the parts proposed to be added; for the real cathedral, as is well known, has never yet been completed. The first of the large tables with which the hall was covered, exhibited numerous models of steam-engines, boilers, and fire-engines, from the collection of the Edinburgh School of Arts, and from private individuals. Tables second and third were covered with models of agricultural implements of every imaginable kind. The south wall of the room was covered with portraits and portrait frames. Specimens of the Blind-Asylum work, of spun silk, of loom-woven portraits, of carpets, &c., all from the workshops and warehouses of private merchants, filled up others of the tables. On table seventh were a number of singular works of art from a bazaar in town, including an automaton singing-bird, which leaps from a box, plays a beautiful tune, and disappears again, at the touch of command; a picture-clock, with a miniature railroad in front, and several sets of trains whirling backwards and forwards at speed; and a time-piece with invisible mechanism, the index appearing to move round the centre of a small disc of glass, framed in a ring of gold. Specimens of goods and instruments, illustrating the woollen manufactures of Huddersfield, the flax manufacture of Arbroath, the cotton-spinning of Manchester, the process of stereotyping, and the process of gold-beating—specimens of Scottish and foreign marbles, and of Berlin-iron work—models of the various watch-escapements—formed the contents of other tables in the large hall. The whole of this superb apartment may be said to have been filled with specimens of workmanship, and working machinery, in almost every department of practical science. The utility and intelligibility of the exhibition was greatly increased by the presence of engravers and other workmen, showing the enginery of their respective trades in actual operation.

On a side-table, where beautiful models of ships, light-houses, the Thames Tunnel (from Mr Brunel), &c., were also seen, we found one object of extraordinary interest, a working-model of Ponton's Galvanic Telegraph. By this machine forty-two different signals were communicated from one end of the room to the other, by means of three insulated copper wires. Letters were arranged in view of the spectator, at one end, like the notes of a piano, and it was by acting on these that the intelligence was immediately conveyed. This machine has succeeded perfectly on some occasions of trial. One is now working with success, we believe, on the Great Western Railway. The manner in which the attention of the guardian of the telegraph at one end is drawn to the machine when a communication is about to be made from the other, is ingenious, and worthy of notice. A distinct exertion of galvanic influence is brought to play on a needle at the far end of the wire. The deviation caused in this needle moves a platinum wire kept at a white heat by a spirit-lamp. The motion brings the hot wire in contact with a fine cotton thread attached to a cord by which a pendulum is kept aside from a gong. The thread is burned, the pendulum falls, and strikes the required signal on the gong, to call the telegraph-keeper to his post.

At the upper end of the great hall were some beau-

Digitized by Google

tiful specimens of reflectors, with burners and discs of various kinds and colours, presented by the Commissioners of the Northern Lighthouses. The paraboloidal reflector, similar to that used at the Bell Rock lighthouse, and the catadioptric apparatus of Fresnel, with the annular lens, and great burner such as is in use in the Inchkeith lighthouse, are splendid spectacles. The use of them Dr Reid explained daily at stated hours.

In passing from the large hall into the first or east side-room, the visitor beheld, through magnifying glasses, two magnificent views, stained upon glass, of the Bell Rock lighthouse in a storm, and of the Fall of Babylon, after Martin. Various beautiful models of machinery and objects of art filled the east side-room, and a machine for manufacturing hosiery was seen in operation. The central south room beyond was similarly filled. There were, among other objects of interest, several specimens of photogenic drawings and Daguerreotype plates, and a large collection of interesting skeletons, skulls, and other preparations from the College of Surgeons. In the west side-room the principal object was a Jacquard loom, seen in operation. Mere inspection by the eye cannot enable one to detect or describe the principles on which this remarkable machine is constructed, and we did not enjoy any chance of hearing it explained. It is of very considerable size, and is worked by one man, seated as at the ordinary loom. Beside it were a turning lathe in operation, and specimens of paper in all its stages, from the state of rags to the fine completed article.

Even from this meagre sketch of the collection, those of our readers who have not personally beheld it may form some idea of the rich variety of interesting objects which the scientific men, manufacturers, and mechanicians of Edinburgh, were able to bring forward on this occasion for the inspection of their fellow-citizens. The satisfaction of the public with the exhibition was unequivocally proved by the constant daily increase of the crowds which flocked to see it, and by the general expression of regret at its hurried close. There cannot, we think, be the slightest doubt that a permanent exhibition of the kind in Edinburgh, and consequently in other towns of the same size, would succeed. Of its effects in imparting knowledge to the public at large, in creating a general respect for science and art, and for their professors, in awakening in young minds the faculties fitted for particular pursuits, and guiding them in the early and more arduous part of their career, it would be difficult, we think, to form too high an estimate.*

EMIGRATION—REPORT OF THE POOR-LAW COMMISSIONERS ON THE SUBJECT.

The Poor-Law Commissioners for England and Wales have commenced issuing an occasional sheet, entitled "An Official Circular," with the view of affording information on topics connected with pauperism, for the use of local functionaries, and generally all who are interested in the administration of the existing Poor-Law. As the first instance of a public board voluntarily publishing its more important transactions, for the public advantage, this unquestionably merits the thanks of the community.

From the first number, purporting to be for the month of January, we extract the following portion of a Report on the state of Emigration, and demand for labourers in the colonies, by Mr Parker, Assistant Commissioner. The subject is at present of considerable importance.

By a Parliamentary paper recently printed, containing reports and correspondence respecting emigration to the colonies, it appears that the average annual emigration from England for the six years preceding 1838, was—

To the British North American Colonies	6,830
United States	26,849
Cape of Good Hope	318
Australian Colonies	2,806
	36,805

And that in 1838 it was—

To the British North American Colonies	1,572
United States	12,566
Cape of Good Hope	292
Australian Colonies	9,746
	24,176

Thus, in the last year, when the Poor-Law Amendment Act had been brought into operation over nearly the whole of England and Wales, notwithstanding the price of provisions had increased twenty per cent., and the demand for labour had become stronger in the colonies, there was less emigration by 14,629 persons than the average of the six preceding years. This difference there is every reason to suppose would have been much greater, had not emigration to the Australian colonies suddenly increased to its present extent, an increase attributable to the bounty now given to the labouring classes proceeding to that part of the British dominions. Previous to 1837, assistance was given to only single females between fifteen and thirty years of age proceeding to Australia; but since then, all persons deemed likely to prove eligible colonists have received gratuitous passages. This aid has naturally operated as an encouragement to labouring people, who may fairly argue, that unless their services are required, the cost of their removal to a colony would not be defrayed from public funds set apart by the colonists for that purpose. The aid so given will account for the sudden increase of the numbers of persons who proceeded to the Australian colonies in 1838, and without which increase, the emigration of the past year would have been insignificant in the extreme, as compared with former years. It is to be regretted that the statistical information supplied in the tables contained in these reports does not supply the actual immigration to the different colonies and to the United States for each year since 1829, similar to the one prepared by the agent for emigration at Quebec. The table relating to Quebec shows conclusively that immigration to that port has materially diminished. In the four years preceding the passing of the Poor-Law Amendment Act (including 1834, the act having been passed after the season for emigration had terminated), there arrived in Quebec from England and Wales 39,821 persons, whilst in the four years after the passing of the act there arrived there 21,825, including upwards of 1000 assisted by parochial funds, which a provision in the Poor-Law Amendment Act, for the first time, made applicable to emigration purposes. It has been frequently asked of witnesses, before committees of the Houses of Parliament, what has become of the surplus labour existing before the Poor-Law Amendment Act passed; and it has been broadly asserted by an influential journal, opposed to the provisions of the Poor-Law Amendment Act, that that surplus has been reduced by shipping off thousands of poor persons to the colonies. The assertion, broadly as it has been made, is nevertheless negatived by the official returns from the United States, where it is presumed no one will say poor-law influence prevails; as well as the British possessions in Asia, Africa, and America. It would be out of place, in a notice of a Parliamentary paper, to discuss the causes of the absorption of the surplus labour apparently existing before the operation of the Poor-Law Amendment Act; yet, from whatever cause the reduction in the number of unemployed labourers may proceed, it cannot fail to be an important consideration in ascertaining the causes, that the reduction has taken place at a time when the demand for the services of the productive classes is more than ever urgent in the colonies.

That the demand for the services of the productive classes has become more urgent in the colonies since the passing of the Poor-Law Amendment Act, is clearly evinced by the reports. Mr Buchanan, adverting to the Canadas, says:—'The great scarcity of labourers, and the high prices of wages which farmers are obliged to pay for the necessary assistance required on their land, continue to weigh heavily on the new settler, who has not sufficient physical aid amongst the members of his own family.' And he further adds, that in the eastern townships good labourers can earn from 40s. to 50s. currency per month, with board and lodging found.

In New South Wales the demand for the services of the labouring classes exists equally as strong, if not more so, than it does in the Canadas. A committee of the legislative council, presided over by the Bishop of Australia, has reported that 'it cannot be assumed that the want of labour in the colony can be supplied by the introduction of a smaller number than 3000 adult males every year—a number which will, allowing the average number of women and children, require the introduction of 12,500 persons annually.' The committee estimate the cost of introducing 12,500 persons to be L.250,000, and without recommending that a loan of L.2,000,000 should be raised, advert to the communications suggesting a loan in such a manner as to lead the governor, Sir G. Gipps, to remark, 'that the members of the committee are not unfavourable to it.' The governor, adverting to the want of labour, says, 'that immigration should be kept up at its present rate, and that if the funds prove insufficient, then recourse should be had to a loan rather than put a stop to it. The committee, in their Report, say:—'As the foundation of every other inquiry, your committee naturally directed their first attention to ascertain, as nearly as in the nature of things might be possible, the actual demand for labour of various descriptions at this time prevailing in the colony. Their own private sources of information had sufficed to satisfy them that such demand was certainly urgent, and the supply highly insufficient to meet it; and that, generally speaking, every resident in the colony who had occasion to employ the services of others, was exposed to difficulties in conducting his pursuits, of whatever nature they might be, as well as in providing for the service of his domestic establishment. But until their inquiries were directed, in the course of this examination, to an actual investigation of individual wants, and of the losses, inconveniences, and disappointments to which entire classes are reduced through inability to obtain the extent of labour which their various operations require, your committee had not a due or distinct conception of the urgency of the prevailing distress.'

In Van Diemen's Land there exists so urgent a demand for female servants, that the governor (Sir J. Franklin) says, 'Not only is social intercourse at present very much restricted, especially in the interior, in consequence of the difficulty felt even by the wealthiest families to obtain female attendants for their children, and the additional domestic duties thereby imposed upon parents, but it has recently been found impossible even to procure in cases of sickness the requisite number of attendants, of sufficiently good character, however deficient in skill.'

In Western Australia (Swan River), a memorandum presented to the governor states, that 'in the present state of the colony there is such a deficiency of labour as to impede its advancement. The prudent portion of the workmen have saved means, and are now in a condition to extend their business, and to hire assistance, if they could procure it; but they cannot venture to undertake works in the existing scarcity of workmen, and the consequent high rate of wages. Under these circumstances the price of every product has risen; improvement is discouraged; capital prevented from finding investment here, must go elsewhere, and the colony is menaced with a return to its former state of unproductiveness, in the midst of every natural convenience for producing abundance. 'The only remedy for these evils is a steady and well-regulated supply of labour from abroad, in proportion to the growth of capital within the settlement.' The council concurred in this, and pledged itself to a limited extent to any future measures tending to procure a supply of labour.

At the Cape of Good Hope, labour is also required, and a scheme to supply it from this country has been suggested in the colony; from which it would appear that some thousands of young people might be annually introduced with benefit to the colony.

Great as the demand is for labour in all these colonies, and tempting as are the inducements held out in the shape of remuneration, and easy as it is to obtain a passage to the Australian colonies, yet it is found that the demand cannot be supplied, because there exists no disposition amongst the labouring classes to emigrate. Before the passing of the Poor-Law Amendment Act, when there was an apparent surplus population, emigration was extensive; now that there exists an urgent demand for the services of the productive classes in the colonies, the number of emigrants has fallen off. In the present year the disposition to emigrate has not strengthened. Within the last few days, a vessel, chartered to convey emigrants gratuitously, has sailed with only two-thirds of its complement of passengers."

The following letter from the Agent-General for emigration was read to the board:—

"2, *Middle Scotland Yard, 29th October* 1839.

Sir—In pursuance to instructions received from Lord John Russell, I have the honour to acquaint you that dispatches have been received from the lieutenant-governor of Upper Canada, reporting the successful introduction into that colony of a body of 181 emigrants, who were sent out from Ennis in the county of Clare last summer in the ship 'Waterloo,' through the liberality of Colonel Wyndham.

On arriving at Quebec, the whole of the emigrants proceeded in a body under the charge of Lieutenant Rubridge, to whom Colonel Wyndham had entrusted the care of them, to Cobourg, Upper Canada, where they were all immediately engaged, the men at L.2, 10s. per month, boarded and found, and the women at L.1 per month, boarded and fed.

No sickness or accident of any kind occurred amongst them from the time of their leaving Ireland.

In consequence of these favourable accounts of the result of Colonel Wyndham's liberal efforts in promotion of emigration, Lord John Russell has conveyed to me his desire that the officers of this department should give every advice and facility to landlords who may be desirous of following Colonel Wyndham's example.—I have, &c.

(Signed) T. Frederick Elliot."

SKETCHES OF SUPERSTITIONS.

THE DRUIDS.

Interesting as are the ancient superstitions and theological fables of Scandinavia, a notice of which formed the subject of the last paper in this series, British readers cannot but feel a still greater interest in the history of Druidism, the superstition which flourished peculiarly among their own forefathers, the aborigines of the British islands. Druidism was the religion of the ancient Celts or Gauls, and prevailed in France as well as in Britain—every where, indeed, where that ancient race had formed settlements. With the usual tendency of the learned to expend more attention upon words than things, inquirers into the nature of Druidism have cavilled much about the etymology of the word. Either the old British term *dru*, an *oak*, or the word *dry*, signifying a *magician* in the Saxon language, may be set down, it seems to us, as the source of the word Druid. The first is probably the correct etymon, as we find the oak to have been intimately and prominently connected with all the peculiar rites which constituted the Druidical religion.

As far as can be gathered from the statements of Cæsar, Diodorus Siculus, Strabo, and others, the Druids not only formed the priesthood of the Celts, but appropriated to themselves all the offices usually discharged, in modern days, by the separate learned professions. "Among the priests of Druidism," says George Chalmers in his Caledonia, "there appear to have been three orders, the Druids (proper), the Vates,

* Since this paper was written, we have accidentally observed, in a Newcastle paper, that an exhibition of the kind described has for some time existed in that enterprising town.

Digitized by Google

and the Bards, who severally performed very different functions; the Bards sang, in heroic verse, the brave actions of eminent men; the Vates studied continually, and explained nature, the productions of nature, and the laws; and the Druids, who were of a higher caste, and were disciplined in the forms of an established order, directed the education of youth, officiated in the affairs of religion, and presided in the administration of justice." In consideration of these high and important duties, the members of the Druidical order were exempted from all taxes and burdens, and from military servitude. They were under the government of a single head, the Arch-Druid of his tribe, who was chosen by general election, and was invested with absolute authority. The Druids wore short hair and long beards. Their garments were of remarkable length, and when officiating at the altar, they wore a white surplice. In their hands they commonly carried a long wand, and their arms and necks were decorated with gold chains and bracelets. But the most notable of their ornaments, and that, in truth, in which much of their power was supposed to depend, was an artificial egg, set in gold, and of miraculous virtues. The Druids asserted that every one of these eggs, which they sold, it should be mentioned, to the rich and credulous, was formed by a number of serpents, mysteriously conjoining for its production. When made, it was raised up in the air by the *hissing* of these creatures, and was to be caught in a clean white cloth when falling to the ground. The person who was fortunate enough to catch it, was under the necessity of instantly mounting a swift horse to escape from the angry serpents, which were always desirous to keep the egg. Procured in this way, the egg possessed the property of making the bearer or wearer successful in all disputes, and gained for him the love of all good and great men. Pliny mentions his having seen one of these eggs. He says it was of the size of a small apple, its shell being a "cartilaginous encrustation," full of little cavities, and he adds that "it is the badge of the Druids."

This story of the mystic egg will prepare the reader for learning that the order of the Druids, such as we have described them to be, laid pretensions to miraculous powers, and that the art of magic intermingled largely with their religious system. The open sky was the canopy under which they worshipped. A wood or grove, consecrated by the priests, and fenced in by stones to prevent the entrance of unhallowed feet, constituted the mysterious scene where the rites were performed. In the centre of these groves, which were usually either circular or oblong, there was an open area, encompassed with large oaks, closely set together. Within this large circle were several smaller ones, surrounded with large stones; and near the centre of these smaller circles, were other stones of a prodigious size and convenient height, on which the victims were slain and offered up to the Supreme Being, whom they termed *Esus* or *Hesus*. They considered the oak as the emblem or symbol of this divinity, and chaplets of it were worn both by priests and people in their ceremonies. The fruit of the oak, and especially the mistletoe, was thought to possess a divine virtue, and on the sixth day of the moon it was anxiously looked for on the oak, where it is but rarely found. When found, the Druids prepared every thing for a grateful sacrifice under the oak. Two white bulls were brought and fastened to the tree by the horns, and the Arch-Druid ascended the tree, cropped the mistletoe with his golden knife, and received it in his robe, amid the acclamations of the people. The sacred mistletoe being brought down, the bulls were sacrificed, and the deity invoked to bless his gift, which was held highly valuable in a medicinal and in other points of view.

We know nothing about the Druidical conceptions of a heaven or future state. They believed that one Supreme Being created and governed the world, but they also admitted the existence of a few subsidiary divinities, and among others of Bel or Baal, the god of fire, whose worship was spread over a great part of the earth by the enterprising mariners of Phœnicia. The sacrifices made to Esus, and these minor deities, consisted of animals for the most part; and we find, as in the sacrificial customs of most religions, that the priests took to themselves a tolerable share of all the offerings. After a third part had been burnt, the offerer or offerers received another third to feast on, along with friends; and the remainder went to the Druids. This was no trifling perquisite, as in all cases the finest and most valuable of the flocks and herds were selected for the altar. But it would have been well had the Druidical altars never been turned to a worse purpose than that of fattening the priestly officiators. Beyond a doubt, the Druids pursued the horrible practice of sacrificing human victims. They affected to possess the power of drawing predictions, from the appearance of persons killed at the altar, from the manner in which they fell, the flowing of their blood, and their movements in the mortal agony. To have the fate of a war or a battle foretold, therefore, the kings or chiefs of these days would seldom hesitate, it may be believed, to sacrifice dependents, or other procurable victims, by scores if necessary. The Druids also taught that, in cases of sickness, the afflicted person might be saved by propitiating the angel of death with another victim; another notion evidently calculated to lead to a dreadful abuse of human life on the part of the great. Without such specific causes, however, human lives seem to have been regularly sacrificed, as a propitiation to the gods. Cæsar describes an idol of a most extraordinary and fearful kind, as having been used by the Druids in their sacrifices. This idol was a gigantic figure formed of wicker-work, in the rude likeness of a human being. Its interior was so arranged that every part, body and limbs, could be filled with human victims, men and women; and at the proper moment straw and wood were piled around it, and the prisoned unfortunates perished by a slow and most horrible death in the flames. It is related by the historian, that the persons who thus suffered were chiefly those condemned to death for offences against the laws or religion; but if a sufficient number of persons in this condition could not be procured, the innocent were ruthlessly thrust in, till the idol was filled. The imagination revolts at the idea of such wholesale butchery; and the fearful character of the picture is heightened to the fancy by the circumstance of women, stripped of every portion of their clothing, and painted over the body with the dark blue woad, having assisted in the consummation of these bloody rites. Some authors inform us, that women were more frequently the victims of the Druidical superstitions than men. Young, innocent, and beautiful maidens, we are told, were dragged to the altar or the stake, and their lives offered up as a propitiation to the powers above.

The power of the Druidical order was great among their countrymen, and their influence extended to all matters whatsoever, political as well as religious. This is scarcely to be wondered at, being but a natural sequence of the maxim, that "knowledge is power." To the Druids was exclusively confined all the knowledge then existing among the Celtic nations, and, barbarous as their idolatrous rites show them to have been in some respects, they had certainly made considerable advances in many of the sciences. By Cæsar, an excellent authority on the subject, because a personal observer, and a writer of undoubted veracity, we are informed that the Druids were conversant with arithmetic and geometry, and that they carried the knowledge of these sciences even into the highest branches, speculating often at their meetings upon "the magnitude of the earth, and even of the universe." Regarding astronomy, we are told by the same author that they had many "disquisitions concerning the heavenly bodies and their motions, in which they instructed their disciples;" and it is certain that they divided time in a fixed manner into year and month. The moon and its quarterly periods, which have guided all rude nations in their division of time, seem so peculiarly to have formed the rule of the Druids, that they counted by *nights*, not by days. From some unknown cause, they reckoned their month from the sixth day of the moon, and not from its change. As regarded the science of medicine, the opinions and practice of the Druids were founded on the assumption that all diseases proceeded from the anger of the gods, and that to appease them was to effect or ensure a cure. From this unfortunate belief sprang the baneful custom, already mentioned, of sacrificing one person for the cure or relief of another. According to Pliny, the Druids used a few herbs in medicine, and, in particular, the mistletoe, which they denominated All-heal, from the impression that this sacred substance was endowed with the power of curing all diseases. But every thing depended, according to them, on the mode of use or application. For example, in employing *selago*, a kind of hedge-hyssop, for the cure of sore eyes, the following ceremony was indispensable to its efficacy. The patient was to be clothed in a white robe; to have his feet bare, and washed in pure water; to offer a sacrifice of bread and wine, before he proceeded to cut the herb; and the cutting was to be accomplished by the patient with the right hand enveloped in the skirt of his garment, while the herb was to be held by a hook of some more precious metal than iron. Then the cut herb was to be received in a clean cloth, and applied afterwards. Treated in this way, the herb was infallible. Such a ridiculous ceremonial as this brings to one's mind the saying of Cicero regarding the Roman priesthood and their rites. He said, that he marvelled how they were able to look each other in the face without laughing. The remark may well be applied to the Druidical priests.

The Druids, it has been stated, had the office of instructing youth. This was done in groves, under the sacred branches of the oak. There seems to have been a strong resemblance between the forms of instruction pursued by the Druids, and those adopted by some of the Greek sages. The children of the nobility, and of important families generally, were carried away by the Druids into the most retired and desolate portions of the forests which then covered the British soil, and there kept sometimes for the space of twenty years, undergoing the while a course of discipline as severe as that to which Pythagoras subjected his pupils. The teachers made the young Celts get by heart immense strings of verses, in which the actions of the great men of the race were recorded. In their common course of learning, the Druids are said to have taught their pupils not less than twenty-four thousand such verses. These they would not allow to be written down; a plan which they adopted with regard to the great body of their knowledge, and which had the effect of keeping it almost entirely among themselves. Among other branches of learning taught by the Druids, oratory held a high place. Eloquence was the great instrument by which the Celts were moved, on the field of battle and in the council; and from the various fragments of their speeches, preserved by Roman writers, it is obvious that many of the Celtic kings and chiefs, instructed by the Druids, had carried the rhetorical art to a high pitch of excellence.

After all, however, it was by their pretences to supernatural powers, to the arts of magic and divination, that the Druids arose to such commanding influence over the rude generality of their countrymen. "In Britain (says Pliny) the magic arts are cultivated with such astonishing success, that the Britons seem to be capable of instructing even the Persians themselves in these arts. The Vates, in particular, investigate and display the most sublime secrets of nature, and by auspices and sacrifices they foretell future events." The Druids were indeed so famous in these respects, that even the emperors of Rome sent to consult them about things to come. There can be little doubt that much of this magical repute arose from the possession of a few scientific secrets, which they were careful to keep to themselves. When their fame was once established, moreover, the credulity of mankind readily discovered proofs of their power in the simplest operations of nature. Plutarch relates that an officer, named Demetrius, was sent by one of the Roman emperors to examine some of the islands adjacent to Britain, and that he landed on one inhabited by a few Druids, who were esteemed powerful magicians by their countrymen. Soon after his arrival, the air grew black and troubled, and fiery spouts were seen flashing from all parts of the heavens. Demetrius and his men fled from the island in dismay, convinced that these appearances were caused by their own invasion of the sacred isle; a belief which the Druids took good care to encourage. In such a light may men view a simple storm, when looking at it through the mists of ignorance and credulity.

Even the monuments and temples of the Druids afforded strong additional grounds in support of the belief in their supernatural powers. Now-a-days these remarkable relics, of which many still exist, only give proof of the possession of considerable mechanical skill by the Druids. By far the most extraordinary of these remains are those at Stonehenge, on Salisbury Plain, in Wiltshire. This temple, for such almost all antiquaries consider it to have been, consists of two circles, and two ovals, the latter forming the cell or sanctum to the circles, the largest of which measures three hundred feet in circumference. The walls of this temple are composed of huge unconnected stones, standing upright, and computed, some of them, to weigh upwards of seventy tons. The greater number of the stones are flat, and bear the mark of tools, but they are still in an extremely rude state. Some stones have others laid over them, forming a kind of architrave. The longest stones measure about twenty-two feet, and the highest thirteen. "We can hardly suppose (says a writer on this subject) that it was possible to cut these prodigious masses of stone without wedges, or to raise them out of the quarry without levers. But it certainly required still greater knowledge of the mechanical powers, and of the method of applying them, to transport these huge stones from the quarry to the places of their destination; to erect the perpendicular pillars, and to elevate the imposts to the tops of these pillars." Possessing the exclusive knowledge of such mechanical arts, as well as all the science and learning of their race and age, it is no matter of surprise that the order of the Druids should have acquired so much importance among their countrymen, ignorant and superstitious as these were in the main.

It would be a little out of our way to describe at length the other Druidical relics yet extant in Great Britain. *Mona*, or Anglesea as it is now called, was their chief settlement, but it is in North Britain that the Druid monuments are most abundant. They appear either in the shape of circles of upright stones, with or without a sacrificial altar in the centre, or in the shape of cairns, for sepulchral or other purposes. As one example of a Druidical cairn, we may mention that on the moor of Strath-Ardle, in Perthshire, which is a stony mound, ninety yards in circumference, and twenty-five feet high. Such monuments are particularly numerous along the Grampian range. There are also curious stones, called Rocking-stones, supposed to be of Druid origin. In the parish of Kells, in the stewartry of Kirkcudbright, there is one rocking-stone, called the *Logan* stone, which is about eight or ten tons in weight, and is so nicely balanced upon some protuberances of another stone, that the pressure of a finger can set it in motion. These stones are found both in England and Scotland. Their exact purpose, if they ever had one, cannot now be ascertained, and the same may be said of other relics of a similar kind, believed to be Druidical.

Such as they have now been described, the Druid superstitions were at one time prevalent over a large part of the continent of Europe and the adjacent isles. Their extinction is enveloped in the mystery of the dark ages. Up to a late period, however, some traces of the Druid customs were perceivable among the Scottish Celts, and Dr Jamieson mentions that an old Highlander, so lately as the end of the eighteenth century, was in the habit of always addressing the Deity by the title of the Arch-Druid. Druidism certainly gives us no pleasing idea of the character of our ancestors. In some respects, their superstitions were among the darkest and cruelest that have ever been cherished by man in his rude and pagan condition.

ABD-EL-KADER.

The Hadji Abd-el-Kader Oulid Mahiddin, who figures in the accounts of the wars of the French in Africa, belongs to a most ancient family of Marabouts, and descends, like his kinsman the Emperor of Morocco, from the Fatimite Caliphs. He was born at Guetna, a sort of seminary near Mascara, on the Hachem territory, where the Marabouts, his ancestors, assembled a number of young men to instruct them in letters, theology, and jurisprudence. Abd-el-Kader was educated as well as an Arab can be by his father, Sidi Mahiddin, who turned to his best account his intelligence and energy. As yet but a boy, not a passage of the Koran perplexed him, and his explanations were readier than those of the ablest commentators. He likewise diligently applied himself to oratory and history, and so successfully, that he is now the most eloquent speaker in his country (an immense advantage among the Arabs), and perfectly acquainted with the annals of his nation. Nor did he neglect the exercises of the body, in which he excels, he being generally reckoned the best horseman in the Barbary states. In short, at the early age of twenty he was distinguished for all the qualities which men like to behold in those whom they place at their head.

Abd-el-Kader is now about thirty-one years old; he is of middling height, somewhat corpulent; his countenance is mild, expressive, and distinguished; his eyes are very fine, his beard thin and dark, and his teeth, which are ill set, are blue spotted; his hands, of which he takes particular care, are extremely fine and delicate; his head is generally somewhat inclined towards the left shoulder; his manners are affable, and most polite, and dignified; he seldom is betrayed into anger, but always keeps a command over himself; in short, to quote the words of an intelligent and impartial French officer of rank, who has been employed upon negociations with the natives almost ever since the occupation of Algiers, "the whole person of the Emir is fascinating, and it is difficult to know and not to like him."

Abd-el-Kader is a man of great bravery, yet his mind is perhaps better adapted to government than to military affairs. Though gifted with great fortitude and perseverance, he has occasionally betrayed some dejection in the arduous circumstances he has had to contend with. His manners are pure, even rigidly so; he has but one wife, whom he most tenderly loves. Three years ago his family consisted only of a daughter, then four or five years old, and of a son, born a few days before the French entered and destroyed Mascara. When in his capital he dwelt with his family in a rather fine house, but which was not the palace. He lived there without any guards, and as a private individual. Every day, at an early hour, he repaired to the palace, or beylick, to transact public business and give audiences. In the evening he returned to his house, and again became a private individual.

Abd-el-Kader is equally unpresuming in his dress, his costume being that of a mere Arab, without any sort of ornament or badge of distinction. If he displays any splendour, it is about his arms and horses. At one time he wore a burnous, the tassels of which were of gold; but one of his brothers-in-law, whom he had appointed Kaid of a powerful tribe, having indulged in that station in a pomp which had excited some discontent, he sent for him, and after censuring his conduct, added, "Follow my example; I am richer and more powerful than you, yet see how I am dressed; I will not even retain those paltry tassels that you see hanging to my burnous." He immediately cut them off, and from that moment has never worn the slightest bit of gold or silver about his person.

Abd-el-Kader is very fond of study, to which he devotes the few hours he can spare from his active life. A little library accompanies him in all his movements. When on any expedition he displays much more of royalty than when in town; he then lives under a superb and convenient tent, in a nook of which, elegantly fitted up, he gives private audiences and attends to state affairs. In the camp he employs his time as follows, when the day is not taken up with military operations:—On reaching his tent, after a day's march, he keeps by him but one servant, and after some minutes devoted to dressing and cleanliness, summons his secretaries and principal officers, in succession, and works with them till four o'clock; he then presents himself at the entrance of his tent, and himself says the public prayers; he next preaches for half an hour, taking care to select a religious text that may naturally lead him to inculcate the notions it suits him to propagate upon war and politics; nobody, however, is obliged to attend his sermons. Some moments after he sits down to table with his chief secretary and a confidential friend, Miloud-Ben-Arach, his brothers, when they are with the army, and the oftener one of his agas. The dishes served up to him are few in number, but good and carefully prepared.

Abd-el-Kader appears to have religious feelings and due notions of Providence, but he is no fanatic. He does not dread discussing religious matters with Christians, and he argues with politeness and without asperity. He is an honest man, and has well-established moral principles; though subtle and cunning, in a diplomatic point of view, he is a faithful observer of his word. Nothing is more foreign to his nature than cruelty; he governs the Arabs with justice and mildness, thereby confuting those who maintain that they can be governed only by terror. Whenever it has been in his power, he has acted with clemency and generosity towards his enemies. Two only have suffered death under his government, and that after due trial—the Gadi of Arzew, and Sidi-el-Gomarez, Sheik of Angad, who was hanged at Mascara, in August 1835.

The conversation of Abd-el-Kader is very animated, and at times witty. In private life he is considered parsimonious, but as a prince he knows full well how and when to be liberal. In financial and commercial matters his notions are most of them erroneous.

The remarkable man whose portrait we have just derived from authentic data, is the most formidable foe that the French have to contend with in their efforts to assert their pretended rights over the vast territory extending from the Mediterranean to the Sa Lara, and from the frontier of Morocco to that of Tunis. Whilst pursuing the object of their ambition at an enormous expense of men and money, and by the alternate employment of force, treachery, extortion, and cruelty, Abd-el-Kader, undaunted by the strides of his powerful neighbours, has gradually risen, by dint of bravery, sagacity, and perseverance, to the possession of no small share of the empire which they would exclusively secure to themselves. Whilst their policy has fluctuated under the influence of systems as various as the administrations formed at Paris, or the many governors-general sent out to Africa, the young emir has steadily pursued his object, and become unto the Arabs a leader and a centre of action—a leader whose talents and gallantry in the field his Gallic enemies have already tried.—*Morning Post.*

MAY-DAY IN NEW ENGLAND.

Can this be May? Can this be May?
We have not found a flower to-day!
We roamed the wood—we climbed the hill—
We rested by the rushing rill—
And lest they had forgot the day,
We told them it was May, dear May!
We called the sweet, wild blooms by name—
We shouted, and no answer came!
From smiling field, or solemn hill—
From rugged rock, or rushing rill—
We only bade the pretty pets
Just breathe from out their hiding-places;
We told the little, light coquettes
They need'nt show their bashful faces—
"One sigh," we said, "one fragrant sigh,
Will soon discover where you lie!"
The roguish things were still as death—
They would'nt even breathe a breath.
Alas! there's none so deaf, I fear,
As those who do not choose to hear!
We wandered to an open place,
And sought the sunny buttercup,
That, so delighted, in your face
Just like a pleasant smile looks up.
We peeped into a shady spot,
To find the blue "Forget-me-not!"
At last a far-off voice we heard,
A voice as of a fountain-fall,
That softer than a singing-bird,
Did answer to our merry call!
So wildly sweet the breezes brought
That tone in every pause of ours,
That we, delighted, fondly thought
It must be talking of the flowers!
We knew the violets loved to hide
The cool and lulling wave beside:—
With song, and laugh, and bounding feet,
And wild hair wandering on the wind,
We swift pursued the murmurs sweet;
But not a blossom could we find;—
The cowslip, crocus, columbine,
The violet, and the snow-drop fine,
The orchis 'neath the hawthorn tree,
The blue-bell and anemone,
The wild-rose, eglantine, and daisy,
Where are they all?—they must be lazy!
Perhaps they're playing "Hide and seek"—
Oh, naughty flowers! why don't you speak?
We have not found a flower to-day—
They surely cannot know 'tis May!
You have not found a flower to-day!—
What's that upon your cheek, I pray?
A blossom pure, and sweet, and wild,
And worth all Nature's blooming wealth;
Not all in vain your search, my child!—
You've found at least the rose of health!
The golden buttercup, you say,
That like a smile illumes the way,
Is nowhere to be seen to-day.
Fair child! upon that beaming face
A softer, lovelier smile I trace;
A treasure, as the sunshine bright—
A glow of love and wild delight!
Then pine no more for Nature's toy—
You've found at least the flower of joy.
Yes! in a heart so young, and gay,
And kind as yours, 'tis always May!
For gentle feelings, love, are flowers
That bloom thro' life's most clouded hours!
Ah! cherish them, my happy child,
And check the weeds that wander wild;
And while their stainless wealth is given,
In incense sweet, to earth and heaven,
No longer will you need to say—
"Can this be May? Can this be May?"

—*Poems by Mrs Osgood [an American Lady].* London, 1837.

MISERIES OF A MUSICAL MISS.

Singing a most pathetic, enchanting song, which you intend shall entrance all present. Conversation, which before had died a natural death, instantly starts into life with renewed vigour. After an ineffectual struggle to make yourself heard, you at length desist.

Practising a beautiful new song, for a party, and hearing it sung by the first Miss who is asked.

A large harp-string breaking in the middle of a splendid fantasia, having no other to replace it.

Having sung a brilliant Italian bravura (as *you* imagine) with great execution and taste, the compliments which are showered on you from a set of earless exquisites, such as, "very pretty!" "what a sweet thing!" "really a pretty little song!"

Playing on a piano out of tune, guiltless of soft notes, half a dozen of the principal being judiciously dumb.

After singing in your best style a very beautiful song, being asked if you ever heard Miss Brown or Mrs Black sing it? The tone of the inquiry leaving no doubt on your mind that it is considered you would be much improved by only *hearing* those ladies.

A Miss (in an unhappy moment) being asked to play a waltz, and having seated herself at the piano, remaining there, a fixture for the evening.

In the middle of a sentimental song, to which all and sundry are listening attentively, the bustling entrance of two servants with tea, coffee, &c., and all that follows.

Hearing a Miss asked to sing, and listening to the mawkish excuses, which last fully a quarter of an hour, such as, "Really I scarcely ever sing," "quite out of practice," "I have such a cold," &c. &c.

Playing an overture, and, in the middle of a brilliant passage, having *two* leaves suddenly turned over by a polite young gentleman, which lands you safely into the middle of the adagio movement.

Being requested to sing after supper, about forty people present, the most of whom are strangers to you. Commencing your song three notes too high, and after shrilly screaming higher than you ever screamed before, you are at length compelled to desist, amidst a suppressed titter, and affectedly kind remonstrances to "go on."

The ineffectual efforts which you make to conceal your mirth, at witnessing a young exquisite accompany himself on the piano, and with his shoulders paying their addresses to his ears, and his eyes doing the same to the ceiling, sing a very slow sentimental ditty, about a broken heart. At length the word farewell (which occupies at least ten minutes) is drawled forth by an effort of nature, as if he and his voice both meant quietly to expire together.

Being obliged (by dint of incessant importunities) to lend a music book, full of rare and beautiful songs, all of which, of course, *then* become quite common amongst your musical acquaintances.

Singing at a party that beautiful song "Farewell, Dearest!" and having got through the first two bars, you are disagreeably surprised by hearing "two by honours" squeaked forth from the far end of the room; however you take courage, and go on. The following accordingly is heard:—

Blessings with thee go (we have the odd trick).
Sunshine be upon (trumps) flowers around (spades).
Thou wert kind (hearts were trumps).
All the world (you played ill);
Fortune felt (the rubber's lost);
Troubled heart (I had *no* hearts).
Dearest (never trump second in hand).
Fare-thee-well (fifteen and sixpence).

Here song and whist both conclude.

LOSS OF LIFE BY CARELESSNESS IN THE USE OF DRUGS AND MEDICINES.

A return has recently been printed, by order of the House of Commons, of all inquests held by the coroners of England and Wales, during the years 1837 and 1838, in cases where death was found by verdict of the jury to be caused by poison. The return is not so complete as could be wished, but it shows that the number of deaths by poison in 1837 and 1838, was 543, namely, 261 females, and 282 males. The number poisoned by opium, or its preparations, was 186. We are anxious, however, to direct attention to the lamentable fact that nearly one-seventh (72) of the cases of death by poison resulted from the carelessness of mothers and nurses, ignorant of the powerful effects of substances which are only used by medical men in slight doses, and with the utmost caution. The return shows that the deaths of very young children (most of them at the breast) from opium or its preparations, were 52; and from opium or laudanum administered in mistake for other medicine, 20. Narcotic and anodyne drugs are scarcely ever administered to infants by experienced surgeons without accurately calculating the power of the patient, and mothers and nurses ought never to administer medicine of this description excepting under their direction. Mr Browne, the coroner for Nottingham, states that "——'s cordial is given to children to a great extent, and that he has no doubt whatever that many infants are yearly destroyed in that borough, but who, dying off gradually, never come under his notice officially." In recording one of the cases on which he held an inquest, in which death had been caused by an over dose of laudanum, Mr Browne says, "There appeared very great negligence on the part of the person who sold the laudanum. He had not been brought up as a druggist, but had lately taken to the business, and employed two young girls to attend his shop, and sell drugs in his absence. I ascertained personally at the shop, that one of them sold twice as much for a penny as the other." Mr Frampton, the coroner for Dorsetshire, suggests that those who sell poisons should be compelled to register the day and hour of sale, and the name of the purchaser.

The total deaths by arsenic were 184; opium, 42; laudanum, 133; prussic acid, 27; vitriol, 32; corrosive sublimate, 12; oxalic acid, 19; poisons not specified, 14.—*From the Working Man's Almanack and Companion*, 1840.

DIVORCES IN AMERICA.

In the United States, divorces are obtained without expense, and without it being necessary to commit crime, as in England. The party pleads *in forma pauperis* to the State Legislature, and a divorce is granted upon any grounds which may be considered as just and reasonable. Miss Martineau mentions a divorce having been granted to a wife upon the plea of her husband being a gambler; and I was myself told of an instance in which a divorce was granted upon the plea of the husband being such an "*awful swearer*;" and really, if any one heard the swearing in some parts of the western country, he would not be surprised at a religious woman requesting to be separated. I was once on board of a steam-boat on the Mississippi, when a man let off such a volley of execrations, that it was quite painful to hear him. An American who stood by me, as soon as the man had finished, observed, "Well, I'm glad that fellow has nothing to do with the engines; I reckon he'd burst the *biler*."—*Marryat's Diary.*

We observe that the editor of the New York Mirror continues to extract articles from our Journal, not only without acknowledgment, but in a manner calculated to make them appear as the original composition of American writers. For example, a story called the "Coal Carrier," which was written by a lady in Edinburgh for our Journal, has been copied into No. 52, volume 16, of the Mirror, with the name "W. Harrison" appended to it as writer. Such artifices are unworthy of a respectable print.

ST PAUL.

GOING TO LAW!

PART THE SECOND.—Showing what John Leahy, commonly called "Johnny the Giant," got by going to law.

AFFECTED by the representations of Alice, Mr Russel visited Attorney Botherum, with the design of interesting him in the case, and recommending Leahy to abandon his proposed legal contest with Abel Carr.

"Rely upon me, I'll do my best," said Botherum, towards the close of a long conversation on the subject, "but you'll see what the result will be; he has been edged on hitherto by those reptiles of the court-house who live by *putrid law;* who don't care how poor the man, so they get the spoil; who are the means one way or other of driving hundreds to the road, or out of the country; who set men fighting about *trancens*; they are nothing, one would think, in the scale of society, but they are *filthy pebbles in the wheel of justice*, that impede its course. He comes full of the *rights* of his case; I *convince* him that he is wrong, and yet he wont believe me; he immediately thinks I have a *motive* in not agreeing with him; he hears that Abel Carr has been with me; I advise him *not* to go to law; he commences his address with, 'knowing how yer honour loves justice;' and he concludes the interview, thinking I am either a knave or a fool! My dear sir, *agree* with a man, he thinks you a miracle of wisdom; *differ* from him, and he turns away with the opinion that you are astonishingly overrated;" and the shrewd attorney pulled down his wig with considerable vehemence.

"You will do your best to put him off this matter," said Mr Russel, rising, "for we are deeply interested about him and his; and as (if the differences are arranged) you will be a loser, I can only say I shall be happy to make it up by placing any little matters I may have in your hands at the next assizes." The attorney bowed low.

"Sir," he answered, "when such men as you go to law, the result is easily anticipated; there is much beautiful practice in a gentleman's lawsuit."

"Leading pretty much to the same result, I fancy," observed the county magistrate, who had smarted more than once; "my poor friend Leahy is likely to be sacrificed by a pitchfork; I should be dispatched by a well-tempered Toledo; there is not much difference in the end. But use your best exertions, however, to get this madness out of Leahy's head, and, believe me, it shall not be forgotten."

"Rely on my doing my best. I will treat him *delicately*," answered the attorney; "not let him see what I intend at first—rush with him *into* it at first, and, if possible, rush with him *out of it* at the last—though I am not sanguine. Carr let drop a hint that he was like all law lovers, in difficulties already."

"Those I can manage for him," said his landlord, "if he does not plunge deeper."

"What sort of a wife has he?" inquired the attorney.

"One of the best and most superior women I ever knew for her station."

"Fond of law?" "No."

"Is *he* fond of her?" "Very!"

"That makes my hope less," said Botherum. "If a good and superior woman can't manage a husband who *loves* her, there is little hope, I fear, for me."

The attorney was right.

More than two years had elapsed since the conversation I have now related took place. Mr Russel had spent the last six months on the continent, and Mr Botherum continued his ordinary course, sidling from his office to the court-house of the good city of Limerick, and from the court-house back again, just as usual; popping his little head up and down as he went along, and saluting his familiars with a "How do do, Jack?" "Good-morrow, Tom," "How are ye, Bill?" "God save ye, Harry," "Mend ye, Ned," and so on; while to his superior clients he moved his hat, or kissed gallantly the tips of his three little fat fingers. The world prospered with him, and he with the world. How far he was able to influence the conduct of Mr Russel's law-loving tenant will be immediately seen.

John Leahy was a wrong-headed man, a man who drove forward without reflecting on consequences; but he was both honest and kind. I hope those who read this story will remember that his great fault was obstinacy; that he would not in reality wrong his neighbour; and that, when he exclaimed before Mr Russel, upon being asked what he would swear to, "Any thing at all, for satisfaction," he neither meant to perjure himself nor to injure even Abel Carr. He used strong language, it is true, but only what Irishmen use when over-excited; he meant he would have law—*and he had it.*

Much bustle and confusion were evident in the immediate vicinity of a well-built farm-house, that—well built and substantial though it was—seemed to have known better days; the windows were broken; the thatch evinced no marks of care; it was brown and uneven; the corn-stands in the rick-yard had no piles of the golden grain upon their exposed crossings. Such a farm should have been able to muster five or six fine cows. There was but one, a miserable rough-coated thing, though of the Ayrshire breed. There were two or three pigs standing or grubbing about, but they were thin, neither fit for living nor dying; the only vigilant-looking animal at liberty about the door was a stern stiff dog, evidently aged, but not less inclined to live and die in the service of his puppyhood, for he shadowed the footsteps of a slight pallid little girl, who would have been called very beautiful if her cheek had been graced by the hue of health. Regardless of the people who passed backwards and forwards, she rambled first into the garden, which, like the rest of the farm, betrayed tokens of great neglect. She pulled a rosebud from one tree, a degenerate pink from a clump that trailed the ground, a sprig of thyme, and a few other simple flowers that might have been called "wild;" and, stopping before some empty bee-stands, tears gathered within the transparent lids of her large grey eyes, and then rolled down her cheeks. The poor dog looked meekly and affectionately in the pale child's face; he did not wag his tail, for his features, if I may venture to call them, expressed a perfect understanding of and sympathy with her sorrows; and at last he seated himself by her side, and placed his rough paw gently on the little arms that were crossed one over the other beneath her throbbing bosom.

"Let me alone, Bran, good fellow; let me alone; let poor little Ally alone. Why should you care for her? Sure she's going away from ye, poor Bran!"

The animal, as if comprehending her words, stood erect on his hind-legs, and commenced licking her cheek. "It's no use," she continued, flinging her arms round his neck; "it's no use, Bran—the farm is gone, and the house is gone, and poor ould Granny is in her grave, and we're going away from Ireland for ever; but I can't part ye, Bran, oh, I can't part ye, ye poor dumb baste, that minded me many a day, and looked afther me, and played with me! Ye'll come with me, Bran—won't you? You wont let me go without you, ye ould darlint of a dog! Maybe," she added, with that quick transition of feeling which is one of the many blessings of childhood, "maybe we'd be happy yet, and find as green fields as these, where, as mother says, *'there'll be no law* to tempt father to ruin again.' Oh, Bran, oh, can ye tell yer poor Ally what ruin is? It seems something that's all over us, and about us. Wag yer tail, Bran, honey, *and don't look in my face with yer breaking heart.* Oh, doggy, doggy, sure it's something any way to have the father and the mother and poor Bran left to little Ally Leahy!"

The girl returned the caresses of the poor dog with interest, but nothing could animate him, or oblige him to express any thing like joy; he hung his head, though his eyes were restless and vigilant; he did not like the bustle and the strangers; his tail, which it was his habit to keep in a perpetual yet quiet motion, was slouched between his legs, as he followed the footsteps of his young mistress, who looked back at him every moment, repeating over and over again the same wail. "Bran, a-cushla, we shall never see that ould tree again." "Bran, a-cushla, we are done with the race across the meadow." "Bran, a-cushla, no more blackberries 'll grow for us on the fairy wreath." "Bran, a-cushla, bid every thing good bye, for if ye come with us, you'll never see *any* of them more!" and so the little simple affectionate child wandered on and on, and over the fields and about the garden, taking leave of every bush and "bohreen," and talking to her silent friend, who sympathised in her afflictions.

Within, there was sorrow more loud; for the fact was, that utter ruin had overtaken one it had long pursued—the law-loving John Leahy. There was nothing peculiar in his case; it is on a par with thousands that have occurred, with the same result. It was to be anticipated that he would scorn the advice of Mr Botherum, however skilfully it might have been bestowed. When his poor wife met him at "the turn of the road," where she was in the habit of watching for him, she hoped a far different termination to his visit; but when he dismounted, and after having thrown the bridle over his arm, declared "he really thought the half of the counthry war mad, to go dancing afther that 'Turney Botherum, that hadn't by a cart-load as much law in him as Mr Garrett, the long 'turney of Mullinabeg," Alice Leahy thought she would have fallen to the earth; her hopes were extinguished; she foresaw the ruin that soon made rapid strides towards their home. Leahy was, as they call it, "cast" in three successive actions with Abel Carr. One misfortune led to another. Nothing could exceed the energy and activity of Alice Leahy as long as her strength remained; but broken spirits induced broken health; every thing about her changed, except her temper, which was greatly tried during her husband's absence; his mother was as eager as her son for "law," for having, as she expressed it, "her rights," and was perpetually upbraiding Alice with "want of spirit." Poor Alice bore it all, and every one wondered how she could. Leahy seemed like a man in a perpetual fever; the bright moonlight and the long heavy starless nights found him alike wakeful; and whenever Alice, with gentle firmness, would endeavour to draw his attention to his domestic wants—to the necessity that must always exist for a perpetual and regular outlay, if a farm is expected to yield its fruits in due season, he would throw far from him every industrious thought, and angrily revert to the necessity for money to carry on "the law," which, *he said*, would preserve his property, and get him justice. At last, bit by bit of the land

"His forefathers tilled"

was parted with to feed the harpies who fatten on the

misery of human kind, until, at the last, the agent considered it to be *his* duty to save what remained for the benefit of the absent landlord. Had Mr Russel been in Ireland at the time, he would doubtless have softened this last trial; but he was in England or France, or somewhere far away, and requiring all the rents, which had now been long unpaid.

When heavy distress comes upon a man, unless his mind be very highly strung, he will yield to the dangerous and evil advice which, in better times, and with happier feelings, he would have spurned. John Leahy was not strong-minded, and his poor wife's most bitter trial was to see him gradually drawn into the vortex of the discontented. Of such, who so abound in the neighbourhood of Limerick, he was acquainted with many; and Alice's observations led to the belief, that, unless he emigrated, he would become a worn-out and morally ruined man—that his life would be the last sacrifice to "the law." This idea haunted her by day and night; and whenever the remnants of their prosperity were seized, Alice Leahy resolved that the emigration often hinted at, often debated, should take place. The arrival of what she knew *must come*, and that soon, was communicated by the entrance of two of "the neighbours," while she was dressing her child. "The agent's caretaker," they said, "and two or three more with him, were coming; John Leahy must guess for what, but they would stand by their 'ould comrade' to the last; they'd never see him wronged; there were many more of the same miad, to whom he had only to lift up his finger."

John Leahy turned pale as death at this information, but took down and prepared to load an old gun, which, rusty though it seemed, was quite able to do mischief. One of the men ran to secure the pigs in their sty, and the other showed *he* had not come unarmed.

Little Alice screamed, and clung to her trembling mother. For an instant that mother's brow, cheek, throat, were suffused with crimson; she then became white and rigid like a corpse; and her husband, forgetting all but the love of his youth, caught her to his bosom.

"Let 'em do what they like!" he exclaimed, dashing down the gun; "let them do what they like, *now she is dead.*"

"No—no—no—only wait till the breath comes back," murmured Alice; "wait;" and, gulping down some water, she summoned her mental strength, which was great, to aid the little that remained of bodily power. "John Leahy," she said, grasping her husband's arm, and looking in his eyes with the pure and earnest intensity of wedded love; "John Leahy, across that door, now twelve years ago, I came a young bride, a young loving bride, resting my whole heart, and, maybe, too much of the safety of my soul, on you. I have borne you five childre, of which this was the first, and God willed should be the last; the rest are in heaven! Don't look so, John Leahy; have a mite more patience, till my heart beats easier, and I'll go on."

Several of the neighbours now crowded in at the door, although the "distrainers for rent" were not, nor could not be, in sight for nearly half an hour; but the news had spread, and the people are ever ready at a rescue. Several of the young men had stout sticks, and the women, whose most acceptable service in the sight of heaven is that of being peace-makers on earth, had their aprons full of stones. Seeing Alice half kneeling at her husband's feet, while he endeavoured to raise her again to his bosom, they withdrew, and remained outside ready for action. "And now, John," she said, "let me ask you how often I have been wanting in love or duty to you during them years?"

"Never!" he exclaimed, passionately; "never onst, if this hour, as it may be, is my last—never, never onst."

"The past is past; ye can't think but that this place, these walls, that little bed where I watched the dying, as I had done the living hours of our babbys, are all in my heart; but, John Leahy, the memory of *that*, and every thing else, is all we'll have left of it to take to a foreign land, and"——

"Stop, Alice, stay; inside these walls I was born; inside these walls I will die; and let him who dares to put me out, take what he'll get."

"Hurra!" exclaimed the man (James Thurles by name) who had brought the news; "I knew Johnny the Giant had blood in him yet, for all that the law drew out; I knew *that*. Shout, boys and girls, shout! we'll not have a straw of his thatch touched."

The Giant's eyes glittered, and he seized the gun again, but his wife grasped his arm. "Hear me, for the last time, John," she exclaimed; "hear me. Suppose you war left by the landlord in this house, with so little land, with no money, with not so much as the price for seed potatoes, every thing going to rack and ruin, what would you have? what good would it do you? You've neither means nor money to keep us from starving; all we had is gone—gone—in the law! and you would end all by breaking the law, and trying to keep *what isn't your own.*"

"What do you mane by that?" exclaimed John, fiercely; "*not my own!* these walls not my own!"

"Not now when you can't pay for them," she answered calmly.

"Blessed father!" he said, "and is it *you* that send the reproach to my heart!—is it *you* that but just this minute tould me what you war, to show you'd be so no longer!—is it come to this wid ye? But that 'll only make me worse. What have I new to care for!"

"Yer character, John. The worst any could say of ye was, that you war too fond of law!—but if ye keep yer landlord from his own share, who then can say John Leahy's an honest man? The land is his; we cannot pay for it; he never was hard upon us when we tried to pay; but, in spite of his advice, look what you did yourself. Look, John: I have a friend who will give us enough to take us away from the ould place in dacency—enough to take us to another land. No one can say then, this was a rogue's house. In another land we can live and work. What matters our poverty there?—no one will be to the fore to remember our riches. John, *agra!* the landlord bore with us long; he saw the farm going to destruction, and he wasn't like many another, wishful to turn out ould residenthers for new. John, *acourseen!* remember, in this bitther time of trial, remember that the landlord stuck to us longer than we stuck to him."

"*Me*, you mane me!" interrupted the Giant, sullkily.

"Then let it stand so," she said, "and still you know it's the truth. John, rouse up the pride of an honest heart! We may hould out for two or three months, but in the end *we must quit.* We saw *that* before you owned to it the other night. Do not let blood be spilt when you can hinder it. This isn't like a hard landlord," she repeated, gaining strength from justice. "I tell ye, John, I've turned every thing over in my own mind; it can't be helped; give up at onst, bravely. It is brave to resign like a man."

"I can't part the counthry, Alice; it's no use talking; I can't part the counthry," he said, looking round and speaking through his clenched teeth. "I did what you wanted three days ago. I made every inquiry as you wished, but I can't part the counthry—the fields, *the sod* I was born on, or the people!"

"And why should you?" exclaimed James; "aint we all ready to stand by ye to the last? Sorra a windfall of the law shall set foot in it while we stand here." Alice took no notice of these words, but looking at her husband tenderly, and pressing his hand between hers, she replied, "And do you think that *I* do not love the counthry? wouldn't I lay my life down for it? I don't want to lave it because we're prospering in it, but because we should burthen it, like too many others. I love it as much as you, and if you *will* stay, let it be still in peace and honesty. Make no resistance."

"Stay!" he said; "what! stay to see this very house, maybe, the property of Abel Carr! I'd—I'd"——

"Let us go, then; I have more to lave behind than you," said his wife.

"The bones of all belonging to me are in the ould churchyard," he answered, much softened; "but where will mine rest?"

"With mine," was the reply. "But, John, I lave my brothers, my sister, my ould mother, and she I never can see afther we go. They will hear her last prayer, receive her last blessing; and though you know how I love her, I am content to be far away from her at the last moment, *to be with you. My* country is where you are, John. My"——

"We can see them crossing the near hill," interrupted James; "don't be tramped in the briars, John Leahy; we'll all stand by ye."

The Giant's powerful frame quivered like that of a girl in an ague fit. Strong as he was, he trembled, not from fear, but emotion.

"But for the landlord's claim, it would go to such as Abel Carr," whispered Alice, wisely.

"You are right, Alice," replied her husband; "I own it; and now all's gone, I take yer advice. Hide me somewhere," said the heart-broken man; "somewhere that I can't see or hear 'em; let 'em have possession; and then, when all's gone! Oh, Alice, Alice!" he added, as, staggering into the bedroom, he fell on his face upon the bed. "Oh, Alice, to think it should come to this!—I, onst so proud, so independent, so high in myself! Thank the neighbours. But, my God! I cannot let it go—I must"——

"Ally, come here," said Mrs Leahy to her child; "Ally, come here, and keep with yer father; tell him you will live or die with him, beg with him; put yer arms round him, Ally; say the prayer I taught ye; I've strength for it all, John, darlint. May the Almighty bless you!—your peaceableness has given me strength; I'm able for it all, if you'll keep quiet. My husband will be an example to the whole counthry; all will see what he is now; they thought him a disturber of the law; they will find their mistake." She closed the door, paused a moment, and then, as if afraid of a sudden outbreak, turned the key upon it, and removed the gun. "Kind neighbours, and dear friends," she said, advancing to the open door, "my husband and I are for ever obliged to ye for yer kindness; we shall soon be far away from ye, but we shall never forget ye; we know that the agent is acting for the best, in doing his duty for his employer. Boys and girls, just is just, and it's fitter he should have it, than such as ye all know who. We thank ye kindly, but entreat that a finger may not be raised in defiance of these that are coming. We take ye to witness, kind friends, that we offer no opposition; we have no one to blame but ourselves—not even the law my husband thought long ago to get the betther of; for its nature is to take advantage where it can, and we can't expect any thing to go against nature. Thank ye kindly, Mrs Doolan, but let the stones go; a woman's best arms are a prayer and a blessing, and you'll all give us those before we lave ye." There was something so different from any thing the kind-hearted but wrong-headed people expected in all this, something so brave in a weak delicate-looking woman stifling her feelings, and resolving to give up every thing, because it was just to do so, particularly when (according to the opinions of their defenders) they might have repelled the invaders, and fought it out—there was something so unusual in the dignified bearing of the still beautiful Alice, that even Mrs Doolan let the stones she had gathered slide out of her apron on one side, as if ashamed of her intention, while the men still persisted in their entreaties to let them have one fight for her any way before she'd quit them for good and all. They also (as the distrainers were now at the gate) called loudly to John Leahy to come out, but the heartbroken man heard them not, overcome as much by the reason and eloquence of his wife, as by the pent-up but most powerful feelings of his nature.

Ashamed—ruined—the innocent caresses of his child wrought his heart to agony; and pressing the little creature to his bosom, he gave way to those desperate sobs which storm the frame of a strong man, but seldom, perhaps never, more than once in a whole lifetime. John Leahy, stimulated by bad advisers, had refused on more than one occasion to yield possession to the agent, with whom, indeed, he had never been on good terms. If Mr Russel had been in Ireland, though he could not prevail on him to abandon law, he would have preserved his influence over him, and *that* would have prevented much that was painful. As the men advanced, they perfectly understood they were engaged in a service of danger, and were greatly astonished when Mrs Leahy advanced to the gate, and said they might enter. The peasantry could hardly be prevailed on to depart; they clamoured to see the poor farmer, but his wife's presence of mind, and the power which conscious integrity invariably gives to those who otherwise would be powerless, carried her through as trying a scene as it ever fell to the lot of woman to endure. She told them he would thank them to-morrow; the women clung to and embraced her, saying she was fitter for heaven than earth; the men, while they cursed their disappointment, and insulted the distrainers as much as their kindly dread of hurting Alice's feelings permitted, declared she was an angel, and called down blessings on her head; and the necessary officer of the law, a strong but well "battered" specimen of human nature, who had received and returned many a sound drubbing, removed his hat, and waited to think over what was the mildest way of performing his duty. When she had seen the last of their faction depart, when the strong necessity for exertion was over, her woman's heart fainted as it had done before; and one of the men, not so accustomed to scenes of misery as the others, departed without intimating his intention to his companions, to tell the agent how peaceably they had obtained possession, and of the extraordinary conduct of Alice. "It was the finest example set to the counthry," he said, "for years, and surely his honour would be as mild as he could, considering."

Alice found her husband in a state of stupor, and sent her child into the open air, where, poor little maid! she had held such long converse with her dog. Never did distrainers perform their duty with such tardy steps; and the agent, with the trust which Alice Leahy's noble conduct merited, sent word to those he employed, that if they pleased they might remain there for a few days. Leahy went through the form of giving up his house, with a stolid frame, and an eye moveless, and almost rayless. His wife saw, and trembled, for she knew that with a violent temper this appearance was far more dangerous than rage. He then quitted his dwelling, and sat down beneath the shadow of an old tree that grew on the opposite side of the road, and which many a time he had climbed in his childhood. He steadily refused to accept the agent's offer. It was a frightful proof of the growth of evil, for his obstinacy seemed to have returned four fold. He sat down on a wide flat stone, and insisted upon Alice sitting at one side, and his child at the other; he would suffer none other to approach him, and spurned the poor dog even, that crouched to his feet—spurned it away more than once; but the animal still returned, and

at last softened his sternness by licking away the tears that dropped from his child's eyes on his own hand.

The evening drew towards its close, and the warm kind-hearted people, who have no ungenerous faults, crowded round John and his wife. They brought them share of their provisions—invited them to enter their dwellings—endeavoured to reason with John, who remained fixed as if by a spell, his eyes red from the intensity of the gaze which he fixed upon his cottage. Finding that he was immoveable, they endeavoured to persuade Alice to leave him, and take some repose; but she was too true-hearted for that; and when the child was induced to quit his side, he felt about as a blind man in search of his staff, until Alice deemed it right to recall her. The neighbours hung a blanket over their heads to save them from the night-dew; and at last his head fell on his wife's bosom, and he slept.

Little Alice had been long asleep, but the wife and mother could obtain no repose. She recalled the days of their early love—the days of their prosperity—the entreaties she had used to avert the consequences of litigation—the hardness and perverseness of her husband, who would go through any thing "for satisfaction." The crisis had arrived, a crisis rendered still more painful by the obstinacy of him who at that time was as an oak resting on a reed for support. Although her brothers had promised her the means necessary for emigration, yet the future was as dark as the night-clouds that lowered above their heads. The moon broke through the obscurity, and its beams fell upon her husband's face; she could see huge drops of moisture, the heat-drops of the fevered brain, standing on his brow; he had been the cause of her affliction, the cause of their mutual ruin. She knew it well; and yet in the first beatings of maiden love, in the deep earnestness of matronly duty and devotion, not even when she took her first born from her bosom to place it in its father's arms, not even *then* did she love him so devotedly as at that moment. This knowledge made her draw her husband more closely to her heart, and bless God that had still left her her two treasures. She closed her eyes in thankfulness and prayer, and might have slumbered; but a low sullen growl from Bran arrested her attention. She looked down at the dog, and saw his eyes were turned in the direction of a little dell on the right-hand side; she looked along the line, and discovered at first a palish light, succeeded by a red glare; then spiral tongues of fire ran into the air, and a wild haloo came on the breeze; then the fire brightened, then quenched; then the dull heavy smoke showed like a funeral pall above the light below. She felt her heart sink within her; she could not be mistaken as to the direction of the fire; and she suddenly remembered the words, uttered by one of her neighbours when he saw her resolve to have no disturbance at the farm, "that they'd have revenge somehow." She traced the direction of the flames, and well knew that the fire was the burning of Abel Carr's house. Ripe for mischief, and not content to leave all to the wisdom of HIM who returns the poisoned chalice to the poisoner, some desperate spirits had resolved to "punish" Abel Carr; and their "punishing" would indeed have added to the annals of crime and violence which disgrace the country, but for the interference of the horse-police; they arrived hardly in time to save the life of the wicked man, who had so continually provoked the evil spirit of litigation which dwelt in the Giant's bosom.

The agitation of Alice was extreme, yet she did not dare to awake her husband. The glare of light was fading, when a voice from behind the tree I have mentioned whispered, "We've hot the right nail on the head now, Mrs Leahy, any way." But the words were hardly spoken when a couple of the horse-patrol were heard galloping along the road; they drew up opposite to where the little party sheltered. The close of that sad day saw Alice Leahy arrested with her husband on suspicion of having originated the fire.

They might have charged John Leahy with any crime they pleased; for before the following morning had thoroughly dispelled the shades of night, the unhappy man was enduring the phrensy of a brain fever. Nothing could exceed the interest created throughout the country by this event. Mr Botherum himself stept out of his usual practice on the occasion, and declared "that so convinced was he of the incapability of Alice Leahy's concealing, much less perpetrating such a crime—so convinced was he that though John Leahy might have committed a breach of the law in defending his own house, nothing could have induced him to do the cowardly deed of an incendiary, that he would, if it came to a trial, undertake their defence without professional fee or reward. Irish interest once excited is not satisfied with lip service; the neighbourhood was in a state of fermentation during the few hours the Leahys were incarcerated; the peasantry gloried in the bare idea of effecting a rescue, but it was not needed. There was no evidence against them; the state of the poor fevered man spoke for itself; and when Alice and her unconscious husband were discharged, she, while supporting his head on the car sent to convey them to "a neighbour's house," observed, in the thankful spirit of a true Christian, "that no evil but had good in it. Sure it was a blessing he wasn't right in himself to feel the disgrace such a suspicion would bring on him." Her excellent spirit was not weary of well-doing; she nursed him through that fearful malady with untiring fortitude; she refused to accept the agent's offer, and return, till he was recovered, to their old home. "It would be only breaking her heart entirely," she said, "to go back to and then leave it, which she must do, for they had no means to keep it on;" and though she did not say so, she knew that Mr Russel himself could not afford, even if he had the inclination, to let them have such a house rent free; besides, she remembered, that, owing to her husband's love for law, persisting so obstinately in his course against his landlord's well founded opinion, he had completely worn out his patience, and that he must feel as if a firebrand were quenched when "Johnny the Giant" left the country. Nor would she accept shelter in any of the cottages of her neighbours. The Irish peasantry have suffered so desperately from fever, that they stand in great awe of infection, though it seldom makes them forget the rites of hospitality. Many offered their humble homes, and desired to give "the place" up to her altogether. "Sure the weather, God be praised! was beautiful, barring the drop of rain that never harmed Ireland; and it would do them good to know that the poor man had all they had to give."

Alice Leahy made her husband's bed in a farmer's barn, and watched him there until it pleased God he was able to lift up his heart in thankfulness for his recovery. Tears—calm, gentle, refreshing tears—trickled down his pallid cheeks when he recognised the loving face of his wife bending over his pallet, and though he had not strength to speak, she saw that he knew her—knew his child—knew even poor Bran, who looked with his sad earnest eyes into his master's countenance. She had disposed of the articles of furniture, which Mr Russel, informed of the facts, had ordered to be returned to her, so as to meet his observation on his recovering his consciousness; and he closed his eyes in refreshing slumbers, without apparently reverting to their changed circumstances. Abel Carr, though he knew his unfortunate opponent had nothing more to lose, would have caused him to be arrested for the last law expenses, if he had dared; but there are few instances on record where the hearts of both rich and poor so completely united in admiration of the enduring virtue of a simple unpretending woman, as in the case of Alice Leahy. The poor revelled in the idea that Abel was not only beggared in reputation, but in pocket; and those who wished well to their country took every opportunity of pointing out to those who were fond of going to law, the curious fact of two men, the vanquished and the vanquisher, on the verge of starvation. But for his wife's admirable conduct, Leahy, with many fine natural qualities, would in all human probability have suffered the penalty which awaits crime; and Abel Carr's success, independently of the losses he too had suffered by paying "costs," was sacrificed by the fury of those who, whatever their motive might have been, had no right to judge and execute judgment.

It was a fine summer evening, and John Leahy's health was comparatively restored; the next day he was to leave for ever the land of his fathers. Alice and their child accompanied him midway up a mountain which commanded a view so extensive, that the farm which had once been his seemed but as a patch of very small extent; he shaded his eyes with his hand so as to intercept the rays of the setting sun, and enable him to take a farewell look of all he had known so long and loved so well. Neither husband nor wife spoke, but they both wept bitterly. The sun set gloriously; they waited until he had sunk in the not far distant ocean that was to bear them to another land; and then, while the whistle of the plover and the low of the kine were yet upon the air, they descended together, little Alice and Bran lingering behind—Alice to gather wild-flowers, and seek for a four-leaved shamrogue that was to bring her luck in "furrin parts," and Bran to sniff at every rabbit-hole that was not concealed beneath the prickly furze.

"Alice," said John to his wife, when they were turning into the *bohreen* leading to their place of rest for the night; "Alice, if it had not been for the generosity of your brothers and your friends, I should not have had wherewith to begin life again in another land—and I find you war right; I could not have borne with it here."

"The Lord above is very good!" she answered, though sobbing bitterly.

"Look!" he exclaimed, "if I hear you cry that way, it will break my heart. I know it is my fault—my crime—my ——! If you cannot go without tears and sobs like these, we will remain, although I work as a day-labourer."

"They will be the last," she said, meekly. "I have bid my mother farewell; and she, John, *she* said I did right; she said she was proud of me; and sure *that* is a proud hearing for a child from a parent's lips. You shall not have to reproach *me* with the weakness again."

"*Me* reproach *you* with weakness," he replied; "no, Alice. Even this morning when you war putting in the box the bits o' things that we had for years, and that the goodness of Mr Russel left us, your eyes war dry, and even cheerful, and I wondered at yer strength. I couldn't put up my tools myself. And now, Alice, setting a case that you war not strong-hearted, where would I be?"

"We shall be happy together wherever we are," she said.

"Plaze God," replied her husband. "But, Ally, betwixt ourselves, if I was beginning life again, I'd go to law altogether in a different way to what I ever did before."

"Oh, John!" exclaimed his wife, pained but not surprised at his mind still being clogged by the old leaven, and too thoroughly acquainted with the windings of the human heart to expect the habit of a life to be overcome. "Oh, John, sure you've taken your Bible oath to me, to bear even death before you'd go to law!"

"Ay," he replied, "and for your sake so I would, and you're right, Alice, darlint. Warm blessing of my heart! you are right; and to-morrow, plaze God, the neighbours who will set us on our way, when they see a man onst so prosperous obligated to quit his native counthry, reduced so that but for charity"——

"Hardly charity, John," said his delicate-minded wife. "*Not* charity, sure; the generosity of our own *people** maybe is *bounty*, but not *charity*, John; though, even if it was," she added in a more subdued tone, "betther than us have wanted it and had it, and but for it my heart would never warm to Ireland as I know it will to the last hour of my days. The Lord of heaven, who knows the beating of my heart, and the prayers of my soul, look down upon it!—bless it with peace!—increase its power!—turn its enemies into friends!—make it wise as it is fruitful, and prudent as it is brave! Oh, *lanna machree*, ould Ireland! what keeps yer green hills down and yer people poor? Isn't it the mistakes of the law? But, as I was saying, John, my heart would never warm to Ireland as it now does, if I thought they'd hould their hand back from a fellow-creature in want. And so, John, darlint, call it *charity* if you like; I wont fault the word a second time."

"I'll tell them," resumed John Leahy, "when they see a prosperous man reduced to begging, and forced into exile, I'll tell them *that's what he got by going to law!*"

* Irish relations.

LOITERINGS OF TRAVEL,

BY N. P. WILLIS.*

THE "Pencillings by the Way," published by Mr N. P. Willis, a few years ago, originally, we believe, in the New York Mirror, and afterwards in a handsome London-made book of three volumes, was one of those productions which many rail at, but all read. The accounts which the author gave of his residence in private houses, and his conversations with eminent persons, were exclaimed against, and justly so as we think, as constituting a very grave breach of propriety; but, nevertheless, the liveliness of the author's style, the truth and force of his descriptions, and the interest generally felt in the persons whose conversations he reported, made his book one of the most amusing which have been published for many years. Mr Willis has again more recently crossed the Atlantic, and resided for some time amongst us; and as his pen is an active one, we have the result which was to have been expected in a production, of which the title has been described above. Were we disposed to dwell upon the analogies between time and space, we should compare the ocean that divides England from America to the centuries that separate generations. An American's account of the mother country appears like the judgment of posterity, and an Englishman's description of the United States seems like glimpses at our great-grandchildren. In both cases "distance lends enchantment to the view," and curiosity checks the spirit of criticism. The Pencillings by the Way, in spite of all drawbacks, were useful in letting us "see ourselves as others see us;" and the Loiterings of Travel are chiefly valuable for setting before us objects so familiar, that they escape our own observation. How true is the picture of that great London thoroughfare, the Strand:—

"You would think London Strand the main artery of the world. I suppose there is no thoroughfare on the face of the earth where the stream of human life runs with a tide so overwhelming. In any other street in the world you catch the eye of the passer-by. In the Strand, no man sees another, except as a solid body, whose contact is to be avoided. You are safe nowhere on the pavement, without the vigilance of your senses. Omnibuses and cabs, drays, carriages, wheelbarrows and porters, beset the street. Newspaper-hawkers, pickpockets, shop-boys, coal-heavers, and a perpetual and selfish crowd, dispute the side-walk. If you venture to look at a print in a shop-window, you arrest the tide of passengers, who immediately walk over you; and if you stop to speak with a friend, who by chance has run his nose against yours, rather than another man's, you impede the way, and are made to understand it by the force of jostling. If you would get into an omnibus, you are quarrelled for by half-a-dozen who catch your eye at once; and after using all your physical strength, and most of your discrimination, you are most probably embarked in the wrong one, and are going at ten miles the hour to Blackwall, when you are bound to Islington."

As a contrast to this most crowded of crowded streets, let us turn to the quietude of Cranbourne Alley.

"I like Cranbourne Alley, because it reminds one of Venice. The half daylight between the high and overhanging roofs, the just audible hum of voices and occupation from the different shops, the shuffling of hasty feet over the smooth flags, and particularly the absence of horses and wheels, make it (in all but the damp air and the softer speech) a fair resemblance to those close passages in the rear of the canals between St Mark's and the Rialto. Then I like studying a pawnbroker's window, and I like ferreting in the old book-stalls that abound here. It is a good lesson in humility to an author to see what he can be bought for in Cranbourne Alley.† Some 'gentle reader' who has paid a guinea and a half for you, has resold you for two-and-sixpence. For three shillings you may have the three volumes 'as good as new,' the shopman showing, by his civility, that he is pleased to be rid of them on these terms. If you would console yourself, however, buy Milton for one-and-sixpence, and credit your vanity with the eighteen-pence of the remainder."

The sight-seers of a bygone age, that is to say, the visitors to London, for the denizens of the metropolis

* London, Longman and Company.

† [This is a mistake; there are neither book-stalls nor pawnbrokers in Cranbourne Alley, though there are several in the neighbourhood.]

Digitized by Google

are in nine cases out of ten unconscious of the wonders by which they are surrounded, always included Bedlam in the list of places which they deemed it necessary to visit. Every reader must recollect the exquisite picture of that abode of misery given by our own Mackenzie in the Man of Feeling. It is curious to compare it with Willis's description of the present inmates.

"On the end of a bench in one of the courts, quite apart from the other patients, sat the youth who came up two hundred miles from the country to marry the queen! You will remember the story of his forcing himself into Buckingham Palace. He was a stout sandy-haired sad-looking young man, of perhaps twenty-four; and with his arms crossed, and his eyes on the ground, he sat like a statue, never moving even an eyelash while we were there. There was a very gentleman-like man working at the water-wheel, or rather walking round with his hand on the bar in a gait that would have suited the most finished exquisite of a drawing-room—Mr Davis, who shot (I think) at Lord Londonderry. Then, in an upper room, we saw the Captain Brown who shook his fist in the queen's face when she went to the city, really a most officer-like and handsome fellow; and, in the next room, poor old Hatfield, who shot at George III., and has been in Bedlam forty years—quite sane! He was a gallant dragoon, and his face is seamed with scars got in battle before his crime. He employs himself with writing poetry on the death of his birds and cats, whom he has outlived in prison—all the society he has had in this long and weary imprisonment. He received us very courteously, and called our attention to his favourite canary, showed us his poetry, and all with a sad, mild, subdued resignation, that quite moved me. In the female wards I saw nothing very striking except one very noble-looking woman, who was standing at her grated window entirely absorbed in reading her Bible. Her face expressed the most heart-rending melancholy I had ever witnessed. She had been for years under the terrible belief that she had committed the 'unpardonable sin,' and though quiet all the day, her agony at night becomes terrible. What a comment on a much practised mode of preaching the mild and forgiving religion of our Saviour!

As I was leaving one of the wards, a young woman of nineteen or twenty came up to me with a very polite curtsey, and said, 'Will you be so kind as to have me released from this dreadful place?' 'I am afraid I cannot,' said I. 'Then,' she replied, laying her hand on my arm with a most appealing earnestness, 'perhaps you will on Monday; you know I've nothing to pack.' The matron here interposed, and led her away, but she kept her eye on us until the door closed. She was confined there for the murder of her child."

These specimens will suffice to show the nature of the facts which the Loiterer has recorded in his Travels; he has however interspersed them with many poetic fictions, which, however beautiful, are less interesting than the realities which English life presents to the observation of an intelligent foreigner. We would gladly exchange the poetry and romance of the three volumes for another such picture as that of the Indian Chiefs at the Washington Theatre, and their subsequent interview with Mr Tyrone Power, a portion of which we shall extract for the amusement of our readers.

"The 'dress circle' of the theatre at Power's benefit not long since, was graced by three Indians, in full costume—the chief of the Foxes, the chief of the Toways, and a celebrated warrior of the latter tribe, called the Sioux-killer. The Fox is an old man of apparently fifty, with a heavy aquiline nose, a treacherous eye sharp as an eagle's, and a person rather small in proportion to his head and features. He was dressed in a bright scarlet blanket, and a crown of feathers, with an eagle's plume, standing erect on the top of his head, all dyed in the same deep hue. His face was painted to match, except his lips, which looked of a most ghastly sallow in contrast with his fiery nose, forehead, and cheeks. His tomahawk lay in the hollow of his arm, decked with feathers of the same brilliant colour with the rest of his drapery. Next him sat the Sioux-killer, in a dingy blanket, with a crown made of a quantity of the feathers of a pea-hen, which fell over his face and concealed his features almost entirely. He is very small, but is famous for his personal feats, having among other things walked one hundred and thirty miles in thirty successive hours, and killed three Sioux (hence his name) in one battle with that nation. He is but twenty-three, but very compact and wiry-looking, and his eye glowed through his veil of hen feathers like a coal of fire. Next to the 'Sioux-killer' sat 'White Cloud,' the chief of the Toways; his face was the least warlike of the three, and expressed a good nature and freedom from guile very remarkable in an Indian. He is about twenty-four, has very large features, and a fine erect person, with broad shoulders and chest. He was painted less than the Fox chief, but of nearly the same colour, and carried in the hollow of his arm a small glittering tomahawk, ornamented with blue feathers. His head was encircled with a sort of turban of silver fringed-cloth, with some metallic pendants for ear-rings, and his blanket, not particularly clean or handsome, was partly open on the breast, and disclosed a calico shirt, which was probably sold to him by a trader in the west. They were all very attentive to the play, but the Fox chief and White Cloud departed from the traditionary dignity of Indians, and laughed a great deal at some of Power's fun. The Sioux-killer sat between them as motionless and grim as a marble knight on a tombstone. The next day I had the pleasure of dining with Mr Power, who lived at the same hotel with the Indian delegation; and while at dinner, he received a message from the Toways, expressing a wish to call on him. We were sitting over our wine when White Cloud and the Sioux-killer came in with their interpreter. There were several gentlemen present, one of them in the naval undress uniform, whose face the Sioux-killer scrutinised very sharply. They smiled in bowing to Power, but made very grave inclinations to the rest of us. The chief took his seat, assuming a very erect and dignified attitude, which he preserved immoveable during the interview; but the Sioux-killer drew up his legs, resting them on the round of his chair, and with his head and body bent forward, seemed to forget himself and give his undivided attention to the study of Power and his friend.

Tumblers of champagne were given them, which they drank with great relish, though the Sioux-killer provoked a little ridicule from White Cloud by coughing as he swallowed it. The interpreter was a half breed, between an Indian and a negro, and a most intelligent fellow. He had been reared in the Toway tribe, but had been among the whites a great deal for the last five years, and had picked up English very fairly. He told us that White Cloud was the son of old White Cloud, who died three years since, and that the young chief had acquired entire command over the tribe by his mildness and dignity. He had paid the debts of the Toways to the traders, very much against the will of the tribe; but he commenced by declaring firmly, that he would be just, and had carried his point. He had come to Washington to receive a great deal of money from the sale of the lands of the tribe, and the distribution of it lay entirely in his own power. Only one old warrior had ventured to rise in council, and object to his measures; but when White Cloud spoke, he had dropped his head on his bosom, and submitted. This information, and that which followed, was given in English, of which neither of the Toways understood a word. Mr Power expressed a surprise that the Sioux-killer should have known him in his citizen's dress. The interpreter translated, and the Indian said in answer, 'The dress is very different; but when I see a man's eye, I know him again.'

He then told Power that he wished in the theatre to raise his war-cry, and help him to fight the three bad-looking men who were his enemies (referring to the three bailiffs in a scene in Paddy Carey)."

RIENZI, THE TRIBUNE.

In one of the meanest districts of the city of Rome, a quarter inhabited only by humble mechanics and Jews, was born, in the early years of the fourteenth century, Nicholas Rienzi Gabrini, commonly called Cola di Rienzi, the last of the tribunes, or popular magistrates, of Rome. He was the son of an innkeeper and a washerwoman; and in those days, when all the avenues to power and distinction were exclusively occupied by the families of the great, it might have been anticipated that young Rienzi would have passed his life in the obscure and lowly sphere which had witnessed his birth. But his parents, either in consequence of some early promise in the boy, or through some accidental cause, were induced to bestow on him, at the cost of great privations to themselves, the rare gift of a liberal education; and nature had endowed him with the talents necessary to turn his opportunities to advantage. The writings of the ancient historians and orators of his country formed the favourite study of his youth, and in her magnificent monumental remains he saw emblems of her past glory that fired his fancy and nursed in his breast the spark of patriotism.

But the Rome of Rienzi's early day was sadly different from the Rome of elder times. It had long lost the political empire of the world; and even the pontifical power, which had in some measure compensated the loss of imperial rule, had been reft from the city, the Popes having transferred their court and government to Avignon. Rome could only boast, at this era, of a delegated head, an apostolic vicar or viceroy, in whose hands was lodged the ostensible dominion of the city. But the nobles were its true governors; the great families of Colonna, Ursini, and a few others, held the whole authority, virtually, in their hands. Grossly they abused their power, subjecting the citizens to the cruellest oppression and tyranny, outraging systematically the honour of their families, and corrupting at will the course of justice. Such was the condition of Rome in the early years of the fourteenth century.

Young Rienzi saw and deeply deplored the evils of his country. A disinterested desire to relieve it from its oppressors sprang up in his breast, and he began in a remarkable manner to pave the way for the accomplishment of that great end. At accidental meetings of the people, whether in large or small bodies, he allowed his voice to be heard, and took every occasion to recall to the remembrance of his hearers the glories of their ancestry. Alluding to them, he would cry, "Where are now those Romans? their virtue, their justice, their power? oh! why was I not born in those happy times?" Being a fluent and energetic speaker, Rienzi speedily became a favourite with the populace, and his addresses to them in the streets grew more and more frequent. Daily he would assemble bands of them around him, and, pointing their attention to the lions, serpents, and other emblematical figures abounding in every part of the city, he would draw comparisons, in an allegorical but not very ambiguous style, between the glorious times which witnessed the erection of these monuments, and the degraded period in which he and his hearers were condemned to live. Growing bolder day by day, he ventured upon open denunciations of the tyranny of the nobles, and inflamed the passions of his audiences by dwelling on the bitter subject of their wrongs. Strange to say, the nobles were blinded enough to be totally insensible to the serious and dangerous tendency of Rienzi's proceedings. Every thing "plebeian" was so utterly despised by them, that many of them actually came in person to listen to his political lectures, looking upon him much in the same light as they did Punchinello, or the common buffoons of the carnival. It is even said that Rienzi, taking a lesson from the elder Brutus, who feigned madness till the hour came for the deliverance of his country, condescended to enter the Colonna palace by invitation, to *amuse* the company with his threats and predictions. The abject state of slavery to which the nobles had reduced the people, could not be more glaringly shown than by such a circumstance as this.

When an embassy was sent from Rome to the papal court of Avignon, Rienzi had acquired influence enough over the people to be appointed one of the thirteen deputies representing the order of the commons. At Avignon, he attracted notice by his bold and ready oratory, and there he also met a congenial spirit in the poet Petrarch. On returning to Rome, Rienzi continued his former practices, but the pressure of poverty for a time chilled his aspiring hopes, and he was absolutely reduced to seek the charity of an hospital. With the appointment of apostolic notary, which yielded him a fair income, his spirit revived, and he recommenced his daring addresses to the people. Still the nobles remained in supine blindness, allowing the orator to ripen the minds of the people for any outbreak. An accident brought on the crisis. Rienzi's brother was assassinated, and the survivor loudly demanded vengeance. But the murderer was protected by the Colonna influence, and Rienzi found his appeals fruitless. From this hour he was resolute in his design of immediately overturning the power of the nobles. It was in the middle of May 1347 that he entered on the first step towards the completion of his object, by assembling on Mount Aventine, at midnight, a body of one hundred citizens favourable to his purpose. "Friends and fellow-citizens," said Rienzi, "the blood of my slaughtered brother cries for vengeance, and would justify a severe retaliation; but it is your wish and mine to procure the inestimable blessings of liberty without involving our country in bloodshed and confusion. The accomplishment of your wishes, the establishment of the *good estate* (the speaker's favourite phrase), is rapidly advancing, if you have only fortitude and forbearance enough to exert the power you possess with spirit, perseverance, and moderation. The strength of our oppressors is imaginary; they are without union, without virtue, without resources." Rienzi ended his harangue by announcing his intention of immediately assembling the people, unarmed, by proclamation, and recommended to his hearers so to demean themselves as "to prove to the world that a few precious drops of Roman blood were still circulating in their veins."

Next day, accordingly, a proclamation was made over the whole city, by sound of trumpet, calling on all the people to assemble before the church of St Angelo on the following evening, to provide for the "restoration of the good estate." The nobles still remained inactive, and seemed totally ignorant of the real character of Rienzi's movements. This supposition is confirmed by the circumstance of the Pope's vicar, the Bishop of Orvieto, consenting to be present at the proposed assembly before the church of St Angelo. During the whole of the night preceding that meeting, Rienzi and his friends were occupied in the celebration of masses, in order to propitiate Heaven in favour of their enterprise. When the appointed hour came, an immense crowd had assembled. Not only the whole space before the church, but the windows and roofs of the adjoining houses, and every place which commanded a view of the spot, were covered with spectators, whose numbers it would be difficult to calculate or tell. After a sufficient time had elapsed to stimulate the curiosity of the people to the highest pitch, the doors of the church were thrown open, and Rienzi, bare-headed, and dressed in complete armour, presented himself to the crowd, having on his right hand the papal vicar, and behind him the principal conspirators. Four silken banners followed next, carried by men attired in purple and gold. On these banners were emblazoned allegorical figures of Justice, Liberty, and Peace. A procession, accompanied by

Digitized by Google

martial music, now commenced, the whole assembled multitude following in the wake. Being gifted by nature with a tall and handsome person, Rienzi played his part nobly and dignifiedly in the pageant, and the admiring populace, ignorant of what was to be done, yet hopeful of good, sent up loud and lengthened shouts of applause. On reaching the Capitol, Rienzi ascended a lofty balcony, from which he addressed the people. Assuming that they were fully masters of the city, he congratulated them on the bloodless victory they had gained. Charmed by his noble appearance and his captivating eloquence, the people raised a shout, exclaiming with one accord, "Rienzi shall be king!"

Meanwhile, the nobles looked on in stupor, yet unconscious whether they were in danger or not. Stephen Colonna brought the matter to a decision. Absent from Rome at the time of this great meeting, he hastened to the city on hearing of it, and when Rienzi sent a messenger to the Colonna palace, its master declared that at his leisure he would cast the mad notary from the windows of the Capitol. On receiving this message, Rienzi rang the great bell, and gave the alarm. A great crowd of citizens rushed to the Colonna palace, and its haughty lord was compelled to fly with precipitation to his country castle of Palaestrina. A general order was issued, commanding all the nobles to follow his example, and they, stunned by the unanimity of this movement, obeyed with haste and in silence.

The author of this remarkable revolution, which freed the Roman citizens at one blow from the presence of all their oppressors, would not assume the title which, in the warmth of their gratitude, the people would have freely accorded to him. He declared that he would not bear an appellation which a Tarquin and a Nero had disgraced. After a time, however, seeing the necessity of having his authority sanctioned in some regular form, he consented to take the title of tribune, which in ancient days indicated a guardian of popular privileges. But the power of Rienzi was really that of a dictator, and it is admitted by all historians, that he at the outset wielded it admirably. He introduced new and excellent laws, reformed the finances, extinguished sanctuaries and such-like privileges, and, in short, established an entirely novel order of things. "A den of robbers (says one historian) was converted to the discipline of a camp or a convent; patient to hear, swift to redress, inexorable to punish, his tribunal was always accessible to the poor and the stranger." Another historian declares that "in this time the woods began to rejoice that they were no longer infested with robbers; the oxen began to plough; the roads and inns were replenished with travellers; trade, plenty, and good faith, were restored in the markets; and a purse of gold might be exposed without danger in the midst of the highway."

Rienzi behaved generously, perhaps not wisely, towards the banished nobles. He soon recalled them to the city, exacting only from them an oath of allegiance to the new government and to the church, which he had judiciously taken pains to identify with his own cause. The haughty nobles felt deeply their humiliation, yet fear constrained them into obedience. A simple Roman citizen of the period, speaking of their condition and feelings, says, "Bareheaded, their hands crossed on their breast, they stood in presence of the tribune with downcast looks; and they trembled, good heavens! how they trembled!" These and other triumphs rendered the head of Rienzi giddy. At no time was he distinguished for cool reason and self-command, and ere he had been elevated a month or two, he grew ridiculous for pride and ostentation. His acts and decrees were headed, "Nicholas, severe and merciful; deliverer of Rome; defender of Italy; friend of mankind, and of liberty, peace, and justice; tribune august!" On public occasions, he clothed himself in a parti-coloured robe of velvet, lined with fur, and embroidered with gold. In his hand he carried a sceptre of shining steel, crowned with a globe and cross of gold. In processions he rode on a pure white horse, the emblem of royalty; the great banner of the republic was held above his head; fifty halberdiers and a troop of horse attended him; his trumpets and tymbals were of massive silver; and at every step of his march handfuls of gold and silver were scattered among the people. His love of pomp, however, was carried to still greater lengths. He caused himself to be created a Knight of the Order of the Holy Ghost, under circumstances of splendour unequalled since the days of the empire. On another occasion he had himself crowned with seven crowns of different metals and leaves, representing the seven gifts of the Holy Spirit. The degree to which his reason was affected by his elevation, may be conceived by his having the folly to summon before him the two rival emperors of Germany, and Pope Clement, "commanding" the latter, at the same time, to "reside in his diocese of Rome." Unsheathing his maiden sword, also, on the occasion of his knighthood, he "thrice brandished it to the three parts of the world, and thrice repeated the extravagant declaration, 'And this, too, is mine!'"

All this from the man who, but a few years before, was known to every one to have had but one garment in the world, and to have begged for bread at the gate of a house of charity, was most vexatious, even to his firmest supporters among the people. To the barons it was intolerable, and, forgetting their private feuds, the houses of Colonna, Ursini, and others, conspired to effect the overthrow of the tribune. He obtained information of the plot, and, inviting the heads of it to a banquet, he seized them all and threw them into prison. But he either wished merely to show them his power, or dared not carry his first stern intent into execution; for, after detaining them for a night in mortal fear, and preparing every thing for their execution, he suddenly changed his tone, and became the supplicant for their lives with the council of the people, pledging himself for their obedience and submission thenceforward. Of course, at his word, the barons were liberated, but they were not the men to pardon the deadly alarm into which they had been thrown. Within a few weeks they fled simultaneously to their country estates, raised their vassals, and marched against Rome. The great bell of the Capitol sounded the alarm, and Rienzi had still influence enough to rouse the citizens to resistance. A battle took place within the walls, and the barons were routed. Seven of the house of Colonna fell on that occasion, and the triumphant tribune, who had shown but little military prowess, was inhuman enough to refuse them the honours of burial. The maidens of the family at length interred the bodies of their kinsmen, and their tears, together with the latent respect of the people for that ancient house, stirred up a more general feeling of bitterness against the tribune.

Rienzi did not long enjoy his success over the nobles. The pope, disgusted, like others, by his arrogance, and irritated by the treatment shown to one of his legates, fulminated a bull of excommunication against him, and soon after Count Pepin de Minorbino introduced himself into Rome with one hundred and fifty soldiers, and took possession of it with the greatest ease. It is true that Rienzi, as usual, tolled the great bell of the Capitol for hours together, but no man rose to aid him, and, without a blow being struck, he fell into the hands of Count Pepin. The tribune showed, it is said, great pusillanimity, and abdicated the government, weeping over the ingratitude of his countrymen. He was thrown into the Castle of St Angelo, and was soon as much forgotten, seemingly, as if his short reign of a few months had never taken place.

Count Pepin restored the authority of the aristocracy and the church, conciliating the people, however, at the same time, by the election of a new civic tribune with a degree of nominal power. Things speedily returned to their former condition. The nobles resumed their cruel tyranny over the people, and robberies and assassinations became again frequent, or rather incessant, on Roman ground. For seven years matters remained thus, and the wearied people began to think with regret of the energetic rule of Rienzi, and to remember nothing of him but his virtues. Meanwhile, what had become of the fallen tribune? After a month's durance in St Angelo, he had made his escape in the guise of a monk, and wandered through various cities of Germany, Italy, and other countries, endeavouring to gain the friendship of various princes and potentates. At length he boldly presented himself at the court of the emperor Charles IV., and was sent by that monarch to Avignon, in the condition of a captive. Pope Clement kept him in prison, but on the succession of Pope Innocent, new hopes dawned on the deposed tribune. Lamenting the troublous and disordered state of Rome, Innocent was advised to send Rienzi thither, as being the only man who could restore peace to the disturbed city of St Peter. Rienzi, it may be believed, joyfully accepted the charge. After swearing allegiance to the papal power, he set out for the scene of his glories, his follies, and his fall.

The re-entrance of the senator Rienzi, as he was now styled, into Rome, was a scene of triumph and rejoicing. For a time afterwards, hopes were entertained that he would be a blessing to the city; but these hopes proved fallacious. His own character, we are informed, had undergone a serious change for the worse during his exile. He had become intemperate, suspicious, and cruel, and his once fine face and person now presented a bloated swollen appearance, indicating the grossness of his living. He was now, besides, but a delegated servant of the Pope—scarcely a trusted one. The barons were all more inimical to him than ever; and hence it was, that Rienzi's new reign was a continued scene of tumult during the four months that it lasted. At the end of that time, a disturbance, fomented by the nobles, broke out, and an angry multitude besieged the Capitol, where Rienzi had taken up his abode. The senator was deserted by his guards; yet, in that last hour, he made a vigorous effort to regain his authority. With the banner of liberty in his hand, he presented himself on the balcony to address the people. Had they listened to him, the charm of his eloquence might still have moved them; but the noise drowned his voice, and stones and arrows were directed at his person, and on being struck in the hand, he retired weeping. It was evening ere the rioters forced their way into the building, where they seized their former idol as he attempted to escape in disguise. They dragged him into the street, and for one whole hour he stood in the midst of them, pale, silent, and motionless. There was still a nobility in his aspect which restrained the mob from injuring him. But one individual finally struck him with a dagger, and the charm seemed broken. A thousand blows followed, the most of them borne by a lifeless corpse.

Thus fell Rienzi the tribune, a man of extraordinary endowments and extraordinary fate. Had he been able to endure prosperity, he might have left behind him one of the most glorious names in history. Petrarch, the poet, was his friend, and has expressed high admiration of his character and abilities, as they were developed in his early career.

PHYSICAL AGENTS AFFECTING MAN.

THE ATMOSPHERE OF CITIES.

In the arrangement of the system of the universe, the human being has been obviously left, to a great extent, the creature of circumstances; or, in other words, has been placed under the domination of certain general laws, the operation of which may be so far modified by circumstances, as to render him more or less comfortable and happy in his earthly position. An incalculable amount of evil has resulted in past times from the prevalence of an opposite opinion. That species of piety, which induces man to sit down and fold his hands under the visitation of disease and other varieties of suffering, in the belief that he is thus showing a laudable resignation to the will of heaven, is at once disparaging to the character of the divine being, and at variance with the principles deducible from an observation of his laws, their mode of working, and their consequences. The race of man have been subjected to few evils for which a remedy, partial or complete, has not been provided; and nothing can more perfectly display the benevolence of the Creator, than the fact that such is the case. The world is at last becoming sensible of this great truth. Disease, and other physical evils, are now traced to their true source—the neglect, namely, or violation of the general laws under which man has been placed. This subject well deserves the most minute attention that can be paid to it; and as we have now before us various documents exhibiting the results of practical investigations made into it in Great Britain, some space may be devoted to the consideration of the question in detail, although we have already noticed certain branches of it in a detached manner.

Air and food are the supporters of man's existence, and it is plain that a proper supply of these, as regards quality and quantity, is the great desideratum for the maintenance of his physical well-being. The air we breathe is liable to be affected by causes of two kinds, those which affect its quality, and those which affect its temperature. In both these respects the atmosphere may be so deteriorated, as to be rendered injurious to human health and life, and this is especially the case when both influences operate at once, as they too often do. The aggregation of a multitude of human beings in one spot, is, of all others, the most common cause by which the healthful properties of the air are impaired or destroyed. The establishment of this fact, the examination of the mode in which the noxious influences are exerted, as well as the consideration of the applicability of effective remedies, demand the first place in a discussion of this kind. It seems impossible, even if it were acknowledged to be proper, to prevent mankind from associating in one spot in great numbers; and, therefore, the manner in which they can do this with the greatest safety, or rather with least detriment to themselves, becomes a matter of the deepest importance.

In the First Annual Report of the Registrar-General of births, deaths, and marriages, an appendix appears, containing accurate statements of the mortality of great towns, when compared with that of country districts. Mr Farr, the able preparer of these statements, drew his calculations from thirty-two metropolitan unions, and twenty-four of the largest towns in England, including Manchester, Liverpool, Birmingham, &c.; while on the other side he placed the counties of Cornwall, Devon, and others, containing nearly an equal amount of population. The deaths in six months from twelve principal classes of diseases, are contrasted in the following table:—

	In London and 24 other towns, containing a population of 3,553,000.		In rural districts, containing a population of 3,500,000.
Epidemic, endemic, and contagious diseases,	12,766	—	6,045
Sporadic Diseases.			
Of the nervous system,	7,705	—	3,607
— respiratory organs,	12,619	—	7,847
— organs of circulation,	590	—	309
— digestive organs,	3,476	—	1,832
— urinary organs,	219	—	161
— organs of generation,	460	—	265
— organs of locomotion,	262	—	154
— integumentary system,	62	—	55
Of uncertain seat,	4,396	—	3,730
Age,	2,924	—	3,102
Violent deaths,	1,370	—	929
Not specified,	1,104	—	1,637
Total,	47,953		29,693

This table completely establishes the general fact of the increased mortality in large communities; and when the matter is still more closely inquired into, the immense share which the atmosphere has in causing this augmentation appears with equal clearness. The classes of disease upon which the difference between the mortality of towns and country districts chiefly hinges, are precisely those in which the air is

most influential. In the first three classes of disease, for example, marked in the preceding table, the mortality is shown to have been doubled by the concentration of the population in cities, and the increase is not much less as respects the diseases of the lungs. The deaths from consumption and typhus, diseases that appear to have a peculiar dependence on atmospheric influences, are stated by Mr Farr to have been increased in towns in the respective ratios of 39 and 221 per cent.

On the whole, the results of his observations have led Mr Farr broadly to assert that the "source of the higher mortality is in the insalubrity of the atmosphere." Other causes certainly aid, however, in no inconsiderable degree, in bringing about this general result. But if we think for a moment of the usual effects produced by a dense population on the atmosphere, we shall find strong cause to coincide with the opinion above expressed. Every human being expires about 666 cubic feet of air daily, and the gas so expired, if it were collected in a reservoir, would destroy any animal compelled to inhale it, man himself among the number. Every one will remember the horrible illustration of this truth, afforded by the Black Hole catastrophe at Calcutta, where, out of *one hundred and forty-six* human beings shut up at night in a single close room, only twenty-three came out next morning alive. These persons perished from being made to breathe the same air over and over again. This single cause, then, it is obvious, is in itself capable of producing the most deleterious results. When we add to this the effluvia arising from putrifying substances, animal and vegetable; the emanations from streets, stanks, and sewers; the products of combustion, and the smoke of fires, both of which are in themselves poisonous; with all the thousand noxious exhalations which man's habits and occupations assemble around him; we shall find city air, in its unmitigated impurity, to be a thing which people might well fly from with terror and dismay. In the open country, all exhalations of this destructive nature speedily mix with the currents of the atmosphere, and are diffused so as to be perfectly harmless. But instead of one inhabitant to the square mile, which is about the density of the population in the plains of Asia, "locate (says the Report already quoted) 200,000 individuals upon a square mile, as soldiers in a camp, and the poison will be concentrated 200,000 fold; intersect the space in every direction by 10,000 high walls, which overhang the narrow streets, shut out the sunlight, and intercept the movements of the atmosphere; let the rejected vegetables, the offal of slaughtered animals, the filth produced in every way, decay in the houses and courts, or stagnate in the wet streets; bury the dead in the midst of the living; and the atmosphere will be an active poison, which will destroy, as it did in London formerly, and as it does in Constantinople now, 5 [and a fractional part] per cent. of the inhabitants annually, and generate, when the temperature is high, recurring plagues, in which a fourth part of the entire population will perish."

But notwithstanding all this formidable array of anti-salubrious agencies, to which a city atmosphere is exposed, observation and experience give us the comforting assurance, that health will be little more impaired upon one than upon a hundred square miles, if proper means (and these means are at command) be employed for supplying the two hundred thousand dwellers thereon with pure air, and for removing the principal sources of poisonous exhalations. To a certain extent, this is done in almost every great city. Those parts of them, at least, which are of modern construction, enjoy many provisions, pointed out by experience, which obviate the tendency to insalubrity in the atmosphere; and the beneficial consequences of these provisions appear most strikingly, when the state of health in these quarters is compared with that in the old districts, where the wide streets, the free household ventilation, the plenteous supply of water, and the well-constructed sewers, that form the essential sources of advantage in the modern divisions, unfortunately do not exist. The mean annual mortality, in a variety of the districts of London, is stated as follows:—

ANNUAL DEATHS AMONG 1000 FEMALES IN

Whitechapel,	39	Kensington,	22
Shoreditch,	32	St Pancras,	20
Bermondsey,	30	London City,	20
Holborn,	29	Camberwell,	18
St George, Southwark,	27	Hackney,	18
Strand,	25	St George, Hanover Square,	17¾
Stepney,	24		

It is to be observed here, that some of the new suburban districts are not less unhealthy than the closest old ones. This has been clearly traced to the undrained marshes and other similar nuisances to which the comparative paucity of inhabitants exposes the suburbs. But in every case, it may safely be averred, the mortality is in exact proportion to the condition of the district as regards ventilation and cleanliness. We have before us, for example, Dr Southwood Smith's report on Whitechapel, a region fatally prominent in the preceding table. Describing parts of this district, he uses the following language:—"In Baker's alley the houses are dark, gloomy, and extremely filthy. Between the wall and the houses there is a gutter, in which is always present a quantity of stagnant fluid full of all sorts of putrifying matter, the effluvia from which are most offensive, and the sense of closeness extreme." In this same alley the interior arrangements of the houses are so defective, that "the stench is abominable" and incessant. Here "the fever (a recent complaint) was extremely mortal, and raged in almost every house." Of other parts of Whitechapel, Dr S. Smith gives a similar account. "In Johnson's-change there is no drainage of any kind, a great accumulation of filth, and the sense of closeness is stifling." Here a cess-pool overflowed recently, and was left unheeded. "In the house *next* the cess-pool a malignant fever broke out after this, and extended to almost every house in the courts." The whole district of Whitechapel, in truth, was in a very bad condition, and, in consequence, "fever raged dreadfully in the whole of this district, six persons of a family being frequently ill together, all in one room, and four in one bed."

At the present moment, it is our wish simply to exhibit the consequences of local insalubrity in the atmosphere, without referring to the concurring influence of other causes, such as personal and moral habits, &c., which will be alluded to in another place. From an accurate examination of all the districts of London, Drs Arnot and Kay found disease to be generated and fostered by the subjoined circumstances, all of them of the kind now under consideration. 1. Imperfection or want of sewers and drains in the parish or district. 2. The existence of uncovered or stagnant drains or ditches, containing vegetable and animal matter in a state of decomposition. 3. Open stagnant pools of water rendered putrid by the admixture of animal or vegetable substances. 4. Undrained marshland. 5. Accumulations of refuse, either thrown from the houses, or otherwise collected in the streets, courts, and lanes. 6. Lodgement of filth in large cess-pools and privies, in situations where the inhabitants are exposed to the exhalations. 7. The situation of slaughter-houses in densely peopled districts, among narrow streets, and the defective regulation of these establishments. 8. The state of some of the public burial-grounds, in thickly peopled districts. 9. The want of ventilation in narrow alleys and close courts inhabited by the working-classes.

In the Fourth and Fifth Annual Reports of the Poor-Law Commissioners, Drs Arnot and Kay, by a specific reference to the state of health in the various districts of London, exhibit individually, and in detail, the destructive nature of each of the nuisances now enumerated. In almost all of them, it will be noticed, the cause of the noxiousness is the evaporation of *putrescent animal and vegetable matter*. On this point Dr Southwood Smith remarks, that it has now been demonstrated, by "direct experiment," that, in certain situations in which the air is loaded with exhalations from marshes and stagnant pools, the matter they convey is poisonous, and "consists of animal and vegetable substances in a high state of putrescency. If a quantity of air in which such exhalations are present be collected, the vapour may be condensed by cold and other agents; a residue is obtained, which, on examination, is found to be putrescent animal or vegetable matter. This matter constitutes a deadly poison. A minute quantity of it, applied to an animal previously in sound health, destroys life, with the most intense symptoms of malignant fever. If, for example, ten or twelve drops of a fluid containing this highly putrid matter be injected into the jugular vein of a dog, the animal is seized with acute fever; all the ordinary symptoms speedily follow; and in a short time the dog is actually seized with the *black vomit*, identical in the nature of the matter evacuated with that thrown up by a person labouring under the yellow fever (that disease so fatally prevalent on the marshy coasts of a hot clime). By varying the intensity and the dose of the poison thus obtained, it is possible to produce fever of almost any type, and endowed with almost any degree of mortal power." In marshy, boggy grounds, the poison is chiefly of a vegetable character; in cities it is principally animal in its nature, or contains a mixture of both. In either case, were it not for the radiation of caloric from the earth which rarifies the lower air and carries it upwards, aided by that *force of diffusion*, as it has been termed, which a benevolent power has bestowed on all gaseous bodies, the effects of these putrescent exhalations would be fatal beyond conception; as it is, there can be no doubt that the varied diseases affecting those who breathe the tainted air are merely the result of the varied nature and intensity of the poison, acting on different constitutions and under different circumstances. "But it would be a most inadequate view of the pernicious agency of the poison, if it were supposed to be restricted to the diseases commonly produced by its direct operation. It is a matter of constant observation, that, even when not present in sufficient intensity to produce fever, this poison, by disturbing the function of some organ or set of organs, and thereby weakening the general system, acts as a powerful predisposing cause of some of the most common and fatal maladies to which the human body is subject." Diseases of the digestive organs, and diseases of the lungs, form a large proportion of our annual mortality. As for the latter class of maladies, it is obvious that vitiated air must further and foster them to an excessive degree; and "no one who lives (says Dr S. Smith) in a marshy or malarian district, is ever for a single hour free from some disease of the digestive organs."

We have now sufficiently established the fact of the great mortality arising from the respiration of vitiated air, and explained the nature of the poison generated so abundantly in and around large cities. If further proof were wanted, reference might be made to other cities besides London. In Edinburgh, the attention of the public has been recently directed to the pernicious effects of the system of irrigating lands in the vicinity with the filthy fluid refuse of the city, as it passes on its way to the sea. It has been distinctly proved, by the testimony of numerous persons, professional and otherwise, that the dwellings in the neighbourhood of these foul stanks are rendered extremely unhealthy, low fevers and various other diseases being the result to the occupants. Other cases might be pointed out, but it would be, we believe, a work of supererogation; and the question with us should now be—the evil being admitted—how is it to be remedied? Drs Kay and Arnot give the following directions upon this important subject, and we would press them as strongly as possible on the public attention. "The means of removing completely the noxious animal and vegetable matters brought to or produced in cities, evidently are:—

1. A perfect system of sufficiently sloping drains or sewers, by which, from every house and street, all fluid refuse shall quickly depart by the action of gravitation alone; the streets, alleys, courts, &c., being moreover well paved, so that the refuse may be easily distinguished and detached.

2. A plentiful supply of water to dilute and carry off all such refuse, and to allow of sufficient washing of streets, houses, clothes, and persons.

3. An effective service of scavengers to remove regularly the rubbish and impurities which water cannot carry away, and fit receptacles for such matters until removed.

4. Free ventilation by wide streets, open alleys, and well-constructed houses, to dilute and carry away all hurtful aëriform matters.

5. Keeping as distant as possible from the people the practice of all the arts and processes capable of producing malaria or tainting the air. Hence the situation of cattle-markets, slaughter-houses, cow-houses, tripe-shops, gas-factories, burying-grounds, and the like, should be determined by competent authorities.

6. Preventing the great crowding of the lodging houses of the poor."

The greater number of these suggestions are capable of being carried into practice with ease by any community, particularly if the work be pursued step by step. The alteration of existing streets and alleys built upon a crowded and injurious plan, could not be effected, certainly, excepting by very slow degrees, yet every opportunity of amendment of this kind ought to be seized. Those suggestions that refer to the construction of sewers, the cleansing of streets by an effective body of scavengers, and the supply of water, might be followed up at once in those cities where they are required, and most assuredly public funds could never be more judiciously expended. In the closes and common stairs of the Scottish metropolis, a most complete change of affairs is needed. As much putrid matter, animal and vegetable, is lodged about one of these as might disseminate poison through a whole neighbourhood; and what that poison can do, Dr Smith has told us. These are the things which render such a disease as typhus terrible, and make cities suffer from it to the extent of 122 per cent. above the ratio of its fatality in the country. With open streets, clean and well paved, with close and properly acting sewers, with abundance of water, and a few other provisions, plague or pestilence would find it difficult to effect a lodgement.

The condition of *individual houses*, their manner of ventilation, and the state of the atmosphere within them, will form the subject of a succeeding paper.

A TRAVELLER BELOW GROUND.

When Mr Bruce of Kinnaird returned from his many years' absence in Barbary and Abyssinia, to his country mansion on the carse of Falkirk, he was greatly dissatisfied with the way in which his collieries had been wrought. After some stormy disputes with the individuals who had leased them, he agreed to submit the matter to a committee of experienced coal-engineers, who accordingly met at Kinnaird, inspected the mines, and used every endeavour to form an impartial judgment. Conversing one day with these gentlemen, he challenged something which one of them said respecting the condition of the mines; whereupon the engineer said that, if Mr Bruce was not afraid, he might go down and satisfy himself on the point by personal investigation. The word "afraid" startled the ear of the traveller, whose commanding figure and bold demeanour had been the chief means of bringing him unscathed through so many dangers. "Afraid!" said he, in his magnificent way: "sir, do you think I would be afraid to go down into my own mines?" He immediately proposed to go down with them next day, and they as eagerly took him at his word, determined to punish him a little for the unreasonable way in which he had disputed many of their statements. "He speaks of Nubian sands," quoth one to another that evening; "we'll show him something worse to-morrow, if I am not mistaken." Next day, accordingly, the illustrious traveller appeared at the mouth of the pit, and after investing his dignified person in the coarse clothes proper to the occasion, down he went, along with his corps of engineers. The strata are not there very thick at the best, and many of the wastes were considerably *crushed* or fallen in. It was therefore by no means pleasant walking through Mr Bruce's mines. Nevertheless, as had been concerted amongst them, on they went, up one waste, down another, leading the unfortunate Abyssinian such a dance as never traveller danced before,

Digitized by Google

either on the surface or beneath it, and all the time pretending to demonstrate to him the results at which they had arrived. Sometimes the party would be stooping in a rectangular form; sometimes they would be wading up to the knees in coal mud; sometimes they would be reduced, for a quarter of a mile together, to crawl on their hands and knees, also in deep mud. At one place the engineers passed through an aperture barely wide enough for themselves, who were men of moderate size, but which was evidently too narrow for Bruce. When they had passed, they said they were afraid it would be difficult for him to get through; but he was too proud to own himself defeated—tried the aperture, and fairly stuck in it. They had to pull him out by the head and shoulders; and a sore pull it was. Thus they led him about, he evidently sinking with fatigue and disgust, but never uttering a word of complaint, and they, of course, greatly enjoying his distress, till towards dinner-time, when at length they brought him back to the bottom of the pit, the only place where he could stand upright. The figure which he now cut—one tall mass of black mud and rags—is not to be described. Nevertheless, up to the very last moment he maintained his usual composure, and the only remark he now made, that seemed to denote his feelings, was, that he did not think the wastes had been so dirty. It may be supposed that next day he showed himself a good deal more ready than he had formerly been to admit the conclusions to which experience and observation had brought his scientific advisers.

REMARKABLE CASES OF CIRCUMSTANTIAL EVIDENCE.

BRADFORD THE INNKEEPER.*

JONATHAN BRADFORD kept an inn in Oxfordshire, on the London road to Oxford. He bore a respectable character. Mr Hayes, a gentleman of fortune, being on his way to Oxford on a visit to a relation, put up at Bradford's. He there joined company with two gentlemen, with whom he supped, and in conversation unguardedly mentioned that he had then about him a considerable sum of money. In due time they retired to their respective chambers; the gentlemen to a two-bedded room, leaving, as is customary with many, a candle burning in the chimney corner. Some hours after they were in bed, one of the gentlemen, being awake, thought he heard a deep groan in an adjoining chamber; and this being repeated, he softly awoke his friend. They listened together, and the groans increasing as of one dying and in pain, they both instantly arose, and proceeded silently to the door of the next chamber, from which the groans had seemed to come. The door being ajar, they saw a light in the room. They entered, but it is impossible to paint their consternation on perceiving a person weltering in his blood in the bed, and a man standing over him with a dark lantern in one hand, and a knife in the other! The man seemed as much petrified as themselves, but his terror carried with it all the appearance of guilt. The gentlemen soon discovered that the murdered person was the stranger with whom they had that night supped, and that the man who was standing over him was their host. They seized Bradford directly, disarmed him of his knife, and charged him with being the murderer. He assumed by this time the air of innocence, positively denied the crime, and asserted that he came there with the same humane intentions as themselves; for that, hearing a noise, which was succeeded by a groaning, he got out of bed, struck a light, armed himself with a knife for his defence, and had but that minute entered the room before them. These assertions were of little avail; he was kept in close custody till the morning, and then taken before a neighbouring justice of the peace. Bradford still denied the murder, but with such apparent indications of guilt, that the justice hesitated not to make use of this extraordinary expression on writing his mittimus, "Mr Bradford, either you or myself committed this murder."

This remarkable affair became a topic of conversation to the whole country. Bradford was condemned by the general voice of every company. In the midst of all this predetermination, came on the assizes at Oxford. Bradford was brought to trial; he pleaded not guilty. Nothing could be stronger than the evidence of the two gentlemen. They testified to the finding Mr Hayes murdered in his bed, Bradford at the side of the body with a light and a knife, and that knife, and the hand which held it, bloody. They stated, that, on their entering the room, he betrayed all the signs of a guilty man; and that, but a few minutes preceding, they had heard the groans of the deceased.

Bradford's defence on his trial was the same as before; he had heard a noise; he suspected that some villany was transacting; he struck a light, snatched up the knife, the only weapon at hand to defend himself, and entered the room of the deceased. He averred that the terrors he betrayed were merely the feelings natural to innocence, as well as guilt, on beholding so horrid a scene. The defence, however, could not but be considered as weak, contrasted with the several powerful circumstances against him. Never was circumstantial evidence so strong, so far as it went. There was little need for comment from the judge in summing up the evidence; no room appeared for extenuation, and the prisoner was declared guilty by the jury without their even leaving the box.

Bradford was executed shortly after, still declaring that he was not the murderer, nor privy to the murder, of Mr Hayes; but he died disbelieved by all.

Yet were these assertions not untrue! The murder was actually committed by the footman of Mr Hayes; and the assassin, immediately on stabbing his master, rifled his pockets of his money, gold watch, and snuff-box, and then escaped back to his own room. This could scarcely have been effected, as after-circumstances showed, more than two seconds before Bradford's entering the unfortunate gentleman's chamber. The world owes this information to a remorse of conscience on the part of the footman (eighteen months after the execution of Bradford) when laid on a bed of sickness. It was a death-bed repentance, and by that death the law lost its victim.

It were to be wished that this account could close here, but there is more to be told. Bradford, though innocent of the murder, and not even privy to it, was nevertheless a murderer in design. He had heard, as well as the footman, what Mr Hayes had declared at supper, as to the having a sum of money about him; and he went to the chamber of the deceased with the same dreadful intentions as the servant. He was struck with amazement on beholding himself anticipated in the crime. He could not believe his senses; and in turning back the bed-clothes to assure himself of the fact, he in his agitation dropped his knife on the bleeding body, by which means both his hands and the weapon became bloody. These circumstances Bradford acknowledged to the clergyman who attended him after sentence, but who, it is extremely probable, would not believe them at the time.

Besides the graver lesson to be drawn from this extraordinary case, in which we behold the simple intention of crime so signally and wonderfully punished, these events furnish a striking warning against the careless, and, it may be, vain display of money or other property in strange places. To heedlessness on this score, the unfortunate Mr Hayes fell a victim. The temptation, we have seen, proved too strong for two persons out of the few who heard his ill-timed disclosure.

BRUNELL'S CASE.

In the year 1742, another case of a very remarkable nature occurred near Hull. A gentleman travelling to that place was stopped late in the evening, about seven miles from the town, by a single highwayman, with a mask on his face, who robbed the traveller of a purse containing twenty guineas. The highwayman rode off by a different path, full speed, and the gentleman, frightened, but not injured except in purse, pursued his journey. It was growing late, however, and being naturally much agitated by what had passed, he rode only two miles farther, and stopt at the Bell Inn, kept by Mr James Brunell. He went into the kitchen to give directions for his supper, where he related, to several persons present, the fact of his having been robbed; to which he added this peculiar circumstance, that when he travelled he always gave his gold a peculiar mark, and that every guinea in the purse taken from him was thus marked. Hence he hoped that the robber would yet be detected. Supper being ready, he retired. He had not long finished his supper, when Mr Brunell came into the parlour where he was, and after the usual inquiries of landlords as to the guest's satisfaction with his meal, observed, "Sir, I understand you have been robbed, not far hence, this evening." "I have, sir," was the reply. "And your money was marked!" continued the landlord. "It was," said the traveller. "A circumstance has arisen," resumed Mr Brunell, "which leads me to think that I can point out the robber. Pray, at what time in the evening were you stopped?" "It was just setting in to be dark," replied the traveller. "The time confirms my suspicions," said the landlord; and he then informed the gentleman that he had a waiter, one John Jennings, who had of late been so very full of money, and so very extravagant, that he (the landlord) had been surprised at it, and had determined to part with him, his conduct being every way suspicious; that long before dark that day, he had sent out Jennings to change a guinea for him; that the man had only come back since the arrival of the traveller, saying he could not get change; and that, seeing Jennings to be in liquor, he had sent him off to bed, determining to discharge him in the morning. Mr Brunell continued to say, that when the guinea was brought back to him, it struck him that it was not the same which he had sent out for change, there being on the returned one a mark, which he was very sure was not upon the other; but that he should probably have thought no more of the matter, Jennings having frequently had gold in his pocket of late, had not the people in the kitchen told him what the traveller had related respecting the robbery, and the circumstance of the guineas being marked. He (Mr Brunell) had not been present when this relation was made, and unluckily before he heard of it from the people in the kitchen, he had paid away the guinea to a man who lived at some distance, and who had now gone home. "The circumstance, however," said the landlord in conclusion, "struck me so very strongly, that I could not refrain, as an honest man, from coming and giving you information of it."

Mr Brunell was duly thanked for his candid disclosure. There appeared from it the strongest reason for suspecting Jennings; and if, on searching him, any others of the marked guineas should be found, and the gentleman could identify them, there would then remain no doubt in the matter. It was now agreed to go up to his room; Jennings was fast asleep; his pockets were searched, and from one of them was drawn forth a purse, containing exactly nineteen guineas. Suspicion now became certainty; for the gentleman declared the purse and guineas to be identically those of which he had been robbed. Assistance was called; Jennings was awakened, dragged out of bed, and charged with the robbery. He denied it firmly, but circumstances were too strong to gain him belief. He was secured that night, and next day taken before a justice of the peace. The gentleman and Mr Brunell deposed to the facts upon oath, and Jennings, having no proofs, nothing but mere assertions of innocence which could not be credited, was committed to take his trial at the next assizes.

So strong seemed the case against him, that most of the man's friends advised him to plead guilty, and throw himself on the mercy of the court. This advice he rejected, and, when arraigned, pled not guilty. The prosecutor swore to the fact of the robbery; though, as the thing took place in the dusk, and the highwayman was in a mask, he could not swear to the person of the prisoner, but thought him of the same stature nearly as the man who robbed him. To the purse and guineas, when they were produced in court, he swore—as to the purse, positively, and as to the marked guineas, to the best of his belief; and he testified to their having been taken from the pocket of the prisoner.

The prisoner's master, Mr Brunell, deposed as to the sending of Jennings for the change of a guinea, and to the waiter's having brought back to him a marked one, in the room of one he had given him unmarked. He also gave evidence as to the discovery of the purse and guineas on the prisoner. To consummate the proof, the man to whom Mr Brunell had paid the guinea, as mentioned, came forward and produced the coin, testifying at the same time that he had received it on the evening of the robbery from the prisoner's master, in payment of a debt; and the traveller, or prosecutor, on comparing it with the other nineteen, swore to its being, to the best of his belief, one of the twenty marked guineas taken from him by the highwayman, and of which the other nineteen were found on Jennings.

The judge summed up the evidence, pointing out all the concurring circumstances against the prisoner; and the jury, convinced by this strong accumulation of circumstantial evidence, without going out of court brought in a verdict of guilty. Jennings was executed some little time afterwards at Hull, repeatedly declaring his innocence up till the very moment of his execution.

Within a twelvemonth afterwards, Brunell, the master of Jennings, was himself taken up for a robbery committed on a guest in his house, and the fact being proved on trial, he was convicted, and ordered for execution. The approach of death brought on repentance, and repentance confession. Brunell not only acknowledged himself to have been guilty of many highway robberies, but owned himself to have committed the very one for which poor Jennings suffered.

The account which Brunell gave was, that after robbing the traveller, he had got home before him by swifter riding and by a nearer way. That he found a man at home waiting for him, to whom he owed a little bill, and to whom, not having enough of other money in his pocket, he gave away one of the twenty guineas which he had just obtained by the robbery. Presently came in the robbed gentleman, who, whilst Brunell, not knowing of his arrival, was in the stable, told his tale, as before related, in the kitchen. The gentleman had scarcely left the kitchen before Brunell entered it, and there, to his consternation, heard of the facts, and of the guineas being marked. He became dreadfully alarmed. The guinea which he had paid away he dared not ask back again; and as the affair of the robbery, as well as the circumstance of the marked guineas, would soon become publicly known, he saw nothing before him but detection, disgrace, and death. In this dilemma, the thought of accusing and sacrificing poor Jennings occurred to him. The state of intoxication in which Jennings was, gave him an opportunity of concealing the money in the waiter's pocket. The rest of the story the reader knows.

* This case, the reader will remark, is not unlike, in some points, that of Thomas Harris, in No. 182.

TROPICAL DELIGHTS.

Insects are the curse of tropical climates. The bete rouge lays the foundation of a tremendous ulcer. In a moment you are covered with ticks. Chigoes bury themselves in your flesh, and hatch a large colony of young chigoes in a few hours. They will not live together, but every chigoe sets up a separate ulcer, and has his own private portion of pus. Flies get entry into your mouth, into your eyes, into your nose; you eat flies, drink flies, and breathe flies. Lizards, cockroaches, and snakes, get into the bed; ants eat up the books; scorpions sting you on the foot. Every thing bites, stings, or bruises; every second of your existence you are wounded by some piece of animal life that nobody has ever seen before, except Swammerdam and Meriam. An insect with eleven legs is swimming in your tea-cup, a nondescript with nine wings is struggling in the small beer, or caterpillar with several dozen eyes in his belly is hastening over the bread and butter! All nature is alive, and seems to be gathering all her entomological hosts to eat you up, as you are standing, out of your coat, waistcoat, and breeches. Such are the tropics. All this reconciles us to our dews, fogs, vapours, and drizzle—to our apothecaries rushing about with gargles and tinctures—to our old, British constitutional coughs, sore throats, and swelled faces.—*Rev. Sydney Smith.*

THE DEPUTY.

[From Pictures of the French, drawn by Themselves.]

Auguste was elected, two years ago, Deputy for the arrondissement of * * *.

On his arrival in Paris he called upon me. He was almost afraid of what he had dared to undertake. The formidable honour, once obtained, preyed on his mind. He was nervous and agitated, and looked up to me for advice; he seemed to be as giddy as if suddenly conveyed to the top of a lofty monument. I tried to compose him as well as I could, not daring to laugh at his terrors; for symptoms of gratified vanity shone through his fear, making it manifest that he was not a little proud of his dignity.

He frequently repeated his calls for some time after, anxious to consult with me about his line of conduct; but it was not long ere he offered me his patronage.

A complete change, certainly rapid, if not sudden, came over my friend's manners. He speedily got rid of his natural timidity, I had almost said, his modesty; and I was never more struck by the powerful effect of the elective mandate, than when I saw how quickly it enlarged the intellectual faculties of my honourable friend, his talent for observation, his foresight, and, above all, his ability as a leader. A month had not yet elapsed, and I no longer recognised in Auguste the same man I had shortly before seen so frightened by his new duties, and so anxious to discharge them creditably. Auguste had already acquired perfect self-confidence. On his first visits, he had spoken with great humility of what he wished to obtain from government for his native district; soon afterwards, he expatiated with energy on sundry improvements required in his department. Now, the interest and happiness of France were uppermost in his thoughts, and views and projects embracing the whole world often engrossed his mind. It is right to add, that these extended views of general politics effectually banished from his memory his pledges to forward and support the local interests of his constituents, as he used to call the elective body of his district.

[From less to more, Auguste shakes off his conscientiousness, forgets his legislatorial duty, and becomes a dangler at the levées and drawing-rooms of the great. His friend now calls upon him.]

Auguste seemed to me to be threatened by some terrible crisis; he was gloomy, and evidently preoccupied; his whole appearance betrayed his inward agitation. He had received letters from the country; his constituents were disappointed with him, and vexed to look in vain for the report of his speeches. Many questioned his abilities, while others ascribed his silence to the unsteadiness of his political opinions. There was no means to avoid it: the time was come when he must speak. He was rather disappointed to find a troublesome duty interfere with his charming arrangements for his Parisian life. A bill closely affecting the local interests of his constituency was about to come under discussion. Nothing could justify his silence on such a question: and he came to the determination of making his maiden speech.

The composition of Auguste's extempore speech took him three days. In order to make himself perfectly its master, he recited it several times with and without the manuscript to the chairs in his apartment. The next day, Auguste, prepared for all contingencies, ascended the rostrum, and delivered his speech without any hesitation, and most accurately. Nobody paid the least attention to it; the Chamber was very thin, the president had just taken the chair, and my honourable friend was only listened to by a few ladies, whom he had favoured with tickets for the grand occasion, and were, with myself, the only persons in the secret of the forthcoming début.

I felt anxious to know the sensations of the new orator, rather expecting an ostentatious display. To my great surprise, Auguste was humble and diffident. He confessed that the rostrum had seemed to him raised to an extraordinary elevation; that at first he felt giddy, his tongue was tied, his mouth parched, and without the assistance of the *eau sucrée* he would have been unable to utter a syllable.

Delivered under the most unfavourable circumstances, Auguste's speech was one of those to which reporters invariably apply the following stock phrase:—"The Honourable Deputy spoke in a very low tone of voice, which failed to reach us in the gallery." But I, foreseeing this, had taken measures accordingly. Assisted by Auguste, I had prepared four copies of the extempore speech, and sent them to the leading newspapers; and in the evening we went round to revise the proofs, and insert at the conclusion of the most striking paragraphs the sympathetic words, "Hear! hear!" "Profound sensation," and "General applause." We ventured to alter a few words, escaped in the warmth of the discussion; and a paragraph or two added after the debate, gave relief to the weak points of the speech. Such are the precautions constantly taken by every Deputy careful of his reputation as a speaker, and ours secured for Auguste the well-earned congratulations of his constituents.

Numerous and flattering were the felicitations he received. He was the true protector of his district, the saviour of his country, and the glory of France. Every letter teemed with praise, which was accompanied in every instance by a request, a commission, a petition, or the demand for some favour. Each constituent had a wish to express, certain hopes to reveal, some expectations to hint. The Deputy was become on a sudden the guardian angel of his district, but it was not intended to leave him in the quiet enjoyment of a sinecure. He had purchases to make for the ladies of his neighbourhood—books, millinery, jewellery, chins, and furniture; he had to advocate every claim; to support all rights, old and new, past, present, and future; to foster all complaints; to countenance all pretensions, and all petty, insatiable ambitions. Two or three schoolboys were entrusted to his care: he was to go and see them often at college, and to send for and amuse them on holidays; and was actually to be responsible for the faults of four or five law and medical students, whose conduct he was commissioned to inspect. Nor was this all. His arrondissement had numerous claims on the budget, and instructed him to sue the government for grants of money, books, pictures, and statues. They set forth their claims to new bridges and new roads; they had valleys to fill up, mountains to level, and rivers to divert from their course; they wanted a regiment to enliven their principal towns, &c. &c. &c. Auguste was unable to stand it. Heaps of letters were brought him by every post, and incessant were the demands made upon his purse.

The character of guardian angel of a country district is not maintained without a world of trouble. Auguste's door was besieged every morning by crowds of eager applicants. He had countless letters of introduction to write, and all his time was taken up by innumerable visitors. He was the natural comforter of all the misfortunes of his department. An unceasing call was made upon his cash-box, for loans or for charity. In the Chamber he was assailed by fresh importunities. Some came up from the country on purpose to see and hear him, and for them he could do no less than procure tickets of admission to the Chambers, and to view the public monuments. He was, moreover, expected to devote a few hours a-day to do the honours of Paris to his constituents, and to introduce at least the leading men amongst them to the minister.

Meanwhile, in the midst of these tribulations, honours came to console him: he was invited to court. He now began to think much of himself, and to consider whether some high office of state would not suit him. After having so often exerted his influence in the service of others, he felt that he had some right not entirely to forget his own interest. Without any very strong political bias, and free from unjust prejudices, Auguste never displayed a stern hostility to power; but when he entered public life, he wisely determined to avoid any engagement that would hazard his independence. I cannot affirm whether any change has since taken place in his convictions; but he lately told me, that if those fierce opponents who are always combating men in power, had more opportunities to see them at less distance, they would undoubtedly be less severe.

WHEN I UPON THY BOSOM LEAN.

In Burns's "Epistle to J. Lapraik, an old Scottish Bard," which appears among his poetical productions, the following lines occur:—

On fasten-een we had a rockin',
To ca' the crack and weave our stockin',
An' there was muckle fun an' jokin',
Ye needna doubt;
At length we had a hearty yokin'
At *sang about*.

There was *ae sang* amang the rest,
Aboon them a' it pleased me best,
That some kind husband had addrest
To some sweet wife;
It thirl'd the heart-strings through the breast,
A' to the life.

The following is Lapraik's song here referred to, as slightly altered and improved by Burns:—

When I upon thy bosom lean
And fondly clasp thee a' my ain,
I glory in the sacred ties
That made us ane, wha ance were twain:
A mutual flame inspires us baith—
The tender look, the melting kiss;
Even years shall ne'er destroy our love,
But only gie us change o' bliss.

Hae I a wish? it's a' for thee;
I ken thy wish is me to please;
Our moments pass sae smooth away,
That numbers on us look and gaze.
Weel pleas'd they see our happy days,
Nor envy's sel' finds aught to blame;
And aye when weary cares arise,
Thy bosom still shall be my hame.

I'll lay me there, and tak' my rest;
And if that aught disturb my dear,
I'll bid her laugh her cares away,
And beg her not to drap a tear.
Hae I a joy? it's a' her ain;
United still her heart and mine;
They're like the woodbine round the tree,
That's twined till death shall them disjoin.

SLAVE TRAFFIC IN THE EAST.

The Papuas, a people of the Molluccan Archipelago, are very jealous of foreigners, and their principal trade is in slaves. In no part of the world is this odious traffic carried to greater excess. "The price given for a slave on the coast is usually two pieces of white calico, valued at from eight to ten Spanish dollars; from sixty to seventy rupees (five or six pounds sterling) being obtained by the traders for them at Bali, and other places in that direction. Natives worthy of belief have assured me, that if a Papua of the coast is struck by a desire to obtain any articles brought by the foreign trader, for which he has no productions to give in exchange, he will not hesitate to barter one or two of his children for them; and if his own are not at hand, he will ask the loan of those of his neighbour, promising to give his own in exchange when they come to hand—this request being rarely refused. This appeared to me to be almost incredible; but the most trustworthy natives bore unanimous evidence to its truth. The mountaineers themselves sometimes sell their children also. In other places, I have known parents sell their children when their maintenance became too heavy a burden for them to bear, without heeding whether they would ever see them again." Such a total absence of feeling certainly brings these savage people below the level of dumb animals!—*Kolff's Voyages.*

THE SPOTTED FLY-CATCHER.

We extract the following anecdotic sketch of this creature from a communication made to the Kendal Natural History Society, and published lately in the Kendal Mercury:—

"A pair of small birds (the spotted fly-catcher of Bewick) built their nest lately in a corner of my bedroom window. I happened to see them when they were about beginning their little structure; but my attention was withdrawn for two or three days, and when I looked again it was finished, so that I unfortunately lost the opportunity (so seldom afforded) of witnessing the mode of building of those tiny architects. So soon, however, as the young were hatched, did these indefatigable birds feed them with flies of different descriptions, from five or six o'clock in the morning until ten at night; and often so quickly as every minute or half minute. The male as well as the female took part in this labour of love: for they were frequently both present at the nest at the same time; though, from their similarity of plumage, they are not easily distinguished. There were five young ones, and when a fly was brought, it was deposited in one of the gaping mouths, without hesitation, though I regret I could not ascertain the method by which they contrived not to cram one too much, while another was left wanting, for the little cormorants were all ready to swallow when the food came. Whether each of the parents had its own part of the offspring to attend to, or however it was managed, I have little doubt they made an equitable distribution, and that no pets or pampered nestlings were allowed in this feathered household. I once took notice of three of them being fed in succession. A small white-winged butterfly was brought to the young, but not having been previously killed, instead of being swallowed, it was making its escape with what speed it could muster, but was pounced upon and seized before it had got a foot from the nest. Another time, the hen (as I took it) had fed her young one, but before she flew away, the cock came and sat down, when, without ceremony, she took the food from his bill, and gave it to one of the nestlings herself, as if, like a good mother, she had some doubt of her helpmate's sound discretion in the matter. She would often, after having delivered her fly, stay awhile and look around on her little family, as if to indulge a mother's fondness, or perhaps for the purpose of clearing away the excrement, which was done with wonderful dexterity the moment it was ejected. And it was curious I could never see any thing come from the young, except when one of the old birds was there to remove it. When the young were feathered, and had increased in size, they were a good deal incommoded for want of room in the nest. Indeed, they filled it above the brim; and it was amusing to see two or three of these little creatures clambering over and sitting on the backs of the others; yet, although the nest was placed close to the edge of the window sill, such was their instinct of self-preservation, they took care not to fall from it, which would have been almost instant destruction. After they had left the nest, they sat near it in a row, for two or three days, on the outside of the window, where the old ones fed them as usual. They did not take their final departure all together, at the same time; on one day, two went away; on the day following, another; and the remaining two on the next. It appears as if they had immediately removed to some distance, as I have never since been able to get a sight of my little fly-catchers. The last disappeared on the 1st of July. Perhaps I ought to mention, that in order to witness the goings-on in the nest, unobserved myself, I heaped up a pile of books and newspapers to form a screen, through an opening in which I could view the nest and its inhabitants.

I noticed one circumstance so remarkable, that I must not forget to mention it. The nest was sheltered from the rays of the forenoon and noontide sun by a projection of a part of the house; but when he came round to three or four o'clock in the afternoon on a clear day, his warm beams shone right against the corner where the nest was placed, to the great distress of the poor little nestlings. (The old birds had evidently not foreseen this, for the inconvenience would have been nearly prevented, had they built in the other corner of the window.) One warm afternoon, the young ones were panting with open bills from the great heat; and judge my surprise and pleasure to see one of the old birds (the female, I supposed) seated on the sunward side of the nest, and stretching over them with wings a little extended, to shield and protect them, and apparently, from her open mouth, suffering as much or more than themselves! Here she would continue till the sun got lower. I observed them for at least three sunny afternoons; and when the young were suffering from the heat, one of the old birds was never absent, sitting at the nest side, if not to shelter, to lean over with open bill, as if, at least, to sympathise with her distressed brood!

In respect to this beautiful trait in the character of these little birds, shielding their young from the burning rays of the sun, I have certainly read of something of the same kind related of the swallow or martin, though I do not recollect where. It is undoubtedly a very striking circumstance, but I shall not comment upon it. Yet one thing may be remarked. It is clear they could perceive the distress of their young; they could infer the cause, and they took the most effectual means in their power to ward off the inconvenience. The more intimately we are acquainted with the habits of the inferior animals, the more shall we be convinced of the surprising degree of intelligence conferred upon them by their Great Creator, whether we choose to call it instinct or reason."

Edinburgh: Printed and published by W. and R. Chambers, 19, Waterloo Place.—Agents, W. S. Orr, London; W. Curry Jun. & Co. Dublin; J. Maclrod, Glasgow; sold by all booksellers.

Complete sets of the Journal are always to be had from the publishers or their agents; also, any odd numbers to complete sets. Persons requiring their volumes bound along with title-pages and contents, have only to give them into the hands of any bookseller, with orders to that effect.

CHAMBERS' EDINBURGH JOURNAL

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS, EDITORS OF "CHAMBERS'S INFORMATION FOR THE PEOPLE," "CHAMBERS'S EDUCATIONAL COURSE," &c.

NUMBER 422. SATURDAY, FEBRUARY 29, 1840. PRICE THREE HALFPENCE.

JUSTICE IN BYGONE TIMES.

JUSTICE is now administered in this island with so much care and impartiality on the part of the judges, that, among all the complaints of the age, we never hear the slightest insinuation against the honour of our courts of law. The case was not always so. Little more than two hundred years have elapsed since even the illustrious Bacon was degraded from his office of Lord Chancellor for taking bribes. The custom of making new-year presents to judges was then recognised as one inferring no dishonour either in the giver or the receiver. We have not much information on this subject regarding the English courts of law, but some curious particulars have lately fallen under our attention, with respect to the course of justice in our own northern soil.* Of these we propose to give a condensed view: most readers will, we think, be amused with them, and it will be generally matter of surprise that judicial corruption so recently flourished amongst us.

For the last three hundred years the supreme administration of law in Scotland has, as must be generally known, rested in the *Court of Session*, a tribunal composed till very lately of fifteen judges (now thirteen), some of whom hear causes in the first instance (called outer-house procedure), while others hear them in the second and final instance (called inner-house procedure). This court, in the latter part of the sixteenth century, is described by Buchanan as extremely arbitrary, and by a nearly contemporary historian (Johnston) as infamous for its dishonesty. An advocate or barrister is described by the latter writer as taking money from his clients, and dividing it among the judges for their votes. At this time we find the chancellor (Lord Fyvie) superintending the lawsuits of a friend, and writing to him the way and manner in which he proposed they should be conducted. But the strongest evidence of the corruption of "the lords" is afforded by an act of 1579, prohibiting them "be thame selffis or be their wiffis or servandes, to tak in ony time cuming, *buddis, brybes, gudes or geir*, fra quhatever persone or persons presentlie havand, or that heirefter sall happyne to have, *any actionis or causis pursewit befoir thame*, aither fra the persewer or defender," under pain of confiscation. Had not bribery been common amongst the judges, such an act as this could never have been passed.

In the curious history of the family of Somerville there is a very remarkable anecdote illustrative of the course of justice at that period. Lord Somerville and his kinsman Somerville of Cambusnethan had long carried on a litigation. The former was at length advised to use certain means for the advancement of his cause with the Regent Morton, it being then customary for the sovereign to preside in the court. Accordingly, having one evening caused his agents to prepare all the required papers, he went next morning to the palace, and being admitted to the Regent, informed him of the cause, and entreated him to order it to be called that forenoon. He then took out his purse, as if to give a few pieces to the pages or servants, and slipping it down upon the table, hurriedly left the presence-chamber. The earl cried several times after him, "My lord, you have left your purse," but he had no wish to stop. At length, when he was at the outer porch, a servant overtook him with a request that he would go back to breakfast with the regent. He did so, was kindly treated, and soon after was taken by Morton in his coach to the court-room in the city. "Cambusnethan, by accident, as the coach passed, was standing at Niddry's Wynd head, and having inquired who was in it with the regent, he was answered, 'None but Lord Somerville and Lord Boyd;' upon which he struck his breast, and said, 'This day my cause is lost!' and indeed it proved so." By twelve o'clock that day, Lord Somerville had gained a cause which had been hanging in suspense for years.

In those days, both civil and criminal procedure was conducted in much the same spirit as a suit at war. When a great noble was to be tried for some monstrous murder or treason, he appeared at the bar with as many of his retainers, and as many of his friends and their retainers, as he could muster, and justice only had its course if the government chanced to be the strongest, which often was not the case. It was considered dishonourable not to countenance a friend in troubles of this kind, however black might be his moral guilt. The trial of Bothwell for the assassination of Darnley is a noted example of a criminal outbraving his judges and jury. Relationship, friendly connection, solicitation of friends, and direct bribes, were admitted and recognised influences to which the civil judge was expected to give way. If a difficulty were found in inducing a judge to vote against his conscience, he might at least perhaps be induced by some of those considerations to absent himself, so as to allow the case to go in the desired way. If we are to judge by the story of Christie's Will, in the Minstrelsy of the Scottish Border, even force would be sometimes resorted to, to cause the absence of a judge. The Earl of Traquair, having a law-suit which was expected to turn upon the voice of the president (Gibson of Durie), hired Christie's Will, the last of the Border freebooters (it was about 1630) to kidnap that judge. The man accordingly seized his lordship one day as he was riding on the Sands near Leith, and carried him off, muffled up and hoodwinked, to a tower in Annandale, where he kept him immured for several months. The president was given up for dead; another was appointed in his place; and the cause went in favour of Traquair. The freebooter then muffled up the judge once more, and, carrying him back to Leith, set him down on the very same spot where he had originally seized him. This is a strange story, but there is good reason for believing it to be in the main true. What makes the circumstance the more remarkable, Traquair was a man who held high state offices under Charles I., being at one time lord treasurer, and at another commissioner, or representative of the king, in parliament.

It is a general tradition in Scotland, that the English judges whom Cromwell sent down to administer the law in Scotland, for the first time made the people acquainted with impartiality of judgment. It is added, that after the Restoration, when native lords were again put upon the bench, some one in presence of the President Gilmour, lauding the late English judges for the equity of their proceedings, his lordship angrily remarked, "De'il thank them—a wheen kinless loons!" That is, No thanks to them; a set of fellows without relations in the country, and who consequently had no one to please by their decisions.

After the Restoration, there was no longer direct bribing, but other abuses still flourished. The judges were tampered with by private solicitation. Decisions went in favour of the man of most personal or family influence. The following anecdote of the reign of Charles II. rests on excellent authority: "A Scotch gentleman having entreated the Earl of Rochester to speak to the Duke of Lauderdale upon the account of a business that seemed to be supported by a clear and undoubted right, his lordship very obligingly promised to do his utmost endeavours to engage the duke to stand his friend in a concern so just and reasonable as his was; and, accordingly, having conferred with his grace about the matter, the duke made him this very odd return, that, though he questioned not the right of the gentleman he recommended to him, yet he could not promise him an helping hand, and far less success in business, if he knew not first the man, whom perhaps his lordship had some reason to conceal, 'because,' said he to the earl, 'if your lordship were as well acquainted with the customs of Scotland as I am, you had undoubtedly known this among others—*Show me the man, and I shall show you the law*,' giving him to understand that the law in Scotland could protect no man, if either his purse were empty, or his adversaries great men, or supported by great ones."*

One peculiar means of favouring a particular party was then in the power of the presiding judge: he could call a cause when he pleased. Thus he would watch till one or more judges who took the opposite view to his own were out of the way, either in attendance on other duties, or from illness, and then calling the cause, would decide it according to his predilection. Even the first President Dalrymple, afterwards Viscount Stair, one of the most eminent men whom the Scottish law-courts have ever produced, condescended to favour a party in this way. An act, enjoining the calling of causes according to their place in a regular roll, was passed in the reign of Charles II.; but the practice was not enforced till the days of President Forbes, sixty years later. We have a remarkable illustration of the partiality of the bench, in a circumstance which took place about the time of the Revolution. During the pleadings in a case between Mr Pitilloch, an advocate, and Mr Aytoun of Inchdairnie, the former applied the term *briber* to Lord Harcarse, a judge seated at the moment on the bench, and who was father-in-law to the opposite party. The man was imprisoned for contempt; but this is not the point. Not long after, in this same cause, Lord Harcarse went down to the bar in his gown, and pleaded for his son-in-law Aytoun!

About that period, a curious indirect means of influencing the judges began to be notorious. Each lord had a dependent or favourite, generally some young relative practising in the court, through whom it was understood that he could be prepossessed with a favourable view of any cause. This functionary was called a *Peat* or *Pate*, from a circumstance thus related in Wilkes's North Briton:—"One of the former judges of the Court of Session, of the first character, knowledge, and application to business, had a son at the bar, whose name was Patrick; and when the suitors came about, soliciting his favour, his question was, 'Have you consulted *Pat*?' If the answer was affirmative, the usual reply of his lordship was, 'I'll inquire of *Pat* about it; I'll take care of your cause; go home and mind your business.' The judge, in that case, was even as good as his word, for, while his brother judges were robing, he would tell them what pains his son had taken, and what trouble he had put himself to, by his directions, in order to find out the real circumstances of the dispute; and as no one on the bench would be so unmannerly as to question the veracity of the son, or the judgment of the father, the decree always went according to the information of *Pat*. At the present era, in case a judge has no son at the bar, his nearest relation (and he is sure to have one there) officiates in that station. But, as it frequently happens, if there are *Pats* employed on each side, the judges differ, and the greatest interest—that is, the longest purse—is sure to carry it." There is a rhyme of the latter part of the seventeenth century, satirising the three sons of George first Earl of Melville:—

"Three brave sons and all gallant statesmen,
There's Crooked Son, and Wicked Son, the third son is a *Pateman*,
And if your purse be full enough, it will end all debate, man."

This Pateman was James Melville of Balgarvie: his two elder brothers were successively Earls of Melville. There is another, satirical poem of the same era, entitled "Robert Cook's Petition to the Lords of Session against the Peats." It is curious and humorous; but

* "Anecdotes of the Early Administration of Justice in Scotland;" being a paper in the curious miscellany entitled "The Court of Session Garland. Edinburgh, Thomas Stevenson, 1839."

* A Moral Discourse on the Power of Interest. By David Abercromby, M.D. London, 1691. p. 60.

in such matters one does not know how much to believe. The writer, after stating

"That he's likely to starve unless he's made a peat,"

wishes to know

"Whose peat he must be:
The President's[1] he cannot, because he has *three*.
And for my lord Hatton,[2] his son now Sir John
By all is declared to be peattle patron.
It's true my lord Register[3] at first did appear
A vacant place to have, but your petitioner doth fear,
For no other end did his brother of late
His ensign's place sell, but to be made a *pate*.
Old Nevoy[4] by all is judged such a sot,
That his *peatship* could ne'er be thought worth a groat;
Yet John Hay of Murie, his *peaty* as I hear,
By virtue of his daughter, makes thousands a-year
Newbyth[5] heretofore went snips with the *peats*,
But, having discovered them all to be cheats,
Resolves for the future his son Willie Baird
Should be *peat* for his house, as well as young la', &c.
My lord Newton,[6] a body that gladly would live,
Is ready to take whate'er men would give, &c.
Who wisely considers when *peat* to himself,
He avoids all danger in parting the pelf."

He then concludes his petition with craving

"To be a peat to some peat,
Or in Pittenweem's language to make his peat's meat."

At the Union, a strong sense of the partiality of the Court of Session pervaded the public mind in Scotland, and it was in consequence of this feeling that an appeal to the House of Lords was then established. In a pamphlet of that time, in which the appeal was ably contended for, the absolute power hitherto enjoyed by the Court of Session was said to have filled the nation with discontent. "What shall they think," says this writer, "of the absolute power, who observe that men take not ordinarily their measures according to the justice or injustice of their suits, but their *influence and interests with the lords*, adhering to the old compend of the Scots law, *Show me the man, and I'll show you the law*." From this time, moreover, the national feelings to which the evil was in some measure to be traced, began to decline. Formerly, Scotland was a small, secluded country, of little population, and yet always placed in competition with a powerful and populous one. Hence, an intense self-love, like that which animates Holland at this day, took possession of it. Accustomed to look at every thing through the spectacles of national prepossession, and to defend every thing Scotch without the least regard to its real merits, it is not wonderful that men became affected by still narrower considerations, that they loved their own relatives too well to do justice upon them, and would stand by a friend not only in promoting his legitimate welfare, but in wreaking out his worst passions. It was not with them "God defend the right," but "God defend the good Hamilton's regiment, right or wrong." But during the last century, when Scotland had become almost an integral part of another country, these prejudices gradually gave way. Public morality improving at the same time from the operation of other causes, partiality of judgment on the bench was gradually extinguished.

We bring the subject to a conclusion by a quotation from the Court of Session Garland:—"Even so far down as 1737, traces of the ancient evil may be found. Thus, in some very curious letters which passed between William Foulis, Esq., of Woodhall, and his agent Thomas Gibson of Dury, there is evidence that private influence could even then be resorted to. The agent writes to his client, in reference to a pending lawsuit (23d November 1735):—'I have spoke to Strachan and several of the lords, who are all surprised Sir F(rancis Kinloch)[7] should stand that plea. By Lord St Clair's advice, Mrs Kinloch is to wait on Lady Cairnie to-morrow, to cause her ask the favour of Lady St Clair to solicit Lady Betty Elphingston and Lady Dun. My lord promises to back his lady, and to ply both their lords, also Leven and his cousin Murkle.[8] He is your good friend, and wishes success; he is jealous Mrs Mackie will side with her cousin Beatie. St Clair says, *Leven[9] has only once gone wrong upon his hand since he was a Lord of Session*. Mrs Kinloch has been with Miss Pringle, Newhall. Young Doctor Pringle is *a good agent there*, and discourses Lord Newhall[10] *strongly on the law of nature*,' &c.

Again, upon the 23d of January 1737, he writes:—'I can assure you that when Lord Primrose left this town, he staid all that day with Lord J(ustice) C(lerk),[11] and went to Andrew Bromfield at night, and went off post next morning; and what made him despair of getting any thing done was, that it has been so long delayed, after promising so frankly, when he knew the one could cause the other trot to him like a penny-dog, when he pleased. But there's another hindrance: I suspect much Penty[1] has not been in town as yet, and I fancy it's by him the other must be managed. The Ld. J(ustice) C(lerk) is frank enough, but the other two are —— clippies. I met with Bavelaw and Mr Wm. Tuesday last. I could not persuade the last to go to a wine-house, so away we went to an aquavity-house, where I told Mr Wm. what had passed, as I had done before that to Bavelaw. They seemed to agree nothing could be done just now, but to know why Lord Drummore[2] dissuaded bringing in the plea last winter. *I have desired Lord Haining to speak*, but only expect his answer against Tuesday or Wednesday.'

It is not our intention to pursue these remarks further, although we believe that judicial corruption continued long after the Union. We might adduce Lord President Forbes as a witness on this point, who, one of the most upright lawyers himself, did not take any pains to conceal his contempt for many of his brethren. A favourite toast of his is said to have been —'here's to such of the judges as don't deserve the gallows.'[3] Latterly, the complaint against the judges was not so much for corrupt dealing, with the view of enriching themselves or their 'pet' lawyer, but for weak prejudices and feelings, which but ill accorded with the high office they filled.

These abuses, the recapitulation of which may amuse and instruct, are now only matter of history—the spots that once sullied the garments of justice are effaced, and the old compend, 'Show me the man, and I'll show you the law,' is out of date."

PEROUROU, OR THE BELLOWS-MENDER.[4]

I WAS born in one of those little hamlets situated in the neighbourhood of Montelemart, in the south of France. My father had made many a fruitless effort to raise himself above indigence. His last resource in his old age arose from the exercise of a talent which he had acquired in his youth, that of bellows-mending. This, too, was the humble profession which I was destined to follow. Being endowed by nature with quick and lively faculties, both of mind and body, I soon grew skilful in my trade, and, having an ambitious spirit, set off for Lyons, to prosecute my calling there. I was so far successful, that I became a great favourite with the chamber-maids, who were my chief employers, and whom my good looks and youth interested in my favour.

One evening, however, as I was returning home after my day's rounds, I was accosted by four well-dressed young men, who threw out a few pleasantries on my profession, which I answered in a style of good-humoured raillery, that seemed to surprise and please them. I saw them look significantly at one another, and heard one of them say, "This is our man." The words alarmed me, but my fears were speedily dispelled. "Perourou,"[5] said one, "you shall sup with us. We have a scheme which may do you good. If you do not agree to it, we shall not harm you, but only ask you to keep our secret. Do not be afraid, but come with us." Seeing all of them to be gentlemen in appearance, I did not hesitate to accept the offer. They conducted me through a number of cross-streets, and at last entered a handsome house, in an apartment of which we found six other young men, who appeared to have been waiting impatiently for my conductors. A few explanatory words passed respecting me, and soon afterwards we sat down to supper. Being young, thoughtless, and light-hearted, I gave way to the enjoyment of the hour, and vented a succession of pleasantries which seemed highly to please my chance companions. But they all grew silent and thoughtful ere long, and finally one of them addressed me thus: "The ten persons whom you see before you," said he, "are all engravers and citizens of Lyons. We are all in good circumstances, and make a very handsome living by our occupation. We are all attached to one another, and formed a happy society, till love stepped in to disturb us. In the street of St Dominic there lives a picture-merchant, a man of respectable station, but otherwise an ordinary personage. He has, however, a daughter, a creature possessed of every accomplishment, and endowed with every grace, but all whose amiable qualities are shaded by one defect—pride, insupportable pride. As an example of the way in which this feeling has led her to treat others, I will own that I myself paid my addresses to her, and was approved of by her father, as one by birth and circumstances much their superior. But what was the answer which the insolent girl herself gave to my suit? 'Do you think, sir, that a young woman like me was born for nothing better than to be the wife of an engraver?'

Her charms and her pride have been equally felt by us all," continued the speaker, "and we hold that she has cast a slur both on us and our profession. We therefore have resolved to show this disdainful girl, that she has not indeed been born to the honour of being the wife of an engraver. Now, will you (addressing me) venture to become the husband of a charming woman, who to attain perfection wants only to have her pride mortified and her vanity punished?" "Yes," answered I, spurred on by the excitement of the moment; "I comprehend what you would have me do, and I will fulfil it in such a manner that you shall have no reason to blush for your pupil."

The three months that followed this strange scene were wholly occupied with preparations for the part I was to perform. Preserving the strictest possible secrecy, my confederates did their best to transform me from a plain bellows-mender into a fine gentleman. Bathing, hairdressers, &c., brought my person to a fitting degree of refinement, while every day one or other of the engravers devoted himself to the task of teaching me music, drawing, and other accomplishments; and nature had furnished me with a disposition to study, and a memory so retentive that my friends were astonished at the progress of their disciple. Thoughtless of all else, I felt the deepest delight in acquiring these new rudiments of education. But the time came when I was to be made sensible, for the first time, of the true nature of the task I had entered upon. The confederates at length thought me perfect, and in the character of the rich Marquis of Rouperon, proprietor of large estates in Dauphiny, I was installed in the first hotel in Lyons. It was under this title that I presented myself to the picture dealer in St Dominic Street. I made a few purchases from him, and seemed anxious to purchase more. After a little intercourse of this kind, he sent me word one morning that he had just received a superb collection of engravings from Rome, and begged me to call and see them. I did so, and was received not by him, but by Aurora. This was the first sight I had got of that lovely girl, and, for the first time in my life, my young and palpitating heart felt the power of beauty. A new world unfolded itself before my eyes; I soon forgot my borrowed part; one sentiment absorbed my soul, one idea enchained my faculties. The fair Aurora perceived her triumph, and seemed to listen with complacency to the incoherent expressions of passion which escaped my lips. That interview fixed my destiny for ever! The intoxication of enjoying her presence hurried me on, blind to every thing else. For several months I saw her every day, and enjoyed a state of happiness only damped by the self-accusing torments of solitary hours, and by the necessity I was under of regularly meeting my employers, who furnished me with money, jewels, every thing I could require. At length Aurora's father gave a little fête in the country, of which I was evidently the hero. A moment occurred, in which, thoughtless of all but my love, I threw myself a suitor at her feet. She heard me with modest dignity, while a tear of joy, which dimmed for a moment her fine eyes, convinced me that pride was not the only emotion which agitated her heart—yes, I discovered that I was beloved!

I was an impostor, but, heaven is my witness, I deceived her not without remorse. In her presence I remembered nothing but herself; but in the stillness of solitude, sophistry and passion disappeared, leaving a dreadful perspective before me. When I associated the idea of Aurora with the miserable fate which was soon to fall upon her, when I figured to myself her delicate hands employed in preparing the coarsest nourishment, I shrunk back with horror, or started up covered with a cold perspiration. But self-love would come to my aid, and I thought, if she truly loved me, she might yet be happy. I would devote my life, I swore, to the task of strewing flowers along her path. But all my hopes, all my fears cannot be told. Suffice it to say, that her father believed me when I represented my estates as being in Dauphiny, a distant province. I would not allow a farthing of Aurora's portion to be settled otherwise than on herself. So there was one baseness of which I was not guilty. We were married. At the altar, a shivering ran through all my veins—a general trepidation seized my whole frame—and I should infallibly have sunk to the earth, if a flood of tears had not come to my relief. The silly crowd

---

[1] Lord Stair.
[2] Mr Charles Maitland, afterwards Earl of Lauderdale.
[3] Sir Archibald Primrose.
[4] Sir David Nevoy, admitted a judge in 1661.
[5] Sir John Baird, made a judge in 1684.
[6] Sir David Falconer. This gentleman was grandfather to David Hume by the mother's side.
[7] He died 2d March 1747. His grandfather was an Edinburgh clothier, who, acquiring considerable wealth, became Dean of Guild, and subsequently Lord Provost of Edinburgh. Sir Walter Scott used to tell an anecdote of one of the family who set up as a man of fashion, and who being present at a meeting of the freeholders of Haddington, took occasion to rally an old gentleman who was there upon the antique cut of his garments, remarking that he was very much delighted with their elegance and fashion. "Deed, my man (was the reply), *so you ought*, for they were made by your grandfather."
[8] John Sinclair of Murkle, appointed a Lord of Session in 1733.
[9] Alexander Leslie, advocate, succeeded his nephew as fifth Earl of Leven, and fourth Earl of Melville, in 1729. He was named a Lord of Session and took his seat on the bench on the 11th of July 1734. He died 2d February 1754.
[10] Sir Walter Pringle of Newhall, raised to the bench in 1718.
[11] Andrew Fletcher of Milton was appointed, on the resignation of James Erskine of Grange, Lord Justice-Clerk, and took his on the bench 21st June 1735.

[1] Probably Gibson of Pentland.
[2] Hew Dalrymple of Drummore, appointed a Lord of Session in 1726.
[3] A story is told of one of the judges of the old school, which, if correct, indicates, that not quite a century since there still did exist some of the old leaven. It is said that a law-suit had for some time depended between the magistrates of a certain circuit town and some neighbouring proprietor, which had been brought to a termination unfavourable to the wishes of the former, by the admirable management of one of the judges. This eminent person, who happened to be a justiciary judge, had occasion officially to visit the town in question, where he was received with becoming gratitude and attention by the gratified magistrates. At a feast—whether given by the judge or his clients we forgot—the magistrates gravely thanked the learned lord for his kind exertions, and trusted he would continue his patronage. My lord smiled and bowed, and looked particularly amiable; presuming on his good nature and complacent demeanour, one of the number ventured to hint, that his lordship's services might again be required, as they, emboldened by their former success, had commenced another new suit, and he was humbly requested to carry them through with that case also. "Na, na, I canna do that," exclaimed my lord. "Why?" exclaimed all the astonished magistrates, amazed probably at what they conceived to be a most uncalled-for scruple of conscience. "Because," rejoined the judge, "you're too late; I've already given my promise to the opposite party."
[4] In addition to the extraordinary and intrinsic interest which attaches to the above story of real life in France, and which we abridge from the original narrative, it possesses the additional attraction of having afforded the groundwork of a very popular piece, by one of our most distinguished modern English authors. That gentleman has himself made an admission of this fact. We shall not anticipate the interest of the story, by the mention of names at present. Perourou, or the Bellows-Mender, relates his own history.
[5] Perourou is a name familiarly given to bellows-menders in Lyons, probably from their mode of crying in the streets.

Digitized by Google

around mistook the last cry of expiring virtue for an excess of sensibility.

A fortnight after the marriage, as had been arranged by my employers, at whose mercy I was, we started for Montelemart, my unfortunate bride believing that we were going to a far different place. Several of the engravers were themselves our attendants, disguised, and acting as couriers to our magnificent equipage. The awful moment of exposure arrived; and when it did come, it proved more terrible than even I had anticipated. The engravers made the equipage be drawn up before a mean and miserable cottage, at the door of which sat my humble but venerable father. Now came the awful disclosure. The poor, deceived, and surprised Aurora, was handed out. The engravers came up; they pulled off their disguises; and he whom Aurora had so pointedly refused, exclaimed to her, "No, madam, no, you have not been born or brought up for an engraver; such a lot would have done too much honour to you. A bellows-mender is worthy of you, and such is he whom you have made your husband!" Trembling and boiling with rage, I would have replied; but the engravers entered the coach, and, like the shifting of a scene in a theatre, all our grandeur disappeared with them!

Poor Aurora scarcely heard what had been said. The truth had flashed upon her, and she sank back in a swoon. Recollect that I had now acquired a considerable share of sensibility and delicacy from my late life. At that cruel moment I trembled alike at the thought of losing the woman I adored, and of seeing her restored to life. I lavished on her the most tender cares, yet almost wished that those cares might be unavailing. She recovered at length her senses, but the moment that her frenzied eye met mine, "Monster!" she exclaimed, and again became insensible. I profited by her condition to remove her from the sight of those who had gathered around, and to place her on a humble straw couch. Here I remained beside her till she opened her eyes; mine shrunk from her glance. The first use she made of speech was to interrupt the broken exclamations of love, shame, and remorse, which fell from my lips, and to beg to be left alone for a time. The niece of the curate of the parish, however, who chanced to be by, remained beside her, and the poor young victim of my villany, for she was but eighteen, seemed glad of her attentions.

How shall I describe the horrible night which I then passed? It was not on my own account that I suffered or feared. She, she alone was in my thoughts. I dreaded above all, for my love was still predominant, to see that heart alienated whose tenderness was necessary to my existence, to read coldness in that eye on whose look my peace depended. But could it be otherwise? Had I not basely, vilely darkened all the prospects of her life, and overwhelmed her with intolerable shame and anguish? That night was a punishment that would almost have wiped out any lesser sin. Frequently, it may be believed, I sent to know how Aurora was. She was calm, I was told; and, indeed, to my surprise she entered in the morning the room where I was. She was pale, but collected. I fell before her on the ground, and spoke not. "You have deceived me," said she; "it is on your future conduct that my forgiveness shall depend. Do not take advantage of the authority you have usurped. The niece of the curate has offered me an asylum. There I will remain till this matter can be thought of with calmness."

Alas, these were soothing but deceitful words! Within a day or two after this event, the interval of which I spent in forming wild hopes for the future, I received at once two letters. The first was from the engravers, the causes of my exaltation and my fall. They wrote to me that "my acquaintance had begot in them a friendship for me; that they had each originally subscribed a certain sum for the execution of their plot; that they wished not to carry their revenge too far; and that they would supply me with money and every thing necessary for entering into some business, and ensuring the creditable support of myself and Aurora." The other letter was from Aurora. "Some remains of pity," she said, "which I feel for you, notwithstanding your conduct, induce me to inform you that I am now in Lyons. It is my intention to enter a convent, which will rid me of your presence; but you will do well to hold yourself in readiness to appear before every tribunal in France, till I have found one which will do me justice, and break the chains in which you have bound your victim."

This letter threw me into despair. I hurried to the curate's, but could learn nothing of Aurora's retreat, although I became assured that the curate and his niece, despising my mean condition, had been the urgent advisers of the step Aurora had taken. I then hastened to Lyons, where the affair had now created a great sensation. I lived unknown, however, and obscure, and saw only the engravers, who, notwithstanding the base plot which they had through me effected, were men of not ungenerous dispositions. As they had driven me out of my former means of livelihood, I conceived myself at liberty to accept a sum which they offered me to enter into trade with. They advised me how to dispose of it at once, and I laid it out in a way which speedily, and without trouble to me, augmented it greatly. Meanwhile, the father of Aurora had made every preparation for annulling the marriage. This could only be done by publicly detailing the treachery which had been practised. Never, perhaps, was court-house more crowded than that of Lyons on the day on which the case was heard. Aurora herself appeared, and rivetted the eyes of all present, not to speak of my own. Unknown and unseen, I shrunk into a corner, like a guilty thing. The counsel for Aurora stated the case, and pleaded the victim's cause with so much eloquence as to draw tears from many eyes. No counsel arose for me, and Aurora, who merely sought a divorce, without desiring to inflict that punishment which she might easily have brought down on the offenders, would at once have gained her suit, had not one man arisen to speak for me. It was one of the engravers, the one who had been refused, as mentioned, by Aurora. He made a brief pleading for me; he praised my character, he showed and confessed how I had been tempted, and how I fell. At last he concluded by addressing Aurora. "Yes, madam," said he, "the laws may declare that you are *not* his wife, but you *have been* the wife of his bosom. The contract may be annulled, and no stain may rest upon you. But a stain may be cast on another. Can you, will you throw the blot of illegitimacy upon one even more innocent than yourself?" The appeal was understood, and was not made in vain. The trembling Aurora exclaimed, "No, no!" and her tears fell fast as she spoke.

The marriage was not annulled—was no longer sought to be annulled. But while the contract (which I had signed with my own name, believed by them to be the family name of the Marquis de Rouperen) was declared valid, it was also determined that Aurora should remain unmolested by the adventurer who had so far deceived her. Every legal precaution was taken that I should have no control over her or her affairs. After this event I did not remain long in Lyons, where I heard my name branded every where with infamy. Master, by the means I have related, of a considerable sum, I went to Paris, where I assumed a feigned name. I entered into business, and, more to drown remembrance than from any other cause, pursued it with an ardour which few have evinced in the like circumstances. The wildest speculations were those which attracted me most, and fortune favoured me in a most remarkable way. I became the head of a flourishing commercial house, and ere five years passed away, had amassed considerable wealth. At times, however, the remembrance of my wife threw me into fits of anguish and despair. I dared not think, nevertheless, of attempting to go near her, until it chanced that I had it in my power very materially to serve a banker in Lyons, who pressed me much to pay him a visit. After much uneasiness and anxiety, I resolved to accept the invitation. Once more I entered Lyons, and on this occasion with an equipage which was not borrowed, though as handsome as my former one. My friend the banker, on being questioned, told me that Aurora still lived in the convent, and was admired for her reserved propriety of conduct, and for her unremitting attention to her child—her boy; but he told me that her father had just died, leaving her almost dependent on the charity of the abbess. This recital excited in me the most lively emotions. I took an opportunity soon afterwards of visiting one of the engravers, who scarcely knew me, changed as I was, but who received me warmly. I requested him to assemble the creditors of the father of Aurora, and to pay his debts, giving him funds for that purpose. I told him also to purchase some pieces of furniture which I knew to be prized by Aurora.

Every hour of my stay in Lyons strengthened my desire to see my wife, and at least to fold my boy in my arms. The feeling became at length irresistible, and I revealed myself to the banker, beseeching him to find some way of taking me to the convent. His astonishment to find in me the poor much-spoken-of bellows-mender, was beyond description. Happily, however, he was acquainted with the abbess, and assured me that it was easy for me at least to obtain a sight of my wife. Ere an hour passed away, my friend had taken me there. I was introduced as a Parisian merchant, and beheld, with emotions unspeakable, my wife seated in the convent-parlour, with a lovely child asleep on her knee, in conversation with her venerable friend. Aurora, now twenty-three years of age, seemed to me more lovely than ever. I had purposely wrapped myself closely up, and she knew me not, though I observed an involuntary start when she first saw me, as if my presence reminded her of some once familiar object. I could not speak; my friend maintained all the conversation. But the boy awoke. He saw strangers present, and descended from his mother's knee. Looking at my friend and myself for a moment, he came forward to me. Oh! what were my feelings when I found myself covered with the sweet caresses, the innocent kisses, of my child! An emotion which I had no power to subdue, made me rise hastily, and throw myself, with my child in my arms, at the feet of my pale and trembling wife. "Aurora! Aurora!" I exclaimed, in broken accents, "your child claims from you a father! Oh, pardon! pardon!" The child clasped her knees, and seemed to plead with me. Aurora seemed ready to faint. Her lips quivered, and her eye was fixed, as if in stupor, upon me; but a flow of tears came to her relief, and she answered my appeal by throwing herself into my arms. "I know not," she sobbed, "whether you again deceive me; but your child pleads too powerfully. Aurora is yours."

This event closes my history. I found Aurora much improved by adversity, and have tasted a degree of happiness with her such as no penitence for my past offences could ever make me deserving of. One only incident in my history after my reconciliation with Aurora seems to be worthy of mention. I took my son and her with me to Paris, but at the same time, seeing it to be my wife's wish, bought a small country house for her near Lyons. Sometimes we spent a few weeks there, and on one occasion she invited me to go down with her to be present at a fête for which she had made preparations. Who were our guests? The ten engravers, who were the original cause of all that had passed! It was indeed a day of pride to me, when I heard Aurora thank them for the happiness, which, under the agency of a wonder-working providence, they had been the means of conferring upon her.

[Our readers, at least many of them, will have detected in this story the foundation of Sir Edward Lytton Bulwer's "Lady of Lyons," one of the most popular of our modern dramatic pieces.]

SKETCHES OF SUPERSTITIONS.

THE ANGLO-SAXONS AND THEIR SUPERSTITIONS.

THE invasion of the Romans, which took place shortly before the commencement of the Christian era, had some influence, doubtless, in effacing the mythological system of the Druids, and in establishing a new order of things in the island. By the Romans, however, the country was not, properly speaking, colonised; they only occupied it as a military station important to them from its position and other circumstances. Very different was the case with respect to the successors of the Romans in the occupation and dominion of the south of Britain. These new invaders were the Anglo-Saxons, a race whose blood, language, and institutions, became so extensively and intimately intermixed with those of the former population, as almost to blot out all traces of the original Celtic peculiarities, and to create a new people, with new characters, customs, and laws.

The Anglo-Saxons were a branch of the great race which emigrated at an early period into central Europe from Asia, and which has received the various names of Scythian, Gothic, and German or Teutonic. The Saxon branch settled several centuries before the Christian era, to the west of the mouth of the Elbe, occupying also the islands of Heligoland, Busen, and others in that estuary. The name of Saxon is supposed to be derived from the word Sakai-suna, signifying sons of the Sakai or Sacae, a great and primitive branch of the Scythian stock. About the birth of Christ, the Saxons had become an important and spreading people, devoted to maritime affairs. Other neighbouring Teutonic tribes, and particularly two called the Angles and Jutes, formed an alliance with the Saxons, and augmented their strength. The Angles, destined to give a permanent name to the south of Britain and its people, were so called from the district of Anglen in which they lived, and which corresponded in site with the modern duchy of Sleswick. Feeling their power, these united tribes began to make excursions by land and sea, which terrified the Romans in the third and fourth centuries. In that period the Saxons spread from the Elbe to the Rhine. It was in the middle of the fifth century that they invaded Britain, which was at that time independent, the preceding conquerors having retired shortly before. In about a century afterwards, the whole of England, so called from the kingdoms of the Angles, had fallen into their hands, Wales excepted; and the conquerors had established eight separate kingdoms, usually called the heptarchy, but which should be named the octarchy. These kingdoms existed nearly to the time of Alfred, who reigned alone in England, and died at the close of the ninth century.

The settlement of the Anglo-Saxons introduced a new order of superstitions into Britain. Like the Scandinavians of the north, they deduced their descent from Odin, whom they worshipped along with Thor, Friga, or Freya, and other imaginary deities of the Gothic people. This savage mythology they brought with them to England, where it dispossessed the equally barbarous religion of the Druids, and existed for a short time till it disappeared before the advances of Christianity. Besides reverencing the prime gods of their idolatry, they worshipped idols emblematic of the sun, moon, earth, and various seasons and circumstances. In particular, they sacrificed to one goddess called Eostre, in the month of April, and her name still expresses the festival of Easter in the Christian church. In token of devotional feelings towards the sun, they solemnised a festival to that luminary on the day in December in which the days began to lengthen, a log of wood being burnt on the occasion as an emblem of returning light and heat. From this ancient practice, therefore, may be traced the custom of burning the Yule-log at Christmas, which is still continued among other observances of the olden time in various parts of England.

It is learned from legendary poems, which formed the only literature of the Anglo-Saxons, that they believed the world and all created things would ultimately be destroyed by fire, but that the just would be resuscitated, and enjoy existence in some new form. Strange to say, however, Odin and most of the good deities were to fall before the wicked ones, in attempting to resist this general destruction of earthly things. In one of the most ancient of these poems, the day of final doom is spoken of in the fol-

Digitized by Google

lowing impassioned verses. Hrynn, Muspell, Loke, the giants, and the wolf, are the evil spirits with whom Odin fights :—

The giant Hryan rides from the east.
The sea swells.
The serpent that surrounds the world
Turns himself with gigantic might.
The snake moves the seas.
The eagle clamours:
It tears the dead with its beak.
The ship of nails is loosened.
It floats from the east.
The sons of Muspell come
Along the deep:
Loke governs them.
The raging people press on.
What occurs among the gods?
What among the Elfi?
The world of the giants resounds.
The gods are in council.
The dwarfs groan
Before their stone doors.
They know the paths of the rocks.
Do you know what is happening?
Surtur is coming from the south
With Fire, his companion:
Like the sun shines his sword:
The sword of the god of slaughter.
The rocks threaten destruction.
The giantesses are wandering.
Men tread the path of Hela.
The heavens are cleft asunder.
Then to Hlina
Will come a second grief,
When Odin goes forth
To battle with the wolf.
And the slayer of Bela:
The fair one with Surtur,
Then will fall,
The husband of Freya.
Thor will kill the great serpent.
All mankind
Will disappear from the world.
The sun darkens.
The sea overwhelms the earth.
The peaceful stars
Vanish from the sky.
Fire rages:
To the end of all things,
The ascending flame
Plays on the heavens.
Then will be seen again
A green world come up
Out of the sea.
There the just people will dwell,
And for endless days
Enjoy pleasure.

We may learn from these lines, were other authority wanting, that among the Anglo-Saxon superstitions was included a belief in giants, dwarfs, and elves, all of a spiritual order, but partaking in some degree of human attributes and feelings. In the term *elfi* or *elves*, we have one of the earliest traces on record of those ideal fairy tribes who afterwards figured in the familiar superstitions of the British islands. The Gothic nations, of whom the Anglo-Saxons were a branch, had various orders of elves, who were understood to haunt the fields, the woods, mountains, and waters, and received denominations accordingly, as field-elfin, dun-elfin, &c. Whether this varied race of spirits originated in the east, whence so many superstitions spread into ancient Europe, is not satisfactorily known, although it is probable that they did, and were of the same genus as the *peri* of the Persians, a being not dissimilar in character to our fay or fairy. Both in the Scandinavian and Anglo-Saxon superstitions, elves formed an important order of beings, not unlike in character the demi-gods, naïads, driads, and other imaginary spirits of the Greek and Roman mythologies, and like them exerted a certain influence over human affairs.

Besides a belief in these mysterious elfin tribes, the Anglo-Saxons brought with them to England the still darker and more dangerous doctrines of witchcraft and divination, before which the reasoning powers of the people quailed, and all intellectual advancement was impeded. The general introduction of Christianity about the year 600, abolished, as a matter of course, the more gross pagan observances, but failed to extirpate the familiar and less obvious superstitions of the people. Witchcraft, wizardry, magic, divination, preparations of charms, and other mystic follies having no foundation in truth, continued to flourish, although opposed both by the more intelligent clergy and the kings. It is from the statutes, indeed, which Alfred, Canute, and other monarchs, passed for the prevention of magical practices, that we chiefly know their nature and extent. *Wiglaer*, a wizard, and *wicca*, a witch, are persons severely denounced. Penalties are enjoined if any one should destroy another by wiccecraeft. They appear to have used philtres, for it is declared a crime in any one to use witchcraft, or potions to produce another's love. Canute enjoins his people not to worship fire or floods, wells or stones, or any sort of tree; not to frame death-spells, either by lot or otherwise; and not to effect any thing by phantoms. Wizards, we also learn, pretended to the power of letting loose tempests, and controlling the visible operations of nature.

"Their prognostics (says Mr Sharon Turner, in his history of the Anglo-Saxons) from the sun and moon, from thunder, and from dreams, were so numerous, as to display and perpetuate a most lamentable debility of mind. Every day of every month was catalogued as a propitious or unpropitious day for certain transactions. We have Anglo-Saxon treatises which contain rules for discovering the future fortune and disposition of a child from the day of his nativity. One day was useful for all things; another, though good to tame animals, was baleful to sow seeds; another favourable to let blood; and so on." A few specimens from the statements of the Anglo-Saxon writers themselves on these subjects, may amuse the reader :—"On the first night of the moon, go to the king, and ask what you like. [If we may guess from his statutes, Canute, at least, would have ordered the asker a sound whipping for his credulous folly.] If it thunder in the evening, some great person is born. If new year's day be on a Monday, it will be a grim and confounding winter. When you see a bee fast in a briar, wish what you please, and it will not fail you." Dreams were to the Anglo-Saxons a great source of prognostics. They had their regular interpretations and applications, and served instead of the lessons of experience, or deductions of reason, in governing the affairs and actions of those who trusted in them. How far they were qualified to answer such a purpose, may be imagined from the following specimens :—"Whatever we dream on the first night of the old (waning) moon will become joyful to us. If a man dream that he hath a burning candle in his hand, it is a sign of good."

If any thing were required to show us how deeply such superstitions had become rooted in the minds of the Anglo-Saxon people, the desired proof would be afforded by the fact that these are the very fancies which prevail among the illiterate part of their descendants at this day. In reading such dream-interpretations as the above, which refer to a period more than one thousand years back, one would imagine that he had before him the silly almanacks and "books of fate" which lie in the window-nooks of the peasantry at this day. This feature in the Saxon character, when viewed seriously, must be regarded as a most unfortunate one, "having tended to keep their minds in the dreary bondage of ignorance and absurdity," and materially impeded the free exercise of reason, and the growth of knowledge.

Like most rude nations, the Anglo-Saxons regarded all diseases as the inflictions of malignant spirits. Hence their medical science consisted in the use of charms and incantations—a spell to remove a spell. The venerable Bede, who was born in 673, and from whom much of our knowledge regarding this part of English history is derived, tells us that the people, in times of disease, resorted to the "erring medicaments of idolatry, as if to restrain God's chastisements by the incantations, phylacteries, or any other secret of the demoniacal arts." In some respects, the Anglo-Saxons seem to have had notions of disease scarcely more enlightened than those of the poor negro of modern days, who begs a written scrap of paper from the white traveller, under the impression that it will prevent or cure all his ills. Such would certainly be quite as efficacious as the following piece of semi-Latin rigmarole, which formed the Anglo-Saxon charm to cure a *fever* :—

"In nomine dni nri Ihu Xpi tera tera tera testis contera taberna gise ges mande leis bois eis andies mandies moab leb lebes Dns ds adjutor sit illi ill eax filiax artifex sum."

Some of the words here, such as "Dns ds," which are obviously contractions of "dominus deus" (Lord God), would lead us to believe the whole to be a prayer to the Deity; but there are other words, again, such as "andies mandies," which are not interpretable by our poor Latinity, and which incline us to suppose that the drawer up of the charm had been much in the situation of some of our European travellers, who, in making out African paper-charms, put down the day of the month, or their own names, or whatever most readily occurred to them. Even where the Anglo-Saxons knew and practised more rational modes of cure for disease, their value was almost destroyed, in consequence of the superstitious folly which governed their use. Venesection, for example, was often employed; but then it was hurtful to bleed, according to an Anglo-Saxon manuscript, on the 2d, 3d, 5th, 6th, 9th, 11th, 15th, 17th, and 20th days of the month, and equally so, excepting at *certain hours*, on the 10th, 13th, 19th, 21st, 23d, 24th, 25th, 26th, and 28th days. Did ever folly exceed this? A man seized with apoplexy on the night of the first day of the month, would be left unrelieved till the morning of the fourth, when the favourable hour for bleeding came round. The following recipe, which was designed for the cure of gout, affords a specimen of the medical knowledge of those days :—"Take the herb datulus (tuberose isis). Take the heads of it, and dry them very much, and take thereof a penny-weight and a half, and the pear-tree and roman-bark, and cummin, and a fourth part of laurel-berries, and of the other herbs half a penny weight of each, and six pepper-corns, and grind all to dust, and put two egg-shells full of wine. This is true leech-craft. Give it to the man to drink till he is well."

The introduction of Christianity, as has been mentioned, failed to dissipate the familiar superstitions of the English; a circumstance which can excite no surprise, as no pains were taken to enlighten the understandings of the people, or make them acquainted with the true causes of natural phenomena. We accordingly find, that from the seventh till the sixteenth century, the belief in demons, spirits, lubber-fiends, and elves, of every shade and character, prevailed without intermission, and with no further challenge from the clergy than as being individually manifestations of the devil, on whom now the whole load of superstition was based. One goblin, in particular, formed the theme of innumerable legends. What was his name originally in continental Europe, whence he emigrated with the Anglo-Saxons, is of little consequence; in England he became known by the title of Father Rush, from a belief that he had on one occasion personated a monk or friar, and, to serve his own malignant purposes, had in that capacity long imposed on a religious brotherhood; afterwards, this appellation went out of repute, and he was popularly known and feared by the familiar name of Robin Goodfellow, and performed many useful services in the rural districts of England. It is not a little strange that both monks and clergy sanctioned these fancies, and increased their number by the propagation of legends, which we venture to say could not now receive the approbation of a single individual, lay or clerical, in England. Of these it is only necessary to mention the absurd stories which were fabricated and circulated respecting Dunstan, Abbot of Glastonbury, and afterwards Archbishop of Canterbury, who died in the year 988. When a boy, he is stated to have studied theology so sedulously as to reduce him to the point of death, when he was suddenly restored by some divine medicine sent to him by an angel in a storm. So extraordinary a circumstance could not but demand grateful thanksgivings, and Dunstan started from his bed, and ran with full speed towards the church. Satan met him in the way, surrounded with numerous black dogs, and endeavoured to defeat his pious intention. But Dunstan was not to be overcome; he instantly prayed for ability, and was enabled to cudgel the devil and his black dogs so effectually, that they left him, and the angel together; the latter of whom, finding the church door fastened, took up the pious youth in his arms, and conveyed him to his devotions through the roof. Another time the devil attempted to intrude himself upon St Dunstan's studies in his laboratory, but the saint speedily punished his impertinence, by taking from the fire his tongs, which were red hot, and with them seized the nose of the fiend, who was thereupon glad to make his escape. It is lamentable to think how such vain imaginations should have so long weighed upon the understandings of the people, and engrafted a habitual dread of the supernatural, which till this day exerts an influence over the untutored mind.

DOMESTIC GREENHOUSES:

FURTHER INFORMATION RESPECTING THEM.

An article on "Domestic Greenhouses," which appeared in the 375th number of the Journal, will be in the recollection of most of our readers. The sketch which we were able to afford of this very remarkable botanical repository, has, it appears, led several individuals to attempt something of the kind within their dwelling-houses, which have been less or more successful. Some more information, however, of a more explicit kind, is desired on the subject, and we willingly afford it, as far as in our power.

Any person, whether inhabiting the most humble or the most splendid dwelling, provided it be freely exposed to the sun's light, has it in his power to rear and cultivate a miscellaneous collection of plants, to enjoy the beauty of their appearance, and to watch their progress through all the stages of their growth, at an expense so insignificant as to be within the means of every man in very moderate circumstances. To do this he must provide an apparatus, consisting of a box, with a glass case over it, of a size according to his desires and means, from the capacity of a small trunk to that of an ordinary closet. We shall suppose he wishes one of a small size, to stand at a window in an apartment of limited dimensions. Procure a strong wooden box, three feet in length, one and a half feet in breadth, and nine or ten inches deep; no top is wanted; it should be painted, or otherwise prepared to resist damp. Two small holes for corks are to be made in the bottom. The ledges should be covered with lead or zinc, and slope inwards. Over the box is placed a glass case, resembling a garden forcing-frame in shape; it should measure 18 inches high up to the sloping top, and then the top or roof should slope inwards on all sides, to meet in the centre. This case must be framed with lead or zinc, whichever be the metal employed for the ledges of the box. (Difference of metal may cause a galvanic action injurious to the plants.) When great elegance and durability are required, brass is used, and the box is made of mahogany. The case must be made to fit with nicety upon the ledges of the box, and in such a way that moisture will flow down the inside of the case into the box. The case should have a door on one side, to open and shut at pleasure, but also to fit as nicely as possible; there must, in short, be no crevices to permit a free interchange of air betwixt the room and the interior of the case. The glass panes in the case should be fitted with care, and the putty well painted, to preserve it from the action of the moisture. The finer the glass is, the better will be the view of the

Digitized by Google

plants. When we add, that the box, with its glass cover, are to be placed on a four-footed stand or low table, in front of a window which is exposed to the sun during several hours of the day, the entire fabric of the apparatus has been described.

We now come to the preparation for the plants. Lay the bottom of the box with pieces of broken earthenware, to a depth of two inches, as an open subsoil. Next, lay a stratum of turfy loam an inch deep, and fill in the remainder of the space with good soil, mixed with a portion of peaty loam and sand. The artificial garden-plot is now ready to receive the plants. Set these in the usual manner, and then shower over them with a watering-pot from three to four gallons of water, till the soil be pretty well saturated, and the liquid runs off by the two openings in the bottom. When this is done, cork up the holes, place the case on the box, and the operation will be finished.

A question will here readily occur—what species of plants are best adapted for these domestic greenhouses? We are fortunately enabled to answer this inquiry by referring to a learned paper on the subject by Mr Ellis, which was read to the Botanical Society of Edinburgh, January 13, 1839, and afterwards published in the Gardener's Magazine, vol. xv., and also as a separate pamphlet. According to this gentleman's statement, the plants most suitable are "those which partake largely of a cellular structure, and possess a succulent character, and especially those which have fleshy leaves; whilst, on the contrary, the continued humidity is unfavourable to the developement of flowers of most exogenous plants, except such as naturally grow in moist and shady situations." Plants, therefore, which have to grow and bloom in cavernous and moist situations, or at least in moist and warm climates, are best adapted for these cases. However, within this class of vegetables there are many beautiful and highly luxuriant plants, which it would afford no small pleasure to contemplate. The following is a list of plants from various countries, which were set in a box under Mr Ellis's directions, and examined from nine to twelve months afterwards:—

Botanical Names.	Country.	Remarks.
Chamærops humilis	Italy, Sicily, Spain	Increased 1-4th its original size
Gentiana verna	England	Flowered, but no difference in size
Adiantum Capillus Veneris	England	Increased 1-8th
Primula farinosa	Scotland	Flowered; atmosphere rather damp for it
scotica	Scotland	Flowered; atmosphere rather damp for it
Verbascum Myconi	Scotland	Increased 1-8th
Androsace villosa	Scotland	Flowered; not very healthy
Chamærops Palmetto	Carolina	Increased 1-3d
Dionæa Muscipula	Carolina	Made 1-8th
Sarracenia purpurea	Carolina	Increased 4 times its original size
Spigæa repens	Carolina	Increased one-half
Testudinaria elephantipes	Cape of Good Hope	Made a shoot 10 inches long
Aloe retusa	Cape of Good Hope	Made 1-3d, shewing flower spikes
Rhododendron chrysanthum	Siberia	Increased one-half
Chamæcistus	Austria	Increased 1-6d
Cycas revoluta	China	Increased 1-9th
Nepenthes distillatoria	Ceylon	Increased 2-3ds
Cypripedium venustum	Nepal	Increased 1-5th
insigne	Nepal	Increased 1-4th
Agave geminiflora	Mexico	Increased 1-3d
**Goodyera discolor*	Mexico	No perceptible difference
**Echinocactus multiplex*	Mexico	Increased one-half
**peruviana*	Mexico	Increased one-half
myriacantha	Mexico	Increased one-half
**formosa*	Mexico	Increased 1-3d
O'ttoni	Mexico	Increased 1-4th
candida	Mexico	Increased one-half
Epiphyllum truncatum	Brasil	Increased 2-3ds
Cereus flagelliformis	Peru	Increased one-half
Lycopodium stoloniferum	Cuba	Very luxuriant

Those marked thus * are growing in fancy pots, and suspended from the roof of the plant-case.

In our former paper it was mentioned, that the plants, after the first preparation, require little or no care; the case need only be opened for the removal of dead leaves, or for a little trimming when required. Plants in open flower-pots are exposed to the vicissitudes of change of climate, and require constant watering; but the plants in these cases seem to be independent of any change of temperature in the air, and water themselves. The moisture rises by the sun's influence from the moistened earth, cherishes the leaves of the plants in its aërial condition, and during the cool of night falls to the earth again like rain or dew. In this manner there is a constant succession of rising and falling of moisture, in imitation of the great processes of nature, daily going on in the fields around us. The plant-case is a little world in itself, in which vegetation is supported solely by the resources originally communicated to it.

Not the least remarkable part in the economy of the case, is the preservation of atmospheric purity. To all who reflect for the first time on this subject, it will seem incomprehensible how the plants can possibly thrive and blossom without the occasional interchange of fresh air with the atmosphere. This certainly does appear extraordinary, yet it is ascertained by experiment that no such reinvigoration is requisite; to account for the phenomenon, it will be necessary to explain the constitution of atmospheric air, and the means adopted by nature for its purification.

Air consists of three gases in close mechanical union—nitrogen, oxygen, and carbonic acid, in the proportion of about 79 of nitrogen, 20 oxygen, and 1 of carbonic acid, in 100 parts of pure air. In this mixed composition, the essential element for the support of respiration in both animals and plants, and also for combustion, is the oxygen, the nitrogen being little else than a diluent to modify the strength of the oxygen. By the process of respiration, oxygen is consumed, and in its stead carbonic acid, which is a foul poisonous air, is emitted. The vast quantity of oxygen consumed daily by animals, including mankind, and the corresponding amount of carbonic acid produced, would speedily poison the atmosphere, if nature had not provided means for purifying it, as ample as those for its deterioration. It was long believed by men of science that plants possessed the power of exuding oxygen, and so formed a prime agent for restoring vitiated air to purity. Later investigations, chiefly by French chemists, have made it evident that plants have no such power, unless when placed under the influence of the sun's rays, or, in other words, that solar light is the grand cleanser of the atmosphere, and without which both plants and animals languish and die. With respect to plants in particular, it is ascertained, that, while inhaling oxygen and expiring carbonic acid, their leaves possess the remarkable property, in conjunction with the sun's light, of re-transforming the carbonic acid into oxygen. At night, when the light of day has departed, the expired carbonic acid may be detected in the neighbourhood of plants, and hence one cause of injury to health by breathing night-air; but when the morning sun again bursts upon the scene, a great chemical process commences in the atmosphere—the carbonic acid is decomposed, oxygen is evolved, and all nature rejoices in a re-creation of its appropriate nourishment.

The alternate action of vitiation and purification is emphatically described as follows by Mr Ellis, in the pamphlet before us:—"Under a bright sunshine, the two processes by which carbonic acid is alternately formed and decomposed, go on simultaneously; and their necessary operation, in as far as regards the condition of the air, is that of counteracting each other. Hence, though both may be continually exercised in favourable circumstances, the effects of neither on the atmosphere can be ascertained by ordinary means; and, consequently, though in the experiments of De Saussure with common air, the production and decomposition of carbonic acid by plants in sunshine must have been continually going on, yet in all the analyses which he made, the air was found unchanged, either in purity or volume; in other words, the processes of formation and decomposition of this acid gas exactly counterbalanced each other.

Of the two processes which have been now described (continues our authority), each may be considered as in its nature and purpose quite distinct from the other; hence their effects may be readily distinguished; neither do they necessarily interfere, when actually working together. The first or deteriorating process, in which oxygen gas is consumed, goes on at all times and in all circumstances when vegetation is active. It requires always a suitable temperature in which to display itself; and when that temperature falls below a certain point, which is very variable in regard to different plants, the process is more or less completely suspended, again to be renewed when the temperature shall again return. This conversion of oxygen into carbonic acid is as necessary to the evolution of the seed as to the growth of the plant, and is all that is required for germination; but the plant requires something more, for, if light be excluded, vegetation proceeds imperfectly, and the plant does not then acquire its proper colour, and other active properties which it ought to have. The chief organs by which the consumption of oxygen gas is effected, are the leaves, and its purpose, in great part at least, seems to be that of producing some necessary change in the sap during its transmission through those organs, on its way from the vessels of the wood to those of the inner bark, whereby it may be rendered fit for the purposes of nutrition and growth. In its nature and object, therefore, as well as in the specific change which it produces in the air, this process closely resembles the function of respiration in animals, and may thus with propriety be deemed a physiological process. The second, or purifying process, in which oxygen gas is evolved, differs in all respects from that which has just been described. It is in a great measure independent of temperature; at least it proceeds in temperatures too low to support vegetation, provided light be present, an agent not required for germination, nor essential to vegetable developement. The organs by which this process acts on the air are, as before, the leaves; not, however, by changing the qualities of the sap in the vessels of those organs, but by producing changes in the chromule, or colourable matter, in their cells, to which it imparts colour and other active properties. In doing this, it does not convert the oxygen gas of the air into carbonic acid, but, by decomposing that acid gas, restores to the air the identical portion of oxygen of which the former process had deprived it. The former process, carried on by the agency of the oxygen gas of the air, was essential to living action, and affected the well-being of the whole plant; that exercised by the agency of light is not necessary to life, is local, not general in its operation, and is capable of proceeding in circumstances and under conditions incompatible with living action. By withdrawing the air altogether, or depriving it of oxygen gas, vegetation soon ceases through the whole plant; but the exclusion of light from any part of the plant affects that part only; and even the total exclusion of that agent only deprives the plant of certain properties necessary to its perfection, but not essential to its life. These differences in the processes by which oxygen gas is alternately consumed and evolved, during the vegetation of plants in sunshine, are so manifest, both in their nature and effects, as to satisfy the ascription of a name to the latter process distinct from that given to the former. It might, perhaps, be denominated the chemical process, in contradistinction to that named physiological.

It would contribute much, we think, to simplify our inquiries concerning vegetation, to bear in mind these distinctions: to consider the one process as accomplished by the agency of the air, and essential to the life and growth of the plant; the other, as subordinate, depending on the agency of light, and though necessary to the perfection of vegetation, yet not essential to its existence. In this manner each process may be followed out separately, both in regard to its immediate effects and remoter consequences, without clashing with the other; and the apparently discordant and even contradictory phenomena which on a first view they seem to exhibit, may be reconciled, and considered, not less in theory than in fact, as conspiring together to form one harmonious and perfect whole."

After these explanations, little need be added respecting the supply of pure air to domestic greenhouses. The deterioration of the atmosphere in the case is daily counteracted by an opposite process of purification, so that amidst the vicissitudes of perpetual change, the air is maintained in a state of nearly uniform composition and purity, and serves over and over again for all the purposes of vegetation. It may, however, be stated, to prevent misconception, that the more pure the air of the apartment, the plants will have the better chance of thriving, because there must necessarily be an interchange to some extent betwixt the air of the room and the case, in consequence of the daily expansion from heat, and nightly condensation from cold. This interchange will be effected by the minute crevices in the apparatus, and therefore requires no special provision.

RECOLLECTIONS OF AN AUTHORESS.

BY A. OPIE.

GEORGE CANNING.

I was never so fortunate as to be in company with this celebrated man, but at a very early period of his life and mine, he was brought by circumstances under my admiring observation. An aunt of his, the wife of a Norfolk clergyman, who was afterwards Dean of H——, resided in N——, and when Canning was at Eton, he used to spend part of his holidays at her house. He also visited there sometimes while he was at the university.

While he was paying a visit during the long vacation, there was a benefit concert given at the assembly rooms, to which I was chaperoned by an old lady of my acquaintance. Till the middle of the first act we were able to *hear* and enjoy the music; but then, our attention was disturbed by the entrance of Canning's aunt, himself, and a large party staying at her house, who, all of them, *unfortunately*, placed themselves before us, because, instead of listening to the concert, they conversed as loudly as if nothing was going on.

This conduct was very trying to my companion, and I should have been equally annoyed by it, had not a friend whispered in my ear that the young man near me was the *Eton boy* who had so much distinguished himself at that school, and some of whose poetry I had seen and admired. I was therefore more interested in examining his countenance than in listening to the performance; I was pleased to hear the tone of his voice, though it was exerted during a violin concerto.

But my patience was at length worn out, and I partook of the displeasure of my chaperon. At last, when Canning had been more than usually vociferous, she gave him a smart stroke on the shoulder with her fan, and when he turned round, astonished at the blow, she shook her head at him with a reproachful look. He understood the reproof, but instead of resenting it, he bowed his head in silence, gracefully and respectfully, and became an attentive listener; nay, he evidently reproved the talkativeness of his companions; while the old lady was so delighted with his penitence, that she could not help whispering in my ear, "There, child! you see he is a gentleman, and how handsome he is!"

But the rightly-feeling and well-bred young man did not think he had made proper amends yet for his rudeness; and as soon as the act concluded, he rose, and, turning about to my aged friend, said with an ingenuous blush on his cheek, "I am very sorry, madam, that I interrupted your pleasure just now, and

Digitized by Google

am really ashamed of myself; pray excuse me; indeed I will not offend again." The lady received his apology graciously, and he faithfully kept his promise. Often when we were together did my friend and I talk over this proof of good feeling, which was the more remarkable in a youth conscious as he then was of having recently distinguished himself; but I was then too young to appreciate it as thoroughly as I have done since. The observation of a long life has now convinced me that the rarest of all qualities is a virtuous consideration of the rights of others in *little things*—and, at that time at least, Canning possessed this quality. He felt that, by his ill-timed noise, he had violated the right of the lady in question, and of the audience in general, to hear the music, which they had come to enjoy; and as soon as he was conscious of his error, he was candid and generous enough to own it, to apologise for it, and to discontinue it.

To persons in general this anecdote may appear not worth relating, but it has always seemed to me indicative of a kindness of heart, which, when combined, as it was in him, with splendid talents, seemed a pledge of future greatness. I know not, however, whether the same unselfish regard to the minor rights of others distinguished his career through life; and, probably, it could not have done so *undeviatingly*, because the course of the ambitious man must run counter to such regard. It is not at all likely that he should be eminent for that benevolent self-denial—that attention to others' feelings and interests in *little things*, which contribute to the happiness of private life, and constitute the *gracefulness* of private character—that unobtrusive, but important charm, in which the public philanthropist is often so painfully deficient; for how often does one see in the eloquent asserter of the rights of nations and of men, the petted, spoiled, selfish despot of his own fireside!

But if George Canning was ever led, by the acrimony of debate, and the collision of party resentments, into using language which was at variance with his good feelings, I fully believe that, on the whole, he was as amiable in private as he was distinguished in public life, and that he never really lost that kind-heartedness which I have ventured to commemorate.

Some years elapsed before I saw him again, for, though I became intimately acquainted with his aunt and her family, he never visited at the house when I was her guest, and at an early period of my life the L——s quitted N——. But I saw him soon after he obtained a seat in Parliament, and when the Pitt administration had won the young orator from his early political associates, and ranked him among their eloquent adherents.

At the time to which I allude, he was standing on Windsor Terrace, bareheaded, his cheek evidently flushed with pleasurable emotion, and listening to George III., who, with the queen and the rest of the royal family, was taking his usual Sabbath evening walk, to the delight of those who were able to visit the Terrace on these occasions. The king and queen stopt some time in conversation with the already distinguished member, who more than shared my attention with his royal master, though I own there were some drawbacks to the pleasure which I experienced in seeing him again.

The *last* time I saw him was in the hall of Buckingham House, when the queen and the regent held their levees there, and he had just left the presence-chamber. With what magical rapidity our thoughts fly back from time that IS, to time that WAS! and then, as rapidly returning, increase the interest of the PRESENT, by forcing back on it the memories of the PAST! It was with interest thus increased that I now beheld the celebrated man before me! I saw him in my mind's eye in the concert-room at N——, then on the Terrace at Windsor, and now I beheld him a distinguished statesman in the palace of his sovereign!

He was still in the prime of life, but his magnificent forehead was become bald; the bloom of youth had left his cheek, the fire of his full eye was in some measure dimmed, and there were untimely marks of age on his expansive brow! Yet I recognised in middle life the same character of face and feature which had interested me in the youthful student. But how different was now his bearing! How different the character of his person altogether!

There was a dignity in his mien, a loftiness in the carriage of his head, which a consciousness of his importance in society would naturally give. At the same time, I thought there was a slight expression of sadness piercing through his smile. Perhaps he was beginning to see the hollowness of the idols whom he had adored, to feel the emptiness of worldly distinctions, and to experience the many thorns that line the pillow of the statesman! Yet he was the favoured child of prosperous ambition! His talents had raised him to the highest offices in the state; his eloquence was the delight of his friends and the terror of his enemies; he had formed a high and happy connection in marriage; he was admired even by his opponents, and warmly beloved by all who enjoyed the privilege of his intimacy. But, doubtless, the corroding cares attendant on a public station, and a sense of its awful responsibility, were then preparing to fasten on his heart, and gradually destroy the functions of life. Methought, as I gazed on him, I did not behold so happy a man as he whom I had first seen in the concert-room at N——, and on the Terrace at Windsor! Yet perhaps he would have been unwilling to own that I was right.

Stormy grew the political horizon in the years that followed, though, on the whole, he may be said, to use his own words, to have "weathered the storm," for at the period of his untimely death he seemed to have nearly overcome every prejudice against him; and when he fell, a worn-out victim to his public duties, an universal lamentation and an universal plaudit attended his exit.

Among the mourners, I can sincerely say that I was one, and rarely do I now pass his statue without breathing a sigh to his memory, while I am tempted to parody the epitaph on a bard of former days, and exclaim, "Oh! *rare* George Canning!"

THE LETTER-BAG OF THE GREAT WESTERN.*

THE British public had been so much gratified and amused by the humorous history of the "Sayings and Doings of Samuel Slick of Slickville," that the announcement of a new forthcoming work from the pen of the same author naturally created a very general sensation in the reading world. This work has just appeared, and our more remote readers may expect from us some account of its character and contents. "The Letter-Bag of the Great Western" is the attractive title which the writer has in this instance chosen, and it is one which gives a hint of the plan of the work. It consists of a series of epistles, supposed to have been written by the various personages assembled on board of the Great Western steamer, during one of its recent trips from Bristol to New York.

Truth compels us to say, that in some respects this work has rather disappointed us, and that certain portions of it appear to us unlikely to increase the reputation gained for the author by his first production. For example, the dedication and preface, both somewhat lengthy, seem to us to be altogether in bad taste. What could induce the author, in composing a work of light literature like this, to step so far out of his way as to make the initial parts of his volume the vehicle of bitter political sneers and satire, is more than we can comprehend. The general tone and tenor, also, of the letters composing the work, seem to us somewhat unfortunate. We think well enough of human nature to believe that out of the large list of passengers on board the Great Western, or British Queen, on any given occasion, there will be found some few, at least, who are neither fools nor rascals. The imaginary writers of all the epistles, or nearly all, in the "Letter-Bag," are persons of one or other of these characters.

While candidly pointing out what appear to us to be the faults of this work, we at the same time admit with pleasure, that many of the letters are well spiced with unexceptionable fun. Perhaps one of the best is No. 15, entitled a "Letter from an Old Hand." His account of his fellow-passengers, and their converse, is as follows:—

"The company usually consists of young officers joining regiments—talk, Gibraltar, Cape, Halifax, Horse Guards, promotion, and sporting; of naval men—talk, insults to flag, foreign stations, crack frigates, round sterns, old admiral; of speculators—talk, cotton, tobacco, flour; of provincials—talk, Durham, Head, Colborne, Poulett Thompson; of travellers—talk, Mississippi, Niagara, Mahone Bay; of women—talk, headache, amusements, and nonsense about Byron; of Yankees—talk, Loco-Focos, go-ahead, dollars; of manufacturers—talk, steam, factors, and machinery; of blockheads—who chatter like monkeys about every thing. The incidents are common to all; fall on the deck—wet through—very sick—bad wine—cold dinner—rough weather—shipped a sea, and a tureen of soup—spoke a ship, but could not hear—saw a whale, but so far off, only a black line—feel sulky. There is nothing, therefore, to tell you but what has been told a thousand times, and never was worth telling once, but there are a *few maxims worth knowing.*"

The "old hand," whom the rubs of the world have hardened not a little, then communicates to his correspondent these few notice-worthy maxims:—

"MAXIMS OF AN OLD STAGER.—Call steward; inquire the number of your cabin; he will tell you No. 1, perhaps. 'Ah, very true, steward; here is half a sovereign to begin with; don't forget *it is* No. 1. This is the beginning of the voyage, I shall not forget the end of it.' He never does lose sight of No. 1, and you continue to be No. 1, ever after; best dish at dinner, by accident, is always placed before you, best attendance behind you, and so on.—*I always do this.* If you are to have a chum, take a young one, and you can have your own way by breaking him yourself.—*I always do.* If the berths are over each other, let the young fellow climb, and do you take the lowest one; it is better he should break his neck than you.—*I always do.* All the luggage not required for immediate use is marked 'below.' Don't mark yours at all, and you have it all in your own cabin, where you know where to find it when you want it. It is not then squeezed to death by a hundred tons of trunks. If you have not room in your cabin for it all, hint to your young chum he has too much baggage, and some of it must go 'below.'—*I always do.* Never speak to a child, or you can't get clear of the nasty little lap-dog thing ever afterwards.—*I never do.* Always judge your fellow passengers to be the opposite of what they strive to appear to be. For instance, a military man is not quarrelsome, for no man doubts his courage; a snob is. A clergyman is not over strait-laced, for his piety is not questioned; but a cheat is. A lawyer is not apt to be argumentative; but an actor is. A woman that is all smiles and graces, is a vixen at heart; snakes fascinate. A stranger that is obsequious and over-civil without apparent cause, is treacherous; cats that purr are apt to bite and scratch. Pride is one thing, assumption is another; the latter must always get the cold shoulder, for whoever shows it is no gentleman; men never affect to be what they are, but what they are not. The only man who really is what he appears to be, *is*—a gentleman.—*I always judge thus.* Keep no money in your pockets; when your clothes are brushed in the morning, it is apt—ahem—to fall out.—*I never do.* At table see what wine the captain drinks; it is not the worst.—*I always do.* Never discuss religion or politics with those who hold opinions opposite to yours; they are subjects that heat in handling until they burn your fingers. Never talk learnedly on topics you know; it makes people afraid of you. Never talk on subjects you don't know; it makes people despise you. Never argue; no man is worth the trouble of convincing; and the better you reason, the more obstinate people become. Never pun on a man's words; it is as bad as spitting in his face; in short, whenever practicable, let others perform, and do you look on. A seat in the dress-circle is preferable to a part in the play.—*This is my rule.* Be always civil, and no one will wish to be rude to you; be ceremonious, and people cannot if they would. Impertinence seldom honours you with a visit without an invitation; at least—*I always find it so.* Never play at cards. Some people know too little for your temper, and others too much for your pocket.—*I never do.*"

This wisdom is of a very worldly order; but if useful any where, such a species of knowledge is so, certainly, on board of a crowded packet. Among the other letters, the one which amused us most was the epistle of Cato Mignionette, the black steward, who corresponds with a friend in the Union, named Lavender. Cato goes through his duties with a good deal of the stoicism of his Roman namesake. "Steward here, and steward dere, and steward ebery where; well, I say, 'Coming, sir,' but I takes care neber to come to none at all; and when dey is tired of calling, dey come ob demselves to me, and find out to de last it would be ebery bit as good for em to hab come at fust and sabe dere wind to cool dere soup wid." "As to the men passengers," he says, "I always let dem shift for demselves, for dere isn't werry few of dem is real superfine gentlemens, but jist refidge a leetle varnished over de surface like, all pretence. Dey all make believe dat dey know wine, when dam um dere isn't hardly one of em know him by name even. One buccra say, 'Steward, I can't drink dis wine; it is werry poor stuff: what de debil do you mean by giving me such trash as dis; he no fit to drink at all! Change him directly, and gib me some dat is fit for a gentleman.' Well, I takes up de wine, and looks at um werry knowing, and den whisper in his ear not to speak so loud, ebery body hear; and I put de finger on my nose and nods, and I goes and brings him anoder bottle of de werry identical same wine, and he taste him, smack um lip and say, 'Ah, dat is de wine; always bring me dat wine, and I remember you when I leab de ship.' 'Hush,' I say, 'massa; not so loud, sir, if you please, for dere is only a werry few bottles of dat ere wine, and I keep um for you, for I sees you know de good wine when you sees um, which is more nor most gentlemen does.' Dey is cussed stupid is dem whites, and werry conceited too, Mr Labender." The ladies he treats more leniently. "I makes sception," he says, "of de ladies; de dear critturs I do lub em, and likes to tend on em, dey is so helpless, poor tings! But one ting I must say, and dat is, de white ladies do lub werry stif grog, werry stif indeed. Mr Labender, you ab no notion of it, no more den a child. 'Steward, a leetle, werry leetle weak brandy and water, but mind and let um be werry weak.' 'Yes, ma'am,' I say, and away I goes to mix it. Poor leetle tings! knows werry well what werry weak means—it means half and half, jist as I likes um myself. Well, when I takes it to de lady, she make a face like de cabbage leaf, all puckery puckery, wrinckely wrinckely, and arter eber so leetle of a swig at it, she gives um back again to me. 'Oh, steward,' she say, 'how could you! dat is too strong; put in a leetle drop more water; dat is a good steward.' Well, I knows what dat means too; so I goes back and puts in one glass brandy more, and two lumps of de sugar more, and stir um up well wid de spoon, and gib um a little nutmeg for de flavour. 'Try dat,' marm, I say; 'see how you like um; I most fear um too weak now.' 'No, steward,' she say, and she smile werry sweet, de leetle dear; 'dat will do werry well; dat just right now—always take care to mix my brandy and water weak, for I isn't used to have um strong, and um gets into my head.' 'Yes, marm,' I say; 'now I knows your gage, I fit you exactly to a T, marm.' De dear leetle critture, de grog he do warm em hearts, and brighten de eye, and make em werry good-natured."

One more specimen of Cato's letter may be given without any chance of tiring:—"T'oder day I sell some small ting to de outlandish Jew, who no speak werry good English; and I goes into his cabin, and I

* By the Author of Sam Slick. London, R. Bentley.

Digitized by Google

say, 'Our voyage over now, him pilot on board; so you fork out, massa, if you please.' Well, he stand like a shy horse. 'What dat you say?' say he. 'You fork out now, massa!' say I. Den he goes round, and he bolt de door, and den he say, 'I give you one sovereign, steward, if you no mention it. 'Oh,' I say, 'I nebber mention um, master; nebber fear; and I 's werry much obliged to you, sir, werry much indeed.' Den he say, 'Here is de forks,' and he gave me back three silver forks; 'I took um by mistake,' he say, 'and I hope you no mention um.' Oh, ho, says I to myself, is dat de way de cat jumps! Now I see how de land lay. I come Jew over you, my boy; my turn come now. 'Four sovereigns more, massa, and steward he keep mum; and if you no pay de money, I go bring captain, passenger, and ebery one.' Well, him sovereign break um heart a'most, but he show him out for all that before I go; one—two—three—four—five sovereigns. 'All's right now, massa,' say I; 'dat is what I calls forking out.' Jist as I turns for to go, he say, 'How you know I ab um, steward? any body tell you?' 'Oh, massa,' I say, 'I knew de tief so far as I see him. When I clap eyes on you fust, by gosh I knew you for one of dem rascals. No mistake, massa; face nebber tell um lie—he always speaky de truth.'" This beats any thing in the Roman Cato's policy; but we grudge Mr Slick's putting the story into a name, which does not represent an individual, but a nation, and that one which we systematically use ungenerously.

Upon the whole, a perusal of the "Letter-Bag of the Great Western" leads us to conclude, that the peculiar style of the "Sayings and Doings of Slick" is that in which the author is most fitted to shine; in other words, that his forte lies in the humorous display of Nova-Scotian and Yankee peculiarities, and in the skilful use and exposition of Transatlantic oddities of thought and language. In that field he seems at home, and naturally so; and we hope that he will soon enter on it again, which he may do with the confident assurance of gathering thence a far richer harvest of fame than will accrue to him from such attempts as the present one.

HARDRESS FITZGERALD.

In the Dublin University Magazine for February, among other articles of interest there appears a narrative of the singular adventures of Hardress Fitzgerald, an eminent Irish royalist, who contrived to elude the strictest search for his person, after the battle of the Boyne had all but annihilated his party. The narrative, from which we propose to make a short extract, purports to be written by the hero himself, and commences with an amusing account of his living in disguise in Dublin; it then proceeds to state, that, becoming anxious to join the wreck of King James's forces in Limerick, he ventured on travelling across the country as a pedlar; how, while on the way, he had an interview with General Sarsefield, and received from him certain papers to convey to the unhappy royalists; after which, on pursuing his journey, he had the misfortune to fall into the hands of some soldiers, and was brought before Captain Oliver, a leader in the ranks of his opponents. At this point we shall allow him to tell his story in his own words, which give one a fearful idea of the cruelties committed at that disastrous period in Ireland.

"Unbuckle your pack," exclaimed the corporal; "unbuckle your pack, fellow, and show your goods to the captain—here where you are."

I proceeded to present my merchandise to the loving contemplation of the officers, who thronged around me, with a strong light from an opposite window. As I continued to traffic with these gentlemen, I observed with no small anxiety the eyes of Captain Oliver frequently fixed upon me with a kind of dubious inquiring gaze. "I think, my honest fellow," he said at last, "that I have seen you somewhere before this. Have you often dealt with the military?" "I have traded, sir," said I, "with the soldiery many a time, and always been honourably treated. Will your worship please to buy a pair of lace ruffles?—very cheap, your worship." "Why do you wear your hair so much over your face, sir?" said Oliver, without noticing my suggestion. "I promise you, I think no good of you; throw back your hair, and let me see you plainly. Hold up your face, and look straight at me; throw back your hair, sir."

I felt that all chance of escape was at an end, and stepping forward as near as the table would allow me to him, I raised my head, threw back my hair, and fixed my eyes sternly and boldly upon his face. I saw that he knew me instantly, for his countenance turned as pale as ashes with surprise and hatred; he started up, placing his hand instinctively upon his sword-hilt, and glaring at me with a look so deadly, that I thought every moment he would strike his sword into my heart. He said in a kind of whisper, "Hardress Fitzgerald?" "Yes," said I boldly, for the excitement of the scene had effectually stirred my blood, "Hardress Fitzgerald is before you. I know you well, Captain Oliver. I know how you hate me. I know how you thirst for my blood; but in a good cause, and in the hands of God, I defy you." "You are a desperate villain, sir," said Captain Oliver; "a rebel and a murderer. Hollo there, guard, seize him." As the soldiers entered, I threw my eyes hastily round the room, and observing a glowing fire upon the hearth, I suddenly drew General Sarsefield's packet from my bosom, and casting it upon the embers, planted my foot upon it. "Secure the papers," shouted the captain, and almost instantly I was laid prostrate and senseless upon the floor by a blow from the butt of a carbine.

I cannot say how long I continued in a state of torpor; but, at length, having slowly recovered my senses, I found myself lying firmly handcuffed upon the floor of a small chamber, through a narrow loophole in one of whose walls the evening sun was shining. I was chilled with cold and damp, and drenched in blood, which had flowed in large quantities from the wound on my head. By a strong effort I shook off the sick drowsiness which still hung upon me, and weak and giddy I rose with pain and difficulty to my feet. The chamber or rather cell in which I stood, was about eight feet square, and of a height very disproportioned to its other dimensions—its altitude from the floor to the ceiling being not less than twelve or fourteen feet. A narrow slit placed high in the wall admitted a scanty light, but sufficient to assure me that my prison contained nothing to render the sojourn of its tenant a whit less comfortless than my worst enemy could have wished. My first impulse was naturally to examine the security of the door—the loophole which I have mentioned being too high and too narrow to afford a chance of escape. I listened attentively to ascertain if possible whether or not a guard had been placed upon the outside. Not a sound was to be heard. I now placed my shoulder to the door, and sought with all my combined strength and weight to force it open; it, however, resisted all my efforts, and thus baffled in my appeal to more animal power, exhausted and disheartened, I threw myself on the ground. It was not in my nature, however, long to submit to the apathy of despair, and in a few minutes I was on my feet again. With patient scrutiny I endeavoured to ascertain the nature of the fastenings which secured the door. The planks fortunately having been nailed together fresh, had shrunk considerably, so as to leave wide chinks between each and its neighbour. By means of these apertures, I saw that my dungeon was secured, not by a lock as I had feared, but by a strong wooden bar, running horizontally across the door, about midway upon the outside.

[Contriving to make an opening, he reaches the door of the apartment in which he had been seized, and overhears an order given by Oliver for his execution, which he declared should take place in the evening ere the moon arose.]

There was a kind of glee in Oliver's manner and expression which chilled my very heart. "He shall be first shot like a dog, and then hanged like a dog; shot to-night, and hung to-morrow; hung at the bridge-head; hung, until his bones drop asunder!"

It is impossible to describe the exultation with which he seemed to dwell upon, and to particularise, the fate which he intended for me. A chill, sick horror crept over me as they retired, and I felt, for the moment, upon the brink of swooning. This feeling, however, speedily gave place to a sensation still more terrible—a state of excitement so intense and tremendous as to border upon literal madness, supervened; my brain reeled and throbbed as if it would burst; thoughts the wildest and the most hideous flashed through my mind with a spontaneous rapidity that scared my very soul; while, all the time, I felt a strange and frightful impulse to burst into uncontrolled laughter. Gradually this fearful paroxysm passed away. I kneeled and prayed fervently, and felt comforted and assured; but still I could not view the slow approaches of certain death without an agitation little short of agony.

I returned again to the closet in which I had found myself upon recovering from the sweon.

The evening sunshine and twilight was fast melting into darkness, when I heard the outer door, that which communicated with the guard-room in which the officers had been amusing themselves, opened, and locked again upon the inside. A measured step then approached, and the door of the wretched cell in which I lay being rudely pushed open, a soldier entered, who carried something in his hand, but, owing to the obscurity of the place, I could not see what.

"Art thou awake, fellow?" said he, in a gruff voice. "Stir thyself; get upon thy legs." His orders were enforced by no very gentle application of his military boot.

"Friend," said I, rising with difficulty, "you need not insult a dying man. You have been sent hither to conduct me to death. Lead on! My trust is in God, that he will forgive me my sins, and receive my soul, redeemed by the blood of his Son." There here intervened a pause of some length, at the end of which the soldier said, in the same gruff voice, but in a lower key, "Look ye, comrade, it will be your own fault if you die this night. On one condition I promise to get you out of this hobble with a whole skin; but if you go to any of your gammon, before two hours are passed you will have as many holes in your carcase as a target." "Name your conditions," said I; "and if they consist with honour, I will never baulk at the offer."

"Here they are: you are to be shot to-night, by Captain Oliver's orders; the carbines are cleaned for the job, and the cartridges served out to the men. I tell you the truth."

Of this I needed not much persuasion, and intimated to the man my conviction that he spoke the truth.

"Well, then," he continued, "now for the means of avoiding this ugly business. Captain Oliver rides this night to head-quarters, with the papers which you carried. Before he starts he will pay you a visit, to fish what he can out of you, with all the fine promises he can make. Humour him a little, and when you find an opportunity, stab him in the throat above the cuirass."

"A feasible plan, surely," said I, raising my shackled hands, "for a man thus completely crippled and without a weapon." "I will manage all that presently for you," said the soldier. "When you have thus dealt with him, take his cloak and hat, and so forth, and put them on; the papers you will find in the pocket of his vest, in a red leather case; walk boldly out—I am appointed to ride with Captain Oliver, and you will find me holding his horse and my own by the door; mount quickly, and I will do the same, and then we will ride for our lives across the bridge. You will find the holster pistols loaded in case of pursuit, and with the devil's help we shall reach Limerick without a hair hurt. My only condition is, that when you strike Oliver, you strike home, and again and again, until he is *finished*—and I trust to your honour to remember me when we reach the town."

I cannot say whether I resolved right or wrong, but I thought my situation, and the conduct of Captain Oliver, warranted me in acceding to the conditions propounded by my visitant, and with alacrity I told him so, and desired him to give me the power, as he had promised to do, of executing them. With speed and promptitude he drew a small key from his pocket, and in an instant the manacles were removed from my hands. How my heart bounded within me as my wrists were released from the iron gripe of the shackles!—the first step towards freedom was made—my self-reliance returned, and I felt assured of success. "Now for the weapon," said I. "I fear me you will find it rather clumsy," said he, "but if well handled it will do as well as the best Toledo; it is the only thing I could get, but I sharpened it myself; it has an edge like a skean."

He placed in my hand the steel head of a halberd, and with a low savage laugh left me to my reflections. Having examined and arranged the weapon, I carefully bound the ends of the cravat with which I had secured the cross part of the spear-head, firmly round my wrist, so that in case of a struggle it might not easily be forced from my hand, and having made these precautionary dispositions, I sat down upon the ground with my back against the wall, and my hands together under my coat, awaiting my visitor. The time wore slowly on; the dusk became dimmer and dimmer, until it nearly bordered on total darkness. "How's this?" said I inwardly. "Captain Oliver, you said I should not see the moon rise to-night; methinks you are somewhat tardy in fulfilling your prophecy." As I made this reflection, a noise at the outer door announced the entrance of a visitant. I knew that the decisive moment was come, and letting my head sink upon my breast, and assuring myself that my hands were concealed, I awaited, in the attitude of deep dejection, the approach of my foe and betrayer. As I had expected, Captain Oliver entered the room where I lay; he was equipped for instant duty, as far as the imperfect twilight would allow me to see; the long sword clanked upon the floor, as he made his way through the lobbies which led to my place of confinement; his ample military cloak hung upon his arm, his cocked hat was upon his head, and in all points he was prepared for the road. This tallied exactly with what my strange informant had told me. I felt my heart swell and my breath come thick, as the awful moment which was to witness the death-struggle of one or other of us approached. Captain Oliver stood within a yard or two of the place where I sat, or rather lay, and folding his arms he remained silent for a minute or two, as if arranging in his mind how he should address me.

"Hardress Eitzgerald," he began at length, "are you awake? Stand up if you desire to hear of matters nearly touching your life or death; get up, I say."

I arose, doggedly, and affecting the awkward movements of one whose hands were bound.

"Well," said I, "what would you of me? is it not enough that I am thus imprisoned, without a cause, and about, as I suspect, to suffer a most unjust and violent sentence, but must I also be disturbed during the few moments left me for reflection and repentance, by the presence of my persecutor. What do you want of me?"

"As to your punishment, sir," said he, "your own deserts have no doubt suggested the likelihood of it to your mind; but I now am with you to let you know, that whatever mitigation of your sentence you may look for, must be earned by your compliance with my orders. You must frankly and fully explain the contents of the packet which you endeavoured this day to destroy; and, further, you must tell all that you know of the designs of the popish rebels."

"And if I do this I am to expect a mitigation of my punishment—is it not so?" Oliver bowed.

"Well, sir, before I make the desired communication, I have one question more to put. What is to befall me, in case that I, remembering the honour of a soldier and a gentleman, reject your infamous terms, scorn your mitigations, and defy your utmost power?" "In that case," replied he coolly, "before half an hour you shall be a corpse."

"Then, God have mercy on your soul," said I, and springing forward, I dashed the weapon which I held at his throat. I missed my aim, but struck him full in the mouth with such force that most of his front teeth were dislodged, and the point of the spear-head passed out under his jaw, at the ear. My onset was so sudden and unexpected that he reeled back to the wall, and did not recover his equilibrium in time to prevent my dealing a second blow, which I did with my whole force; the point unfortunately struck the cuirass, near the neck, and, glancing aside, it inflicted but a flesh wound, tearing the skin and tendons along the throat. He now grappled with me, strange to say, without uttering any cry of alarm. Being a very powerful man, and if any thing rather heavier and more strongly built than I, he succeeded in drawing me with him to the ground. We fell together, with a heavy crash, tugging and straining in what we were both conscious was a mortal struggle. At length I succeeded in getting over him, and struck him twice more. The weapon which I wielded had lighted upon the eye, and the point penetrated the brain; the body quivered under me, the deadly grasp relaxed, and Oliver lay upon the ground a corpse! As I arose and shook the weapon and the bloody cloth from my hand, the moon, which he had foretold I should never see rise, shone bright and broad into the room, and disclosed, with ghastly distinctness, the mangled features of the dead soldier. It is hard to say with what feelings I looked upon the unsightly and revolting mass which had so lately been a living and a comely man. I had not any time, however, to spare for reflection; the deed was done; the responsibility was upon me, and all was registered in the book of that God who judges rightly.

With eager haste I removed from the body such of the military accoutrements as were necessary for the purpose of my disguise. I buckled on the sword, drew off the military boots, and donned them myself, placed the brigadier wig and cocked hat upon my head, threw on the cloak, drew it up about my face, and proceeded with the papers, which I found as the soldier had foretold me, and the key of the outer lobby, to the door of the guard-room; this I opened, and with a firm and rapid tread walked through the officers, who rose as I entered, and passed without question or interruption to the street door. Here I was met by the grim-looking corporal, Hewson, who, saluting me, said, "How soon, captain, shall the file be drawn out, and the prisoner dispatched?" "In half an hour," I replied, without raising my voice. The man again saluted, and in two steps I reached the soldier who held the two horses, as he had intimated.

"Is all right?" said he, eagerly. "Ay," said I; "which horse am I to mount?" He satisfied me upon this point, and I threw myself into the saddle; the soldier mounted his horse, and dashing the spurs into the flanks of the animal which I bestrode, we thundered along the narrow bridge. At the far extremity, a sentinel, as we approached, called out, "Who goes there?—stand and give the word." Heedless of the interruption, with my heart bounding with excitement, I dashed on; so did also the soldier who accompanied me. The sentinel fired.

"Hurrah!" I shouted; "try it again, my boy," and away we went at a gallop, which bade fair to distance every thing like pursuit. Never was spur more needed, however; for soon the clatter of horses' hoofs, in full speed, crossing the bridge, came sharp and clear through the stillness of the night. Away we went, with our pursuers close behind. One mile was passed, another nearly completed. The moon now shone forth, and turning in the saddle, I looked back upon the road we had passed. One trooper had headed the rest, and was within a hundred yards of us. I saw the fellow throw himself from his horse upon the ground. I knew his object, and said to my comrade, "Lower your body; lie flat over the saddle; the fellow is going to fire." I had hardly spoken when the report of a carbine startled the echoes, and the ball striking the hind leg of my companion's horse, the poor animal fell headlong upon the road, throwing his rider head foremost over the saddle. My first impulse was to stop and share whatever fate might await my comrade; but my second and wiser one was to spur on, and save myself and my dispatch. I rode on at a gallop. Turning to observe my comrade's fate, I saw his pursuer, having remounted, ride rapidly up to him, and on reaching the spot where the man and horse lay, rein in and dismount. He was hardly upon the ground, when my companion shot him dead with one of the holster pistols which he had drawn from the pipe, and leaping nimbly over a ditch at the side of the road, he was soon lost among the ditches and thorn bushes which covered that part of the country. Another mile being passed, I had the satisfaction to perceive that the pursuit was given over, and in an hour more I crossed Thomond Bridge, and slept that night in the fortress of Limerick, having delivered the packet, the result of whose safe arrival was the destruction of William's great train of artillery, then upon its way to the besiegers.

Years after this adventure, I met in France a young officer, who I found had served in Captain Oliver's regiment, and he explained what I had never before understood—the motives of the man who had wrought my deliverance. Strange to say, he was the foster brother of Oliver, whom he thus devoted to death, in revenge for the most grievous wrong which one man can inflict upon another!

THE WAGES OF BRITISH AND GERMAN WEAVERS COMPARED.

Operatives employed in the cotton, silk, woollen, and other manufactures, are apt to imagine that their rate of wages depends merely on the caprice of employers; indeed, many have publicly avowed as much. We have at present no wish to combat this opinion by any exposition of the principles which regulate the rate of wages, but to call the attention of workmen to one very important circumstance which seems to escape their notice—this is the rate of wages in those continental countries which are now attempting to compete with Britain in manufacturing industry. For instance, a large share of our manufactures are exported for the use of foreign consumers. These consumers have hitherto paid prices which enable our employers to give a certain rate of wages; but these consumers are gradually limiting their orders for British goods, because they can get the same kind of articles cheaper elsewhere. And why cheaper? Because these articles are manufactured by artisans who work at a half or third of the amount of wages paid in this country. Thus, British artisans are brought into direct competition with their continental brethren.

To descend to particulars, let us take the case of an English and a German hand-loom cotton-weaver. The Englishman, with all his skill and perseverance, and probably toiling twelve hours a-day, cannot earn more than six shillings per week; a sum very inadequate for supporting an able-bodied man and his family, considering the high price of food and other necessaries of life. Still, miserable as is this weekly pittance, it is about three times more than is earned by the German or Saxon weaver, at the same kind of work. "It is stated on the best authority (says Mr Porter*), that, in October 1837, a man (in Saxony) employed very diligently from Monday morning until Saturday night, from five o'clock in the morning until dusk, and even at times with a lamp, his wife assisting him in finishing and taking home the work, could not probably earn more than 20 groshen (2s. 6d. sterling, a groshen being 1½d.) per week, and that another man, who had three children aged twelve years and upwards, all working at the loom as well as himself, with his wife employed doing up the work, could not earn in the whole more than 1 dollar 8 groshen (5s. 4d.) weekly."

Making every allowance for the greater cheapness of food in Saxony than in England, it is certain that the Saxon workmen subsist on the most wretched fare, their diet being almost exclusively of vegetables, and to a limited extent. But neither the quality nor the amount of their physical comforts affects the present question. The thing we have to look to is their wages. It is evident, that, from the necessity of their situation, they work for about 2s. or 2s. 6d. a-week, which is from a half to a third of the weaver's wage in this country; consequently, those who employ them are enabled to undersell the British manufacturer to the amount of that saving. It is no doubt exceedingly hard that the rate of wages in Saxony should thus force down the wages of British operatives to starvation point; but how is the evil to be remedied? We possess no power to compel Saxon weavers to take higher wages, nor to prevent Saxon manufacturers from underselling us.

Hitherto, Britain has successfully competed with continental nations solely from its superior skill and capital, chiefly the latter; but continental nations, during a twenty-five years' peace, have discovered the trick of British success, as we may call it. In Saxony, to which we have above referred, joint-stock companies were formed in 1837, for the purpose of investing capital in machinery, and are now proceeding to the accomplishment of their objects. It may be some years before these and other newly formed establishments on the continent can thoroughly compete with the well-regulated concerns of Britain; but there is no reason why such an event should not occur some time or other. This is a contingency (already in part realised) which it behoves both British operatives and capitalists to look boldly in the face; and we agree with the authority already quoted, that "there appears to be but one course open to us in order to avert the evil—that of still further liberalising our commercial system, and especially of lessening the cost of the prime necessaries of life, by abolishing all restrictions on the importation of food."

* Progress of the Nation, by G. R. Porter. 2 vols. 1838.

MANUFACTURED PICTURES.

Mr Winstanley, of Liverpool, in the course of a lecture on portrait painting, recently delivered by him at the Royal Institution of that town, related an anecdote which may enlighten as well as interest the patrons of old pictures. The high character of Mr Winstanley secures him from the suspicion that he has at all exaggerated the statement; but we believe there are many persons who could relate stories equally striking and equally true. It is notorious that in England there are hundreds of Titians, Vandykes, and Raphaels, the canvass for which was manufactured in the nineteenth century; the impositions practised upon English buyers on the continent are so notorious as to have become proverbial; and of the eight thousand works by foreign masters annually imported into this country, perhaps it would not be too much to say, ninety-nine out of every hundred are forgeries. Yet noblemen and gentlemen will be cheated with their eyes open, and very frequently crowd their rooms with base imitations, when, for half the sum they have expended, they might have procured good and true works by accomplished artists, and at the same time have had the proud and happy knowledge that they had contributed to advance the glory of their country, and the interest of its men of genius. We quote the anecdote related by Mr Winstanley, as one of the most circumstantial and best authenticated that has ever been recorded:—He exhibited to the audience a small picture, which, from the peculiar costume, the cut of the beard, and the expanse of forehead, looked like a portrait of Shakspeare. It was also finished in a style, and had an appearance of age and mellowness, that would incline almost any person to believe it a genuine picture. Some years ago, a friend in London wrote to him giving information that he had picked up from some noteless vender of heterogeneous articles, a portrait of Shakspeare, an undoubted original. Mr Winstanley saw the picture, approved of it, and became its proprietor. It was the identical picture which was then before the audience. He showed it to several persons of eminent taste, who all pronounced it an original picture, and set upon it a high value, though they attributed it to different masters. He was offered very large sums of money for it, which, however, he refused, on the very proper principle, that if it were an original portrait of Shakspeare, such a rarity was inestimable, and if it were not, he had no right to take any such amount for it as was tendered. To set the matter at rest, he took the picture to London, where he called upon an individual whom he found repairing a portrait of Nell Gwynne. This person informed him, in his peculiar way, that he had made many portraits of Shakspeare, and he had no doubt he could tell him something respecting the one in question. The moment the picture was placed before him, he said, "Oh, that is my old friend." On being pressed for an explanation, he said that it had been made by a pupil of his—a person whom he had taught to manufacture portraits of Shakspeare. It was one of a pair of old pictures of an ancient gentleman and lady of the Elizabethan age. From the costume and features they thought it might be made to look very like Shakspeare. Accordingly, under his direction his pupil heightened the forehead, altered the hair and beard, and put in a few touches, which made the old man into a Shakspeare. This sort of deception Mr Winstanley assured the assembly had not been uncommon; and thus a picture for which he might have had five hundred guineas, turned out to be worthless.—*Art-Union.*

CONSCIENCE.

Locke has demonstrated that we have neither innate ideas nor innate principles, and he was obliged to demonstrate it too much at length, because at the time the contrary was universally believed. From hence it evidently follows that we have the utmost possible necessity that good principles should be lodged in our heads, when we come to use the faculty of understanding. Locke cites the example of savages who kill and eat their neighbours without the slightest remorse of conscience, and of well-educated Christian soldiers, who, in a town taken by assault, pillage, slay, and ravish, not only without remorse, but with the utmost pleasure, with honour and glory, with the applause of all their comrades. It results from all this, that we have no other conscience than that with which we are inspired by time, by example, by our temperament, and by our reflections. Man is not born with any principle, but with the faculty of receiving all. His temperament will render him inclined to cruelty or to kindness; his understanding will, in time, enable him to comprehend that the square of twelve is one hundred and forty-four, that he ought not to do to others that which he does not wish to be done to himself: but he will not of himself comprehend these truths in his infancy—he will not understand the first, and he will not feel the second.

A young savage who is hungry, and to whom his father shall give a slice of another savage to eat, will require the same the next day, without imagining that he ought not to treat his neighbour otherwise than he would wish to be treated himself. He does mechanically, invincibly, exactly, the reverse of what this eternal truth teaches. Nature has provided for this horror. She has given to man the disposition to pity, and the ability to comprehend the truth. These two gifts of God are the foundations of civilised society. They have caused that there should be so few anthropophagi, they have rendered life somewhat tolerable in civilised countries. Fathers and mothers give their children an education which soon renders them sociable, and that education gives them conscience.

Pure religion and pure morality imparted at an early age, so form human nature, that from about seven years of age till sixteen or seventeen, no bad action is committed without the reproof of conscience. Then succeed the violent passions which combat the conscience, and sometimes extinguish it. During this conflict, the persons tormented by the storm consult on some occasions with other men, as in their sickness they consult those who appear to be in health. It is this which produces casuists—that is, persons who decide cases of conscience. One of the wisest of casuists is Cicero. In his book *De Officiis*—that is, on the Duties of Man—he examines the most delicate points, but long before him Zoroaster had appeared to regulate the conscience by the best of precepts—"Being in doubt whether an action be good or bad, abstain from it."—*Translated from the French by Zac.—From a newspaper.*

A HABIT IN THE ENGLISH MIND.

There is a decided tendency in the English mind to ask what may be the consequences of a proposition, before inquiring into its validity; as if it were possible, by a bare act of human volition, to make that which is, a nonentity—or that which is not, a reality. In the instance of geology, the habit (for it is but a habit) has been productive of the most mischievous results, and has covered some very worthy and respectable writers with a ridicule, which has reflected on the national character in the eyes of scientific Europe.—*Athenæum, Oct.* 12.

London: Published, with permission of the proprietors, by W. S. Orr, Paternoster Row; and sold by all booksellers and newsmen.—Printed by Bradbury and Evans, Whitefriars.

Complete sets of the Journal are always to be had from the publishers or their agents; also, any odd numbers to complete sets. Persons requiring their volumes bound along with titlepages and contents, have only to give them into the hands of any bookseller, with orders to that effect.

CHAMBERS'
EDINBURGH JOURNAL

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS, EDITORS OF "CHAMBERS'S INFORMATION FOR THE PEOPLE," "CHAMBERS'S EDUCATIONAL COURSE," &c.

NUMBER 423. SATURDAY, MARCH 7, 1840. PRICE THREE HALFPENCE.

SELF-HELPFULNESS.

SOME people, in all but the most familiar circumstances, are remarkably helpless. They can do nothing for themselves, if it lies the least out of their ordinary track. If the driving of a nail, or the tying or untying of a knot, were to save them from some great disaster, they could not do it. Though a stitch in time were to save not nine only, but nine thousand, or the whole garment, they could not execute it. They are, in short, handless or helpless people. To be thus helpless is surely a great misfortune, for it must expose the bulk of those who are so characterised, to a great number of casualties of a distressing kind in the course of life, must often subject them to expense and loss which might be spared, and, besides all that, have perhaps a worse effect in producing languid, unprompt, and indolent habits. It is a very different thing to be self-helpful. One who has the happiness to be so, gets readily and agreeably through hundreds of difficulties which embarrass others. In extraordinary circumstances, such as shipwreck may bring to the door of any one, he may even be enabled by this readiness of hand to save his own life or the lives of his companions. But, probably, the best effect is that sprightliness in act and thought, which the custom of applying one's self to all sorts of useful purposes almost necessarily engenders. From the very consciousness of being able to do many things, and to serve one's self on a great variety of possible occasions, a confidence arises which may serve to carry a man on vigorously through life, even though his numerous little talents may not be at any time much called into exercise.

It appears to us that most persons might be made much more self-helpful than they are, if, in education, advantage were taken of an obvious feature in the juvenile character. It must have been observed by all how invariably children, when left to themselves, engage in some kind of *work*, either in imitation of some craft which they have seen practised by their seniors, or, quite as possibly, some labour such as it never entered into the heads of their elders to conceive. It cannot be for nothing that so broad a natural feature exists; it must be for some important end; and may we not reasonably suppose that that end is, that human beings may become, in the first place, acquainted with all the ways and needs of this world, and in the second, able to help themselves with respect to all those ways and needs? If this be a true inference, it follows that, in the bringing up of children, we ought to train them to a great variety of employments, and to act in a great variety of circumstances, as well as to con their lessons, and practise moral rules. Such training becomes more particularly necessary as a part of systematic education, in certain situations. It is more necessary in a city than in the country, and in an orphan hospital or workhouse than in a common school. In the country, children have opportunities of learning many things unknown in towns; and the children attending common schools are not so cut off from the world as those of a charity establishment generally are. In the case of the latter, it is particularly necessary. The ordinary life of such children, immured in the walls of a workhouse where they see nothing but a house and a courtyard, is absolutely deadening to the faculties, unless something be learned besides reading.

It has been partly with these views that a number of the patrons of improved education have of late years advocated *the introduction of common arts and trades into schools*. The introduction of common arts and trades is not all that is necessary to bring us into harmony with nature on this point; but it is an important and readily practicable part of what is necessary; and we propose, on the present occasion, to give it some consideration.

Perhaps the best thing we can do in the first place, is to present some account of a few of the institutions into which industrial education, as it may be termed, has been introduced. One notable example of a village school of industry exists at Lindfield, on the road from Brighton to London—a place where, a few years ago, the peasantry were in a very marked state of ignorance, and which was indeed selected on that very account by a benevolent gentleman as a proper field for an experiment in this kind of education. Mr William Allen, in building this school, and putting it into operation, had to overcome much opposition even from those he designed to benefit. The poor people, unaccustomed to see persons act from other than selfish motives, conceived it to be intended as a great kidnapping establishment, and beheld it of course with horror. When it was finished, a very few children were with great difficulty induced to attend it. By dint of perseverance this number was gradually increased. To pursue a very interesting account of the establishment given by Mr Frederick Hill in his work on Education: "The few who did come began in a short time to take home with them sundry pence which they had earned in plaiting straw, making baskets, &c.—arts they were learning at school. The boys began to patch their clothes and mend their shoes, without their parents having to pay a penny for the work. Little by little the poor ignorant creatures became assured that there was nothing to fear, but, on the contrary, much practical good to be derived from sending their children to the school; and that, strange and incredible as it might seem, the London 'gemman' was really come among them as a friend and benefactor.

A breach being thus fairly made in the mud-bank of prejudice, it was not long before the whole mass gave way. In short, the scheme proved so completely successful, that at the time we visited the school, almost every child whose parents lived within a distance of three miles was entered as a pupil, the total number on the list being no less than 300; though, from the frequent calls made upon the children for assistance in the fields, and from the bad state of the roads in certain seasons, the number in actual attendance did not exceed 150. About 100 of the children form an infant-school, their ages varying from a year and a half to seven years. For these a distinct part of the building and a separate playground are provided. The remaining 200 are divided according to sex, the boys' rooms and play-ground being apart from those of the girls. The children are at school eight hours each day, three being employed in manual labour, and five in the ordinary school exercises. There is a provision for a diversity of tastes in the classes of industry; indeed, the most unbounded liberality is manifest in all the arrangements. Some are employed as shoemakers, others as tailors, and others again at plaiting, basket-making, weaving, printing, gardening, or farming. The children work very cheerfully, and, as we expected, are found to like the classes of industry better than 'school.' We say we *expected* to find this the case; for until the ordinary plans of instruction in reading, arithmetic, &c., are much improved, and the exercise made more intellectual and interesting, we fear that children will take but little pleasure in their school lessons. The first employment to which the little workers are put is plaiting straw. When they are *au fait* at this, which is generally at the end of a few months, they are promoted to some other craft; the one of highest dignity being that of the printer. Before leaving the school, a child will often become tolerably expert in three or four trades. Those who work on the farm have each the sole care of a plot of land measuring one-eighth part of an acre, and each is required to do his own digging, sowing, manuring, and reaping. An intelligent husbandman, however, is always on the ground to teach those who are at fault. The plots of land were all in clean and nice order; and from the variety of produce—oats, turnips, mangel-wurzel, potatoes, and cabbages—the whole had a curious and amusing appearance, reminding one of the quilted counterpanes of former years.

We found the system of *matayer* rent in use, each boy being allowed one-half of the produce for himself, the other half being paid for the use of the land, the wear and tear of tools, &c. One lad, twelve years old, had in this way received no less a sum than twenty-three shillings and sixpence as his share of the crop of the preceding year; and we were told that such earnings were by no means uncommon. Of course the practical knowledge to be acquired on a miniature farm of this kind would not be sufficient in itself to fit a boy for the cultivation of land upon that large scale on which alone it can be tilled to the greatest advantage; still he will have learned much that will be of direct use to him on a farm of any size; and, what is far more important, he will have acquired habits of industry, intelligent observation, and forethought: and thus prepared, he will learn as much in a few months, as the dull and ignorant boy, whose only training has been in the hovel or at the plough, will acquire in as many years."

We here see proof of the beneficial results which may arise from a school of industry even in a rural situation. Let us now turn to an instance of industrial education in an hospital where a great number of children are kept apart from the world. We select the account given in the report of the National School Society, of the Royal Military Asylum at Chelsea, established by government for the maintenance and education of the distressed children of non-commissioned officers and soldiers:—"There are at present about 600 boys in this school, being half the number under instruction during the time of the late war. The children vary in age from five and six to fourteen years, and are not employed in works of industry until the age of eleven: little more than three years (at five hours a-day in summer, or four hours a-day in winter) can therefore be devoted to learning any trade; and in this short period the boys only work on alternate days, the rest of their time being spent in the school;—yet they make every article of clothing required for their own use.

Rather less than a hundred boys work as tailors; fifty each day alternately: about the same number are employed in a similar manner, as shoemakers, capmakers, and in covering and repairing their old schoolbooks; besides which, there are two sets or companies of knitters and of shirt-makers, and others who are engaged as porters, gardeners, in kitchen-work, &c. &c. Every thing is done by those who work at the trades except the cutting-out. This branch, requiring more experience, is managed by the old regimental shoemakers, tailors, &c., who, with aged sergeants and corporals, and their wives, manage the concerns of the institution. The system of monitors and teachers to overlook the other boys at work is generally adopted; while, in addition to the various branches of industry mentioned, the school furnishes a company of drummers and fifers, and an excellent band of music; the players necessarily devoting a considerable part of their time to the practice of their instruments.

The materials for the shoes, purchased by contract, amount to about 2*s.* 3*d.* a pair; the shoemaking tools, about 3*s.* a set to supply each boy. The stouter children are preferred for the work; and the subdivisions of their labour are of the following kind:—1st, the easiest for the youngest, closing; 2d, the next for the middle set of children, repairing and mending; 3d, the highest for the oldest, making the new shoes. But all the children learn to work at every part of the shoe, and are sufficient adepts, not merely to supply their own institution, but to make whatever shoes are wanted for the Clergy Orphan School, Saint John's Wood Road. In this manner about 25 new pairs of shoes are made, and 140 pairs mended, in the course of each week." We learn from another source that

Digitized by Google

there are defects in the arrangements of this establishment—as, that the children are sometimes on particular exigencies kept away from school in order to work, and that they are allowed no share of their earnings, and thus do not obtain "that lesson of providence which might be inculcated by a savings' bank." Nevertheless, the Royal Military Asylum is allowed to be "an evidence that a greater degree of progress may be made in reading, writing, and arithmetic, and in other branches of learning, than is attained in the great majority of schools, and yet that the boys may be taught music, gymnastic exercises, and various useful trades; thus improving their health, increasing their means of enjoyment, and promoting their future interests, much more effectually than by the prevailing methods."*

Industrial education is practised with marked success in various institutions for the reform of young criminals, as in the Brenton Asylum at Hackney Wick, and the Warwick County Asylum; in several for the refuge of destitute persons, as in that at Hoxton, and the Guernsey Hospital; and in various schools for orphan and pauper children under the New Poor-Law Act, of which that at Norwood is a most interesting example.† It is not as an *improvement*, which may or may not be adopted, that industrial education is here to be advocated: it is called for as something *absolutely necessary*, to counteract an inherent tendency of all asylums for the maintenance and education of children to become monastic institutions. The children are kept apart from external nature, from human society, and from many or most of the common operations of life. They come out as helpless nearly as they went in. Industrial education presents itself as almost the only conceivable means of fitting such children for entering the world in any thing like the same condition as other children. It is not essential that any one child be made a proficient in any one art: the great end is to make them generally acquainted with the arts of life, and to prepare them by habits of industry for earning their own bread when they grow up. From the attention which the Poor-Law Commissioners are giving to the subject, we have no doubt that in a short time we shall see the whole of the forty-five thousand orphan and pauper children of England educated in this wholesome manner. In the late reports of the Commissioners there are some excellent hints thrown out. Different arrangements are recommended for different districts. It is suggested, that in an agricultural district there ought to be a large garden which the children should be taught to cultivate, in order to become acquainted with those duties which they will probably be called to perform when they are sent out into the world. They should also be taught to erect sheds or outhouses, to make wheelbarrows and other simple utensils, and to fashion desks and forms for the school. Thus, as farm-servants, they will be able to execute a number of little jobs in carpentry which would otherwise require the interference of the proper tradesman. To enable them to contribute to their own personal comfort and that of their household, without an expenditure of their earnings, they should be taught to make and mend their own clothes and shoes, to plait straw hats, to make straw mattrasses, and whitewash walls. In a manufacturing district the employments should bear a similar relation to the trades of the neighbourhood; and in or near a seaport, the arts connected with maritime life should be taught. Such, in brief, are the views of the Commissioners respecting the boys: they recommend that the girls should be trained to the household duties of cooking, cleaning, and washing clothes, sewing and knitting, by having to perform those duties as far as required in the workhouse. It is worthy of remark, that in the Mary-le-bonne charity for girls, this plan has been for many years acted upon with excellent results. There the girls are accustomed to make their own beds, to clean their own knives, forks, and shoes, and to be scrupulously clean in their dress. "Their chief employment is needle-work; but they are employed in rotation to scour the school-rooms, the play-rooms, and the washing-rooms, the tables, forms, and stairs, as well as to prepare and remove the meals of the rest of the scholars, and to wait upon the domestic superintendant and officers."‡ The reporter of these circumstances adds, and we fully concur in his sentiments—"The value of charities of this description is too obvious to require particular comment. By establishing *good habits*, they doubtless accomplish more than can ever be effected by mere precept; and they not only tend to make useful servants, but provident, neat, and intelligent wives and mothers. If it were possible to engraft some part of such a system on the national and other schools, these advantages would become generally diffused, and the consequence would be a great increase in the comfort of the houses of the poor, and an accompanying contentment, productive of the best results on the character, among young married men of the working-classes, whom the extravagance or mismanagement of untidy and ignorant partners often drives to ale-houses, and other resorts of idleness and dissipation."

It is to be remarked, to the honour of the superintendants of the National Schools, that industrial education *has been* introduced into many of them. It is also worthy of notice, that, ever since 1753, Logan's Charity at Hull has held forth an example of an industrial school for girls. It was founded for the purpose of rearing girls, the children of poor people of good character, to be servants. "Each girl remains three years at the school, and is accustomed to knit and to sew, and in her turn to wash, and do all the work of the house. They receive twenty shillings on leaving the school, 'for fitting them with necessaries for service;' and as an inducement to a perseverance in good conduct afterwards, a small marriage portion is given to those who apply for it, and bring proofs that they have conducted themselves well in their places. Although for the twenty years ending in 1822 there were never fewer than twenty girls in this school, it is remarkable that only eight or ten out of the whole number had applied in that time for the marriage portion (about L.6)."*

The teaching of arts and trades in schools is not alone desirable as a means of creating habits of industry, and producing a general self-helpfulness; it may also be advocated on other grounds.

If worked out as it ought to be, not as a long-protracted toil, but only as a variation of ordinary school tasks, it could not fail to have a beneficial effect on the health of children, and even to quicken their advances in other departments of education. In a school of industry we might expect to see a lively spring of mind constantly kept up. All would be cheerfulness and alacrity. It might indeed be fairly argued that some arrangement of the kind is absolutely necessary in order to bring common school education into a conformity with natural institutions. Even when grown up, we can neither exclusively exercise our bodies nor our minds, without detriment to the system. An alternation of physical with mental exercise is indispensable to health of both body and mind. Much more is this the case in youth, when the animal system is generally much more developed than the mental. It is therefore eminently necessary at that period of life that mental labour should not be pushed too far, and that a large measure of exercise for the body should be allowed. The children of the cottage and farm may have their proper share of such exercise, without regulation or system, but not so the great bulk of town children, and more particularly those who spend their whole days in hospitals, workhouses, and asylums. There the introduction of industrial education is loudly called for, as almost the only readily available means of keeping the pupils in a natural and consequently sound condition.

In teaching field and garden work in schools of industry, an excellent opportunity would be afforded of diffusing among the peasantry and the class of small farmers improved ideas as to their own common labours. The great bulk of these classes in England know nothing more of their arts than was known in the days of Henry VII., and the productive powers of the country are consequently far from being fully drawn forth. At a village school which had a garden or little farm attached to it, the rising generation might be brought to see and understand the value of improved modes of tillage, including all the mysteries of draining, fencing, the proper use of lime, the economising and right application of manure, and the rotation of crops. It might even be possible to explain the chemical characters of soils and the principles of vegetable physiology. By no other means could the prejudices of the small farming class be so easily got over, or their minds be stimulated to realise the full value of the soil they cultivate. It is scarcely necessary to remind improving landlords that the tenants, as a body, are as fixed to the soil as themselves; if the present men or their children cannot be improved, there is no hope of increasing rents. But the men may be improved by the right means. Village schools and county colleges for teaching agricultural operations on enlightened principles, would in a few years greatly increase the production and the rents of the English soil.

It is also a consideration not unworthy of being attended to, that the British are now eminently a colonising people. Annually not fewer than a hundred thousand persons leave our soil to settle in distant waste lands, where each requires to know something of almost every art under the sun. Many men, who in early life never thought they should deem it prudent to emigrate, find at length that it is so; and they pass accordingly into the wilderness, with habits and feelings perhaps fitted only for refined life. For such persons, what a safeguard from extreme personal hardship there would be in that general self-helpfulness, which a course of training in a school of industry would have given them! The slightest possible acquaintance with the arts of the husbandman, the carpenter, the shoemaker, the blacksmith, would then be worth more to them than the highest literary honours won at Cambridge. Even for the purpose alone of preparing our citizens against this juncture, which may be the fate of any one amongst us, we would say it was worth while that all should receive some measure of industrial education.

One of the most plausible objections to the schemes of modern times for extending education to all classes, and making that education of a good kind, is, that such improved education must tend to make the children of the poor too nice or fine for common labour, and inspire them with wishes for higher employments which have already a sufficient number of candidates. It has even been stated in a work by no means disposed to give ready ear to any clamour against extended education,* that in England too many of the boys taught in charity schools "have aspired to be clerks or shopmen, and too many of the girls to be governesses, ladies'-maids, or nurse-maids." As far as this may be the case, it is certainly an evil; but it is one, we would hope, rather characteristic of an imperfect state of education, than certain to arise from *every* effort to communicate knowledge to the children of the humbler classes. Were the ordinary routine of a school mixed up with light work of various kinds, such as children delight to perform when left to themselves, they would grow up, we are persuaded, with healthier notions as to labour in general, and in most cases, probably, an aptitude and liking for some art fitted to support them—at the same time that their intellects were drawn forth, strengthened, and informed, and their moral feelings duly cultivated, so as to fit them for being better members of society than the ignorant and untrained, under any circumstances, can ever be expected to be. There is nothing, in reality, incompatible in intelligence and pureness of mind on the one hand, and the most rigid attention to a range of humble duties on the other. It is only necessary to make the education given to the humble have a respect to honest but humble callings, instead of mere ambitious walks. At the same time, let no obstacle be thrown in the way of rising talent, where such actually exists, but on the contrary every liberal provision be made for facilitating its naturally upward progress.

We must now draw these remarks to a conclusion. If they carry any conviction with them, we hope that that conviction will not be unproductive of the only good consequence that can arise from it, the extension of industrial education. Should they fail to convince, the fault must be in the feebleness of the advocate, for the principle itself appears to us beyond dispute. We would hope, however, to learn that they have not only produced conviction, but promoted in some small measure the increase of schools of industry.

A TALE OF COUNTRY-TOWN LIFE.

[From "Pencil Sketches, or Outlines of Character and Manners," by Miss Leslie.]†

MR MILSTEAD, a clergyman, who to the most sincere piety united a cultivated mind, a benevolent heart, and a cheerful and liberal disposition, had been recently appointed to a church in one of the small towns of a certain Atlantic section of the Union, that shall be nameless. His wife was a young and beautiful woman, whose character harmonised in every respect with his own. They had no children; they were good managers, and Mr Milstead soon found that his salary would not only afford them all they wanted, but that it would leave them something to give away. They became very popular with the congregation, for Mr Milstead, though indefatigable in administering to the spiritual wants of his flock, was never unmindful of their temporal happiness, and his judicious and amiable wife went hand in hand with him in every thing.

They had not been long established in Tamerton, when Mr and Mrs Milstead observed with regret, that though the inhabitants showed the best possible disposition to be on intimate terms with the minister and his lady, there was little sociability or familiarity among themselves. The society of Tamerton had gradually divided into numerous circles, some of these circles being so small as to comprise but one or two families. For instance, Mrs Gutheridge, the most wealthy woman of the place, revolved entirely in her own orbit. She was the childless widow of Zephaniah Pelatiah Gutheridge, who had for several successive sessions filled the office of speaker in the senate of the state legislature, an office that suited him exactly, as he had never been known to speak in the house, and very rarely out of it.

Mr Gutheridge had long been the chief man of Tamerton, and his widow now reigned in his stead: alone in her glory, and occupant of the broadest, the longest, and the tallest white frame domicile in the

village. She was originally from the city, and of a very genteel family, her grandfather having made his fortune, quitted bricklaying, and turned gentleman long before he was superannuated. Her father had not contaminated his hands by putting them to any trade whatever, having, after he left college, attended to no other business than the care of preserving his life, by studying to guard himself from all possible maladies and accidents. Therefore he died of no particular disease, at the age of thirty-four.

Mrs Gutheridge was a large woman, with a majestic figure. She had an aquiline nose, immense black eyes, and a prominent mouth, with very good teeth. After she became a widow, she preferred remaining at Tamerton to removing to the city, for, like Cæsar, she thought it better to be first in a village than second at Rome. She had, however, a sovereign contempt for every man, woman, and child in the neighbourhood, with the exception of the clergyman and his wife, whom she tolerated, because she had heard that in England the aristocracy make a point of upholding the church, and she professed to be aristocratic in all her ways.

With the assistance of her maid, she spent an hour every day in attiring herself for her solitary dinner, and she sat down alone to her sumptuous table, "all drest up in rich array." This she called self-respect. Her abigail reported that Mrs Gutheridge had a set of night curls for sleeping in, and that her night-caps were far superior to any day-caps that had ever appeared in Tamerton.

She rarely walked beyond her own grounds, but she rode out in her carriage every afternoon. She was seldom seen at full length, except on Sunday morning, when she proceeded up the middle aisle of the church, swinging a magnificent reticule, and followed by her black man, carrying two magnificent books. Her pew was richly lined and carpeted, and it was surrounded by curtains through which she could peep, without being exposed to the gaze of the vulgar, for of that class she considered the whole congregation. She reminded Mr Milstead of the sovereign of one of the Asiatic Islands, who always kept his own name a profound secret, lest it should be profaned by the utterance of his subjects.

Mrs Gutheridge being unquestionably at the head (or rather over the head) of Tamerton society, the next position was occupied by the families of two lawyers, and the third circle consisted of three physicians: for, except in Philadelphia, lawyers are generally supposed to rank as doctors, but in the city of brotherly love, that point is still contested. With regard to the medical fraternity of Tamerton, it might be said in the words of Shelty, that "every man shook his own hand," for they never met in amity, and were seldom on speaking terms. Dr Drainblood referred every disease to the head; Dr Famishem deduced "all the ills that flesh is heir to" from the state of the stomach; and Dr Juste Milieu (who was a Frenchman) maintained a strict neutrality; keeping half way between the two theories, doing neither good nor harm to his patients, and incurring the contempt and reprobation of both his fellow-practitioners.

In the fourth circle were the store-keepers: and they found it convenient to be tolerably friendly. Next came the tavern-keepers, who were rivals and foemen. The mechanics all took precedence of each other; there being no reason why a carpenter should vail his bonnet to a wheelwright, why a shoemaker should do reverence to a tailor, or why a butcher should succumb to a baker. As to the clerks, milliners, and mantuamakers, they got in where they could.

Such was the state of society in the village of Tamerton, when Mr and Mrs Milstead first removed thither. They soon discovered the position of affairs by visiting round among the congregation; and when the pastor and his lady invited company to their own house, they always perceived that they had given some dissatisfaction by not assorting the guests according to rank.

Mrs Gutheridge kept herself entirely *hors de combat*, and showed no other civility to Mr and Mrs Milstead, than that of coming in her carriage to leave at their door two cards printed in gold.

Mr Milstead took occasion in one of his sermons to deprecate the sin of pride and arrogance, which he justly represented as being specially absurd and inconvenient in a small community, every member of which was a citizen of a republic. His discourse was eloquent and impressive, and it was heard with due attention. Yet the only effect it produced was, that none of the congregation took his admonitions to themselves, but all hoped that their neighbours would. However, Mr Milstead gained in popularity, and he came to the conclusion that it was best to spare any further exhortation, and to endeavour by some indirect means to win the people of Tamerton into habits of more sociability. Though a few individuals made some pretensions to literary taste, Mr Milstead had observed in the majority of his congregation a lamentable want of interest in every thing connected with that subject. He now thought of attempting the establishment of periodical reading-parties, with the double view of alluring the members into a relish for book knowledge and book amusement, and of bringing the families together at least once a-week, so that the points on which they founded their foolish notions of reserve and exclusiveness, might be insensibly worn away by frequent collision.

Mrs Milstead heartily concurred in the plan, and her husband drew up proposals for the reading parties, in which it was suggested that one should take place every Wednesday, commencing at the house of the pastor, the hour of assembling to be seven in the evening. The parties were of course to be held by housekeepers only, with the privilege of inviting whom they pleased. It was very properly intimated that these meetings should be attended with no more trouble and expense than was sufficient to insure the comfort of the guests, that the refreshments should be of the simplest description, and that the costume of the ladies should be the same that they would wear if spending the evening with only their own families.

Mr Milstead went round to all the respectable houses in the town, and presented his paper of proposals for the reading parties. He would have thought it scarcely worth while to apply to Mrs Gutheridge, but he had understood that she sometimes did extraordinary things when her rigid system of non-intercourse pressed so hard upon her own comfort, that human nature (even such as hers) could endure it no longer.

When Mr Milstead was ushered into the presence, he found Mrs Gutheridge spread out in a large fauteuil, with her feet on a great square cushion. Over the mantelpiece was an immense mirror, so fixed that as she sat before the fire she could survey herself from head to foot, and this was her usual occupation. Her morning dress was as elegant as a close gown and cap could possibly be. Beside her stood a table with a splendid work-basket, a splendid writing-case, and a splendid book, all which articles held their places as sinecures.

She received Mr Milstead as graciously as her natural haughtiness would allow, and surprised him by promising to attend the first reading party, as it was to be at his house. Mr Milstead then went round to the members of the congregation whom he knew to have "the appliances and means" of receiving company. He explained the purport of his project with so much good sense and good humour, that he found no great difficulty in enlisting as many as he wished. It is true that there was considerable curiosity to know to whom he had already applied, and who were the persons that had agreed to join the reading society, but Mr Milstead had tact enough and influence enough to overrule all objections.

On the following Wednesday evening, Mrs Milstead's largest room was ready for the accommodation of her guests. A table with a reading-lamp was placed in the centre of the floor. On it lay several books by the best modern authors, and a few numbers of the latest periodicals.

The company assembled within a quarter past seven. Dr Drainblood and Dr Famishem had both excused themselves, it being impossible for them to sit down together in the same room. Dr Juste Milieu had promised to attend "with all proper felicity," and he kept his word.

As soon as the female part of the guests were disengaged from their cloaks, hoods, and India-rubber shoes, and had taken their seats, it was proposed that the business of the evening should commence, but Mrs Milstead suggested the propriety of waiting for the arrival of Mrs Gutheridge. Upon this the ladies with one accord broke out into loud invectives against Mrs Gutheridge "and all her airs." Preposterous and incredible anecdotes were related of her pride and her insolence, and a general conspiracy was organised for the purpose of treating her "as if she were no better than themselves," and letting her know "that they considered her company no honour."

The confusion of tongues was suddenly interrupted by the stopping of a carriage at the gate, and the sound of steps letting down. The ladies, who in the excitement of discussing Mrs Gutheridge had all left their seats, now scrambled back to them, and the great woman of the village made her appearance, like Queen Anne, in jewels and black velvet.

Mr and Mrs Milstead advanced to meet her, but she stopped short, and looked amazed that the fauteuil had not been left vacant for her. It was occupied by Mrs Parley Utley, one of the shertest, the thinnest, the dowdiest, and the most insignificant-looking of all the ladies of Tamerton, and on this evening she appeared but little better than usual. Her hair had been scratched up under a cap that had neither shape nor feature; her gown was of the worst possible fit (the belt had slipped several inches below the waist), and her muslin collar was yellow, rumpled, and pinned awry. She often acknowledged herself to be negligent in her dress, but still she believed that, somehow, she always looked well. The man that had married this woman was really in all other transactions a very sensible and judicious sort of person, but somehow, he had, since the first year, been much addicted to long journeys and long absences from home.

Mrs Parley Utley, having rallied from the confusion into which the arrival of Mrs Gutheridge had thrown her, sat conspicuously rocking herself in the arm-chair, and whispering to her friend Miss Fixby, "Who's afraid? Who cares for her?"

Mr Milstead having conducted Mrs Gutheridge to a seat on the opposite side of the fire, there were a few moments of uncomfortable silence, which was interrupted by Mrs Parley Utley speaking out to her in a pert, quick voice, "How do you do, Mrs Gutheridge? I suppose you found the walking very bad this evening, as the snow is beginning to thaw." Mrs Gutheridge turned her large black eyes full upon her, and gave the little woman a demolishing look. Then addressing her reply to Mr Milstead, she uttered in her usual deep, slow tone, that was always meant to be very impressive, "I never walk of an evening, and rarely in the day-time; I have too much self-respect."

"Don't you find your front parlour very cold?" continued Mrs Utley; "facing the north, as I believe it is." Mrs Gutheridge again turned to Mr Milstead, "There is no reason why I should allow either of my parlours to be cold; I should be wanting to myself if I did."

"I think I did not see you at church last Sunday," pursued Mrs Utley; "had you a cold?" "Are you talking to me, madam?" replied Mrs Gutheridge, fixing on her a look still more appalling than the last. Mrs Parley Utley shrunk back into her shell, ceased rocking, and having brought her knitting, she sought refuge among the ladies that surrounded a work-table, in another part of the room.

With the exception of Mrs Milstead, none of the female part of the company made any further attempt on Mrs Gutheridge. She was too rude and too repelling even to be flattered or fawned upon. Still, though they "felt the iron enter their souls," all were glad to suffer under her, that they might afterwards boast of the honour of "having met Mrs Gutheridge in company."

There was one person, however, who came to the reading party with a determination that no rebuff on her side should check his attention to the wealthy widow, whom, as yet, he had seen only at a distance. This was Mr Timmings, first and last teller in the bank of Tamerton; a little, thin, light-complexioned, small-featured old bachelor, verging on fifty-five, very spruce in his dress, and very much of a lady's man. He was supposed to be looking out for a rich wife, a blessing which he had no doubt his numerous attractions would eventually procure him. He had in the course of his life been in business in most of the chief cities of the Atlantic states, and had performed four bankruptcies; beginning at Boston, and proceeding down regularly along the seaboard, till he had failed successively in New York, Philadelphia, and Baltimore. Happy to find that he had met Mrs Gutheridge face to face, and yet lived, Mr Timmings was emboldened to locate himself permanently in the vicinity of her chair, and occasionally to address her with a few complimentary words. It is true that she deigned no reply; but she did not otherwise insult him, and that was something.

Mr Milstead now prepared to open the session, and for that purpose placed himself at the reading-table, and took up a book, when Mr Timmings stopped him hastily by saying, "Mr Milstead—sir—perhaps, sir—in all probability there is something that Mrs Gutheridge would particularly prefer. Pray, madam, may I presume, would you have the goodness to mention what piece you would especially recommend? Mr Milstead, of course you will be guided by Mrs Gutheridge's taste."

Mr Milstead half closed the volume, for after this appeal he could do no less than wait for the mandate of the lady. Mrs Gutheridge paused a moment, but as she really knew nothing of books, she prudently and haughtily replied, addressing herself to Mr Milstead, "Go on, sir. It is of course a matter of perfect indifference to me. I should be wanting to myself if I took any interest in these things."

Mr Milstead coloured, and the cheeks of his wife were suffused in sympathy; however, he recovered in a moment, and again opened the book, which was the Western Souvenir; a little work highly creditable to the taste and genius of our brethren beyond the mountains. He selected Judge Hall's simple and thrilling tale of the Indian Hater, and read it with so much effect as completely to enchain the attention of most of his auditors; only, that in the fine passage where the backwoodsman describes with such agonised feeling the destruction of his whole family, Mrs Neckgusset in a loud whisper asked Mrs Hemmings across the work-table for the loan of a spool, No. 42, and Mrs Scratchgather lamented audibly the present scarcity of three-threaded sewing-cotton.

Mrs Milstead read next, and she chose Irving's beautiful and affecting story of the Widow and her Son, which drew tears from the eyes of many of the audience. To be sure, Mrs Milstead had to stop short in the heart-rending description of the burial of the poor young sailor, and to wait till a commotion at the work-table had subsided; Mrs Puckerseam having dropped her thimble, and her companions all rising at her request and moving back their chairs to give her an immediate opportunity of seeking it on the carpet. However, the thimble was recovered, and order restored; the tale was concluded, and those who were capable of feeling it as they ought, were somewhat annoyed at the pert voice of Mr Timmings, saying, "Quite pathetic!" and at Mrs Parley Utley foolishly observing, "I declare we shall all be solemnised."

"I vote," said Mr Timmings, "that we now have something lively, something to brighten the eyes and bring out the smiles of the ladies, unless, indeed, Mrs Gutheridge prefers pieces of a serious cast."

Mr Chetwin, the schoolmaster, a sensible man and an excellent reader, said gaily, "I will give you something that I think you will find diverting." And with much spirit and humour he read Paulding's admirable account of the night in a steam-boat, when he was so much incommoded by the presence of an inveterate snorer.

A moment before Mr Chetwin began, Dr Juste Milieu made his appearance, having been detained during the early part of the evening by visiting a far-off patient. He took his seat between the reading-table and Mrs Gutheridge, and was much struck by the immoveable gravity of her countenance. At the first laugh, he could not forbear saying to her in his imperfect English, "You keep your serious!" regarding her with a look of unfeigned surprise. Mr Chetwin read on, and another peal of laughter again directed the French doctor's attention towards Mrs Gutheridge, and still he saw the same determined rigidity of muscle. "You keep your serious

Digitized by Google

still," he exclaimed in amazement, and then murmured to himself, "C'est inconcévable!"

Mrs Gutteridge fixed on the French doctor one of her looks of annihilation, but he now only regarded her as an object of professional study, and as such, he gazed on her face with a curiosity that nothing could repel. She slowly arose, and pompously advancing towards Mr and Mrs Milstead, coldly took leave of them. "It is yet quite early, madam," said Mrs Milstead, in some surprise. "Will you not wait till your carriage can be sent for?" asked Mr Milstead. "I shall be too happy to run up to your house and have it brought for you," volunteered Mr Timmings; "I beg you will honour me by commanding my services in every thing." "I want them not," replied Mrs Gutteridge; "wherever I go, I always keep my carriage waiting, that I may depart whenever I please; I suppose it is still at the door."

She stopped a moment in the hall to put on her cloak; Mr Milstead attended her to the gate, and Mr Timmings ran beside her. When assisting her to the carriage, he touched her arm with his hand, which she shook off, and then turning to Mr Milstead (who said something implying his fear that she had not found the reading party agreeable), she replied, "No, sir; after that person was permitted to read aloud, in the presence of a lady, a ridiculous story about a man snoring in a steam-boat, I should have been wanting to myself had I staid. Much that was offensive to me has taken place this evening. For yourself and Mrs Milstead, I know not that I can accuse you of any improper intentions. But, as it is, I cannot consistently with the respect that is due to myself again run the risk of coming in contact with the people that seem likely to frequent these reading parties." After this tirade, which was delivered with one foot on the step of the carriage, she took her seat, coldly bowed to Mr Milstead, and ordered her servant to shut the door.

"Mr Milstead," said Timmings, as they returned to the house, "this is really very unfortunate—quite a contretemps; positively a most lamentable circumstance."

"Not at all," replied Mr Milstead. "Yes, sir, it is," reiterated Timmings, warmly. "To seriously offend Mrs Gutteridge is not a thing of so little consequence as you seem to suppose. Now, to affront Parley Utley's wife, I own would be nothing, and could not deserve a second thought. But the widow Gutteridge of Eaglebury Hall. Really, Mr Milstead, I am surprised at you."

"For what?" asked Mr Milstead, smiling. "For permitting, in your house, the reading of a piece that was likely to shock the refinement of such a lady as Mrs Gutteridge."

"Pho!" returned Mr Milstead; "I never supposed that she had any refinement. Her pride and insolence afford no evidence of it. But, after all, the story is an excellent one, and no woman, with even a moderate degree of intellect, could possibly take exception to it. However, I am expressing myself with too much warmth. In alluding to Mrs Gutteridge, I should rather say, 'Alas! poor human nature!' for most sincerely do I consider her an object of compassion."

When the two gentlemen returned to the parlour, they heard the tongues of all the ladies going at once, and found the whole female part of the company standing round the fire, and talking of Mrs Gutteridge in no very gentle terms; and Mr Timmings could not even gain one assent to his assertion, that "it was merely her manner, and that she was certainly a splendid woman."

Refreshments were now handed round, and Mrs Buttercrumb, who was something of a gourmand, wondered that Mrs Gutteridge had not staid for them. "Oh! you need not suppose that she would have condescended to taste them, even if she had staid," remarked Mrs Parley Utley. "Proud people always behave as if they thought nothing fit to eat in any house but their own."

Before the company broke up, Mrs Parley Utley invited them all to meet at her house on the following Wednesday, by which time she promised them that her husband (who was, as usual, absent on business) would certainly be at home.

Accordingly, on the next Wednesday evening, the reading party assembled at Mrs Utley's. Mr Parley Utley had not yet returned; his wife declaring, in the simplicity of her folly, that she was not at all disappointed, as whenever he went from home he always enjoyed himself so much that he never knew when to get back again. This no one could possibly doubt who was acquainted with Mrs Utley as a wife, mother, and housekeeper. In the latter capacity she was especially deficient; for though she spent, or rather wasted, more money than any woman in the village, yet such was her indolence and mismanagement that every thing in her establishment betokened discomfort. Like all bad housewives, she always had bad servants, and frequently no servants at all. As a set-off to these manifold failings, she possessed the redeeming qualities of a smiling manner, a good temper, and a disposition to make herself agreeable to every body that treated her with civility.

On the appointed evening, she received her company with a very pleasant countenance, apologising for the badness of the fire, which had not been replenished in due season; and for the disorder of the room, her children having, as she said, turned every thing topsy turvy. Her children were eight in number, and all were present except the baby, and one that was almost a baby; the six elder ones having been promised by their mother that they should sit up to the party. They were all palpably dirty and dowdy, therefore Mrs Utley need not have taken the trouble to inform the company that "somehow her children were never fit to be seen." Several of them on the entrance of Mr and Mrs Milstead, who were the first arrivals, called out, "Ma, has the party begun now?"

We need not specify that the children were very troublesome and extremely inconvenient all the evening. Mrs Utley, in her good-nature, had invited a large proportion of honorary members, and many of them were persons whom Mr Milstead was surprised to meet at any thing denominated a reading party.

"I suppose," said one of the ladies, "we are not to expect the honour of Mrs Gutteridge's company this evening."

Mrs Parley Utley then proposed commencing the duties of the evening, and took her seat at the reading-table. She selected from a magazine a weak, insipid, unmeaning tale, called "The Unheard Of," a fair specimen of the thousand and one stories of Italy, that are scattered through the periodicals, and are descriptive of murderous noblemen, sentimental cottagers, diabolical monks, and graceful robbers. Though the time of the narrative was in the thirteenth century, and the scene in Calabria Ulterior, the author had prudently avoided giving names at full length, the monk being incog. all through, and not discovered even at the denouement; and the other characters were designated as Il Marchese F——, Il Contessa D——, Giulietta M——, Giovanni D——, &c.

While Mrs Utley was favouring the company with this story, her son Johnny swung on the back of her chair, trying to overset her; and her youngest girl rolled on the floor at her foot, pulling off and on her mother's shoes. The room was lighted with candles, as Mrs Utley said that her lamps were out of order, as usual; and one of the amusements of her boy Billy was to snuff the candles incessantly, and scatter the snuff all about. The other children dispersed themselves among the company, performing various feats of annoyance. [After a few more readings, the children were finally pacified by some handfuls of almonds and raisins prepared for supper, and then went to sleep beneath the table.]

Mrs Gutteridge appeared no more at these assemblages, and Mr Timmings dropped off after the second. Gradually the original plan became perverted, and the avowed purpose of the meetings sank into a matter of minor consideration.

The Scrapefield family, the least opulent of the reading society, had their refreshments in the most expensive style, to show that they were not poor; handing round in abundance jellies, ice-creams, wine, liqueurs, and plum cake. After this, their example was followed, and it was thought expedient that at every meeting the entertainment, as they called it, should be more and more sumptuous.

The Miss Dodcombs, having returned from town with great accessions to their wardrobes, sported ball-dresses at one of the parties, and from that night all the young ladies came in thin frocks, bare necks, and flowers, and the elder ones appeared in their best silks, and got new dress caps.

At the close of one of the reading evenings, Mr Hopkins proposed an extempore cotillon. This was eagerly acceded to by all the young people. There was no piano, but Miss Skreakington and Mr Quobly volunteered to sing for the dancers, the one performing treble, the other enacting bass. The vocalists proceeded steadily through all the varieties of "La la lalla, la la lay. La lalla lalla, la la lay. Lally lally lally, lally lally lay," &c., till Mr Milstead disturbed their gravity by remarking, that he admired the cotillon very much, particularly the words.

At the next assembly there was visible impatience in the lady of the house and the young people to get the reading party over as soon as possible. Only three or four of the guests were asked to read, and hints were given, that in the choice of pieces brevity was desirable. As soon as they had gotten through, the centre table was moved into a corner, the carpet was rolled away (the tacks having been extracted, and the floor prepared in the morning), most of the chairs were carried out of the room, the fire was nearly extinguished, the scraping of a fiddle was heard in the entry, and black Cæsar, the village Paganini, was ushered into the parlour, and enthroned on a high stool near the door. Cotillons were then the order of the night.

From that time the reading parties were only so in name; none but Mr and Mrs Milstead being invited to read after the host or hostess had made a beginning. They were virtually converted into dancing assemblies, with the usual concomitants of ball-dresses and ball refreshments. Having been the first proposers of the parties, Mr and Mrs Milstead were unwilling to withdraw from them entirely till the season was over, but they now rarely staid more than an hour.

At length the spring set in, and as the pastor and his lady were going home from the last party, Mrs Milstead lamented that the ostensible object of the meetings should have been so strangely lost sight of, deducing the cause from the incontrovertible fact, that but few of the congregation were capable of deriving much pleasure from any thing connected with books.

"True, my dear," replied Mr Milstead, "but, after all, one of our chief designs has been successfully accomplished. These parties have certainly been the means of putting the families on a more sociable footing, and inducing a more friendly state of feeling towards each other. If the younger members of the company did not take as much interest in the reading as they might have done, they probably found those meetings very much to their satisfaction in other respects. You know we have observed indications of at least half a dozen courtships, possible, probable, and positive. Nay, I have already been bespoken, in my clerical capacity, by no less than three couple. To say the truth, I had little hope of improving the literary taste of my congregation, but I rejoice to have done some good, though indirectly, in breaking down the ridiculous barriers which they had absurdly set up against each other."

A few days after the final reading party, a note arrived for Mr Milstead just as he quitted the breakfast table. He read it with a smile, then put it up, and took his hat to go out. His wife inquired from whom the note came. He replied, "You shall know very shortly, but it concludes with an injunction of secrecy, which for the present must be complied with." He then left the house, and walked up the main street. In little more than half an hour he returned, and he had scarcely entered the front door when the sound of wheels induced Mrs Milstead to raise her eyes to the window. She saw the carriage of Mrs Gutteridge drive rapidly past, with trunks behind and curtains up, and in it, side by side, sat the lady and Mr Timmings.

"What can this mean!" exclaimed Mrs Milstead; "Mrs Gutteridge going to town and Mr Timmings with her!"

"And he will return with her also," said Mr Milstead, "for I have just converted her into Mrs Timmings!!"

A CONVERSATION WITH SIR WALTER SCOTT.

[The following paper is a correct and unpretending transcript of a conversation which took place, December 17, 1824, between Sir Walter Scott and a young person who was then engaged in writing a work respecting the less conspicuous and remarkable antiquities of the Scottish capital. The conversation took place in the course of a walk through the streets of Edinburgh; and the present report of it was hastily jotted down immediately after, by the younger interlocutor, in the hope of some of the anecdotes told by Sir Walter proving of service as material for the little book he was then engaged in writing—the design which he believed Sir Walter to have in view in relating at least the greater part of them. This hope was not realised, and they are now for the first time, with some revision, laid before the public. As authentic memoranda of many of the most curious juvenile reminiscences of the great tale-teller of our age, it is thought that they may have some interest in the eyes of the public.]

YESTERDAY I sent a letter to Sir Walter Scott, informing him that I had discovered a curious box in the possession of a Mrs ——, a respectable widow in Drummond Street, whose father-in-law, a teacher, residing in Blyth's Close, Castle Hill, had taken it, about eighty years ago, from the wall behind the niche in the chapel of Mary of Lorraine, situated in that now obscure alley. Sir Walter sent me a note, intimating that, as "a passion for little old boxes and cabinets was one of the sins that most easily beset him," he should take it as a favour if I could obtain for him a sight of the curiosity I had described, or pilot him to the residence of its proprietor. My reply, next morning, contained an appointment for my meeting him at the Parliament House at one o'clock, in order to conduct him to Mrs ——'s.

I attended punctually at the hour, and had the pleasure of finding him waiting for me at the door of the Parliament House. He immediately accepted my arm [his lameness at this period of his life made him glad of such support], and we set off for Drummond Street. As we went, I told him every other particular I knew respecting the box, the circumstances of its discovery, and those of the individuals who had since possessed it. One of these circumstances respecting the lady's father-in-law, who had found the box, I may here note down: it was, that several Highland officers, while residing in Edinburgh in 1745, had taken private instructions from him, in order to remedy as far as might be the original defects of their education. This drew from Sir Walter a great number of observations. * * We soon arrived at the house, where I introduced Sir Walter to Mrs ——, and, the box being produced, he inspected it with a great deal of attention. [It was of thin iron plate, about six inches in length, and had a semi-cylindrical top, with a flap for locking, much like a travelling trunk. The supposition was, that it had been used for keeping the jewellery of the queen's chaplain.] Mrs ——, a warm-hearted simple Scotchwoman, quite overjoyed with the honour of the visit, offered the box to Sir Walter as a present, mentioning that, though, for family reasons, she had a great regard for it, she was happy to part with it to one who would have so much pleasure in possessing and taking care of it. Sir Walter was not prepared for this kindness, and spoke mutteringly of the propriety of giving fair value for any such gift, or at least giving something to the poor on the occasion. However, he did not press this point, but, giving the lady his kind thanks, left the house, after promising to send for the box in the evening. When on the stair, a thought struck him, and he paused on his stick to express it, that the handsomest return he could make to such a person for her kindness would be a good engraving of his portrait, in a neat frame, and he requested of me the favour of getting such a thing prepared and sent to Mrs ——, which I readily undertook to do.*

As we walked along the South Bridge, he mentioned that he was to call at the studio of Mr Joseph, the sculptor, in Windsor Street, but, this being a new part of the town, he was totally ignorant of its whereabouts. I was glad, for the sake of prolonging the conversation, to offer to be his guide, and, my services

* The box is now amongst the curiosities preserved in the smaller room at Abbotsford, where, however, its history seems to be unknown.

being accepted, we took that direction. As we proceeded across the Old Town, he told me a great number of anecdotes respecting it. There was a house, he said, at the foot of Hyndford's Close in the High Street, which in his young days was inhabited by his maternal grandfather Dr Rutherford. The house contiguous to this had originally belonged to the same proprietor; but in the course of time it had come to be sold, but with a strange reservation, of the nature of what is called by Scottish law a *servitude*. The stair of the house latterly possessed by his grandfather being very narrow, it was stipulated, that when any person died in that house, the coffin should be carried by a private door (usually shut up) into the next house, and taken down to the street through the stair belonging to that tenement, which chanced to be of sufficient width. In his uncle's house, he said, he had spent many of the happiest days of his boyhood, and got many a Christmas and New-Year's gift from his venerable relatives. As the house is nearer the High School than his father's was, he used always to come here in the forenoon from his classes to get his luncheon. The High School boys in his young days were very wild. He remembers a terrible affair they had in consequence of one of them having been hurt by a low female as he was passing homewards up Blackfriars' Wynd, then the principal access from the school to the centre of the town, and a notable nest of women of that character. Infuriated by the conduct of the woman, the boys proceeded in mass to the wynd, and demolished the whole of the windows and a good many of the doors of the place, ere any one could appear in behalf of peace and order. At length the Town Guard rushed upon the scene of riot, and seized some dozen of the more active boys, and dispersed the rest. Sir Walter, too young to take part in the fray, obtained refuge under the stall and petticoats of an ancient apple-woman, who was happy to afford him the desired shelter, from good will to the cause of the boys against "the limmers," as she designated her neighbours. We then spoke of the high spirit exhibited on various memorable occasions by the boys of this distinguished seminary in former times; for which Sir Walter accounted in part by remarking, that formerly the pupils remained at the school to a much maturer age than now, so that many of them were rather wild youths than frolicsome boys. He alluded particularly to the barring-out or rebellion of 1598, when a bailie of the city, by name John Macmoran, approaching to lecture them into obedience, was shot through the brain with a pistol bullet, fired out of one of the windows. When Sir Walter first went to the school, the building of those days still existed, and the boys pointed out what they called the *Bailie's Window*, being that through which the shot had been directed. I mentioned that the bailie, as appeared from Maitland's History of Edinburgh, had been buried in the Greyfriars' churchyard, and that some years ago a skull being dug up in that cemetery, with a round hole in it, it was supposed to be that of the unfortunate magistrate. He said he had heard it stated traditionally that the unlucky boy who fired the shot was named Sinclair; he was a son of the chancellor of Orkney, too powerful a man to make it convenient that his son should be dealt with according to the full rigour of law. The boy was accordingly smuggled quietly out of the way. Another stripling, named Campbell, who had been deeply implicated in the riot, fled to Macleod's country in the Isle of Skye, where he settled, and left a generation of Campbells, one of whom, a great-grandson of the rioter, received the unfortunate Charles in his wanderings in 1746, and treated him with great kindness. [It may here be remarked, that Charles was not entertained by any gentleman of this name in Skye; but he was most hospitably treated by one Donald Campbell, a tenant of the Laird of Macleod in the Isle of Glass, one of the remoter Hebrides; and probably this was the person meant by Sir Walter.]

He now adverted to the character of the head master of his day, Dr Adam, who had been at an earlier period his father's preceptor, as he had since been his son's, thus teaching three generations. This good man, said Sir Walter, was a great stickler for old fashions, and could not bear to see a boy exhibit any thing like backsliding from the cocked hat, wide-skirted coat, breeches with stockings, and buckles in the shoes, which gave so old-gentlemanly an air to the youth of the last century. Dr Adam used to lecture his class frequently on the propriety of adhering to the old costume, and sometimes said in an austere and impressive voice, "If you see a boy with a round hat, tied shoes, and a short coat like a groom, that is a bad boy:—mark that boy in after life, and you will see how he will turn out!" I spoke of the last words of this ancient master on his deathbed, which, I said, had always struck me as involving something mystic and sublime—"It grows dark, boys—you may go." It seemed to me a sort of description of the approach of death, and might almost be taken as a communication from, at least, the confines of the other world. Sir Walter, who never seemed to be at a loss for a story of his own wherewith to *cap* a friend's, mentioned the case of a dying person who had a candle placed before him, and made a signal when he lost the power of seeing it.

Our approach to the head of Leith Walk gave a new turn to the conversation. Remarking on the fine spacious street before us, he said, that in his boyhood, when it was merely a bad road, he had passed along it in a coach with his mother and a friend of hers, a gentleman with whom she was on some ceremony. Suddenly, taking advantage of a brief pause in the conversation of his two companions, he said, "Mamma, I should not be surprised if this road were yet to have houses built along it, all the way from Edinburgh to Leith, so that these towns will be joined in one." His mother said he was a very forward boy, and bade him be quiet; and when they got home, she took him apart, and gave him a serious lecture on the bad habit he had of uttering sallies of nonsense in company. "For instance," she said, "what could be more absurd than your remark to-day in the coach! To think of Edinburgh and Leith ever being joined together—such a thing, you should know, never can take place." And here, said Sir Walter, gaily, we see the phenomenon accomplished. [In reality, this must be regarded as a remarkable illustration of the thoughtful sagacity which seems to have distinguished Scott in his earliest years.]

Our next topic, by some chance, was Sir Walter's late Highland piper, John of Skye, who, he said, had made a voyage to China, and had brought him as a present the stick he now carried, being the stalk of a tea-tree. He playfully went over John's character, his wanderings, his long faithful services, and his unfortunate temper, which was the cause of his being discharged. "The truth is," said my companion, "the character of the Highland piper is just that of the turkey-cock." John was insufferably proud, and became quite unamenable to the domestic regulations of Abbotsford. A direct act of disobedience to Mr Laidlaw at last led to Sir Walter parting with him. The voyage to China had somewhat tamed him, and he would now have gladly resumed his former service; but that was not to be thought of. I said I recollected hearing an anecdote of John from the late Mr Alexander Campbell, to the effect that, contrary to express orders, he had come from Abbotsford to Edinburgh to attend the competition of Highland bagpipers, thinking he should do so without being detected, when, just as he stepped on the stage [the scene being the Edinburgh Theatre-Royal], the first person who met his gaze was his master sitting in one of the boxes! Sir Walter acknowledged that the anecdote was strictly true.

We were now at Mr Joseph's door, where we found, on inquiry, that the master sculptor was not at home. We walked in, and were soon attended by a foreman, to whom Sir W. expressed a desire of seeing a copy which had been made by Mr J. of "his own unworthy head;" and we were then conducted to the studio at the back of the house. In going along, we passed first a bust of Sir Henry Moncrieff [an eminent Scotch divine], and then one of Mr Fergusson of Raith, on seeing which Sir Walter instantly said, "My handsome schoolfellow, Fergusson." Finally, we came to Sir Walter's own bust, which represents him in his serious and poetical mood, as Chantrey's does in his comic and conversational aspect. The expression is that which he is described in "Peter's Letters" as wearing, when he pronounces the verses,

> It fell about the Lammas tide,
> When the Englishmen won their hay,
> That Earl Douglas he would ride
> Into England to fetch a prey, &c.

[This bust is now at Prestonhall, in the county of Edinburgh, the beautiful mansion of Mr Burn Callander.] After Sir Walter had transacted some money business with the foreman, we took our departure, and returned towards the centre of the town. I spoke of a curious old manuscript diary lately discovered, the composition of a judge of the Court of Session, and which opened with an account of the great fire of the Parliament Square in the year 1700. This led to a conversation about city conflagrations. He told me that at the fire of a large house in the Lawnmarket in 1771, his father and uncle had been very active in working the engines. His uncle, to favour this labour, took off his coat, and gave it to a poor woman, a bystander, to be kept for him, not recollecting that he had sixty pounds in one of its pockets. To his great surprise, the coat was returned to him next morning, with the money untouched in the pocket, a letter in the other pocket having led the poor woman to a knowledge of the owner. I reminded Sir Walter that that fire had burnt out Mr Hume of Ninewells, who occupied the *fifth flat*. This led to remarks on Mr Hume's younger brother, the celebrated philosopher, of whom Sir Walter seemed inclined to think without asperity. He said he believed that Hume was the most amiable man that ever breathed, and after all wrote his essays chiefly as exercises in metaphysical acumen.

The conversation somehow turned to Bruntsfield Links,* and Sir Walter mentioned that in his youth there was a stone near the west end of that piece of ground, which was pointed out as marking the scene of an unfortunate duel which took place, in the reign of James VI., between one Stephen Brownsfield or Bruntfield, and a gentleman named Carmichael, and which was followed up by consequences recalling to mind the celebrated story of the Cid. Brownsfield, though a tall and powerful man compared with his adversary, was killed on the spot. The widow had three sons rising into manhood, all of whom she brought up with the duty of revenging their father's death deeply impressed on their minds. The eldest, as soon as he reached a certain age, and had acquired a competent skill in arms, challenged Carmichael, and was killed. The mother, not in the least turned from her purpose, took equal care in preparing the second for the same task; but he also fell under the sword of Carmichael. The only effect of this repetition of calamity was to cause the lady to take still greater care in fitting her third and sole remaining son for the deadly encounter. She sent him abroad to study the use of arms in the schools of France and Italy, but with the injunction not to remain there any longer than was necessary to make him a perfect combatant. He returned accordingly, one of the most finished swordsmen of his time; and having obtained the permission of the king, a solemn combat took place between him and Carmichael, in lists erected upon Cramond Island, in the Firth of Forth, and in presence of an immense concourse of people. On this occasion the vengeful spirit of the mother was at length gratified.† Sir Walter then spoke of (I think) Bruntsfield House, the seat of Sir George Warrender, Bart., near the head of Bruntsfield Links, and mentioned that not long ago a chamber was discovered in that old mansion, which was not previously known to exist. In the course of some repairs, a builder observed that there was a certain space in the outside of the house, which was not accounted for in the internal accommodations. Curiosity being awakened on this point, the man proceeded to *sound* some of the inner walls and partitions, and soon ascertained that there was a room in that part of the house, unprovided with a door. A part of the wall was broken down, and a room accordingly was found. It was a bedroom, and, strange to say, exactly provided in all respects as if a gentleman had been about to sleep in it for the night, the bed being *made down*, night-clothes laid out, and the toilette suitably arranged. The whole was in the taste of a long bygone age. Sir Walter made the remark that many circumstances occurred in the days of our ancestors which might make a Scottish gentleman change his mind with regard to the place in which he was to pass the night.

The conversation then passed to Sir William Dick, an eminent merchant in Edinburgh, in the early part of the seventeenth century, and at one time provost of the city, but who was ruined by lending large sums of money (it is said L.30,000 in all) to the Covenanters, to enable them to maintain their armies against Charles I., and who died miserably in prison at Westminster in the time of Cromwell. Sir Walter said he had seen an exceedingly rare life of this gentleman, and had offered ten guineas for it, but in vain. It contained two prints, representing Sir William in his various circumstances of the height of mercantile grandeur and the extremity of distress. In one, he is seen superbly attired and mounted, surrounded by his guards, riding down to Leith to see his ships unloaded. In the other, he is sitting in jail at Westminster, in deep dejection, and deprived of all the comforts of life. Sir Walter also said, that in his youth a window used to be pointed out in what was called Sir William Dick's house in the Lawnmarket, as that from which he had, in open day, poured forth the large supply of dollars which were to be sent to pay the Scottish army on Dunse Law.‡ Another of his family, in the ensuing age, was more fortunate. Up to that time no regulation had ever been made for carrying away the refuse which was constantly accumulating on the streets of the Scottish capital. The possibility of improving land by manure was a thing rather dreamt of by a few visionaries, such as those who now dream about so many things, than a truth acknowledged and acted upon. Accordingly, as far as the streets of Edinburgh were ever cleaned at all, it was at the expense of the city. At length, about the year 1685, this Sir William Dick, being a long-headed considerate man, and then at the head of the magistracy, ventured on making a proposal for relieving the city from all expense on account of its refuse. "'Some fanciful sort of people,'§ said he, 'say that dung is of use in land, though for my part I do not believe a word of the matter. However, if you will permit me to free the city of the nuisance at my own expense, I will make a trial of it.' The proposal was readily agreed to by the town-council, who granted Sir William the right to clean the streets for a considerable term of years; and the lands of Pres-

* A common adjacent to Edinburgh.

† This anecdote became the foundation of a tale which appeared in the fourth number of the present publication.

‡ Scott alludes to this window in "the Heart of Mid-Lothian."

§ These are as nearly as possible the words used by Scott in relating the anecdote.

tonfield soon began to attest what a slie loon the provost was."

We had now arrived at the office of the Oil-Gas Company in St Andrew Square, and, Sir Walter having some business to transact there [he was president of the society], I parted with him, greatly delighted with a conversation which has added so pleasingly to my stock of old-world anecdote.

Edinburgh, Dec. 17, 1824.

SKETCHES IN NATURAL HISTORY.

OYSTERS.

The oyster is a species of shell-fish known to every one, and in very general estimation as a light article of diet, or rather as an appetising whet to more solid feeding. This has long been the case in the civilised world; for we learn from history that the Greeks and Romans held these shell-fish in high repute. Oysters are abundant in most of the seas of the globe. They are found in beds or banks near the shore, and particularly in rocky and sandy situations, or at the mouth of streams. It is thought that the mildness produced in the water by the influx of fresh currents is agreeable to them, and favourable to their increase. In such positions, accordingly, they are found in greatest numbers, and of the best quality, as regards bulk, flavour, and nutritiousness.

The appearance of oysters is too familiar to require particular description. Within an uncommonly coarse bivalve shell resides the animal, the body of which is of a round flattish form, composed chiefly of a whitish jelly-like substance, in which scarcely any appearance of structure can be traced by the naked eye. The most conspicuous feature of the oyster is the part called the beard, which extends about half way round the edge of the body, and is, in reality, the *bronchiæ* or gills of the animal, the mouth being also placed there. The shell of the living oyster is usually found very tightly closed, although the animal has the power of opening it to a certain extent. It was long imagined that oysters possessed no means of locomotion, but this is now ascertained to be a mistake. A French naturalist has discovered that oysters which locate in deep situations are in the habit of propelling themselves to short distances, by forcibly ejecting water from their shells, the reaction so caused being a means of self-movement. If oysters of this kind be placed in situations which are liable to be left dry by the recess of the tides, they will perish by ejecting the water, when left without the means of procuring a new supply. Oysters, however, that are accustomed to lie on beaches left dry daily by the tides, do not resort to this process of advancement, being apparently aware of its danger.

Oysters spawn chiefly about the close of spring, when the sun begins in some measure to warm the waters of the ocean; and what they then throw out consists of small naked oysters, completely formed. Each of these secretes its shell, and expands to a full sized oyster in the space, it is believed, of about three years. They are then fit for food. The sea generally removes the light spawn to a short distance from the parent, but it is quite common to find twenty small ones sticking close to the shell of the old one. Some writers speak of male and female oysters, but Professor Beckmann, who paid considerable attention to the subject, considers this idea as erroneous. However this may be, it is certain that oysters are very prolific, and increase rapidly in numbers. Before the year 1700, no oysters were known to exist in the Straits of Menai, the narrow channel separating Anglesey from Caernarvonshire. About that time, however, some person threw into these straits nearly a hundred oysters, and by the year 1712 they had multiplied so greatly as to yield abundant work for the fisherman. Ever since that period, they have been found in the same place in great plenty.

Oysters are leanest at the time of spawning, and on this account fishing for them at that time is forbidden in Britain and other countries where prudent regulations prevail. The months whose names contain an *r*, as some quaint-thoughted person has discovered, are those in which oyster-banks are fished on the British coasts. In May, June, July, and August, they are left undisturbed.* The mode in which oysters are taken from the sea differs in various places, and must be determined in a great degree, indeed, by the character of the sea-bed in the locality where the bank is placed. Uneven rocky ground cannot be fished in the same manner as places that are level and sandy, or clayey. In some situations, a box bound with iron, and open at one end, is dragged along the oyster-bank, and from time to time drawn up and emptied. Other fishers have rakes, with about twenty strong pikes, blunt and curved, and nearly ten inches long, which are fastened to a long elastic pole. The fishermen, seated in their boat, draw this rake over the bottom, and thus collect the oysters, which, on being raised to the surface, are retained in their place by a board fixed over the rake. But the most common method of oyster-fishing is by *dredging* with nets. The net in this case is very strong, being sometimes made with leather thongs, and is drawn along the ground as in the preceding instances. It is kept open by means of a heavy iron frame, which rakes up the oysters, and admits of their entering the net. In some places the tide recedes so far that the oysters can be picked up with the hand, and in other quarters, where the water is shallow and clear, the fishermen pick off the oysters from the bank by using a pair of long pincers or tongs. This last plan has the advantage of enabling them to select the large full-grown animals, leaving the young for another season. Most fishermen, however, who use the net or rake, have the prudence to pick off the small oysters adhering to the shells of the older ones, and throw them back into the water.

It is a circumstance known to all who are connected with oyster-fishing, that the quality of this species of shell-fish depends greatly on the nature of the bed of the sea at the point where the bank lies. An experienced fisherman or connoisseur can at once tell, by the taste and flavour, whether an oyster has been taken from a rocky, a clayey, or a sandy bottom. Where the ground is calcareous, they are tender and friable; where it consists of rock, they are more solid and heavy; where the channel is marly or clayey, they are softer, and contain more animal gluten; and on a slimy bottom they are more rich and oily. The rock-oysters, generally speaking, are largest and plumpest, and are distinguished by thin and almost transparent shells. This conjunction of characters is natural and intelligible. In calcareous ground, for example, the particles of food which the animal absorbs must be largely mixed with calcareous matter, which will be again excreted and go to swell the shell, without increasing the bulk of the body. In rocky situations, such will not be the case; the food, not being calcareous, will remain to increase the animal's size, while the shell must be thin for want of calcareous matter.

The oysters of the British coasts have long been admitted to be the best procurable in Europe. The Romans paid great prices for them, although it is not likely that they would then be taken to Italy in a very fresh state. Of the British coasts, the districts most famous for their oysters are the shores of Kent and Essex. Those found near Milton in Kent, and usually called the "native" oysters, are perhaps the very best; they are small, round, plump, and white, with thin shells, which are easily opened. The oysters found in the river Coln, on which stands the town of Colchester, in Essex, are also of excellent quality, and are renowned over the whole island. Marlow has made them classical by causing Justice Greedy, in "A New Way to Pay Old Debts," to say that he had nothing to speak of this morning before breakfast, except a barrel of Colchester oysters. The Coln, near that town, forms a great many arms and creeks exceedingly well suited for the formation of oyster-banks. The Dorsetshire oysters rank next in estimation to those of Essex. Those of Pool, especially, hold a high reputation, as do those also of Feversham in Kent, of the Isle of Wight, and of Tenby on the coast of South Wales. Vast quantities are carried to the Continent from the Kentish coasts. Several hundred vessels were at one time employed annually in this trade alone. In London, during the proper season, the trade in oysters is very considerable, both for exportation into the country and native consumption. The dealers bestow great pains in preserving and feeding the oysters in tubs, containing an infusion of salt water with a little oatmeal. At the shops of these tradesmen, which are usually fitted up like coffee-rooms, with private boxes for company, oysters, lobsters, shrimps, and other fish, are served up in a tasteful manner to customers. A common price for good oysters at these establishments is 8d. or 9d. per dozen. To be in perfection, the oyster should be eaten within one or two minutes of being opened. No true lover of the article in London has the oysters sent in an opened state to his house; at lunch, supper, or any other occasion, an oysterman attends to open them at a side table, and they are swallowed from the shell while alive, or the instant after they are killed.

One cause for the better thriving of oyster-banks at the mouth of rivers than any where else, has already been mentioned. It is probable that the slime brought down by rivers materially aids in feeding the oyster. The support of the animal comes entirely from the minute particles of nutritive matter, animal or vegetable, which the sea floats to the open lips of its shell. The oyster, like other animals, is not without its enemies. The worst of these foes is an eel-formed fish of small size, called by Linnæus *ophidion imberbe*, and by the common people the *five-fingered* fish. It is often found in the inside of oyster-shells, curled up like a ring, and sailors assert that it eats the former and proper tenant of the abode. On this account English fishermen recommend all persons who are anxious for the preservation of oyster-banks to lay violent hands on this five-fingered fish whenever it comes in their way. There are other enemies of the oyster, which attack its very shell, and make their way through it. These are worms of various kinds. Sometimes the shell of the oyster is found quite gnawed through, and the intruder lodged inside, feeding on the body of the harmless and unresisting proprietor. Small mussels are also apt to attach themselves to the upper or convex shell of the oyster, and for no good purpose to the inmate. The under shell is flat, and the animal always lies on it.

Besides those on the English shores, oyster-banks are common on the northern coasts of the island, and on the coasts of Ireland. The Scottish capital has been till a recent period plentifully supplied with good oysters from the Firth of Forth, in its immediate vicinity. Nearly opposite to Leith, there was a large depôt of them, formed around or near the islet of Inchkeith. Local poets speak with rapture of the delicious *caller* [that is, fresh] *oysters* which were to be had in Edinburgh for evening festivities. From mismanagement, or some other cause, the Edinburgh oysters have greatly degenerated in quality, and the town has consequently lost one of its objects of attraction. Dublin is supplied from Arklow, a little to the east, and oysters are conveyed thence to artificial beds, near the capital, on the northern side. At Sutton, Polebeg, and Dalkey, places but a short way from Dublin, additional supplies are procured for the tables of the Irish metropolitans.

On the continent of Europe, oyster-banks are also abundant. On the coast of Normandy, near Caen, there is a single bank six miles long by one mile in breadth. The fishing of Normandy is productive of a very large revenue to the inhabitants. At the mouth of the Seine, the oysters, though comparatively few in number, are of the finest quality. Of course these are carried up for the Parisian gourmands. The estimation in which oysters are held by the highest ranks in France may be guessed from the pun which the people made upon the name of one of their late sovereigns, Louis XVIII., who was held to be specially fond of good living. *Eighteen* is in their language *dix-huit*, which word is pronounced exactly like *des huitres*. By adopting the latter reading, the French made out their king to be "Louis *of the oysters*," a name which his known tastes gave point to. Medoc, a place at the mouth of the Gironde, is the Colchester of France, as regards oysters. The estuaries of the Rhone and the Loire are also famous for their banks.

The Dutch have various banks on the coasts of Zealand, but these cannot supply the national demand, and many ship-loads are taken over yearly from England, and pitted on the shores of Holland. There are exceedingly large and rich oyster-banks on the shores of the duchy of Holstein, and of Jutland. The Danish king has also extensive fishing-grounds, called the Royal Oyster-beds, on the western coast of the duchy of Sleswick, amounting in number to more than fifty, the majority of which are under a mile in length. From these, two or three thousand barrels may be drawn yearly. The lessee of these beds is forbidden, under the strictest penalties, to lift any others but those which are full grown and three years old. Sweden has comparatively few beds on its coasts, but these few are large and productive. They lie chiefly near Stromstad and Udewalla. The countries, again, in the south of Europe, lying on the Mediterranean Sea, are well supplied with oysters, that sheet of water being more prolific of shell-fish than any other on the surface of the globe. Perhaps the most noted part of its whole circumference, as regards oysters, is the Gulf of Tarento. There they are produced in immense numbers, and of the finest quality. Formerly, Italy had a rich oyster-field in the Lucrine Lake, which covered a great part of Campania; but in the year 1538 this lake was filled up, and turned into a mere pond, by an earthquake.

Both in the Atlantic and Pacific seas, as well as in the Indian Ocean, oyster-banks are plentiful, and there the fishery assumes a new and higher degree of importance, in consequence of the pearls which are found in a particular variety of oysters, which is abundant in these latitudes. Pearls are sometimes found even in the oysters of the European coasts, but the pearl oyster fishing is chiefly confined, at present, to the southern seas. It constitutes an extensive and lucrative traffic on the Ceylon coasts and in the Persian Gulf. The substance called pearl is supposed to be an excrescence, originating in disease. In No. 226 of this periodical, however, an account of the pearl fishing was given, which renders it unnecessary to enter into details here.

We have now glanced at the oyster-trade over the whole world. A good hint, it seems to us, may be given, or taken, from the information here presented, and for which we are chiefly indebted to a short treatise by the late Professor Beckmann. The case of the oyster-bank so rapidly established in the Straits of Menai, is the point to which we particularly allude. Could the same thing not be done, to great advantage, on many parts of our coasts, with the pearl oyster? Or would it not be an object of importance, in many districts, to have a good bank even of the common edible oyster formed? Several hundreds of the finest Persian or Ceylon pearl-oysters might be brought home, at very little expense, and kept alive by the way in casks, with very little trouble. Some of our smaller port-towns, such as Berwick, which can never rise to great commercial eminence, from defect of natural position, and which, with an augmenting population,

* The London oyster season begins on the 4th of August, and ends on the 12th of May.

Digitized by Google

feels severely the want of an increasing trade, might pursue such a business as that of pearl-fishing with the highest advantage. There appears to be no obstacle to such a plan, unless that in our cold waters some other means than diving would require to be resorted to.

SKETCHES OF SUPERSTITIONS.

MODERN FICTIONS OF NORTHERN EUROPE.

The introduction of Christianity among the Goths of northern Europe had naturally the same influence in abolishing the dark and gloomy fictions of their primitive mythology, as it has been shown to have exercised in the case of the Anglo-Saxons, an offshoot from the same great race. But, as appeared also in that instance, the great religious change alluded to could not at once extricate the people from the intellectual darkness in which they were plunged, or prevent the growth and spread of a host of familiar superstitions, not so gloomy in their character, but as wild and fanciful as those which the followers of Odin brought from their native plains of Asia. Nowhere, indeed, in the whole world, has this order of superstitions, which, for want of a better term, have been called *familiar*, prevailed so extensively, or flourished so luxuriantly, as among the German and Scandinavian nations, from the era of the introduction of Christianity up almost till the present hour.

The people of Northern Germany, Sweden, Denmark, Norway, and the northern islands, who were originally followers of Odin, adopted in later times very nearly the same class of familiar superstitions, though the names of their spirits and supernatural beings are sometimes found to differ. These names are amazingly numerous. Dwarfs (of various descriptions, white, brown, and black), Trolls (or Trows, the same nearly as Dwarfs), Elves (Elfs and Elf-maids), Nisses, Kobolds, Necks, Nixes, Mermen and Mermaids, are but a few of the supernatural beings who flourish in the popular creed of the countries alluded to. The Northmen hold the opinion that all these beings were originally subjected by greater powers, and were doomed in consequence to take up certain assigned abodes and duties. The Dwarfs, or hill-trolls, were appointed to the hills; the Elves, to the groves and trees; the Hill-people, to the caves; and the Mermen, Mermaids, and Necks (or River-spirits), to the seas, lakes, and rivers; and so on.*

The Dwarfs or Trolls are the race most universally believed in, with the exception, perhaps, of the Elves or Elfi. The families or nations of the Trolls live in splendid mansions, in the interior of hills, or under level ground. Their figure is represented as being extremely slight and deformed. They dress variously, but have usually grey jackets, with pointed red caps. Sometimes they wear *mist-caps*, as they are called, which render them invisible. Trolls are not held to be malignant beings, and have often had friendly intercourse with mankind. Out of the immense chests of gold which they possess, they are said often to have bestowed fortunes on people who have had the luck to please them. But, upon the whole, the Trolls are rather disagreeable neighbours, having an inveterate propensity to pilfering, which they sometimes carry to the extent of kidnapping women and children. Fortunately there are various ways of banishing, from any particular spot, these little gentlemen with the humps, long noses, and high red-caps. Drums, bells, and, above all, church-bells, are things they cannot endure. These noises drive them off immediately, and in such a humour, that they generally seek to revenge themselves upon the inhabitants of the place they have left. In "The Fairy Mythology," a clever little book published two years ago, and which gives us much information on these subjects, we find the following account of a Troll's revenge. A Troll had once been forced away from the village of Kund, in Zealand, by the church-bells, and having seen, at the place to which he removed, a person belonging to Kund, "'Will you just be so kind,' said the Troll, 'as to take a letter for me back to Kund?' The man said, of course, he had no objection. The Troll then thrust the letter into his pocket, and charged him strictly not to take it out till he came to Kund church, and then to throw it over the churchyard wall, and the person for whom it was intended would get it." On reaching Zealand, the man sat down in a meadow to rest himself, and, remembering the letter, "felt a great desire to look at it, at least. So he took it out of his pocket, and sat a while with it in his hands, when suddenly there began to dribble a little water out of the seal. The letter now unfolded itself, and the water came out faster and faster, and it was with the utmost difficulty that the poor man was enabled to save his life, for the malicious Troll had enclosed an *entire lake* in the letter. The Troll, it is plain, had thought to avenge himself on Kund church, by destroying it in this manner; but heaven so ordered it, that the lake chanced to run out in the great meadow where it now flows." Such was the origin of Tüs Lake, and such the issue of a Troll's revenge.

In Germany, the Trolls receive commonly the name of Dwarfs, but their character and habits, under both appellations, are much the same. Sometimes, like the Brownies of Scotland, the Dwarfs assist workmen, either openly or otherwise. On one occasion, they used to come frequently, says the story, to visit a band of field labourers in the hay-making season. Sometimes they would assist the workmen, but more commonly preferred to seat themselves in a cluster upon the branch of a maple-tree, overlooking the field. "But some mischief-loving people came one night and sawed the branch nearly through. The unsuspecting Dwarfs, as usual, sat down on it in the morning; the branch snapt in two, and the Dwarfs were thrown to the ground. When the people laughed at this, they became greatly incensed, and cried out,

> 'O how is heaven so high,
> And perfidy so great!
> Here to-day and never more!'

And being people of their word, they never were seen again."

The Elves of the north do both good and evil to mankind; or rather there are Good Elves, and Evil Elves, who respectively comport themselves in a way correspondent with these epithets. The former are a race of minute beings, ever dancing on the grass, or lurking under the leaves of trees or the cups of flowers, frolicsome as the breeze, and musical as its murmur among the summer boughs. Like the Fairies of Scotland, the Elves are held to live in a state of mingled hope and doubt as to their chance of ultimate redemption. They have kings and queens, and ride in stately coaches, with gorgeous trappings. The little circles of green grass, which are called with us fairy-rings, are the elf-rings of the north, and are the spots where the Elves foot it merrily by night. There is one remarkable peculiarity in the *Danish* Elle-women, or female Elves. The Elle-woman is fair and captivating, and plays beautiful music to attract young men; but let these beware of her, for she, though a fair woman in her front aspect, is *hollow* in the back, like a dough-trough. This the Elle-women endeavour to hide, but if the sign of the cross be made, they must turn round, and their strange deformity is seen. So runs the tradition of the Danes. The malicious Elves live underground, beneath the houses of mankind, and the inhabitants above, according to their cleanliness or good behaviour, are objects of liking or dislike to the subterranean residents. It is curious that the Irish at this very day give a similar habitation to their fairies, and hold the same opinions respecting them, in almost every particular.

The Nis of the modern Scandinavians is the Brownie of Scotland, the Kobold of Germany, and probably the Friar Rush or Robin Goodfellow of England, a useful drudging spirit, to whom Milton alludes, when he makes his rustic

> "Tell how the drudging Goblin swate,
> To earn his cream bowl duly set;
> When, in one night, ere glimpse of morn,
> His shadowy flail hath threshed the corn
> That ten day-labourers could not end;
> Then lies him down the lubber-fiend,
> And stretched out all the chimney's length,
> Basks at the fire his hairy strength,
> And crop-full out of doors he flings,
> Ere the first cock of matin rings."

This is an admirable picture of the friendly house-spirit of all countries, and without whom no farm-house, it was at one time supposed, could thrive. Alluding to this circumstance, the Fairy historian already quoted observes, "Well is it for the maids and the men when they are in favour with the Nis. They may go to their beds and give themselves no trouble about their work, and yet in the morning the maids will find the kitchen swept up, and water brought in, and the men will find the horses in the stable well cleaned and curried, and perhaps a supply of corn cribbed for them from their neighbours' barns." The origin of the idea of the Nis or house-spirit is pretty intelligible. In the rude and troublous times of all countries, or during the days of religious persecution, persons in hiding would naturally seek shelter in rural districts, from such as knew them or favoured their cause. But this shelter could not be granted openly, and hence those who received it would be under the necessity of remaining in concealment by day, and could only come out at night to procure food. To repay the hospitality of their resetter, it is naturally to be supposed that they would be willing to do such work for him as could be done under the circumstances. The consumption of food, and the noise of working, would be laid to the door of the Nisses, and the secret be maintained. In Scotland, in very recent times, a case really occurred in which religious sufferers played the part of Brownie in this manner; the tradition afforded to the Ettrick Shepherd the foundation of his well-known tale, "the Brownie of Bodsbeck."

Many are the stories told of the Nis and the Kobold. They are as annoying in the character of enemies as they are agreeable in the capacity of friends, and when they once attach themselves to a household, either for good or evil, it is scarcely possible to get quit of them. There is a Jutland story (told also in Ireland and many other countries), of a man who was annoyed by the presence of a mischievous Nis in his dwelling, and who resolved to quit it for another. Every thing was packed, accordingly, and put on carts for removal; and the good man was inwardly congratulating himself on his approaching liberation from his late pest, when, just before moving, he chanced to turn to the back part of one of the carts, and there saw the Nis sitting quietly and coolly in one of the empty tubs. The poor man's countenance fell sadly, and more so when the Nis popped his head out of the tub, and cried, "Ha! we are moving to-day, farmer!" According to one version of the story, the farmer, seeing the case to be hopeless, ordered the carts to be unloaded, and went quietly back to his house, after which time the tricky Nis became a good friend. In telling a similar story of their Kobold, the Germans say that, before departing with his furniture, the farmer set fire to the barn, in order to burn the tricky "lubber-fiend," and was just driving off, when to his mortification he saw the Kobold behind him on the cart, crying, "It was time for *us* to come out, farmer—it was time for *us* to come out!" The cool and determined association of fates and fortunes, indicated by the *us* of the Kobold, is most amusing!

The Nis, however, is a most useful fellow when he likes, as has been mentioned. Every thing thrives under his vigilant eye. He steals fodder for his host's cattle at all hands; and, according to the stories told of him, he seems often to have shown himself familiarly to those about him. In this intercourse he revenged affronts or injuries very seriously. For example, while a Jutland Nis was one day amusing himself with running up and down the loft of the cow-house, and practising gymnastics, seemingly, for the good of his health, one of his legs slipped through a hole, and a boy below took a hay-fork and gave the Nis a smart rap over the shin of the pendent limb. The boy went into the house laughing, and being asked the cause, he replied, "Oh, I got such a blow at Nis to-day, and gave him such a swanking rap with my fork when he put his leg through the loft!" "No," cried Nis outside of the window, "you gave me three blows, for the fork was three-pronged; but see if I don't pay you for it, my lad." The Nis kept his word. Next night, while the boy slept, the Nis lifted him out of bed, and going out of doors, commenced a novel game at ball by tossing the lad over the house, and catching him again ere he fell, by running to the other side. This pleasant recreation the Nis kept up till he got tired, and then let the boy fall into a great pool, setting up a shout at the same time, which brought out all the people to be witnesses of his revenge.* The Nis is described as being like the Dwarf in appearance, but as possessing immense strength.

The Neck, a Scandinavian spirit, and called Nökke by the Danes, is said to sit frequently on the surface of the water, in the shape of a boy with golden ringlets, and a red cap, or as a handsome youth, shaped below like a fish. It is curious that in all countries and in all ages mankind have attributed fine musical powers to all the imaginary beings with whom they have peopled the sea, probably because the original belief in many of them may have sprung from the accidental transmission of music over water by night, when, as is well known, the effect is beautiful. The superstition of the Neck is connected in an interesting manner with our faith. The spirit is said to play exquisitely on a golden harp, and it is stated that he will teach the art to any one who will present him with a black lamb, and promise him redemption, the fear of losing which makes him continually melancholy. In Sweden it is related that two boys were sitting near a river, when a Neck came to the surface and played sweetly to them. One of the boys said, "What is the use of your sitting there and playing? You will never be saved." The Neck flung away his harp, wept sorely, and disappeared. On going home, the boys told this to their father, who was a clergyman, and he told them to go back and console the Neck with hopes of salvation. The children went back, and said to the spirit, who had re-appeared, and was still weeping, "Neck, do not grieve so; our father says that *your* Redeemer liveth also." The Neck resumed his harp, and rewarded the promise-bringers with sweet playing till the sun was gone down.

Mermen and Mermaids are of northern creation, and in the north they are still firmly believed in, up to this hour. It is needless to describe the Mermaid. Every one, from the time of Horace downwards, knows that creature to be

> "A handsome woman with a fish's tail."

Combing their long yellow hair with a golden comb, they sit breast-high in the sea, singing sweetly, but are dangerous to approach, for their beauty and music entice the unwary into an element which brings death to man. It is supposed that the notion of the existence of Mermaids and Mermen originated in the resemblance which a certain species of seals, when partially seen in the water, bear to the upper part of the human body.

This list by no means comprehends all the fanciful beings with whom the German and northern nations have peopled the air, the earth, and the sea; but the majority of those not noticed are merely modifications, as it were, of the classes which have been described. It would be superfluous to remark gravely on the absurdity of these superstitions, which can affect no mind, however partially enlightened, otherwise than to a smile. It is curious, however, to trace them to the natural circumstances out of which the ignorant and wondering peasantry originally formed them—to find, for instance, works which cunning persons had probably executed during the night for their own ends,

* The term "Old Nick," a name given in modern times to the devil, is derived from the Neck or Nix of the Scandinavians and Anglo-Saxons.

* Fairy Mythology.

attributed next morning to spirits of good or evil disposition, and circles of greener grass which had been produced by a simple scorching of the ground where electricity had passed into the earth, ascribed to the wheeling dances of the elves. The clown and the philosopher both seek for the reasons of things, for this is an invariable tendency of human nature; but the difference between the two lies *here*—that the clown rests satisfied with some vague suggestion of his fancy, while the philosopher takes nothing for certain till accurate observation and just logic have proved it.

FRENCH AND ENGLISH SCHOOLS OF MEDICINE.

In an article on the French and English schools of medicine in the Foreign Quarterly Review, vol. xviii., the following observations, which are sufficiently humiliating to our national pride, occur:—

"We cannot look at the mass of facts which our colleagues in France are constantly adding to the stock of medical truths which we already possess, without feeling a strong sense of our own humiliation. There is not a debateable question, from the most simple in the Materia Medica to the most complex organ of the human frame, which is not in Paris made the subject of the most patient and persevering investigation, and tested by the strictest rules of inductive philosophy, by men, too, whose disposition and talents for observation entitle them to the fullest confidence. It is there only that medicine is viewed on the high grounds of science, apart from those of worldly interest, and where alone we can look with confidence for its further advancement. Not but there are amongst ourselves many persevering and ardent inquirers after useful practical truths, but their field of observation is so limited, and the facts they present are consequently so few, that they seldom carry with them all the conviction which they merit. Science, as an eminent living philosopher says, is but an assemblage of truths, proved by reason, ascertained by observation, or perceived by the mind, and combined under one common character. When opportunities are not afforded for such a desirable object, it is evident that all our conclusions must be liable to great uncertainty.

The discovery of the circulation [of the blood] which Harvey made in 1617, one of the first great attempts to unravel the mystery of human life and organisation, and Jenner's memorable one of vaccination, are among the few prominent facts which distinguish us as original thinkers. * * * With the exception of Baillie's book on morbid anatomy, which appeared in 1793, and which was in England the first effort, on a systematic scale, to verify disease by *post mortem* appearances, there is nothing in this country that can bear any comparison with the valuable pathological works which are daily, we might almost say hourly, issuing from the French press. * * * The French school have taken up the subject with that philanthropy which characterises their conduct when the welfare of our species is concerned; with them every department of the healing art is cultivated with a zeal which is measured by its importance to the well-being of humanity. The names of Corvisart, Bichat, Laennec, Andral, Louis, Dupuytren, Richerand, with many others, will be honoured as long as human nature stands in need of medicine.

Comparative anatomy, upon which Cuvier has shed such lustre, is another subject on which we are immeasurably behind our Gallic neighbours. Were we to estimate its importance by the attention bestowed upon it by the profession generally in this country, we should be inclined to think that it was altogether unconnected with human physiology. To view it in this light would argue a very limited acquaintance with its real uses. There is scarcely a fact in physiology which has not either been suggested by it, or finally established by an appeal to it. Throughout Cuvier's works we have the most enlightened views of elevated physiology, and there we see how medicine may extend her ideas on the subject of disease. Let us pause for a moment or two on the gigantic labours of this extraordinary man, which must include almost every thing, from the cold jelly of the polypus to the megatherium of Paraguay. Upon the most trivial indication, as that of a phalanx [finger or toe bone], he reconstructs animals, discovers movement in articulation; in the former, he again detects habits; in these regimen, and in regimen general disposition. In 1801 he announced to the world twenty-three distinct species of animals, of which there is not one now to be found on our globe; and in his work on Osteology he places before us those animals which the Greeks, Romans, and Carthaginians, exhibited in their public games or battles. By his observations on the fossil remains in the basin of Paris, he shows us the successive revolutions which occurred in the physical world. He passed through two worlds, one denizened with the mollusca of sweet water, the other with marine animals, after which he came to a third, occupied by tortoises and crocodiles, in layers of soft water. * * * No other country presents such opportunities of extending the knowledge of comparative anatomy as England, connected as she is by commerce or colonisation with almost all the habitable world, and yet we have availed ourselves but little of the endless sources of information around us."

We have no room for further quotation, and conclude with only a single remark, which in justice the reviewer should have employed. The deficiencies of which our medical men are accused, arise from no want of mental activity, but from certain habits connected with our social condition. The engrossing pursuit of wealth is a formidable barrier to high scientific advancement, but much more so is the storm of sectarian and party prejudice to which the country has for ages been delivered up. This storm, which Harvey and Jenner equally encountered, would have been directed against Cuvier had he dared to make known his discoveries among us; and at this moment those who humbly follow in his views in Britain are the objects of ceaseless persecution. Is there any wonder that our country ranks so low in the history of scientific discovery?

GEMS FROM THE OLD ENGLISH POETS.

VANITY OF RICHES.

By Cowley, 1618-1667.

Why dost thou heap up wealth, which thou must quit,
Or, what is worse, be left by it?
Why dost thou load thyself, when thou'rt to fly,
Oh man ordain'd to die?

Why dost thou build up stately rooms on high,
Thou who art underground to lie?
Thou sow'st and plantest, but no fruit must see,
For death, alas! is sowing thee.

Thou dost thyself wise and industrious deem;
A mighty husband* thou wouldst seem;
Fond man! like a bought slave, thou all the while
Dost but for others sweat and toil.

Officious fool! thou needs must meddling be
In business that concerns not thee!
For when to future years thou extend'st thy cares,
Thou deal'st in other men's affairs.

Ev'n aged men, as if they truly were
Children again, for age prepare;
Provisions for long travel they design,
In the last point of their short line.

Wisely the ant against poor winter hoards
The stock which summer's wealth affords;
In grasshoppers, which must in autumn die,
How vain were such an industry!

Of pow'r and honour the deceitful light
Might half excuse our cheated sight,
If it of life the whole small time would stay,
And be our sunshine all the day;—

Like lightning that, begot but in a cloud,
(Though shining bright, and speaking loud),
Whilst it begins, concludes its violent race,
And where it gilds, it wounds the place.

Oh, scene of fortune, which dost fair appear
Only to men that stand not near!
Proud poverty, that tinsel brav'ry wears;
And, like a rainbow, painted tears!

Be prudent, and the shore in prospect keep;
In a weak boat trust not the deep:
Plac'd beneath envy, above envying rise;
Pity great men, great things despise.

The wise example of the heav'nly lark,
Thy fellow-poet, Cowley, mark;—
Above the clouds let thy proud music sound,
Thy humble nest build on the ground.

* A great economist.

DOCTOR DOBBS AND HIS NAG NOBBS.

[The power of the extravagant in creating mirth is amply attested by such books as the Adventures of Baron Munchausen. The following, which we find in an old scrap-book, seems to us as amusing an example of the outrageous as we have ever chanced to light upon.]

Doctor Daniel Dobbs, of Doncaster, had a nag that was called Nobbs. One day, in the middle of winter, the doctor having been summoned to attend a patient at some distance from his dwelling, and being anxious to return home before it was dark, rode poor Nobbs very hard. On his arrival, not finding his man in the way, the doctor fastened Nobbs by his bridle to a rail in the yard, and went into his parlour, where he sat down to warm himself by a good fire. It had happened that in the morning the doctor's dairy-maid had brewed a barrel of strong beer, which had been drawn off into the cooler, and the dairy-maid having been called away to milk her cows, she had carelessly left the door of the brewhouse open. The steam of the beer proved wonderfully inviting to poor Nobbs, who had been hard rode, and now stood in the cold extremely thirsty. After sundry efforts he got loose from the rail, and repairing to the brewhouse, he drank so heartily of the strong beer, that before he was aware of it he fell down dead drunk. The doctor's man coming home, ran into the yard to convey Nobbs to the stable; not finding him at the rail, he looked about, and at length discovered him stretched on the ground, cold and insensible. Bursting into the parlour, where the doctor was sitting with Mrs Dobbs, he communicated to them the news of poor Nobby's decease. The doctor and Mrs Dobbs were both good-natured people, and of course were much concerned; but as the doctor never suffered misfortunes to get the better of his discretion, he immediately gave orders that Nobbs should, without delay, be flayed, and that his skin should be taken the next morning to the currier.

The doctor's man accordingly set to work; poor Nobbs was dragged to the dunghill, his skin was stripped off, and he was left to be eaten by the hounds. He had not, however, lain long before the novelty of his situation had a considerable effect upon him. As he had lost his skin, of course the coldness of the night operated with double activity in dissipating the fumes of the beer which he had swallowed; and at length he awoke, got upon his legs, and trotted away to the stable door, which happened to be close by the parlour. Not finding it open, and being both cold and hungry, he began to whinny for assistance. The doctor and his wife had just done supper, and happened at that moment to be talking of the accident which had befallen their nag, over a hot bowl of brandy punch. No sooner had Nobbs whinnied, than Mrs Dobbs turned pale, and exclaimed, "Doctor Dobbs! as sure as I live that is Nobbs's voice; I know him by his whinny!" "My dear," said the doctor, "it is Nobbs's whinny sure enough; but, poor thing, he is dead, and has been flayed." He had hardly said this before Nobbs whinnied again. Up jumps the doctor, takes a candle in his hand, and runs into the yard; the first thing he saw was Nobbs himself without his skin. The doctor summoned all his servants, ordered six sheep to be killed, and clapped their skins upon poor Nobbs. To make a long story short, Nobbs recovered, and did his work as well as ever. The sheep skins stuck fast, and answered his purpose as well as his own skin ever did. But what is most remarkable, as well as most to our point, the wool grew rapidly; and when the shearing season came, the doctor had Nobbs sheared. Every year he gave the doctor a noble fleece, for he carried upon his back, you know, as much as six sheep; and as long as Nobbs lived, all the doctor's stockings, and all Mrs Dobbs's flannel petticoats, were made of his wool.

NOTES ON ALEXANDRIA.

Of the modern sights of Alexandria, the Naval Arsenal is the most worthy of notice, not alone on account of the magnificent scale of the establishment, but from the degree of perfection to which, in the short time it has been in existence, its different departments have been brought. Some long ranges of handsome stone buildings, standing at a convenient distance from the docks, contain the storehouses and workshops of the various departments. On the ground-floor are those of the blacksmiths, carpenters, shipwrights, coopers, pump and block makers, &c., and also the store-rooms for heavy articles, such as iron and timber. Above are warehouses for lighter stores—canvas, bunting, clothing, mathematical and nautical instruments, and other articles of equipment; as also workshops for sail-makers, tailors, &c., school-rooms, offices, and printing presses. A rope-walk occupies the entire length of one of these buildings, and is a thousand feet long. The stores contain every thing necessary for a ship's equipment, even including furniture for the officers' cabins, which are fitted up, to the most trivial articles, at the expense of the viceroy. I was not a little surprised to find that his highness's munificence extended even to the supply of clothes and *hair brushes* for the officers' cabins. Most of the small articles that are of foreign manufacture are procured from France, and their supply has very much the appearance of a *job*—notoriously that of hair-brushes for a people who keep their heads close shaved—but the cotton sail-cloth, and stuffs for the sailors' clothing, the bunting, serges, &c., are of Egyptian manufacture. Very few things are English, and of these bar-iron was the only article that figured conspicuously. In the storehouses I noticed some brass swivel guns, of about a pound calibre: a few were English, but the greater part were of native workmanship. They were all fitted with percussion locks. The number of men employed in the Arsenal amounts to three thousand. I was rather startled on receiving this information; but, on counting upwards of fifty men at work in the pump-room, and seventy tailors plying the needle in another apartment, I became convinced of its correctness. The workmen, with very few exceptions, are natives of the country, and their work, considering the age at which they commenced learning their respective trades, and the short time they have been employed at them, is surprisingly good. The foremen are mostly foreigners—Frenchmen, Italians, and Maltese. The director of the establishment and naval architect (Cerisy Bey) is a native of France. The pay of a foreman is about two shillings and three pence per diem; that of a workman varies according to the degree of proficiency which he has attained—from *one penny farthing to sevenpence*. Such as are on the lowest rate of pay receive, however, an allowance of food in addition. These are scanty pittances, when compared with the wages of artificers in other countries, but by no means so in a land where meat is but seldom eaten, and in which all the articles considered by the natives as *the necessaries of life* are to be obtained for a mere trifle. The price of labour varies in the Delta from twenty paras to a piastre (2¾d.) a-day, the higher rate being usually given near the sea-coast, that is to say, in the vicinity of the rice grounds, where the work is harder and the price of provisions greater. Some idea may be formed of their means of keeping life and soul together on this slender pittance, by the following memorandum of the sums paid by us in the Delta in our character of English travellers—namely, fowls, 1½ piastre each; ducks, 1½; four large French rolls, 1 piastre; twenty-four eggs, 1 piastre; two okes of dates (about six pounds English), 1 piastre.—*Captain Scott's Rambles.*

THE FRUITS OF THE EARTH.

On the subject of wasting or destroying the fruits of the earth, Dr Paley remarks:—From reason and revelation, it appears that God intended the fruits of the earth for man's support; but as he did not intend any waste or misapplication of those productions, such acts are, like others more expressly mentioned, wrong, as contrary to God's will. Hence the conversion of corn fields into parks for deer, or covers for foxes; the non-cultivation of lands, by parties in possession, or the refusal to let them to those who will cultivate them; the destruction or waste of food, with the view to increase the price of stocks on hand; the expending on dogs and horses the sustenance of man, or the conversion of grain into ardent spirits; these, and, in short, all acts by which the food of man is diminished, either in quantity or quality, are sinful, as opposed to God's desire for the happiness of his creatures.—*Paley's Moral Philosophy.*

Edinburgh: Printed and published by W. and R. Chambers, 19, Waterloo Place.—Agents, W. S. Orr, London; W. Curry Jun. & Co. Dublin; J. Macleod, Glasgow; sold by all booksellers.

Complete sets of the Journal are always to be had from the publishers or their agents; also, any odd numbers to complete sets. Persons requiring their volumes bound along with title-pages and contents, have only to give them into the hands of any bookseller, with orders to that effect.

CHAMBERS' EDINBURGH JOURNAL

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS, EDITORS OF "CHAMBERS'S INFORMATION FOR THE PEOPLE," "CHAMBERS'S EDUCATIONAL COURSE," &c.

NUMBER 424. SATURDAY, MARCH 14, 1840. PRICE THREE HALFPENCE.

THE PLEASURES AND ADVANTAGES OF KEEPING A DOG.

THERE is in the first place the extremely agreeable state into which one is every now and then put by personal contact with the dog, whose kindness, leading him to a very familiar intercourse, causes your clothes to be sometimes embroidered in the herring-bone fashion with his hairs, and sometimes curiously marked with the impressions of his soiled paws. It is also very pleasant, if he is a water-dog, to be occasionally besprinkled with the contents of his shaggy coat, as he shakes himself convulsively by your side on coming out of his favourite element. How interesting, too, when the poor animal, in the spirit of sincere friendship, comes up unexpectedly, and thrusts a nose as cold as his heart is warm, into your half-closed hand, as it hangs beside your chair! There are some people who at first start under this application; but habit soon reconciles them to it, as it proverbially will to any thing. We shall suppose the dog to be well bred for domestic existence on the more important points. This is generally considered desirable. But still enough of nature will be apt to remain about him, to remind the company from time to time in the most agreeable manner, that a dog is after all still a dog.

The love that man or woman bears to dog is honourable to man or woman; but the course of this love, like that of the much-berhymed passion which man and woman bear for each other, is one which I have never found from tale or history, or any sort of experience or observation, to run smooth. Love in all its shapes implies sacrifices. Much must be conceded, much endured, if we would love. It is so eminently with respect to dogs. You may love your dog; but unhappily, and in despite of the proverb, no other body does. On the contrary, all other people wonder what you can see in the animal to regard it so tenderly, and whenever an opportunity occurs, they will not be averse from letting it feel how much they despise and loathe it. Many a secret kick and tramp on toes does the poor creature get from friend and servant; many a time is he defrauded of his due aliment down stairs. Trifles light as air are brought to his door as great offences, and often is he accused of things of which he is entirely innocent. Rarely indeed does he experience either justice or kindness from any body but yourself. The very neighbours are in a conspiracy against him. If he but howls a little in the court-yard or street by night—merely following his poetical propensity for baying the moon—then have you civil-angry messages in next morning on all hands, remonstrating against what they spitefully call the annoyance. If, in the merest good nature, he leaps up upon a nursemaid, as she parades the street with her interesting charge in the forenoon, then, as soon as papa comes home to dinner, may you look for a peremptory note from that gentleman, representing the fact in the most alarming light (the maid having exaggerated it to mamma, and mamma having in her turn exaggerated it to papa), and demanding no less than that your innocent favourite shall be chained up a prisoner for life, as otherwise the complainant will feel it necessary, "for the sake of his family," to take legal steps. The police authorities, too, are serious enemies to dogs. Every summer they take it into their heads that the creatures are on the point of turning mad, and out comes an order, commanding that every one of them shall be muzzled, under pain of being apprehended and poisoned. This is nothing, of course, but an emanation of that spite which all men bear towards all dogs which do not belong to themselves.

The inconveniences entailed upon you by your affection are particularly felt when you and your dog take a walk. In the course of your stroll you come to a pleasant garden or park open to the public, and which you therefore enter; but lo, immediately within the gate you behold the malicious placard, "No Dogs Admitted—All found within the enclosures will be shot." You have therefore either to deny yourself the pleasure of walking over the grounds, on which you had set your heart, or to resolve upon having it under all risk of the destruction of your dumb friend. Choosing the safer course, you pursue your walk, and your dog being young and excursive, he is every moment over the enclosures at one side of the road or the other, and scouring through the adjacent fields, where should he find a fleck of sheep, he is instantly in the midst of them, barking like mad. The sheep disperse in consternation; the dog pursues; and the shepherd, after a phrensied endeavour to protect his charge, comes up breathing fire and darts at you, as if *you* were to blame. Some cursory remarks are made on both sides, and you are glad in the end if you can get yourself and dog away without a bodily collision of some kind with the incensed barbarian. As you go along, Roger meets many others of his own species, belonging to other gentlemen who are taking walks. With some he is very friendly, and all passes off agreeably. In other cases, he and the other quadruped, being much about a size, and feeling some instinctive mutual hatred, draw up opposite to each other two yards off, look suspiciously and angrily for a minute, then declining a little each to a different side, go stiffly past each other, keeping their bodies as straight onward as possible, each murmuring exactly the same amount of wrath and defiance, each looking by the tail of his eye at the other with exactly the same glare of deadly enmity, and then pass on at an exactly corresponding pace, till, reaching two hillocks about a hundred yards apart, they let each other know by a subdued bark and an intense scraping of the earth, that, if it had not been more for one thing than another, each would have respectively put an end to his opponent for ever. It is well when they content themselves thus; but sometimes a worry will take place. Then, seeing the beloved of your heart in the death-gripes with another dog evidently large enough to devour him, you rush to the rescue. The other gentleman, under the same feelings, does the same. Having fortunately a stick, you commence using it with all your force and strength on the back of the other gentleman's dog. The other gentleman, having an umbrella, immediately begins to use it with all his force and strength in belabouring Roger. Over they go, over and over in the mud, tearing each other like wild-cats, and still whenever an opportunity occurs, you insinuate a thwack upon the head or rump of the other gentleman's dog; the other gentleman in like manner putting in a lick whenever he can upon Roger. This goes on like a whirlwind for a minute or two, you and t'other gemman looking all the while like two blacksmiths alternating their strokes on the anvil, but far too eagerly engaged upon the dogs ever to think for a moment of each other. At length poor Roger gets yelpingly and discomfitedly away, and you suddenly find yourself planted right opposite a furious military-looking gentleman, who meets your own wrathful face with one quite as wrathful, and seems, in fact, on the point of commencing a not less envenomed combat with yourself. "Your dog began, sir!" "No, sir; it was yours!" "It was yours, sir. My dog never attacks any one." "I say it was yours, sir!" These and such like phrases are exchanged; and it is well if the affair ends by your passing each other much in the same growling, but mutually respectful way, as the dogs in the former case. Do not be surprised, however, if you should find yourself two mornings after planted once more opposite to the military-looking gentleman, with a pistol in your hand, he having the like weapon in his, while a friend, far more concerned for your honour than you are yourself, stands a little aside, prepared to say, "Make ready—present—fire!"

The attendance of your affectionate Roger is apt to be not less troublesome when you go to make a call. Perhaps, with this intention, you leave him at home, or think you are doing so; but the good faithful creature is so attached, and so fond of a walk, that ten to one he is at your heels before you have got to the end of the street. Poor fellow! what can you do but take him with you? The Dorlings are kind friendly people, particularly Mrs Dorling: they will not take it amiss if I bring in honest Roger. So to the door of the Dorlings you go, and finding Mrs D. at home, you are ushered into the drawing-room. To do you justice, you would not have allowed Roger to come in with you, if the day had been wet, and the streets dirty; but the day being dry, and the streets clean, you can see no harm he can do. You have altogether forgotten that Mrs Dorling keeps a cat—a favourite Tom, almost as large as Roger himself, and who always sits on the hearth-rug, an object of great veneration to the family, and the wonder of visitors. The moment, then, that you enter the room, Roger and Tom become mutually aware of each other's presence. Tom gets up his back and his tail, jumps upon the sofa, and spits and screams like one possessed. Roger, good innocent creature, makes no manifestation of hostility whatever; but Mrs Dorling is nevertheless alarmed in the extremest degree, and, in her phrensied fear, gets upon the sofa also, and, making an adroit use of her nether garments, smothers up Tom under a shield more manifold than that of Ajax, deliriously shouting and crying at the same time to you to take away that frightful monster. You instantly seize Roger, and, taking him down stairs (poor fellow, he goes as meekly as a lamb), you put him gently out at the door, and then return by yourself to apologise for the disturbance. Mrs Dorling, a really kind and friendly woman, receives your apologies with a rueful suavity, which marks only too truly how much she has been discomposed, and for some minutes Tom gets much more of her conversation than you. At length, all irritation is smoothed away, and the conversation begins to get into a pleasant strain, when you begin, through the subsiding storm, to hear an impetuous scratching at the outer door, accompanied by a short impatient yelp and whine, such being the mode which worthy Roger has adopted of making the inmates aware that he regrets being separated from his master. Mrs Dorling evidently has heard it too, and a shade of anxiety passes over her face, which you have no difficulty in tracing to a freshly laid coat of mahogany colour, which you remember observing on the door between the ringing of the bell and the coming of the servant, and which you thought remarkably well executed. You instantly, of course, descend again, and getting Roger confined in an outhouse or cellar, think you have at length secured peace. But scarcely has the conversation been well resumed, when you hear such a burst of yelping and howling as might awake the dead; this being the remonstrance which the affectionate creature thinks proper to make against your cruelty in locking him up. You now see the day is against you. It may chance that you are in love with Miss Leonora Dorling, and had it in your mind to sound Mrs D. on the subject. The opportunity may be otherwise excellent. No matter. The game is up. Off you must go, to relieve Roger from his confinement, and Mrs Dorling from an annoyance such as even her good nature can scarcely speak of in civil terms.

Dogs are but dogs, and it is canine as well as human to err. Roger was originally a good moral dog, or at the utmost never was known in his early days to steal more than a bone. But keeping bad company is ruinous to both quadrupeds and bipeds. He has the misfortune to become acquainted with a dog of rather wild character in the neighbouring street, and begins to be a good deal out at night. You are at first in no fear for his youthful innocence, but by and bye you apprehend that all is not right. You observe that, in the mornings, after any of his nocturnal rambles, he has a remarkably worn-out debauched look, and is not so ready for his walk on those forenoons as usual. You fear he is a misled dog, but you cannot imagine

Digitized by Google

in what way he has been misled. At length, some fine morning, the awful fact comes out. Roger is discovered to have acquired from his wicked companion an unhappy tendency to chase and worry the sheep in a neighbouring park. He and his companion were this morning detected at their unhallowed sport, with eight dead sheep strewed around them, and other two just expiring in their hands. Being marked and recognised as your dog, and traced home to his quarters, there can be no doubt of his guilt. You are of course expected to pay for the ten sheep worried this morning, as well as for all those which have been worried during the past two months; and you are further called upon to surrender him as a malefactor, that the laws of his country may be executed upon him. It is vain to remonstrate. It is clear he is guilty. Affection has many struggles, and you attribute the whole mischief to his wicked friend. But there is no remedy, no alternative. The most you can do for the unfortunate victim of bad company is to pay a policeman half-a-guinea, that he may not be hanged ignominiously or cruelly, but put out of existence in a scientific way, by means of prussic acid. And so ends the story of your dearly beloved Roger, leaving you full of Byronic reflections on the wringing of tender affections, and deeply impressed with the maxim of the noble poet, that love and woe are one thing.

A number of minor evils beset the gentle heart that indulges in an attachment to a dog. For example, no whitened floor can long be kept clean where he is. He walks unthinkingly across large washings, and lies down with wet and dirty sides upon the lambs'-wool mat at the parlour door. Newly raked garden-ground assumes under his feet an appearance which a geologist might prize, if the soil were a clay of the secondary formation, and he an undescribed genus of the Pachydermata, but which (the circumstances being as they are) the gardener is apt to take very testily. On one account and another, he is scolded, complained of, and absolutely ill used, every hour of the day; which you naturally feel to be just the same thing as if you were scolded, complained of, and absolutely ill used yourself. The sufferings which a man thus endures out of affection for a poor dumb animal, that only can wag its tail in his face and lick his hands occasionally, are altogether quite remarkable. It presents both the affections and the patience of our nature in a striking point of view. Upon a review of the whole case, we feel inclined to say that, if men manifested the same resignation under unavoidable calamities and annoyances which they exhibit under the self-imposed torture of keeping a dog, they would be more angels than men.

EXPERIENCES OF EARTHQUAKES IN GREAT BRITAIN.

Earthquakes are not frequent in our island; but neither are they very rare. Every few years they are felt in some part of the country, more generally in the north than the south. No one of great violence or destructiveness has occurred within the reach of history; but if there be any truth in Mr Lyell's surmise that a liability to these tremors may shift about over the face of the earth, and after being long absent from a country, take possession of it again, it is not impossible that our soil (so much of it being volcanic) may once more become the scene of dreadful calamities of this kind, while they gradually cease to affect South America, Southern Italy, and other districts, where for ages they have been exhibited on a tremendous scale.

The latter part of the past year, and the beginning of the present, have been remarkable for the number and violence of earthquakes in Great Britain. For a fortnight in the middle of October, slight tremors were felt at Comrie, a village in Perthshire which enjoys the unenviable distinction of more frequently experiencing earthquakes than any other place in the British islands: it is situated in the vale of the Earn, just within the frontier of the Grampian mountains. On the evening of the 23d of October, about a quarter past ten o'clock, an unusually violent shock took place here, and spread away in different directions, chiefly to the east. It was felt over a great part of the island, but nowhere so violently as at Comrie and the adjacent districts. A reporter at Monzie, a gentleman's seat a few miles from Comrie, thus describes what was experienced at that place and its neighbourhood:—"At thirteen minutes past ten in the evening we heard a sound like that of a numerous body of cavalry approaching at full gallop along a grassy sward. When this had continued a few seconds, we felt two or more abrupt concussions, as if a solid mass of earth had struck against a body more ponderous than itself, and *rebounded*. The rattling of furniture combined with the subterranean thunder, and the reeling of what we had hitherto deemed *terra firma*, communicated at this moment a feeling of the terrific that must have made the stoutest heart quail. The sound passed off as before, far to the east, carrying fear into other districts. In a number of houses the bells rang; one house of three stories, situated in Crieff, has been rent from the chimney-top half way down the gable; and we have heard that a number of corn-stacks have been thrown down. At Comrie the consternation was such that the people ran out of their houses, and, late as was the hour, many assembled for prayer in the secession meeting-house, where religious exercises were continued until three in the morning. There was a second shock at twenty minutes to eleven, and a third somewhat later, but both inferior to the first." At Perth the shock was felt for nearly a minute, and was so violent that the room in which the editor of the Perth Advertiser was writing seemed "as if it were about to tumble about his ears." At Ballater, in Aberdeenshire, within the range of the Grampians, but nearly a hundred miles from Comrie, "it commenced tremulously, and gradually increasing, terminated abruptly. Chairs, stools, bottles and glasses, rattled furiously, but nothing was overturned. The duration might have been about five seconds; the sensation was as if the movement had been from west to east." These are the principal places near the Grampians from which we have seen reports. As we recede from that range of mountains, we find the motion described as less and less violent. At Aberdeen it "was not of that energetic and irregular character which usually distinguishes volcanic action, but of a gentle kind, producing a horizontal movement, not unlike the rolling of a vessel in an easy sea-way." At Inverness it was felt slightly and produced no serious effect. At Montrose, also, it was slight. In Edinburgh it was felt chiefly in the low parts of the northern suburbs, but so slightly that many persons living there did not remark it. There seems to have been more motion in the peninsular district comprehending Fife and Clackmannan. At Cupar "the tremulous motions were continued for sixty or seventy seconds. No subterranean sound accompanied the convulsions, which seemed to pass eastward in rapid succession, at first with considerable violence, and a disagreeable complex motion, but which gradually subsided to a slight horizontal rocking that gradually died away. Houses shook, windows rattled sharply, loose pieces of plaster fell from the walls, and light articles of furniture were moved in their places."* The report from Dollar, in Clackmannanshire, is an interesting one, both for its minuteness and on account of the situation of the village under the Ochils, a range of hills nearly connected with the Grampians. "Last night I had gone to my bedroom a little before ten o'clock, and was sitting reading with my face to the south. The house stands quite detached from other buildings, and faces the west. About ten o'clock I felt a sudden shock, accompanied with a loud and uncommon sound, the house strongly undulating in a west and east direction. I felt myself moved in the same direction, and the furniture in my room and the windows shook very much. I was not afraid, but felt singularly confused; the noise was as if within the house, and similar (though much louder) to the drawing a heavy table forcibly along the floor. Some of the inmates of the house had gone to bed, but they were so alarmed that they instantly arose and ran to the lobby, not knowing what the consequences might be. I resumed my reading, and about half-past ten o'clock there was a momentary shock, attended with noise, but not nearly so loud as the former; yet it is remarkable that the sensation was much more unpleasant than the former, which lasted about four seconds. Many people here, who had no idea of an earthquake, conceived their houses were falling, as the furniture, bottles, and dishes, were shaken, and some articles suspended from the walls fell down. After the second shock I went to sleep, but upon inquiry this morning I found there had been another shock, comparatively slight, at twelve o'clock, and another of these shocks was felt last night at eight o'clock." It was generally remarked that most people who were in bed at the time when they felt the principal shock of this evening, started from their places of repose, even before they knew it was an earthquake, as if through an instinctive tendency. A gentleman who remembers the earthquake of 1801, assures us that the same remark was made on that occasion.

By far the most remarkable proof of the force of this earthquake which has been recorded, was the bursting of a great dam formed on Cringate Muir in Stirlingshire, for the supply of water to the manufactories on the Carron. This reservoir was surveyed and considered as perfectly secure by two of the most ingenious men of our country, Mr Smith of Deanston and Mr Thom of Rothsay; but it nevertheless gave way under the shock, producing great damage to property in the vale below. At Blairingone, a tremor which took place at five in the morning, elsewhere unnoticed, shook down the sides of a pit, and buried three working men, who were with great difficulty extricated. Some remarkable results have since been observed—"A small tract of boggy land in Morayshire, which, during the winter seasons of at least the last hundred years, has been invariably more than half under water, has remained dry ever since; and several wells in the neighbourhood of Inverness, which derive their springs from fissures in the old red sandstone of the district, are only now [January 1840] slowly beginning to yield part of their wonted supply."*

The weather on the day and night of this earthquake is universally described as having been rainy. "At Kincardine in Monteith [this place is not far from Comrie], the atmosphere to the south was observed to be in great commotion, resembling the commencement of a hurricane." When the subsequent and lesser shocks were felt during the night, "there was, as before, a very glowing and varied light, and a tint of glowing yellow pervaded the atmosphere." A singular fact was observed in Edinburgh during the ensuing five or six days, namely, that the barometer stood at the height of 30¼ inches, or *Set Fair*, although there was rain every day, and often in heavy showers.

On Sunday the 19th January 1840, about half past three in the afternoon, another earthquake was felt in Perthshire, particularly in the vale of the Earn. The sound was also heard in the Carse of Gowrie. A party of ladies and gentlemen, on a terrace walk overhanging that fine plain from the north, heard what one of them has described to us as "a low underground appalling sort of noise, which came as if from the west"—the direction of Strathearn. In a few minutes they heard the same again.

We pass over a number of minor tremors which have occurred during the last twenty-four years, and take up the remarkable earthquake of 1816. The summer of this year was noted for desolating rains and hail-storms, the effects of which were felt in the scarcity of grain during the ensuing season. It was observed, that during the prevalence of the severer weather the barometer did not afford its usual correct indications, the mercury frequently rising immediately before heavy rain, and falling upon the approach of fair weather. The earthquake which took place on the evening of the 13th of August, about ten minutes before eleven o'clock, was felt throughout the greater part of Scotland, but evidently was strongest in a tract extending from western Ross-shire, through eastern Inverness-shire, and so on through the province of Moray—the direction being from W. N. W. to E. S. E. Directly to the north and south of Inverness, it was comparatively slight, but yet was perceptible to many in Edinburgh and Glasgow. At no considerable seat of population was its action nearly so intense as at Inverness. The streets of that town had been emptied of the inhabitants, most of whom had retired to bed, when suddenly the percussion took place. "I could think of nothing," says a gentleman residing there, "that could give so good an idea of what we felt, as that of a person being seated on the back of a horse, when he suddenly and violently shakes himself." A noise like distant thunder was heard. The tremor lasted for about twenty seconds, or, in the opinion of some, nearly a minute. The force was sufficient to throw some persons out of bed. All others who had gone to rest instantly sprang from their places of repose, and, with little ceremony as to clothing, joined the crowds who had rushed into the streets, which immediately became a scene of wild and unusual terror, no one knowing but that a second shock was instantly to bury them under the ruins of their houses. Under this apprehension, many hurried, ill prepared as they were, out of town, and spent the greater part of the night in the fields. It was found that already great damage had been done to the buildings. Many were rent from top to bottom; great numbers of chimney tops had been shaken down. From a stalk of chimneys on the Mason Lodge, a coping-stone weighing fifty or sixty pounds was thrown to the other side of the street, a distance of not less than twenty yards—a fact strikingly showing the extent of the vibration. It was remarkable that the newer houses suffered more dilapidation than the older. Amidst the crashing of falling stones and tiles, and the shrieks and lamentations of alarmed women, one curious circumstance was not observed in the town, but was noticed by three gentlemen who were approaching it from the westward: the great bell tolled twice. In the morning another important fact became known, namely, that the beautiful steeple which had recently been attached to the county jail had suffered a twist at the distance of a few feet from the top. The spire was there of octagonal shape, and the twist, which was from the east towards the north, was to the extent of about a sixteenth of the whole circumference, the angle of the removed part being turned to the centre of the adjacent *face* in that direction. The present writer speaks of this result from personal observation, for in 1826 he saw the steeple in the condition described; it has since been repaired. Most of the stones detached from the chimney tops were thrown in the same direction, and it was from this fact that the inference was drawn that the direction of the motion in the first instance was from north-west to south-east, for, such being the case, loose parts at the top of a tall building would naturally be left behind, or thrown in the contrary direction. Some gentlemen who had been in the West Indies, where earthquakes are frequent, remarked of this shock, that it was smarter than any they had ever known in that part of the world.

At Cromarty a huge fragment of rock was disengaged from a precipice, and the gable wall of a newly

built house was rent diagonally from top to bottom. Farther to the north, three arches, which had recently been built as part of a roadway across a small arm of the sea in the county of Sutherland, were thrown down. To the east of Inverness, in the line of the tremor, the effects were not much less severe than in that town itself. At Relugas House, on the river Findhorn, at Auldearn, and at Forres, the shaking and noise were frightful. Furniture moved, house bells were set a-ringing, and kitchen utensils rattled on the walls. A man who was walking at the time amongst the mountains near Lochindorb, "was first alarmed by a sudden and tremendous noise of a rushing wind, which came sweeping up the hills like a roar of water: this was instantly followed by a rumbling noise, and the *ground was sensibly heaved up and down under his feet.*" At Peterhead the rumbling noise was heard, and many people thought it arose from thieves breaking into their houses. A family in that town observed that the clock in their stair *earned* twice before striking eleven. The shock was violent at Aberdeen, and a second one, of a slighter nature, was there felt at half past eleven. The same motion and the same noise were observed at Montrose, where great alarm was excited, many leaping from bed in the apprehension that their houses were about to fall upon them. Near the town, two excise officers were on the watch for smugglers, whom they expected to approach in a certain direction. They had lain down on the ground, and when the shock took place, one of them leapt up, calling to his companion, "There they are! I feel the ground shaking under their horses' feet!"

No meteorological appearances of any importance were observed on the evening of this earthquake. The night was calm and mild. It is, however, a circumstance too important to be overlooked, that on the 7th of August an eruption of Vesuvius took place.

In a retrospective view of British earthquakes, no other we believe of any importance occurs till we get back to that of 1801. This occurred on the 7th of September, at six o'clock in the morning, and was felt over a large part of Scotland, but particularly at Crieff and Comrie. In Edinburgh, where it was observed in the New Town, but not in the Old, the sensation within doors was as if the house had been gently lifted upwards, and then shaken violently in a direction from north to south. Some hours afterwards, a house in the Old Town sank so much as to require being condemned by the magistrates, and the gable of an old barn near the city fell in upon some reapers, two of whom it crushed to death. In 1799, on the 17th of January and 24th of February, earthquakes were felt at Comrie and its neighbourhood. The same place was visited in like manner in 1792, and at several times throughout the latter part of 1789. On one occasion, late in the year last mentioned, the ice on a piece of water near Lawers House was shivered to atoms—an effect which we have nowhere else seen observed. On the 30th of September, in the same year, a tremendous earthquake occurred at Borgo di San Sepolchro in Italy, swallowing up many houses and destroying many lives: it is said that "on the same day three distinct shocks of earthquake were felt at the house of Parson's Green, on the north side of the [volcanic] hill of Arthur's Seat near Edinburgh."* Four days before, a shock had been felt in the county of Wilts. On the 8th of July 1788, an earthquake was felt in the Isle of Man, and on the same day the sea at Dunbar suddenly receded.

On the 12th of September 1784, the water of Loch Tay receded from the two ends, and rose in a great wave in the middle, after which it flowed towards the lateral shores, rising high above its usual level. This was repeated every day for a week, with less and less force. It is very remarkable that this summer and autumn were remarkable for earthquakes in different parts of the world. On the 18th of July, one occurred on the borders of Armenia, where it nearly destroyed the city of Ezerghan, and caused the loss of six thousand lives. On the 14th and 15th of August there were severe shocks in Iceland; and on the 15th of October, an earthquake took place at Grenoble. During the tremendous earthquakes of Calabria in 1782, the barometer in Scotland sank within the tenth of an inch of the bottom of the scale, and the waters of many of the Highland lakes were much agitated.

We have not, however, any proofs of sympathy between our own island and remote countries so strong as those which were afforded on the dreadful 1st of November 1755. That day, at a little after nine o'clock, the city of Lisbon was nearly swallowed up by one of the most violent land-convulsions on record. On the same morning, at a time (half past nine) which appears to have been exactly identical, when the difference of longitude is allowed for, the waters of Lochlomond suddenly rose upon its banks, so high as to carry a boat at one place forty yards into the land; and, then receding, was in five minutes as low as it ever is remarked to be in dry summers. In five minutes more, it rose again as rapidly as before, and then again receded. Thus it went on for an hour longer, but always rising less each time. Loch Katrine, Loch Long (an arm of the sea), and Loch Ness, were all agitated in the same way. On the same day, Pibley Dam or Pond, in Derbyshire, swelled in like manner towards one end, and then receded. The highest rise in Lochlomond above the former level was two feet six inches, but a wave eight feet high rushed against one end of Pibley Dam.

Perhaps no good end would be served by going further into the history of British earth-tremors. Enough has been done to show that we are by no means exempt from this class of physical calamities, though fortunately far from the seats of their greatest violence. The general result of our inquiries is, that Perthshire and the neighbouring districts are much more visited by earthquakes than any other part of the empire, the little village of Comrie being, as it were, the metropolis of the country in this respect. Volcanic hills are thickly strewed over this tract, the action of which has long ceased to be apparent on the surface. It is probable, however, from the frequency of these concussions, that in the north of Scotland subterranean fire resides at a less distance beneath than in other parts of the island.

* Scots Magazine, 1818, p. 845.

SEBASTIAN CABOT, THE NAVIGATOR.

It has been a frequent subject of regret, that the name of a comparatively unimportant voyager, Amerigo Vespucci, should have been prominently and indelibly associated with the New World, in place of that of the earliest traverser of the Atlantic, and greatest of all maritime discoverers, Christopher Columbus. But a double injustice has been done here, although few are aware of it. If the name of any other man but Columbus ought to have been bestowed on the great Transatlantic continents, it was not that of Amerigo Vespucci, but of Sebastian Cabot, the first voyager, indisputably, who landed upon the continent of America. It is well known that Columbus, in his first two voyages, did not penetrate beyond the islands of the Mexican Gulf. On the occasion of his third voyage, he certainly reached the American continent; but in the interval Sebastian Cabot had anticipated him in the accomplishment of that honourable feat. The fact, as here stated, has lately been established beyond dispute by the investigation of original documents, previously neglected or misinterpreted.

Sebastian Cabot was an Englishman by birth. His father, John Cabot or Cabota, was a native of Venice, who had come to England to "follow the trade of merchandise," and had settled in Bristol, where, about the year 1475, Sebastian, the second of three sons, was born. As this youth sprang up into manhood, the subject of maritime discovery became the all-engrossing one throughout the civilised world. The voyages of the Portuguese to the East, and of Columbus to the West, had opened up a new and most brilliant field for the operation of the spirit of enterprise, and one, besides, which held out such hopes of gain as might well dazzle the imaginations alike of prince and private adventurer. Sebastian Cabot was precisely in that position of life to be peculiarly acted upon by such motives. His father seems to have acquired very considerable wealth by commerce, and had consequently the command of shipping to a certain extent. At the early age of four, Sebastian first went to sea, being taken by his father on a voyage to Venice, from which city they returned, after a short stay, to England. In 1493, Columbus came back from his first voyage across the Atlantic, and the news of his discovery spread rapidly over Europe, awakening, to an amazing degree, the feelings which have been described. Sebastian Cabot has given an account of the impression made on his own enthusiastic mind at the time. A conversation of his, reported in Hakluyt's Voyages, contains these words:—"When newes were brought that *Don Christopher Colones Genoese* had discovered the coasts of India, whereof was great talke in all the court of King Henry VII., who then raigned, insomuch that all men with great admiration affirmed it to be a thing more divine than humane, to saile by the west into the east, where spices growe, by a way never knowen before, by this fame and report there increased in my heart a great flame of desire to attempt some notable thing. And understanding, by reason of the sphere, that if I should saile by way of the north-west, I should by a shorter tract come into India, I thereupon caused the king to be advertised of my desire, who immediately commanded two caravels to be furnished with all things appertaining to the voyage."

By the date of a patent granted by Henry VII. to John Cabot and his three sons, we find that this enterprise was finally resolved upon in March 1496. Although the name of the father was included in this patent, and although successive modern writers upon maritime adventure have given praise to John Cabot as a great discoverer, there is no good authority for supposing that any one of the Cabots, excepting Sebastian, had an actual personal share in the conduct of the voyages that followed the acquirement of the patent; though, being parties to it, and sharers in the fitting out of these expeditions, their names are usually associated with his in the history of maritime discovery. Sebastian sailed from Bristol in the spring of 1497. He directed his course to Iceland, with the intention of breaking the length of the voyage by a halt there. From Iceland he pursued his voyage into the great western seas, and on the 24th of June came in sight of Labrador, or, in other words, of the continent of North America. In consequence of various erroneous translations and interpretations of old authorities, foreign and domestic, the majority of modern writers have held the land thus discovered to be Newfoundland, and have consequently deprived Cabot of the honour of first landing on the American continent; but a Memoir of Cabot, published in 1831, clearly shows the injustice which has thus been committed. Among the numerous proofs there adduced, it is unnecessary to mention any others than that of the new patent granted in the following year, 1498, which distinctly and repeatedly alludes to the separate discovery of "land and isles" in the voyage of the preceding year; and that of a very old and nearly contemporary map, existing in the king's library, which marks the continent of Labrador as "land discovered by John and Sebastian Cabote in 1497." Now, as Columbus did not sail upon his third voyage till the 30th of May 1498, and as Amerigo Vespucci sailed from Spain no earlier than the 20th of May 1499, the first discovery of the continent of America must be held to be the work of Sebastian Cabot.

From the scanty accounts that exist respecting this voyage of Sebastian Cabot, we can only learn that he was compelled, after reaching the latitude of 67 degrees and a half, and penetrating into Hudson's Bay, to discontinue his researches and return to England. This was done much against the wish of the youthful commander, who imagined, and not without good cause, that he had entered on the waters leading directly by the north-west to India. But the discontent of his men rose to such a pitch that necessity forced him to yield to their wishes for a return.

Sebastian brought home, therefore, only the important information, that a huge body of hitherto unknown land, with various islands, lay in the western way to India. So little was then understood of the true bulk and figure of the world, that Cabot, when he first saw Labrador, imagined that it must be *Cathay*, or India itself, but the cold sterile character of the country seems to have undeceived him. Undeterred by the comparatively unproductive character of his voyage, he immediately applied for a new patent to enable him to resume the enterprise. This patent was granted, and bore date February 3, 1498, being again directed to John Cabot and his sons. John Cabot died immediately afterwards, but this did not prevent Sebastian from at once setting out, accompanied by a crew of three hundred men. The particulars of this voyage are given obscurely. Several authors state that he endeavoured to colonise a portion of the northern coasts of America, but found it impossible to effect his purpose on account of the cold. He then passed along the coast to the south as far as the 38th degree of latitude, and returned, after what length of absence we do not know, to the shores of England. Though our records of this, as well as of his other voyages, are miserably defective, there can be no doubt that his reports were of great value in their day. They afforded landmarks to future voyagers, showed them points to run for, and took away from them that awful feeling of uncertainty which must ever press on mariners entering great unknown seas.

We have no existing account of Cabot's pursuits or employments for a number of years after his return from his second voyage. We first hear of him again in the year 1512, as having then been induced to accept of offers of employment from Ferdinand of Spain. He was treated by that monarch with high consideration, was made a member of the Council of the Indies, and received the appointment of commander of an expedition destined for the discovery of the North-West Passage. But while things were in full preparation for this enterprise, Ferdinand died, and his successor did not follow up his views. Sebastian Cabot, still eager for employment, came once more to England, and in 1517 was placed at the head of a new expedition, the precise object of which is not well known. The unfortunate loss, at a later period, of all Cabot's papers and maps, leaves us in uncertainty with respect to the fate of this enterprise also. We only know for certain that all Cabot's purposes were frustrated by mutinies and disobedience among his sailors. "If the mariners would then have been ruled (says one old English writer), and followed their pilot's mind, the lands of the West Indies, from whence all the gold cometh, would have been ours."

The character of Cabot seems only to have been raised still higher by this expedition. Spain appears to have become jealous of the benefit which might accrue from his after-services to England, as we find him again invited to Spain in 1518, and bearing there, for some years, the honourable office of pilot-major. In 1526, he took the command of a fleet of four ships, fitted out partly by merchants and partly at the public expense, for the prosecution of trade with the Moluccs islands, which had been ceded at that time to Spain. This expedition was, in some respects, unfortunate from its very outset. Cabot was thwarted in every possible manner by those who were concerned with him in the enterprise, the Spaniards being jealous of him as a stranger and foreigner; and, accordingly, on the expedition crossing the Atlantic and touching

Digitized by Google

at Brazil, a mutiny broke out against the commander, at the head of which were two brothers of the name of Rojas, and one Martin Mendez. Cabot acted on the occasion with a degree of energy which secured the future peace of the expedition. Though alone, and among strangers, he instantly seized the ring-leaders, and placing them in a boat, put them ashore, where they were soon after picked up by a Portuguese vessel. This has been called a cruel act, but it was one of those pieces of severity rendered indispensable by a proper regard both to private and public interests. Having lost one of his vessels by shipwreck, Cabot deemed it imprudent to attempt the fulfilment of the original objects of the enterprise. He pursued his way southwards, and discovered the great river La Plata, on the banks of which he built forts, and where he had much intercourse with the natives, "an infinite people (says an old writer), who with admiration came running daily to the shippes." Sebastian examined the rivers and coasts hereabout with great attention, and inquired closely into the regions where the precious metals were most abundant. He spent about four years here in all, and in the interim transmitted ample accounts of his discoveries to Spain. These accounts led to the mighty expeditions by which the Spaniards afterwards acquired the dominion of the greater part of South America. Unlike his successors, Pizarro and Cortez, Cabot had only one important quarrel with the natives during his stay. It was an accidental one, and led to the destruction of twenty-five of his own men, and three hundred of the natives.

It is to be regretted that we possess so few particulars of this voyage, in which Sebastian Cabot undoubtedly exhibited all the qualities of a great captain and discoverer. He returned to Spain in 1531, and resuming his office of pilot-major, lived in Seville in great honour and repute for many years afterwards. In Ramusio's Voyages, a high tribute is paid to him, by one who had seen him, and who "found him a most gentle and courteous person, who treated me with great kindness, and showed me a great many things; and, among the rest, a great map of the world, on which the several voyages of the Portuguese and Spaniards were laid down." He is also praised as a very "valiant man," and "one that could make cardes for the sea with his owne hand." He is said, moreover, to have been "preferred above all other pilots that saile to the West Indies." What particular voyages, besides those already pointed out, were made by Cabot after 1531, we are unable to say. Certain it is, that he left Spain in 1548, and returned to England, being apparently desirous to lay his bones in his native land. His high character and importance may be estimated by the fact, that the Spanish ambassador soon after made an importunate demand that "Sebastian Cabot, Grand Pilot of the Emperor's Indies, might be sent back to Spain, as a very necessary man for the emperor, whose servant he was, and had a pension from." But the generous and enlightened young king, Edward VI., not only declined to comply with the request, but bestowed on Cabot many personal marks of favour, together with a pension of two hundred and fifty marks (L.166, 13s. 6d.), a very liberal allowance in those days. The veteran navigator was also appointed to some general superintendence of the maritime affairs of the country, under the title of Grand Pilot, or some such name. Nothing seems to have been done by the English, after this period, in the way of naval enterprise, without his sanction, and to him Britain was indebted for the opening of a new outlet of trade, which has been an important source of income ever since. In order to remedy the depressed state of the national commerce, Cabot strongly recommended an expedition to be sent to the extreme north of Europe, to form a commercial union with Russia. This was done, and, in consequence, a great Russian company was established, of which Cabot was named governor for life. The whale and Newfoundland fisheries were in some measure indebted for their existence to this company, and "hence (says Campbell, in his Lives of the Admirals) Sebastian Cabot may be said, with strict justice, to be the author of our maritime strength, and to have opened the way to those improvements which have rendered us so great, so eminent, so flourishing a people." In addition to these services, it is known that Cabot was the first who pointed out the variation of the needle. He explained the whole subject publicly to Edward VI.

Sebastian Cabot died about the year 1557, but the place where he died, and the spot where he lies, are alike unknown. We have some accounts, however, of his deathbed from his friend Richard Eden, and find that the ruling passion of his life kept its hold to the last. In the half-sensible moments of his final hour, he talked flightily of a divine revelation having been made to him respecting a new and sure method of finding the longitude, but which he was not permitted, he said, to disclose. "The spirit of the dying man (says a writer in the American Review) was hovering, like a sea-bird, over that ocean which had been the scene of his dangers, and the field from which he had reaped his harvest of glory; and the stirring music of its billows fell with vivid distinctness upon that inner ear, whose perception grew more acute, as the outward organ ceased by degrees to exercise its functions."

This intrepid navigator has received scant measure of justice from historians, whether countrymen or foreigners. A succession of errors, all tending to deprive him of his merited laurels, and even directly to injure his fair fame, has been perpetuated in maritime history respecting him, through the misinterpretation or neglect of the original authorities. In the Memoir published in 1831, these mistakes were for the first time pointed out and rectified, and the name of Sebastian Cabot will henceforth, we hope, take the high and honourable place that it is entitled to among the great early navigators of the civilised world.

FACTS CONNECTED WITH THE MEDICAL CHARITIES OF SHEFFIELD.

Our readers will perhaps remember a few remarks which appeared in the 357th number of the Journal (Dec. 1, 1838), on the subject of Dispensaries. It was pointed out that these institutions, while of course doing much good, are also doing some evil, in as far as, by the liberality with which their benefits are, it may almost be said, pressed on the attention of the poorer classes, they are teaching many to resort to charity who are not necessitous, and thus are diminishing that self-respect and spirit of independence which form so valuable an element in human character. We also took the opportunity of describing a mode of obtaining medical attendance and medicine, without these bad results, by small weekly contributions from the poorer classes themselves—a plan which is said to have been tried with the best effects in Coventry and Derby. In a volume which has recently been published by a medical gentleman of Sheffield, we find some facts which throw light upon this question, and of which we shall therefore endeavour to lay a condensed view before the reader, premising that, in the conclusion, we mean to draw inferences from the facts, somewhat different from those drawn by the author.

The book is professedly the composition of an officer of the two medical charities of Sheffield, the Infirmary and Dispensary. He sets out by stating very broadly as his opinion, that the character of the working-classes in Sheffield is at present undergoing a certain degree of deterioration, in consequence of so many charities, and particularly medical charities, being thrown open to them, the self-respect connected with independence being thus gradually worn away, and with it the virtues which have never yet been found to exist without it. The Infirmary, we are told, was established for the benefit of the poor and needful of all nations; but it never, our author argues, could have been designed for those who are able otherwise to obtain the desired aid. Now, however, the fact of being an operative is held as a sufficient claim. "The artisan never dreams of the possibility of rejection on the ground of being in full and regular employment, and being amply remunerated for his labour. He applies now as naturally to the charity when he is sick, as to the tailor for the repair of his clothes, with this difference, that he would be perfectly astonished were any one to hint at the propriety of paying for the favours conferred by the former." Our author argues against the following classes, at least, having any right to the benefits of the institution—Single men in employment—married men with only young and small families—men with several children but high wages—men who have several sons and apprentices working along with them—servants in situations. All of these persons, excepting the last, must be able to provide medical attendance for themselves, if they economise their resources. He presents a hundred cases of applications, being those within the few weeks before the time when he was writing, and out of these he shows that there were fifteen young single men, all of whom but two had been in employment till the time of their illness, twelve at well-paid crafts, and one as a labourer. Eleven cases were of married persons without children, and thirty-two applicants were married, with only one or two children. In some of the latter instances, "the only child is a daughter eighteen or twenty years of age, who has never been allowed to go out to place, or to learn any business; in others a son apprenticed to his father, and both in regular employment. In one instance, where the wife was the patient, the daughter was in a warehouse, and the son, a youth of fourteen years of age, was a day scholar in a respectable private academy in the town. The husband had received regularly twenty-four shillings a-week for the last twenty years. Many of the thirty-two cases are even more flagrant instances of impositions on the charity."

Certainly in the whole number of applicants for relief, as far as our author has described them, we do not find that proportion of persons likely to be in necessitous circumstances, which might be expected. To support his views, he brings the testimony of the house-surgeon, who, in answer to queries put to him, says—"The character and appearance of the patients generally are very different from what they were fifteen or twenty years ago. The patients are much more respectably dressed, and in better circumstances. Many now, not from inability to walk, are conveyed to the house in hackney coaches. * * They apply for much more trivial ailments than formerly." The author speaks of females who come to the institution in elegant cloaks, shawls, and clogs. Not one half of the applicants have the appearance of indigence. "The frequency with which they apply for very trifling ailments, such as slight symptoms of indigestion, coughs, or occasional pain, or, indeed, for the removal of disease which just perceptibly mars the beauty of the face or neck, is evidence that their situation in life is very remote from those circumstances which entitle them to the sympathy of the benevolent. *The really poor never apply for the relief of slight and unimportant complaints.*" Afterwards he adds—"In evidence of the trifling nature of many of the medical cases, we may state that one-half are often cured in ten days, and two-thirds in three weeks."

The results of his inquiries at the Dispensary are nearly the same. The great bulk of the applicants are either themselves artisans in the receipt of good wages, or the connections of such persons. They come in respectable apparel, and, when visited at their homes by the medical men, are found to possess every appearance of domestic comfort. Recommendations from subscribers to the institution are necessary to procure admission; but these are given, in seven cases out of ten, by persons who have no knowledge of the circumstances of the applicants. "A gentleman who, from his position in society, is often applied to, informs us that he always refuses, unless the individual bring a letter from his employer, stating that he is a necessitous object; and though promising to give a recommendation on this condition, *not one in twenty returns to receive it.*"

Facts still more remarkable are brought out by our physician. "The distresses of a community," he says, meaning such a community as that of Sheffield, "will be admitted to bear a strict relation to the state of trade. When this is extremely depressed, many hands are thrown out of employment. When the trade is good, the demand for labour is great; wages advance, and the blessings of plenty are universally experienced. The amount of misery or destitution cannot be the same in these very different circumstances. It cannot be a fixed quantity floating in society. The idea is preposterous; and yet, if the registered demand for charity be any criterion of the misery existing, there is indeed a quantity subject to scarcely any variation whatever.

From Midsummer 1835 to Midsummer 1836, between which periods trade was better in this town than it had been known for years, the number of patients admitted on the books of the Infirmary was 3126.

From Midsummer 1836 to Midsummer 1837, between which periods the trade was exceedingly depressed, the number was 3431, being an increase only of 305 patients.

Between the former periods the number of patients on the books of the Dispensary was 2888.

Between the latter periods, that is, from July 1836 to July 1837, the number was 2575, being less by 313 patients.

According to these returns there were *eight patients more during a prosperous state of trade, recipients of medical charity, than during the severe depression of it.*"

He elsewhere states that healthy seasons are marked by no diminution of the number of applicants. "We hesitate not to assert that, during the last twelve months, there has been less disease in this town and neighbourhood than has been known for many years, and yet during this period the demands on medical charities have increased."

Our author ends by suggesting a number of new regulations for the purpose of restricting the benefits of the medical charities to the really poor, for whom alone they were designed. We fear, however, that he has not allowed himself to see to the bottom of the evil. On reading his book, two considerations arise in our minds. First, in what measure is this great resort of respectable artisans to charities to be attributed to the unreasonable charges made by medical practitioners from working-men, when they are called in upon an independent footing? Second, to what extent may it be owing to the impression which has of late years, justly or unjustly, been prevailing in the minds of the operative classes, that the capitalled and employing class have an undue advantage over them, and are therefore doing no more than justice in making large and systematic eleemosynary allowances in behalf of the employed? The second of these queries is one which we are forbidden to discuss in this paper; but we may make the remark that, if the fact be so to any extent, it is much to be lamented, as even a right obtained in a mendicant way must be demoralising. With regard to the first query, we feel more at liberty.

We have been at some pains to ascertain the charges usually made to working-men in England for medicine and medical attendance; and though the returns to our inquiries have been various, we fear there is too little reason to doubt that these charges in general are such as must act as a constant temptation to the

Digitized by Google

working-classes to resort to medical charities. We shall first lay before our readers the following extracts from a letter with which we have been favoured by a provincial physician eminent in the literature and science of his profession :—

"My experience of upwards of twenty years leads me to assert that the labouring classes generally are unable to pay private medical practitioners for illnesses in their families, if of any severity or extent of duration. This is true with scarcely any qualification with the whole class of day-labourers and farm-labourers, who earn from eight to twelve or thirteen shillings a-week. Men of superior rank, such as artisans in good employment, who may earn twenty or thirty shillings, *if they have families*, can hardly pay the doctors' bills, unless they are men of very uncommon prudence, or have singularly healthy homes or singularly liberal doctors. The general custom in England (until lately the universal custom) is for 'general practitioners,' as they are called—that is, the sole doctors of the lower and middle classes—to charge nothing for *attendance* (unless they pay visits in the country at some distance from their homes, when they charge 2s., 2s. 6d., 5s., 7s., according to the distance), but for *medicines supplied;* but the price put on medicines is always calculated so as to include virtually the charge for attendance. Thus, if an apothecary visits an artisan or labourer, he sends him perhaps a bottle of physic, worth possibly a halfpenny or a penny, or it may be twopence or even threepence, and charges him 3s., 3s. 6d., or certainly 2s. or 2s. 6d. This may last two or three days according to circumstances, so that the cost to the patient will be 1s., 1s. 6d., or 2s. per day. Suppose the man's illness lasts but a few weeks, the bill will be certainly 10s., 20s., 30s., or in longer illnesses several pounds." Our correspondent then relates the particular case of the brother-in-law of his housemaid, a jobbing day-labourer, realising at the time 12s. 6d. per week, paying L.9 of house rent besides poor-rates, and having a wife and child. This man, falling sick, was attended by a general practitioner between the 16th December and the 8th January, being little more than three weeks. The doctor's bill, which has been transmitted to us, shows a succession of charges for pills, draughts, and mixtures, at 2s. and 3s. each, mingled with some blisters and leeches; and the whole amount is L.4, 5s. —a sum evidently far beyond the means of such a man, but which he nevertheless paid by taking some money out of the savings' bank, and economising severely during the year ensuing upon the illness. The worst of it was, that at January 8, when he had thus incurred a ruinous charge, he was not half cured, but had then after all to resort to the medical charities. Another case was that of a foreman to a printer, receiving 30s. per week. "Last year, or the year before, he had some illness in his family, and the doctor's bills at the year's end amounted to L.15, *which he could not pay.* I would therefore say," continues our correspondent, "that the labouring classes are inevitably forced in sickness, either to obtain medical relief from charities (hospitals, dispensaries, or the parish), or to involve themselves in debt to the doctor, or to ruin themselves by paying him, or, finally, to leave their sickness to the kind care of Nature. I admit that medical charities are not unattended with evils. A good many, who might, by prudence, save a little money for the day of sickness, do not do so: some, even, who can well afford to pay the doctor, obtain relief; but, as things now stand, I am convinced that without dispensaries and parish doctors, the labouring classes and artisans could not get on at all. I am sorry to say that, from the constitution of the profession in this country, the *pure spirit of trade* prevails largely among the medical men, and this will be the case until two changes are brought about—1, a better education (preliminary more particularly), to enlarge the mind; 2, the charging for *prescribing* only, and not for medicines. The only thing that can in any way mitigate the present evil of dependence as to medical relief, is the establishment of medical clubs on good principles (such as proposed by the Poor-Law Commissioners) among the poor. This has been done to a trifling extent of late years; but I blush to say, that the great obstacle to such institutions has lain, and lies, *with the medical profession!*"

Another of our correspondents, a young Scotch physician settled in London, represents, on the other hand, that the doctors' bills are very frequently left unpaid, and that a vast deal is done by the profession gratuitously among the humbler classes, from the mere spirit of benevolence. This may quite well be, and yet the system upon the whole may be such as to press severely on those who are willing and able to pay reasonably. If the prudent and honest man can only obtain independent medical attendance by the sacrifice of the little sum he has been able to put into a savings' bank, he has but little encouragement to make the attempt to save. If he is obliged from absolute poverty to leave a large bill altogether unpaid, he is degraded in his own esteem, and rises from his sick-bed a worse member of society than he lay down. Between the demoralisation thus produced, and that which arises from the direct resort to medical charities, we see little difference. It may at the same time be true that the system is not a good one upon the whole for the medical men; but if this be the case, why should they oppose the introduction of a better? Why should they not come to some arrangement for charging the operative classes according to their actual circumstances, so that the independence of these men would be as much preserved with respect to the doctor as to the baker? If some very moderate *fixed* charges were made by the general practitioners, and that for advice or attendance, instead of for medicine, a working man would know whether he could afford to call a doctor or not; he would be encouraged to make provision against sickness; he would have the agreeable and honour-sustaining sense of preserving his independence; and the medical men, on the other hand, would probably be as well off with small charges which all or nearly all paid, as they can be with high charges which only a few can meet. The expedient of medical clubs is still better, because there the payment is actually stored up while the working man and his family are in health: it is an expedient invested with all the respectable qualities of life-assurance. We cannot conclude without again cordially recommending the general establishment of such institutions throughout England, as the measure the best calculated at once to obtain justice for the practitioner, and to protect the independence of the people.

SLEEP-WALKING.

No phenomenon in the human economy is calculated to excite so much surprise as that called Somnambulism, or Sleep-Walking. If sleep be the intermediate state betwixt wakeful life and death, somnambulism is a condition intermediate betwixt sleep and wakefulness. In perfect sleep, all the organs or faculties composing the mind, together with the external senses and the powers of voluntary motion, are in a state of rest or torpor. Dreaming is a slight approach to wakefulness, seeing that some of the cerebral organs are then in a state of activity, while others are quiescent. In dreaming, the external senses may or may not be in a state of activity. Some people, for example, can be led to dream of particular subjects by the talk of others placed near them when sleeping; while other dreamers are totally insensible to all sounds emitted within the range of their organs of hearing. In ordinary dreaming, too, the powers of voluntary motion are often exercised to a slight extent. A dreamer, under the impression that he is engaged in an active battle, will frequently give a bed-fellow a smart belabouring. Often, also, in cases of common dreaming, the muscles on which the production of the voice depends are set in action, through the instrumentality of that portion of the brain which is not in a quiescent state, and the dreamer mutters, or talks, or cries aloud.

All these partial demonstrations of activity in the external senses, and in the powers of voluntary motion, form an approach to that remarkable state termed somnambulism, in which all or nearly all of the senses, and of the muscles of the body, are frequently in perfect activity, the torpor of a part of the cerebral organs being the only feature rendering the condition different from that of waking life. The degrees in which the preceding characteristics are observable in somnambulism, vary, as is natural, in different cases, and the causes of this, as well as of the condition itself, are well and forcibly explained by Mr Macnish, in his Anatomy of Sleep. "If we dream that we are walking, and the vision possesses such a degree of vividness and exciting energy as to arouse the muscles of locomotion, we naturally get up and walk. Should we dream that we hear or see, and the impression be so vivid as to stimulate the eyes and ears, or, more properly speaking, those parts of the brain which take cognisance of sights and sounds, then we both see any objects, or hear any sounds, which may occur, just as if we were awake. In some cases, the muscles only are excited, and then we simply walk, without hearing or seeing." In other cases, for the reasons given, we both walk and see, and in a third variety, we at once walk, see, and hear. In the same way, the vocal organs alone may be stimulated, and a person may merely be a sleep-talker; or, under a conjunction of impulses, he may talk, walk, see, and hear.

These brief explanations may aid in preventing the reader from being puzzled by the philosophy of this curious condition of the bodily system, or from being disposed to discredit the cases related. The simplest and perhaps least surprising cases are those in which the locomotive powers alone of the body are set in action by the vividness of a dreaming impulse. The person rises, strikes his head or body against something, and awakes. A leap from bed is also a comparatively common and slight species of somnambulism. In the belief of being compelled to cross a ditch by the pursuit of a bull, a gentleman bounded some time since from bed, and at one spring found himself placed upon a dressing-table which stood a short way from the foot of the bed. A few inches farther, and he would have passed through or at least struck a window. But such cases have little interest in comparison with those in which the somnambulism is not momentary, but of continued duration. The following case is related by Smellie, in his Philosophy of Natural History:—"Near thirty years ago, I had an opportunity of examining a striking example of somnambulism. Within a mile of Edinburgh, I happened to reside some time in a farmer's house. Mr Baird, my landlord, had a servant maid, whose name was Sarah. I was not long there, when I learned from the family, that Sarah, particularly after receiving an affront, or being angered, was accustomed to rise in her sleep, to go out, and to walk about the fields. My curiosity was excited, and I begged to be informed the first time that Sarah should rise in her sleep. A few nights afterwards, one of Mr Baird's sons awaked me, and told me that Sarah had got out of bed. I immediately hastened to the apartment where she slept. When I arrived, Mr and Mrs Baird, one of their sons, and a servant maid, Sarah's companion, were present. Sarah was in the midst of them. I took my seat by her. We began immediately to converse. She answered any questions that were put to her pretty distinctly; but she always mistook the person who spoke, which gave us an opportunity of assuming any character within the circle of her acquaintance.

I knew that one of the farmer's servants, whose name was John Porteous, was a lover of hers; and therefore I addressed her in the style which I supposed John might have sometimes done. From that moment she began to scold me, and in the most peremptory manner forbade me ever to speak to her again on that topic. The conversation was accordingly changed. I talked of her mistress, who was in the room, because I knew that they had occasional quarrels. Till now, I suspected that the whole was a trick, but for what purpose I could not discover. Sarah, however, abused Mrs Baird in the harshest terms; she said but the other day she had been accused of stealing and drinking some bottles of ale; that her mistress was suspicious, cruel, and narrow-minded. As the mistress of the house was present when these and other opprobrious terms were used, I began to be shaken in my preconceived notion of imposture, and therefore changed the object of my experiments and inquiries. I examined her countenance, and found that her eyes, though open, wild, and staring, were not absolutely fixed. I took a pin, and repeatedly pricked her arm; but not a muscle moved, not a symptom of pain was discoverable. At last she became impatient to leave the room, and made several attempts to get out by the door; but that was prevented by the domestics. Perceiving her inability to force the door, she made a sudden spring at the window, and endeavoured to throw herself over, which would have been fatal to her. To remove every suspicion of imposture, I desired the people, with proper precautions to prevent harm, to try if she would really precipitate herself from the window. A seemingly free access was left for her escape, which she perceived, and instantly darted with such force and agility, that more than one-half of her body was projected before her friends were aware. They, however, laid hold of her, and prevented the dreadful catastrophe. She was again prevailed upon, though with much reluctance, to sit down. She soon resumed her former calmness, and freely answered such questions as were put to her. This scene continued for more than an hour. I was perfectly convinced, notwithstanding my original suspicions, that the woman was actuated by strong and natural impulses, and not by any design to deceive. I asked if any of the attendants knew how to awaken her. A female servant replied that she did. She immediately, to my astonishment, laid hold of Sarah's wrist, forcibly squeezed and rubbed the projecting bones, calling out at the same time, 'Sarah! Sarah!' By this operation Sarah awoke. She stared with amazement, looked round, and asked how so many people came to be in her apartment at so unseasonable an hour! After she was completely awake, I asked her what was the cause of her restless and violent agitation? She replied, that she had been dreaming that she was pursued by a furious bull, who was every moment on the point of goring her."

In the preceding case there is one point worthy of especial note, and this is the insensibility of the girl to pain when her arm was repeatedly pricked. As will be shown afterwards, this is a phenomenon which has recently thrown quite a novel interest over somnambulism, and made it a subject of greater importance.

The somnambulist in Smellie's case had not apparently the perfect power of vision. She did not or could not recognise the persons about her, yet she saw a window, and would have leapt through it, knowing that a passage was practicable. The true condition of the vision in somnambulism is indeed the point most difficult to comprehend. The boy who, according to the common story, rose in his sleep and took a nest of young eagles from a dangerous precipice, must have received the most accurate accounts of external objects from his visual organs, and must have been able to some extent to reason upon them, else he could never have overcome the difficulties of the ascent. He dreamed of taking away the nest, and to his great surprise found it beneath his bed in the morning in the spot where he only thought himself to have put it in imagination. The following case, mentioned by Mr Macnish, is scarcely less wonderful. It occurred near one of the towns on the Irish coast. "About two o'clock in the morning, the watchmen on the Revenue Quay were much surprised at descrying a man disporting himself in the water, about a hundred yards from the shore. Intimation having been given to the re-

Digitized by Google

venue boat's crew, they pushed off and succeeded in picking him up, but, strange to say, he had no idea whatever of his perilous situation, and it was with the utmost difficulty they could persuade him he was not still in bed. But the most singular part of this novel adventure was, that the man had left his house at twelve o'clock that night, and walked through a difficult and to him dangerous road, a distance of nearly two miles, and had actually swum one mile and a half when he was fortunately discovered and picked up." The state of madness gives us, by analogy, the best explanation of the condition of these climbers and swimmers. With one or more organs or portions of his brain diseased, and the rest sound, the insane person has the perfect use of his external senses, yet may form imperfect conclusions regarding many things around him. The somnambulist, with his senses in activity, but with some of his cerebral organs in a torpid state, is in much the same position as regards his power of forming right judgments on all that he hears or sees.

The story of the sleeping swimmer is borne out by a statement from an indisputable authority, Dr Benjamin Franklin. The doctor relates, that on one occasion, while bathing in a hot salt-water bath, he fell asleep, and floated on his back in that state for nearly an hour, as his watch testified to him.

Sometimes, in the case of a person liable to somnambulism, it is possible to direct the thoughts of the dreamer to any given subject, by acting on the external senses. Smellie, the writer already quoted, gives the subjoined instance:—"Mr Thomas Parkinson, then a student of medicine in the University of Edinburgh, was accustomed to talk and answer questions in his sleep. This fact was known to his companions. To amuse ourselves, two of us went gently into his chamber while he was asleep. We knew that he was in love with a young lady in Yorkshire, the place of his nativity. We whispered her name repeatedly in his ear. He soon began to toss about his hands, and to speak incoherently. He gradually became more calm and recollected. His imagination took the direction we intended. He thought he was stationed under the lady's window, and repeatedly upbraided her for not appearing and speaking to him as she had so often done on former occasions. At last he became impatient, started up, laid hold of books, shoes, and every thing he could easily grasp. Thinking his mistress was asleep, he threw these articles against the opposite wall of his chamber. By what he said, we learnt that his imaginary scene lay in a street, and that he was darting the books and shoes at the lady's window, in order to awake her. She, however, did not appear; and after tiring himself with frequent exertions, he went quietly into bed without wakening. His eyes were nearly shut; and although he freely conversed with us, he did not seem to perceive that any person was present with him. Next day we told him what had happened; but he said that he had only a faint recollection of dreaming about his mistress."

It is consistent with our own knowledge, that many country surgeons, who ride much by night, and pursue a most laborious life generally, sleep perfectly well on horseback. This, however, although a position in which the bodily motion is not entirely passive, is not properly somnambulism. Perhaps the most perfect sleep-walkers were Sir John Moore's soldiers, many of whom, in the disastrous and fatiguing retreat to Corunna, were observed to fall asleep on the march, and yet to go on, step by step, with their waking companions. Many tradesmen have been known to get up by night and work for a time at their usual employments, without being at all aware in the morning of what they had done. Gall mentions a miller who did this. One of the most extraordinary cases of this order, however, is that of a student of divinity at Bourdeaux, who was accustomed to rise in the night-time, and to read and write *without the use of his eyes*. This case is stated in the French Encyclopedie, under the word *Noctambule*, and is attested by the Archbishop of Bourdeaux. This prelate, in order to test the young man, interposed an obstacle between his eyes and the paper on which he was reading or writing, but he read and wrote with equal facility and equal accuracy as before. Macnish, who repeats this story, does not mention the fact of the eyes not being used, though this is the most marvellous feature in the case. The reading may not have been aloud, and may only have been apparent. But as for the writing accurately without the use of the eyes, this was certainly a feat which few waking persons could have accomplished. In addition to these cases, many others might be gathered, and particularly from Mr Macnish's Anatomy of Sleep; but that book is so accessible that it is enough to refer to it for further information. We shall only mention one other case which is there given. It is that of Dr Blacklock, who "on one occasion rose from bed, to which he had retired at an early hour, came into the room where his family were assembled, conversed with them, and afterwards entertained them with a pleasant song, without any of them suspecting he was asleep, and without his retaining, after he awoke, the least recollection of what he had done." Being blind, his family would have the more difficulty in discovering his unusual condition.

Somnambulism, it was stated at the close of the farm-servant's case, had of late years assumed a new and more interesting aspect. This has arisen from the discovery (if it be allowable to call it a discovery) that animal magnetism is capable of inducing a peculiar state of somnambulism, and that, during the continuance of that state, sensation or sensibility is destroyed. It has been seen that Smellie found the farm maid-servant to have lost sensibility in her arms. This is a statement corroborative of the account given of magnetic somnambulism. Taking advantage of this absence of sensibility, surgeons, it is said, have performed upon magnetic somnambulists the most severe and painful curative operations, without inflicting on the parties a moment's suffering of the slightest kind. The patient's mind, meanwhile, seems in a perfectly sound and active state, but without the power of remembering any thing that passed in the unmagnetised state. A Parisian lady, aged sixty-four, who had a cancerous breast, was magnetised, and it was found that somnambulism could be induced. In her waking state she was deeply averse from an operation, but in her magnetised state it was proposed to her, and she consented at once. The breast was operated upon, and cut off without the slightest seeming pain to her. On waking, she was, it may be believed, much surprised. This case, it has been alleged, is but one of several, where the like has been done, and some of the most respectable medical men of Paris have borne witness to the truth, or at least apparent truth, of these allegations.* On this score alone, animal magnetism seems worthy of a full and fair inquiry. It would be a wonderful thing, indeed, if we could arrive at means by which all the painful operations to which the human body is rendered liable by disease or accident, could be performed without suffering to those who undergo them.

Somnambulism, or the tendency to it, most commonly arises from causes not apparent or discoverable. Where it occurs in persons not accustomed to exhibit any such propensity, some disorder of the digestive functions may be suspected, and the restoration of these functions to a healthy state may put a stop to the practice. But in confirmed cases nothing can be done but to lock the doors, bar the windows, and keep dangerous objects or instruments out of the way, or a cord may be affixed to the bed-post and the arm of the sleep-walker. As a general rule, the somnambulist should be taken to bed before being waked.

SPECULATIONS ON WORDS.

THIRD ARTICLE.

Salt, Sound, Tyrant, Propound.—Changes are constantly making in language; and the same tendencies which produce the alterations in the speech of the educated, often produce the alterations in the speech of the uneducated, so that the same principle which is applied by the educated to certain words, is often applied by the uneducated to *other* words, and these are considered *corruptions* of language, and vulgarities. Thus, we all say *sound*, but we do not all say *gownd*; only the uneducated say it. We all say *tyrant*, but we do not all say *chest* (for the game of *chess*); only the uneducated say it. Yet *d* is added in *gownd* on the same principle as in *sound*, and *t* in *chest* on the same principle as in *tyrant*; and *d* in *sound* and *t* in *tyrant* have no more right there than in *gownd* or *chest*. In *tyrannise, tyrannical*, there is no *t*: *tyrana* is the German, *tyrannus* the Latin.† In *sonorous* there is no *d*. Now, Chaucer wrote *soorne* for *sound*; but he also wrote *laund* for *lawn*. The thing is now reversed.

This seems capricious, but it is not more so than people's talking nowadays. We often hear, for example, *clift* for *cliff*, and perhaps from the same person *fon* for *fond*: We have in English some words with and without the *t* or *d*. Thus,

Graff - -	Graft.
Loan - -	Land.
Fell is *fell-monger*	Felt.
Kin - -	Kind.
Sieve - -	Sift.
Cool - -	Cold.

Now, compare the German and English list which follows:

Germ.—Donner - -	Thunder.
Morass - -	Morast.—*Germ.*
Germ.—Lehnen - -	Lend.
Germ.—Sieben - -	Sift.
Sin - -	Sünde.—*Germ.*
Hip - -	Hüfte.—*Germ.*
Thick - -	Dicht.—*Germ.*
Sap - -	Saft.—*Germ.*
Lay (*a song*) -	Lied.—*Germ.*

Propound, compound, expound, have acquired the *d* in the same way.

Spelling influenced by a false etymology. Sovereign, foreign, waits, &c.—There are a great number of words in English, and probably in other languages, which have been spelt in a particular way from a mistaken notion of their derivation. For example, *sovereign* was by Milton always spelt *soveran*, and this is its proper form (through the French *souverain* from the Low Latin *superanus* or *superaneus*, one set *over* others). But people thought it had some connection with the verb to *reign*, and hence it became *sovereign*. So perhaps *foreign*, which was formerly spelt *forein* (through the French *forain* from the Latin *foraneus*, out of doors). Perhaps this was confounded with *reign*. So the word *island* people imagine to be compounded of *isle* and *land*. Now, in point of fact, *isle*, which is a contraction of the Latin *insula* (French île), has nothing to do with *island*, which is the German *eiland* and Saxon *ealond*, and belonging to quite a separate family of words. So again the word *waits*, the name given to the nightly minstrels who itinerate at Christmas time, is commonly pronounced *wakes*. People find that the *waits* wake them; therefore they call them *wakes*. Now, it is very curious that the word *waits* is connected with *wake*, but in another way. *Watch, wake*, and the German *wachten*, are the same, and a *wachter* or watcher is a *wait*, a person who *watches* or keeps *awake* all night; so that the *waits* are in fact *wakes*, not because they keep *us* awake, but because they keep awake *themselves*. Webster, in his American-English or Anglo-American Dictionary, says that the word *waits* is not used; we suppose he *means* not used in America.

Gone, Done, Borne.—In these words the regularity of the formation is obscured by the spelling. Just as we have *shaven, broken, driven*, &c., so from *go, do, bear*, we have *go-en, do-en, bor-en*, the *e* having been displaced in the forms *go-ne, do-ne, bor-ne*. Our participles formerly had the prefix *y* corresponding to the German *ge*; thus *yborn*, whence we now have *born*, but the Germans still *ge-bor-en*. So *ygone-gegangen, ydone-gethan, ydriven-getrieben*. And this *ge* is pronounced *ye* in some parts of Germany, but wrongly. In the word *yclept* or *ycleped*, the participle of *clepe* "to call," the old form is preserved. The phrase *star-y-pointing*, used by Milton, is obviously wrong and falsely formed; the *y* was prefixed, not to the present, but to the past participle.

Lay, Lie; Drop, Droop, &c.—In English, as in many other languages, we have from the same root two sets of verbs, one set transitive, the other intransitive. In Latin these are numerous, and in English perhaps more so than is commonly supposed. Compare

Fell, Fall.	Lay, Lie.
Drop, Droop.	
Set, Sit (and Set).	Raise (and Rouse), Rise.

On exactly the same principle the London shopkeepers speak of *dining* their men. One of them might say, on engaging a man, "I will dine you, but I shall not be able to sleep you." To dine and to sleep a person are phrases formed analogically, though they are not yet in the language of books. Words of this class are numerous in German. Compare

Legen (to Lay),	Liegien (to Lie).
Setzen (to Set),	Sessen (to Sit).
Trinken (to Drink),	Tränken (to give to Drink).

The common mistake of using *lay* for *lie* and *laid* for *lay* is one of the vilest vulgarisms.

Other ways, Otherwise.—People often confound these words *ways* and *wise*, *no ways*, and *nowise*, &c. *Ways*, however, is not the same word as *wise*. *Wise* is only another form of *guise*, and is the same as the German *weise* "manner." "In no wise" means "in no guise" or fashion or manner.

Less, Worse, Chief, Ere, More, Former, First.—Several words are used as comparatives in English which are not so in form; and some are so which do not look so. *Less* and *worse* are used as comparatives, but they are positives, and the real comparatives are *lessor* and *worser*, which the pragmatical school of English critics would reject altogether. Lord Brougham has done a great deal to revive these and some other old forms. *Chief*, again, the same Lindley Murray school would rob of its comparative and superlative, *chiefer* and *chiefest*; and the adverb *most chiefly*. These also Lord Brougham has revived in his writings and speeches. On the other hand, *ere* and *more*, although they are not commonly looked on as comparatives, are so. *Ere* we have not in the positive; the Germans, however, have *ehe*, comparative, *eher*. We have comparative, *ere*, and superlative, *erst*.

More is the comparative of *mo*, which is often used by Spenser and other old writers—Mo, mo-er (more), mo-st. The comparative and superlative of some words are made by *more* and *most* added to the word; thus, pos. *fore*, comp. *for-mer* (fore-more), sup. *fore-most*. *First* is a corruption of *for-est* from *fore*.

Abbreviations.—It is the tendency of language to abbreviate as time goes on. Yet an early period of a language will often exhibit contractions, which a later and more polished period will not tolerate. It is so in English. For example, old writers used *nathless* as a contracted form of *nevertheless*; but now it is not allowed. So the word *them* was often contracted to *'em* even in books, as in the Miscellanies of John Norris (of Bemerton), 8th edit. p. 149, "our designs about *'em*," which is now considered vulgar. Again, the contracted forms *tho', can't, don't, 'tis, 'twill*, which occur frequently in writers of that date, 1600–1700, are instances of the same thing. The participles, also, were generally spelt without the *e*, as *help'd, reckon'd, concern'd, pull'd, sus'd*, &c., which would not be spelt so now in prose. In Fell's Life of Hammond, which we have referred to before, *laid* is spelt (p. 61, 2d. edit.) *lai'd*, instead of *laid*. It might be difficult to say *why* we spell played as we do and not *plaid*, like *laid*. It is curious to notice that it is not so. We do not think it desirable to restore the apostrophes: they look ugly and save no time; but such a word

* Colquhoun on Animal Magnetism. 2 vols.

† The Scotch say *tyerss*, laying the accent on the first syllable. —Ed.

Digitized by Google

as *stopt* we see no reason why we should write *stopp'd* or *stopped*, any more than why *wept* should be written *wepped*. So *whipt*, *stript*, &c. Mr Julius Charles Hare would write *publisht*, *looks*, *wisht*, *talkt*, &c.; and certainly, in so doing, we should only be restoring the old method of writing them.

THE ASS AND THE TREASURE,

AN ARABIAN TALE.

[The ass, in Europe, is a by-word for all that is dull, obstinate, and stupid. Very different is the case in the East; and not unnaturally so, seeing that the animal, under the more genial skies of oriental latitudes, is as remarkable for docility, activity, and swiftness, as well as for elegance of form, as its European congener is for tardiness of step and meanness of aspect. The Egyptian Arabs give the ass the precedence over all other four-footed creatures for intelligence and sagacity, and their story-tellers bring forward as many stories in support of this opinion as would have kept Scheherezade from the block or the bowstring for another month or two. Our young readers may be pleased with a sample of these tales, and we select for their amusement one which we find contributed to a recent French periodical by M. P. Granal, a writer who has personally visited the East, and who, by other compositions, has proved himself to be thoroughly conversant with its fictions and customs. He describes himself as having heard the story from the lips of his temporary attendant in Egypt, a professed narrator of such matters.]

Rajeb was a young man of Cairo, who had been left by his father with a fortune of about two thousand piastres. Had he embarked this little fortune in trade, and been industrious, he might have lived very comfortably; but he fell in love soon after his father died, and could think of nothing but the fair object of his passion. She was a young girl, whose countenance he had first seen for a moment, when by chance she put aside her veil to drink at the fountain of a mosque. She was very plainly dressed, and appeared to belong to some humble but decent family. But she was rich in beauty, at least, and in modesty, for she hastily replaced her veil on seeing a young man looking at her, and walked away without turning to the right or the left, or looking back as coquettes do. Rajeb followed her, and saw her enter a plain house, of the kind inhabited by the middle orders. From this time forward, Rajeb was consumed by the passion which had sprung up in his breast. Of the object of it he could learn no more than that she was as virtuous and well-behaved as she was beautiful. At length he went to the parents of his mistress, and asked her hand in marriage. They received him very kindly; but when he came to speak of the dowry which they expected to be given by their daughter's husband, they demanded the sum of five thousand piastres. This was above the lover's means, and he exclaimed loudly against the enormity of the sum; but they were obstinate, and Rajeb could only prevail on them to give him a few days to reflect, and to look about him for means. If he did not appear at the end of the stated time, they would hold themselves at liberty, they told him, to accept of other offers.

Rajeb returned home, lamenting and reproaching himself with having idled away his past time. "Ah! if I had worked hard," said he, "I might have increased my fortune, and might now have been happy!" He took out his money and counted it several times, but he could not thus make it more than it was—two thousand piastres. He lay down on his bed, and tried to sleep, but his mind was too much occupied with projects for procuring the required dowry to permit him to rest. At last he bethought him of a maternal uncle at Tantah, whom he had not seen for eighteen years, and who was said to be rich. Rajeb had no sooner thought of this person than he resolved to visit him. He would borrow the three thousand piastres; a rich relation could not refuse such a sum. The young man longed for the coming of day to set out on this hopeful errand.

Morning at length dawned, and Rajeb started on his journey. In order to save money he went on foot, hoping, also, to interest his uncle the more by this economy. When he reached the first houses of Tantah, he inquired for his uncle Jousoff, "the rich Jousoff," of several boys whom he met. "The rich Jousoff!" cried they, "say rather the old beggarly miser Jousoff, who regrets to throw away a bone when he has picked it white!" One of the boys, however, conducted Rajeb to his uncle's house. The young man entered it trembling, for the description which he had heard was by no means encouraging. When his uncle came to him, Rajeb saw an old, withered, ragged, dirty being, who cried, "What do you want?" in a rough voice. "Ah, my dear uncle!" cried Rajeb, throwing his arms about the old man, "do you not remember me? I am Rajeb, the son of your sister—little Rajeb, whom you loved when a boy; I am come, dear uncle, to see if you are well." "Very well," said Jousoff, "I am very well, but very poor. I shall not be able to show you very splendid hospitality." "What then!" said Rajeb, cheerfully; "riches and poverty come from God." At these words, they entered the old man's apartment, dark and dingy, without any other furniture than an old mat and a jar of water; neither pipes nor coffee were to be seen. Rajeb, however, was patient, and showed no ill humour. That evening they feasted upon a crust of wretched cheese, and some crumbs of black, detestable bread. The cheese, such as it was, was a novelty in that place, and the neighbours who saw the old man buy it, could scarcely believe their eyes.

Rajeb was not accustomed to rich fare, but after his journey he stood really in need of soup and roast, or something else that was good. But he ate the bread and cheese, and said nothing. When they had done, he tried to lead the conversation by degrees to the object of his journey. The old man, however, anticipated his purpose, and cried, "I am poor, a beggar; no dervish is poorer than I am; I am ruined; all the world robs me; I have spent my last para upon a dinner for you." Rajeb perceived that he had to deal with a heart of marble; so, after trying in vain to soften the old man by descriptions of his mistress's beauty and his own passion, the youth rose, and, under pretence of taking the air, went out to conceal his bitter disappointment and vexation.

Troubled as he was with his own matters, Rajeb could not look without pity on a poor ass which he saw on going out of doors, and which was lying in a little shed, munching some morsels of straw that lay within its reach. Rajeb, who loved animals, approached to caress the poor lean, starved creature, which was all hide-sore; and the ass seemed sensible of the affection shown to it. Prompted by his natural benevolence, Rajeb then went away, and bought a measure of barley, and almost forgot his own griefs in the pleasure of seeing the ass fall to its food with the liveliest marks of joy. After bringing it water to complete its meal, the youth went back to his uncle. It is needless to say that Rajeb passed an unhappy night; he lay on the floor, and the vermin infesting the place were sufficient of themselves to banish sleep. In the morning, the two relations breakfasted on the relics of yesterday's meal, and then the nephew was about to take his leave. But his uncle stopt him, and said, "I have an ass which is of no use to me. It is all that remains to me of my substance, and if you wish"—— Rajeb thought his uncle was about to make him a present of the ass, but he was in error, for the old man proceeded—"if you wish, you may go with me to the market, and see me sell him." Rajeb consented, and when they went to the stall of the ass, the young man again caressed the poor animal. In return, it looked at him with eyes full of intelligence, and struck the ground several times with its foot. Rajeb even thought he heard it say, "Buy me." Its looks at least, he thought, said so.

On the way to the market, Rajeb reflected on the subject, and felt himself impelled to purchase the ass by some involuntary feeling, which most people would have been disposed merely to call good-nature or pity. As the ass was young, and had no faults but those arising from starvation, several purchasers came forward. One offered two hundred piastres, another three hundred, and at last the price mounted to five hundred. When Rajeb saw that his uncle was willing to take this, he offered a few piastres more, assured that he would get the ass. "What do you want with the ass?" said the old man. "I am resolved upon having it," was all that the nephew answered. "Ah, well!" said Jousoff, with a smile of greedy pleasure, "you must give me a thousand piastres, and then it shall be yours." Rajeb was shocked at the miser's demand; but the old man, seeing his nephew's anxiety, would not bate of his exorbitant request, and the youth at last agreed, and a bargain was struck.

As Rajeb had left all his money at Cairo, it was agreed that Jousoff should go back with his nephew to that city, and there receive the purchase-money. Accordingly, they set out, and the ass with them. By the way, the creature seemed to be inspired with fresh life, and gambolled and danced as if to please its new master. Arrived at Cairo, Rajeb gave his uncle the promised sum, and entertained him handsomely. After a few days Jousoff departed, and left his nephew alone. The latter occupied himself in making a good stall for his ass, and in tending and cleaning it, by which means it soon became quite a new creature. As for the mistress of his heart, Rajeb had almost given up all hope of her. The interval allowed him by the parents had expired, and the youth, now poorer than before, did not dare to present himself before them. Whilst matters stood thus, information was brought to him that his uncle had been found dead by the road-side, having been plundered and killed by robbers. The young man shed a tear for the sudden end of the miser, and then made preparations to go to Tantah to take up the deceased's inheritance, though there seemed little hope of its proving great, notwithstanding the reputation which Jousoff had once acquired for being rich.

Mounting his ass, Rajeb proceeded to Tantah. He put up the ass in its old stall, and went into the house to search it. As he had almost expected, not a para was to be found; not a vestige of any thing valuable was visible in any corner of the wretched abode. While Rajeb was prosecuting his examination, he was surprised by the continued whining and braying of his ass. Thinking he had neglected its wants, he went out several times, and put barley, straw, and water before it; but the animal would not touch them, and continued to stamp on the floor of its stall with its foot. Rajeb's attention was at length attracted to this movement, and the ass, seeing this, repeated it with increased vehemence. Its master, seizing a bar of rusty iron which stood by, then commenced to turn up the ground where the ass struck. As he did this, the animal looked on with eyes glistening with eager pleasure, and seemed as if it would fain say, "Go on, go on; it is there." At last, Rajeb came to a coffer. He turned it out, and behold! it was filled to overflowing with doubloons, sequins, and all sorts of precious coins. The youth hugged his treasure, but the ass would not yet let him rest. It struck the ground in another spot with his feet, and Rajeb, on digging anew, found a second coffer, filled with pearls, rubies, emeralds, and other valuable gems.

The ass stamped no more, and Rajeb hastened to secure his treasures, and to get them transported to Cairo. He put them into two panniers, and, although they were very heavy, the ass never slackened its speed, nor gave any signs of weariness, until it brought its burden to its master's door. On the night of his arrival, Rajeb hastened to the house of his mistress. He was just in the nick of time, for an old Turk had seen her, and offered the five thousand piastres to the parents. Rajeb, however, took the father home with him, and showed a part of his treasures, when the marriage was at once agreed on. The young bride proved to be really as virtuous as she was beautiful, and made Rajeb happy. He gave large donations to the poor on the occasion of his wedding. As for the ass, it had the place of honour, during its life, in the stable, and was never doomed to any other toil than that of bearing its mistress and her children. Its master visited the stable every day, and spoke with it as with an old friend.

Behold, in this story, a lesson never to despise animals, but always to be gentle and compassionate to them, for they may often repay a hundred-fold the little kindnesses which we do to them.

THE COMMERCIAL PRINCIPLE.

We have extracted the following just and glowing eulogy on the influence of the commercial principle, from an article entitled the American Merchant, in a recent number of the Knickerbocker.

"The discovery has not long been made, but it is made at last, that the real source of national prosperity, greatness, and power, is the once contemned pursuit of commerce. Even rulers and monarchs, although generally the last to abandon errors, and to perceive great moral truths, have begun to entertain the idea that the power of an empire is not exclusively in its armies; that increase of territory, by conquest, is not prosperity; and that successful warfare is not glory. It is not probable that the civilised world will ever again produce a Napoleon, or civilised nations again engage in such a frightful series of butcheries and desolations as were the fruits of his ambition. The knowledge that the business of mankind is to create, and not destroy, has slowly travelled upward, from the workshop of the mechanic, and the warehouse of the merchant, to the study of the philosopher, the cabinet of the statesman, and the council-chamber of the king.

It is time, indeed, that this great truth were universally acknowledged, for history has been teaching it these thousand years, in the successive rise and fall of empires. Of the great nations of antiquity, we find that the most rapid growth in power and prosperity belonged to the most commercial, as Phœnicia, Carthage, and Egypt; and that when they fell, their ruin came not from within, but from the fierce assaults of enemies, superior in power. Their greatness had in itself the elements of duration; and although they were stricken down by the overbearing might of military dominations, it was not until after long and strenuous resistance, with numbers far inferior, proving the vigour and soundness of the principles on which their national existence had its foundation. The military empires, on the contrary, with the exception of Rome, were of short and uncertain duration. They had within themselves the seeds of dissolution, and crumbled into ruins with a rapidity of destruction generally commensurate with the celerity of their elevation. Even Rome itself was no exception to the rule, save only in the long continuance of its greatness; a greatness founded on the valour and warlike temper of its people, which every new conquest tended to diminish, by the introduction of luxurious habits, and the increase of means for their indulgence, gained by the robbery and plunder of the conquered. A power erected on such foundations could not be permanent. Its growth was unnatural, and at length it fell to pieces, as so many other warlike empires had done before it, through the influence of causes inherent in its elevation. The Romans, the Macedonians, the Assyrians, the Persians, all the conquest-seeking nations of antiquity, were mere robbers. They aimed at riches and dominion by the strong arm and the rapacious spirit; and with the very attainment of their ends, the strong arm grew weak, and their ill-gotten wealth became the instrument of their destruction. The Carthaginians and Phœnicians, and every other commercial people, grew in strength and prosperity with a wholesome and vigorous increase. The wealth they acquired was won by toil, and enterprise, and perseverance, and brought with it increase of knowledge and intelligence; and if they fell at last, they fell nobly, after a long and gallant defence, not by enervation and effeminacy, but by the enormous disparity of force against which they contended.

But without looking more deeply into the causes of ancient prosperity or ruin, as to which we labour under much uncertainty, by reason of the insufficient accuracy and fulness of historical record, we shall find abundant demonstration of our position in those courses of events which approach nearer to ourselves in point of time, and of which we have fuller and more definite information. In the modern history of nations, then, we cannot fail to be struck with the manifest agency of commerce, in the creation of national wealth and power; for wherever we find commercial activity and enterprise existing in vigour, we also find national strength and influence exhibited in a high degree; and a decline of this commercial activity immediately

Digitized by Google

followed by a corresponding decadence of population and resources. Look at the states of Italy, for instance—Venice, Tuscany, the Florentine republic, Genoa, and the rest. Time was, when, despite their narrow territorial limits, they stood foremost among the nations in wealth and power; carrying on a most extensive commerce, their ships were found in every sea; their flags were respected, their political influence was paramount, and their great men were proud to bear the title of merchant-princes. But in process of time they neglected the real sources of their power; their rulers began to assume more exclusively the character of princes, and to lay aside that of merchants; they engaged in wars of aggression; and with all this, permitting themselves to be rivalled in their trade by other nations, they descended very quickly to the miserable state of poverty and impotence in which they now exist. Spain, too, once the most commercial country in the world, was also one of the most prosperous and powerful. But in an evil hour the discovery of Columbus laid open to the Spaniards the delusive wealth of Peru and Mexico; and from merchants they became conquerors and robbers.

We might enlarge upon this branch of the proofs in support of our position; taking the instance of every kingdom and country in the world, and showing that its wealth, power, and influence, bear a direct ratio to its commerce; but the enumeration would occupy too much space, and we limit ourselves to the two most commercial nations of the earth, Great Britain and the United States; each presenting, but in a different way, the most striking and remarkable illustration of the principle for which we are contending. In the first, we behold one of the greatest powers, occupying the very first rank among the nations, and until very recently holding a sort of recognised supremacy upon the ocean, without any one natural advantage which should secure to it this amplitude of power and dominion. A mere island, of such narrow limits, compared with the other great powers of Europe, that in territorial extent it holds almost the very lowest place; unfavourably situated at the corner, as it were, of the eastern hemisphere, with a climate very far from delightful, and a soil, fertile indeed, but extremely limited in the range of its productions; without forests for shipping, or mines of any thing except tin and coal; with scarcely any streams affording water-power for the driving of machinery; and, in short, as little indebted to nature for the elements of prosperity and greatness as the least potential of the petty kingdoms; this small island has for centuries taken the lead of all the world in activity, population, wealth, power, influence, and even splendour, laying every quarter of the globe, every land, and every sea, under contribution; wielding the sceptre of dominion over an empire, that, like the tricksy spirit of Shakspeare, 'puts a girdle round about the earth,' and giving laws to millions upon millions of every race and language under heaven. It boasts a navy, which, until within the last twenty years, was greater than those of all the other powers united, and more than once has maintained long and successful war, single-handed, not only against the most powerful and warlike of the continental powers, but against several of them in combination; and finally, in its last and greatest struggle, it was able to resist, and ultimately to overcome, the greatest soldier of modern times, before whose power all the other kingdoms of Europe had gone down in succession, and whose vast armies at one time included legions from almost every nation between the Baltic and the Mediterranean, the Atlantic Ocean and the continent of Asia.

Such is the power of England; and the wealth by which it is supported is of the same gigantic measure. And this wealth and power are the immediate fruit of commerce. By commerce the latter is acquired, and the former is sustained; and so long as the commercial supremacy of England is kept up, so long will that little island continue to be the first among nations—the arbiter of empires, and the wonder of mankind.

The illustration afforded by our own country is not less remarkable, although of a somewhat different nature. The amazing influence of commerce upon the growth of nations is exemplified in our history, not by overcoming disadvantages, but by the astonishing rapidity of its operation. We have every thing desirable or necessary for the attainment of prosperity and power. Immense extent of territory, unsurpassed fertility of soil, inexhaustible variety of productions, abundant forests, navigable rivers, mines of coal, iron, copper, lead, and other useful minerals; water-power for machinery, and a sea-coast abounding with harbours; we are divided, by three thousand miles of ocean, from the conflicts and intrigues of European politics, and, by the freedom of our institutions, left at liberty to employ all our energies in the attainment of individual welfare and happiness.

And now what is it that has made the United States, within less than half a century, one of the great powers of the earth? Not their natural advantages, certainly, for the same advantages are enjoyed by many other countries, without the same result. Perhaps it may be answered, that our political institutions are the cause of this effect. And so they are, in part. They are the cause, in so far as, by the freedom of action which they secure to every citizen, they have enabled us, as a people, to exert all our energies, with the highest efficacy and advantage, in those pursuits to which inclination prompted; interposing no obstacle either to the choice, or to the successful prosecution, when the choice was made. Favourable circumstances, and the national temper, led to the choice of commerce; and under the benign influence of our free institutions, we have become the second commercial people in the world, and shall soon be the first.

There is a consequence resulting from the wealth and power-bestowing influence of commerce, that is of infinitely more importance than wealth and power alone. There is yet another attribute of commercial enterprise, which bears more directly upon the highest interests of mankind, and the most exalted obligations of responsible Christian beings. The influence of commerce is peaceful; its noblest attribute is, the restraint it places on the brutal passions of humanity. Strange as it is that men should exist so long, without making the discovery, yet it is unquestionable, and the world is at last beginning to find it out, that the interest of all nations, and of every individual nation, is best promoted by the harmonious intercourse of mutual want and mutual supply. At last, the great ones of the earth have bethought themselves of putting glory, and conquest, and military splendour, and increase of territory, in the one scale, and commerce in the other; and some of them are very much astonished to find that commerce is the heaviest.

And now to what conclusion do we arrive as to the *character* of commerce, in this examination of its influence? We find that it is a civilising principle, eminently favourable to the advancement of science and the cultivation of intellect, potent in its operation upon the welfare of states, adverse to war and discord, a promoter of human happiness, and the natural and efficient stimulus to production, because it is the means by which the advantages of production are realised. Are we not right, then, in pronouncing it liberal and honourable? Must we not give a prompt and indignant denial to the charge so often brought against the mercantile profession, that its tendency is contracting, and its character illiberal? For our own part, we cannot listen with patience to such unfounded and silly imputations. Whether we use the term 'liberal,' in its intellectual sense, as relating to the tone of mind, or in that other and more common sense which regards the sentiments, it seems to us that it is, to say the least, not less applicable to commerce than to any other occupation. The merchant is not debarred, by his pursuit, from the cultivation of his mind; on the contrary, he has facilities and inducements for it of the highest order.

And if we speak of liberality in its common sense, as a synonyme for generosity, or readiness to bestow on deserving objects, in what profession shall we find more of it than in the mercantile? It is notorious, that for all charitable institutions, for the relief of individuals or communities in distress, for the endowment of literary or scientific bodies, in a word, for every kind of beneficent purpose or object, the donations of the merchants are always the largest, and the most freely given. It is notorious that the sums annually bestowed for purposes of this nature, in London and New York, the two most commercial cities in the world, are of startling magnitude; and we are warranted in saying, that to no class of men are applications of this kind made more frequently, or with more success, than to the merchants. There are exceptions, undoubtedly; but, generally speaking, their liberality in giving money is one of their most striking attributes. Away, then, with the mistaken prejudice, that charges upon commerce a want of liberality, in thought or feeling!

And that other prejudice, too, which withholds from commerce the title of honourable—one of the most flagrant and absurd of all the prejudices that beset the human mind. Why, is not the pursuit of commerce honourable! It is creative, beneficent, pacific, light-diffusing, and promotive of human comfort; and to the eye of reason, therefore, infinitely more deserving of honour than the destructive pursuit of war. Yet we cling to the stupid error of the warlike ages, and imagine that there is more honour in killing, burning, ravaging, and laying waste the fair domain provided for man, by divine benevolence, than in disseminating and increasing the enjoyments designed for us by our Creator. We adopt the insane and atrocious opinion of those iron-clad and iron-souled barbarians of the middle ages, whose business was robbery, and whose amusement was strife and butchery; who held it right to take whatever they could seize by the strong hand, and thought it very chivalrous and noble to run each other through with spears, for the mere glory of the deed; and allow our high intelligence to be hoodwinked by a prejudice, which the common sense of a child rejects as monstrous and absurd.

It is not merely as an abstract proposition, curious but of no practical consequence, that we have expatiated on the character and influence of commerce. We have been impressed with a sense and a conviction of its beneficial agency; we have seen that, by its effects upon the progress and the welfare of mankind, it has a dignity and honour of its own; we have recognised, in their full extent, its capacity for good, and the dependence of its operation upon the mode and spirit in which it is pursued; and the reader's good sense will point out to him the way in which its full advantages are to be realised; and his laudable ambition, if he be intending or preparing to engage in commercial pursuits, will prompt him to grasp the means, and employ the agencies, by which that end is to be accomplished. He will see that a first-rate merchant is one of the most useful and honourable members of society; and that to constitute a first-rate merchant, are demanded the highest attributes of mind and disposition; clearness and vigour of intellect, extensive knowledge, sound judgment, perfect integrity, liberality of sentiment, and unsullied honour. He will see that to the possessor of these attributes, the mercantile profession opens the road to distinction as widely as any other; and conscious that in this profession, as much as in any other, whatever is noble in the employment, belongs to the man, and whatever is noble in the man, to the employment, he will make it his study to acquire and cultivate all those properties which shall fit him to sustain the honourable character of a profession which, in its capabilities, may give fitting employment to the most accomplished minds, and to which, as well for its beneficial influence, as for the worthy and distinguished men it has produced, the most intellectual, the most instructed, and the most philanthropic man that ever lived, might esteem it no less than an honour to belong."

LINES TO A LITTLE BOY.

My winsome one, my handsome one, my darling little boy,
The heart's pride of thy mother, and thy father's chiefest joy;
Come ride upon my shoulder, come sit upon my knee,
And prattle all the nonsense that I love to hear from thee:
With thine eyes of merry lustre, and thy pretty lisping tongue,
And thy heart that evermore lets out its humming happy song;
With thy thousand tricks so gleesome, which I bear without annoy,
Come to my arms, come to my soul, my darling little boy!

My winsome one, my fairest one, they say that later years
Will sometimes change a parent's hope for bitter grief and tears:
But *thou*, so innocent! canst thou be aught but what thou art,
And all this bloom of feeling with the bloom of face depart?
Canst thou this tabernacle fair, where God reigns bright within,
Profane, like Judah's children, with the pagan rites of sin?
No—no, so much I'll cherish thee, so clasped we'll be in one,
That bugbear guilt shall only get the father with the son;
And thou, perceiving that the grief must see at least destroy,
Wilt still be fair and innocent, my darling little boy!

My gentle one, my blessed one, can that time ever be,
When I to thee shall be severe, or thou unkind to me?
Can any change which time may bring, this glowing passion wreck,
Or clench with rage the little hand now fondling round my neck?
Can this community of sport, to which love brings me down,
Give way to anger's kindling glance, and hate's malignant frown?
No—no, that time can ne'er arrive, for, whatsoe'er befall,
This heart shall still be wholly thine, or shall not be at all;
And to an offering like this thou canst not e'er be coy,
But still wilt be my faithful and my gentle little boy!

My winsome one, my gallant one, so fair, so happy now,
With thy bonnet set so proudly upon thy shining brow,
With thy fearless bounding motions, and thy laugh of thoughtless glee,
So circled by a father's love which wards each ill from thee!
Can I suppose another time when this shall all be o'er,
And thy cheek shall wear the ruddy badge of happiness no more;
When all who now delight in thee far elsewhere shall have gone,
And thou shalt pilgrimise through life, unfriended and alone,
Without an aid to strengthen or console thy troubled mind,
Save the memory of the love of those who left thee thus behind.
Oh, let me not awake the thought, but, in the present blest,
Make thee a child of wisdom—and to heaven bequeath the rest:
Far rather let me image thee, in sunny future days,
Outdoing every deed of mine and wearing brighter bays;
With less to dull thy fervency of recollected pain,
And more to animate thy course of glory and of gain;
A home as happy shall be thine, and I too shall be there,
The blessings purchased by thy worth in peace and love to share—
Shall see within thy beaming eye my early love repaid,
And every ill of failing life a bliss by kindness made—
Shall see thee pour upon thy son, then sitting on thy knee,
A father's gushing tenderness, such as I feel for thee;
And know, as I this moment do, no brighter, better joy,
Than thus to clasp unto thy soul thy darling little boy!

R. C.

ART OF FLOATING.

Any human being who will have the presence of mind to clasp the hands behind the back, and turn the face towards the zenith, may float at ease, and in perfect safety, in tolerably still water—ay, and sleep there, no matter how long. If, not knowing how to swim, you would escape drowning, when you find yourself in deep water, you have only to consider yourself an empty pitcher; let your mouth and nose—not the top part of your heavy head—be the highest part of you, and you are safe; but thrust up one of your bony hands, and down you go—turning up the handle tips over the pitcher. Having had the happiness to prevent one or two drownings by this simple instruction, we publish it for the benefit of all who either love aquatic sports, or dread them. —*Walker.*

NOVEL MODE OF CONVEYING A STEAM-ENGINE.

It is but a short period that the steam-engine has been used to convey post letters on land, and now for the first time a post letter is made the means of carrying a steam-engine. Messrs Newton and Berry, of the Patent Office, Chancery-lane, London, lately received per post, from Messrs Chadburn Brothers, Sheffield, a perfect working steam-engine, constructed on the oscillating cylinder principle, with its fly-wheel, framing, boiler, and fireplace complete; the whole was enclosed in a case wrapped in paper secured with string, and accompanied with a description of its construction and mode of working. The total weight being under four ounces, was charged as eight letters, which sum being prepaid at Sheffield, cost eightpence postage, and came safe to hand with its fellow penny travellers.—*Newton's London Journal of Arts.*

EDINBURGH: Printed and published by W. and R. CHAMBERS, 19, Waterloo Place.—Agents, W. S. ORR, London; W. CURRY Jun. & Co. Dublin; J. MACLEOD, Glasgow; sold by all booksellers.
Complete sets of the Journal are always to be had from the publishers or their agents; also, any odd numbers to complete sets. Persons requiring their volumes bound along with title-pages and contents, have only to give them into the hands of any bookseller, with orders to that effect.

STORIES OF THE IRISH PEASANTRY.

BY MRS S. C. HALL.

"Mind not high things: but condescend to men of low estate."
ST PAUL.

GOING TO SERVICE.

"THERE'S many have done it before; and let people say what they like, and however disagreeable it may be, it's no disgrace," said Mrs Mulvany, the shopkeeper's wife in the little town of Ballycastle, or, according to its original designation, Ballycushlawn. "It's no disgrace, Mary Cassidy, and so don't cry, dear; if you are not comfortable after a while, you can come to me. Remember there's 'a time for every thing, and every thing in time;' 'a place for every thing, and every thing in its place;' 'dust the corners,' as my poor mistress used to say (she was English, as well as myself, Mary), 'dust the corners, and the middle will dust itself;' 'never leave till to-morrow what ought to be done to-day;' 'a stitch in time saves nine;' 'keep on doing, and you will soon be done;' keep a civil tongue in your head, and your head will keep you;' always remember 'time and tide wait for no man.' Why, Mary, girl! if my husband, Terence Mulvany, had minded my advice, where he has single pounds now, he'd have had dozens in his purse; but he's an Irishman, Mary, and they're very affectionate in their way, yet very, very thoughtless. But for all that," added the good woman, leaning her large red arms on a counter that was as clean as hard rubbing could make it, "for all *that*, I would not exchange my Terence for any other husband, no matter what his country."

Mrs Mulvany was a bustling, industrious woman. Many people are bustling who are not industrious, but she was both; and she was kind-hearted withal, though her kindness did not take the form it usually takes in Ireland. Her hospitality was not reckless; she would place enough before her husband's guests, but not a great deal too much. Provisions are cheap in her neighbourhood, but she did not conceive that their being so, justified her in any species of extravagance; she considered their abundance an especial blessing, not to be wasted. She did not think that prevailing on persons to eat or drink more than they liked, more than did them good, was a proof of either kindness or generosity; she loved her husband dearly; she worked with him, thought for him, saved for him; but she also remonstrated with him, when, instead of minding his business, he would borrow a pointer, and use, or endeavour to use, the old gun as a fowling-piece. She steadily refused her sanction to card-playing in all its branches, as being an unchristian and unthrifty amusement; and when, having taken a "stiff tumbler" of punch, Terence would express his desire to have another, or, if not another, half a one, or "only a little drop of sperits in the could wather, *just to kill the insects*," Mrs Mulvany would lay firm, if not violent hands on the ugly green bottle, put it into the cupboard, lock it up, and consign the key to her capacious pocket: this was when there was nobody by. She had good sense enough, if Terence filled his glass too often when a neighbour dropped in, to hold her tongue *until* he was gone; or, if Terence had really taken too much, to keep it quiet till the next morning; then, indeed, her husband received a lecture, long or short, mild or strong, according to circumstances.

Men generally listen to reason when suffering from a bad headache produced by indiscretion, and Terence knew his wife was right; besides, her entire conduct in her own homely way convinced him that his interests were hers, and that the desire of her life was to see him well and happy. To be sure, she wanted him to be happy in her way rather than his own, and was not as yielding, not as subservient, as Irish wives generally are; consequently, the young idling men, who would have enjoyed their hot punch and feasting at Terence Mulvany's expense, but for his wife's carefulness, were apt to say, "that she kept his nose to the grinding-stone." Nevertheless, the worthy shopkeeper grew fat, looked happy, and prospered.

And what has all this to do with "going to service?" you inquire. I will tell you. Mary Cassidy, the pretty interesting-looking girl who stood in Mrs Mulvany's shop, had in a great degree been brought up under her eye, and improved by her counsel. She had within the previous six months lost her uncle, or rather her mother's uncle (for poor Mary was an orphan), an amiable-hearted, gentle-minded old man, a friar, who had been educated in France, and who was both polished and tolerant. Mary was only sixteen, and her great-uncle's death had deprived her of bread; indeed, during the last four years of his life his mind had faultered, and to the kindness of his neighbours he was principally indebted for the few comforts he required. Mrs Mulvany had, as she declared, loved the girl "as if she were her own;" but, contrary to the usual Irish practice, she had sent those of her own children whose assistance was not required in the shop, to service long before. They had gone cheerfully, because they had been brought up with that intention; their mother's well-known diligence and industry had secured them good situations in the best families, and it was not in Mrs Mulvany's bustling nature to understand the nature of poor Mary's feelings. Mary had occupied a dangerous position; she was above the lower class, and greatly below the higher; the poor called her "Miss," the shopkeepers "Mary." She had received a little education; enough to begin upon, and enough to make her desire more, but not enough to raise her above the rank of an ordinary English servant. This she hardly believed could be the case, though Mrs Mulvany had told her so. She had no near relation in the world; but the Irish world is not a cold one. All who knew sympathised with her, except Mrs Mulvany, who declared she was in luck to get what was as good as an English place, to go where she'd have fresh meat once a-day, regular meals, a good bed, and a mistress who "would have her work done properly."

Mary Cassidy silently agreed with every word uttered by her active and disinterested friend; she then as silently stole into the parlour behind the shop, and from that into the little garden, where she shed many bitter tears at the prospect of "going into service." Mrs Mulvany supplied her with all she deemed necessary for English servitude; and as she was going as house-maid, under the lady's maid, there was every reason to suppose she would learn well and quickly. She was, however, to spend a few days after she left Ballycushlawn at the house of a country gentleman, a sort of person midway between a farmer and a squire; a very dangerous position for any one to occupy. The gentleman's wife was a distant relative of poor Mary's, and as in Ireland "poverty" does not often "part good company," she was not ashamed of her fourth cousin, though she was foolish enough to lament her going to *service*. Here it was Mary's fate to witness the reverse of all the maxims inculcated by Mrs Mulvany's kind advice. There was no settled time for any one duty; every thing was conducted by the rule of "hurry scurry;" consequently, when night came, at least half the work was laid to the account of the following day, which thus became overburdened. The kitchen was a scene of most desperate confusion; instead of the noggins and jugs being hung in regular lines along the dresser, they were laid down when done with on the floor, "that the cat, the craythur, might finish the sup of milk," or "the chickens pick the last of the stirabout," or "Rover, the baste, lick the end of it." There they remained until they were wanted, when all was perplexity to get them ready. The dust was never disturbed from the corners of their parlour, or from behind the tables and chairs; consequently every breath of air that entered the room, set it whirling over "the greenest spot" that had received *the promise* of a sweeping.

Mary discovered in the morning, while commencing her breakfast, that the milk had never been properly strained before it was set for cream to make butter; consequently the cow hairs stuck round that compound, like a cheveau-de-frise. Mary could not eat.

"Indeed, and it is very troublesome they are," said the lady, picking out the offenders one by one, and laying them on the breakfast cloth, which bore tokens of being "used to it." "It's mighty troublesome they are; and while I think of it, I'll just speak about it to Nelly. Ring the bell, Mary."

Mary tried; the bell was mute.

"Well, call, then, dear; tongues were made before bells; but, any way, if Jerry had strengthened the crank when I told him, with a bit of wire, we needn't be made hoarse with calling, or lame with tramping after those blind and stupid sarvants; now, we must have the bell-hanger, I suppose, *when we can get him*."

"A stitch in time saves nine," thought Mary Cassidy, as Nelly entered.

"Nelly, the hairs prevent our eating the butter," said "the misthress," with the greatest composure.

"Bad luck and bad manners to 'em for that same," replied Nelly, leaning her shoulder against the door post, and running her finger backwards and forwards across the back of the nearest chair, so as to form a meandering figure in the dust.

"Nelly, it's your fault."

"Bedad! I'm as clear from it as if I had just risen from the priest's knee, God bless him! My *faut*, agra! Bedad! misthress, it's the *faut* of the strainer, that's gone into *smithereens* ever since yerself, ma'am, took it to bate paes in."

"Devil take the peas!" chimed in the husband. "Sure milk-vessels should be kept to themselves; I had the taste of split peas off the butter for a month."

"Ay!" said Nelly, making a very long slide with her finger in the dust; "ay, and last market-day, Pether, Sandy Pether, the *gra-boy*, lost the sale of the butther through one of Andy Muckle's jokes—may the devil choke him wid the next, I pray! He said it was cows' hairs he was bringing to market instead of cows' butter."

"Still, Nelly, that is your fault," said her mistress, in a more angry tone.

"See that now! Bedad! ma'am, *I thought ye'd say so!* Sure ye could not expect me to hinder the strainer of wearing, and the paes, and" ——

"Don't dare to talk to me of the peas," exclaimed the good woman, angry that *her* fault should be exposed; "could you not have mended the strainer?"

"It's a-past mendin' now."

"But at first?"

"Oh! at *fust!* Sure it was only a *dawshy* hole at *fust;* and Miss Nancy used to take the world's delight in seeing the *kitling* put her paw through it. The hole did no *harrum at the fust going off, as we used to lift the strainer on one side.*"

"If Mrs Mulvany heard this," thought Mary, "hew she would storm!" and ventured immediately to suggest, that until a new strainer could be purchased, a piece of coarse linen should be sewn round the wood. She would do it with pleasure herself, "as it was a pity to lose the sale of the butter."

"Oh, very well," said Nelly, rather piqued than pleased; "miss might do it to be sure, if the misthress liked. The *butther* had the hairs in it many a day, and the misthress took it aisy enough; and as to the sale of the *butther*, the laugh was agin Pether in the market. But, to be sure, some people, especially those reared by half English, such as Mrs Mulvany, was mighty nice;" and Nelly flounced away, her mistress talking loudly of the "dirt of the servants," quite forgetting that she had set the example, if example was needed, of carelessness, by corrupting the milk-strainer by the impurity of other matter.

Dinner was ordered at four that day, and as poor Mary was wandering about, observing, without knowing it, how different every thing was from the thrift and care manifested in Mrs Mulvany's dwelling, two of the children came running to tell her that "Peenawn the piper was outside the back door, playing 'Rattle her down the Hill,' the hunter's jig, and that Nelly and Molly, and little Jemmy, war dancing a double jig." Mary thought it must be near the hour of dinner; as she passed the clock she looked up; *it was not going* (a sure sign of a mismanaged house); but in the kitchen, the ducks, suspended by a string of twisted worsted before a fire, roaring like a burning mountain, were at a dead stop, while a dog was licking round and round the edge of a huge cracked dish that did duty as a dripping-pan, as the *cook* (!) had not been able to find time "to rid" the baked potatoes out of the proper dripping-pan, though they had been nearly destroyed by the picking of chickens and the licking of animals, to whom the kitchen was free ground; and over this kitchen there was no presiding genius, as the cook had fled at the sound of the pipes to turn her foot in a jig, leaving the dinner to dress itself.

Mary drove away the dog, and turned the ducks, seeing there was no chance of the servants "keeping on doing and consequently being soon done;" but the servants regarded her care with scorn, and held her labour in contempt. "Indeed, they war not going to lose their step of a dance for nothin'; the dinner would be time enough. *Masther nor mistress was never ready to the minute; why should they bother then?*—it wasn't every day they heard the pipes."

If Mary had known enough to understand the full force of the observation, "master nor mistress was never ready at the minute," she would have understood how necessary the practice of punctuality is to enforce its observance. The slovenly habits of this house did Mary Cassidy infinite service, for she had a sufficient quantity of good taste to perceive they were such as to mar every thing like comfort and economy.

Five months elapsed after she went to Mrs Singleton's before she wrote the following letter to Mrs Mulvany:—

"My dear Friend—for so you have ever proved yourself to be to a poor friendless girl—and you will therefore, I am sure, let me call you so—I am doing, thanks to your advice, very well indeed, and, I may say, give great satisfaction; and if it warn't for Mary Dacey, the lady's maid, I should be as happy as if I wasn't at service at all; every thing is regular as the clock, and my mistress so particular. 'You are a good girl,' says she to me one morning; 'Mary Cassidy, you are a very good girl; I have examined all the corners, and find them well dusted.' 'Ma'am,' says I, making a dutiful answer, 'Mrs Mulvany told me to sweep the corners, and the middle would sweep itself,' and that pleased her very much, and she said I was a nice clean girl. But what puts betwixt me and my rest entirely is Mary Dacey. Oh, Mrs Mulvany, if it wasn't for Mary Dacey, there wouldn't be a happier girl betwixt this and the Bay of Dublin than myself. Now, you see, the mistress asked me when I came if I had any *followers*, and I felt my cheeks burn up like a coal of fire, for *you* know I never encouraged but the one, and he went to sea before my poor uncle (the heavens be his bed!) died; but he did not go without *breaking the ring* which hangs about my neck at this minute, though, even if he is alive, maybe it's too proud he'd be to think of a poor servant, though he'd regard a priest's niece. However, I said, and trembling alive with the shame, 'None at this present time, ma'am,' for you told me to speak the truth.

'At this *present* time!' she repeated; 'then you *hope* to have?'

'If it's pleasing to God and yourself, ma'am,' I answered, curtseying; 'for,' I added, 'I broke the ring with one that's beyant seas, and that, *I'm afraid, will never trouble yer honour about me.*'

Now, Mrs Mulvany, was there any thing to laugh at in that? Sure I *was* in fear, and *am* in fear, that I may never see him again! But the mistress laughed outright, and then said, 'Well, I am sure you have told the truth, and if you continue to do so, we shall have no reason to repent Mrs Mulvany's recommendation. But, Mary, the reason I asked was, that, if you *had* a lover, I would find out who and what he was, and, if he was steady and well conducted, never object to your seeing him occasionally *in my house*, though I do not permit young girls to meet young men *out* of my house. It is perfectly natural,' she said, 'that you and every other young woman in due time should wish to be settled; and as I hope to be not only a mistress but a friend to you, and to all who serve me, I wish to know whom *you* know, that I may be able to advise you for the best, and reward you for good conduct. Always tell me the truth, frankly and simply as you have done now, and I will always be your friend.'

I'm sure they talked of my *little token* in the parlour, for Miss Annette looked very slyly out of her blue eyes at me the next morning, and asked me if I wore nothing about my neck but my '*handkercher*;' but was not that very good entirely of the mistress? Now, I never was used to lying; but, look, after those words of hers, Mrs Mulvany, honey, I'd suffer myself to be cut into sparables before I'd tell her a word of lie; and that's what's ruining me with Mary Dacey—the lies I mean. Oh, Mrs Mulvany, the contrariness of Mary goes *beyant* the beyands—it's shocking, so it is. There's an old henwife in it—a little put-together of a woman; and she gave out that all the young pullets were cocks, and the old hens past laying, so there never was any fresh eggs for breakfast. Moreover, she let a goose-plucker into the goosery at night, on condition that she was only to take half the feathers off the poor innocent birds. As it was done on the sly, even I did not know it, and the plucker was going on with the brutal work, until one old gander, who, I daresay, was up to the mischief, went bang through the window, and never set foot on the ground until he flew right under the mistress's window, and then the cackling he made woke the dog, that woke the mistress, and she wakes the master, and rings the servants' bell. Up I bounced, and, to my astonishment, Mary was not in her bed. I ran down to the mistress, and, 'Cassidy,' she says—the quality think a surname grander than a Christian one, I suppose—'Cassidy,' she says, 'there's a light in the goosery; go and see what's the matter, and tell Dacey to come to me.'

Well, I went down, and the gander kept on roaring a thousand murders; and when I got out, there was the plucker and the hen-wife, one on a *bosa*, the other on a *creepie*, plucking for the dear life at an old goose, and half the flock shivering in a corner, and Mary Dacey with a dirty pack of cards in her hand, that had been reading her fortune.*

'Go back,' says the old goose-plucker, 'and say there was a cat or a weazel among the geese.'

'I'll tell no untruth,' I answered; 'and the master saw the light, besides the gander!

'I wish the devil had him—and I'll give him something will make him stiffer in the wings soon,' says the hen-wife.

'Mistress asked for you,' I said, wondering at their craft, and addressing my words to Mary.

'Tell her I'm very bad entirely with the toothache,' she said, 'and that I can't get out of bed.'

'I tell you what,' I replied: 'you, Anty Mullowny, have no right to sell the birds' feathers *unknowst* to the mistress.'

'She won't sell them herself, so I do no harm,' she said.

'They are not yours,' says I.

'Praich to the skylarks, priest's niece,' she answers.

'Mary,' I said to the lady's maid, 'for the love of God, and the sake of your character, run in at once; I can tell no lie for you or any one else; I must say if I am asked, and tell the truth.'

'Oh dear, how mighty righteous we are of a suddent!' exclaimed Mary; 'but do go your own way; make tales and carry tales, and see what you'll get by it. I don't care.'

'Mary, remember what Don't Care came to,' I answered; 'and as to *making* tales, you know I never did that; but certainly I will not see my master and mistress plundered without informing them of it.'

'It does not take a penny out of their pocket,' said the plucker, while the old hen-woman shook her fist in my face, and the lady's maid dropped me a *sneer* of a courtsey.

Well, Mrs Mulvany, I don't know how it would have ended, had they not seen, from the light of a candle he carried, the master himself picking his steps through the sludge of the yard, on account of the drain of the duck-pond being going to be repaired; and the moment Mary Dacey saw the flare of the candle, she turned white as a silver penny.

'I'm done,' she says, 'I'm done for ever, if the master catches me here.' 'We're all done,' says the goose-plucker, shaking a whirl of feathers from her that looked like a snow-storm. 'We're all done!' And as she said the word, old Anty bundled herself into where a goose, poor thing, was sitting on her eggs, and like lightning she puts herself down on the eggs, and takes the goose in her lap, drawing her head down, for she is but a mite of a woman; the goose-plucker stood her ground, but Mary Dacey fell on her knees to me.

'Oh, Mary, *asoumeen*,' she said, 'just stand here that I may creep down behind you, which will get the master to pass me over—do—now do. *For the sake of your uncle's soul*, don't tell on a *poor motherless girl* like yerself; I'll burn the cards, and never do wrong again.' Well, Mrs Mulvany, I did let her do as she desired; and maybe when the master came in, was'nt he in a towering passion entirely; for being a gentleman mighty used to his own way, he didn't like being disturbed; and then every minute he opened his mouth to spake, the *flaff* of the down got into his throat, and then he was dancing mad entirely; and the goose herself, poor thing, got uneasy about her eggs, as good raison she had; and after turning the plucker out, and she on her knees to his honour, 'Mary,' he says to me, 'that goose is distressed at something; I hope they haven't poisoned as well as pluck't them;' and while he walked over to the far corner with the light to see what ailed the bird, Mary Dacey slipt out, and my heart grew lighter then, for I thought she'd mend for good.

And indeed I could not help laughing, for the master, angry as he was, did the same thing as he pulled Anty off the eggs; and when the poor goose found them broke, she got into her tantrums, and raised a regular rebellion among the other geese, so that old Jerry the gander, *who had sold the pass*† on the goose-plucker, came tottering home; and the upshot of it all was, that, in spite of a thousand lies, and as many curses, old Anty was sent off the next morning, and two more, who certainly deserved it, with her; but they did not tell upon Mary Dacey, which at the time I thought very good of them entirely. But now this is my trouble.

I believe Mary's heart softened, but not only must the heart *soften* with sorrow, but *harden* against future sin; if it does not, the sorrow does no good. Well, Mary promised me if I did not *let on*, that she'd change, and give up the card-playing, which, as you told me, brings not only temptation with it, but a hard and heavy curse wherever it is encouraged; and she seemed mighty *study* and good entirely, until one morning I thought I saw the old goose-plucker in the far shrubbery, waiting under a tree. Now, my poor uncle used to say it was through such as her that servants so often got into trouble; for they maraud through the country, sometimes pulling feathers, sometimes with a basket of hardware, or a pack of soft goods, tempting the foolish girls with finery unfit for them, and taking payment in meal or corn, or apples, or any thing the girls are tempted to take unknowst from their employer, or their parents: this is worst of all, and she was so surely on the watch, that I watched her, and by'n by I saw Mary Dacey go to her and give her something *blue*, but what I can't say. Well, I met Mary at the turn, and she running home for the dear life. She grew red and pale when she saw me. 'Where have you been?' I says. 'Down the grove for a mouthful of fresh air,' she says. 'The air is fine and fresh here, Mary,' I says; 'glory be to God for it!' 'Maybe I had a bachelor to meet down there,' she says, laughing it off.

'May be, Mary,' said I, 'you went to meet the goose-plucker.'

Well, what staggered me, was, she swore such an oath she never set eyes on her since that night; and when I reproached her with her wickedness, and said I *knew* she was there, she turned on me with the greatest abuse, called me a spy, and said I might be an informer if I liked; that, if she did not see the goose-plucker whenever she sent for her, she would tell the mistress, by a synonymous letter, all I had to do with them before.

Oh! Mrs Mulvany, what am I to do?—the woman is often about the house, and neither master nor mistress knows it. Mary meets her, I know she does, constantly, and master said the first person who encouraged her about the house, should lose their place; and what he says, *he'll* do. I know she's after no good, and I tell the cook so, and she says the same; but she says also, it's not your business, nor mine; and if ye tell on Mary, she's an *orphin*, and can have no character if she's turned away for comrading with that old fortune-telling woman, that's the curse of the neighbourhood." [The letter continued to repeat her anxiety as to what she ought to do, and her fears as to whether or not Mary took any thing of value, and her dread of making enemies, and all the various fears and feelings which a well-meaning mind, that nevertheless wants strength, is likely to urge, both to itself and others, as an excuse for not doing at once what it is a duty to do.]

When Mrs Mulvany read the letter, she first of all called to her youngest daughter to be ready to take charge of the shop, as she was going from home for maybe a couple of days. She then asked her husband if she might have "the sorrel swinger," as demurely as if she wished him to believe that he really had some command over his stable. And then she ordered "Jem" to saddle the horse, and put on the big pillion and his best "top coat," as she wanted him to look decent. After she had made these arrangements to her perfect satisfaction, she commenced dressing herself in her best, and commented aloud on the contents of the letter, as she did so. "That's the way the world gets worse instead of better, and good, honest, industrious servants suspected, because of the bad ones that have gone before them. It's all through the want of a proper feeling of the great principle of truth; that's what it is; confounding the character of an *informer*, who tells lies, and if he does tell truth, does it for a reward, with that of the *truth-teller*, who cherishes truth for the love of God, and whose duty it is to prevent evil. 'What is she to do?' Why, if Mary Dacey won't take her warnings, it is *her* duty, as a servant and a Christian, to tell her mistress. My poor child! she'll get into trouble, that she will! But *I don't* care a rush for the whole set of them! I'll just give my own Mary's letter into her mistress's hand, plain and above board. 'Anonymus letter!' he who writes an anonymus letter is a knave, he who *believes* it a fool. Oh! that servants should be so base as to see their employer robbed; and say, 'It is not their business,' as if it is not every body's business to prevent robbery, as if we should not speak truth! Oh! if plain-speaking was minded, how seldom we should meet rogues, for they would know that every honest eye was as a watch-tower over the inroads of roguery. To think now that she'd be led by the cook! But that's the way; if one servant does not exactly corrupt another, she saps the foundation of good principles. Mary Dacey, an orphin, indeed! Good reason she should be more careful, after all the warnings, too; and why should she *have* a character, if she does not deserve it? The idea of letting fraud be practised, because if it was known the person who cheats and robs will not have a character! the person, too, who gives bread, who spends money in his own country instead of going abroad. That little minx, my own Mary, she *ought* to have known better; but she *is* young, poor child! However, I'll set it all to rights; I don't care for any of them."

And having so decreed, she strapped on her riding skirt, put on a warm shawl, surmounted her handsome lace-cap by a black beaver hat, which boasted the ornament of a steel buckle; and after her husband had lifted her on the pillion, and the "sorrel swinger" was fairly off at his usual hard, high trot, Mr Mulvany was heard to declare that his wife "grew *handsomer* and *handsomer* every day of her life."

She had not proceeded far, when she saw strolling towards her the goose-plucker, who was well known to every one in the country.

"Got any thing good and cheap?" she inquired, as the old rogue looked up at her with an expression of cunning and fear, for rogues had an instinctive dread of Mrs Mulvany.

"Oh! ma'am, there's no good in telling you; for you wont let a poor body come within a mile of ye, much less show ye any thing."

"Well, I'm taking a turn, perhaps," said the shopkeeper; "so hand up yer baskct, till I have a look." There were threads and tapes, and ribbons and laces, and little looking-glasses that libelled the human face divine, and the usual assemblage of odds and ends; but Mrs Mulvany knew, from the weight of the basket, that it contained more than it appeared to do.

"How long is it," inquired Mrs Mulvany, "since you were at Castle Hazard?—how long since ye saw my little pet, Mary Cassidy?"

A change, too perceptible not to be at once noted by the quick-witted Mrs Mulvany, passed over the goose-plucker's face; and in a tone of mingled anxiety and anger she exclaimed, "*Yarra wisha!* ma'am, give me my basket; sure it's well enough I know ye didn't want to buy any thing."

"*Here's* a remnant rolled up of *blue* satin," persisted

* The custom of plucking geese is carried to a shameful extent in Ireland; men, and we shame to add, women, go about with huge bags to stuff the feathers in, and pay generally twopence or threepence each to the farmers and cotters' wives for permission to strip the poor bird as close as they please.

her tormentor; "what will you take for that?—or where in the world did ye find such satin?"

"What's that to you?" she replied tartly; "give me back my goods, and don't be stopping a poor traveller on her way."

"I'm not stopping you," replied Mrs Mulvany, who remembered that Mary had said in her letter she thought what the lady's maid had given the goose-plucker was *blue*. This determined her on a singular course of proceeding.

"What's yer basket worth?"

"Myself can't tell."

"Did you give ten shillings for what's in it?"

"Where would a poor craythur like me get ten shillings?"

"There's ten-and-sixpence for it, then," said Mrs Mulvany, quickly, throwing her half a guinea. "There's ten-and-sixpence for it. Will that do? Go on, Jerry; ye heard her say it wasn't worth ten shillings."

The goose-plucker stood with staring eyes, looking after the rapidly trotting horse of Mrs Mulvany, while Jerry, delighted at his mother's frolic, turned round grinning most gloriously, and waving his *Clan Alpin* in adieu to the outwitted rogue. But suddenly gathering up her energies, the goose-plucker set off screaming after the horse and its riders, while Mrs Mulvany, having discovered that the basket had a false bottom, sat coolly examining its contents.

When she arrived at Castle Hazard, Mrs Mulvany had good reason to rejoice at her promptness. She found that Mary Dacey had got up a well-arranged plan to destroy Mary Cassidy's character. Several things had been missed by the lady of the house, and the charge of robbery laid both directly and indirectly upon the priest's niece. Mary Cassidy was in tears; but protesting innocence is not proving it.

Mary Dacey was wicked enough to say she'd take her oath that she *saw* the blue satin, which was one of the things her mistress missed, in Mary Cassidy's possession. It so happened that Mrs Mulvany arrived at the very moment the examination was going on in the parlour, and she said at once, "Mary, let your boxes be searched." This was done, while the poor girl protested her innocence, and saw, when it was too late, that *truth cannot be compromised with safety to our own honour.*

"Oh, Mary Dacey!" she exclaimed, "how could you treat me so, when you knew right well what I saved you from?"

This led to the inquiry, what she had saved her from? and then came a daring appeal from the young sinner. She turned to her master and asked him if it could have been possible that she was in the goose-house the night he entered without his seeing her?

This boldness in lying almost paralysed Mary Cassidy, and her master was compelled to confess he did not think it could.

"How often," continued the artful girl, "have I found money, madam, that you lost, and brought it you!—this was not the act of a rogue, was it?"

Her mistress was obliged to admit the fact, and the feelings of their fellow servants not in the plot wavered from the priest's niece to the lady's maid.

Mrs Mulvany kept her purchase all this time concealed beneath the shadow of her riding-skirt; then suddenly producing it, she said, "Mary Dacey, do you know this basket?"

"It's mighty like—a—a—basket," she stammered.

"Whose basket?" inquired Mrs Mulvany, fixing her sharp keen eyes on her.

"Why, I don't know; sure I can't tell; how should I know?"

"Do you know this blue satin—this lace—this fine scent-box?" And she continued drawing forth a curious assemblage of things, peculations not only from Castle Hazard, but other houses. How frightful is vice at any age, but in the young it is awful.

"Well!" exclaimed the hardened girl, "now I *do* look at the basket, it is mighty like Nanny the goose-plucker's; the creature has been about the house, and ov coorse Mary turned the ready penny with her!"

Just as she had so said, Mrs Mulvany observed the goose-plucker advancing down the avenue at a much more rapid pace than she could have conceived possible, her blue cloak flying behind, and her progress marked by the escape of sundry feathers that floated away upon the breeze.

She observed that Mary Dacey changed colour, but Mary Cassidy wept as before.

"I have one favour to ask, madam," said Mary's friend, advancing to the lady who had been so wrought upon by this bad girl.

"Will you permit ME, and *me* only, to have a word with that woman before she enters here?" and Mrs Mulvany pointed to the advancing enemy.

This request was granted. Mary Dacey at first entreated and expostulated, saying Mrs Mulvany and the goose-plucker would sell her *betwixt* them, but in vain. And when the woman entered the room with Mrs Mulvany, the girl saw that the truth would be known, for the goose-plucker imagined it was known already. Still the love of lying, aided by the natural quickness of a clever but corrupt nature, swayed them both. The goose-plucker's evidence was most cautiously given; and it was marvellous how she acted upon the hint of Mary Dacey's eye.

"Why, not two minutes ago," said Mrs Mulvany, "you admitted that Mary Dacey gave you those things to purchase your silence, as you and the hen-wife determined to tell all you knew, and get her out of her place if she did not give you all she could."

"Ah!" said the old wretch, assuming the most simple expression of countenance, "you bothered me, so you did, betwixt the two Marys—it was Mary Cassidy I meant."

Mrs Mulvany looked—but no matter how she looked; the goose-plucker had confessed all to her, yet now seemed determined to turn that all to the ruin of an innocent girl.

"Here's a letter of Mary Dacey's, directed to Ben Tomlines, and that's her sweetheart, I know," exclaimed one of the children, who had been rummaging over the pedlar's basket with childish delight.

Then, indeed, the lady's maid saw her plot was discovered—then she knew all was over, for the letter, which the goose-plucker had engaged to convey to her lover (one of the worst fellows in Clonmel, and that is saying a great deal), exulted in very strange orthography over the success of her scheme to turn the priest's niece out of her place; it evinced how impossible it is for bad people to appropriate proper motives to the most virtuous actions, for it contained these remarkable words—"*She has not done me any harm yet, but I'm sure she will, for she has the power.*" The ingratitude of this wicked girl speaks for itself; but I hope it is unnecessary to make any observation on Mary Cassidy's culpable weakness, which brought all this trouble upon her. When she saw that her fellow servant persisted in a course which was decidedly at variance with her employers' interests—a *course* which she had *moral proof* was dishonest—she should have said so. She should have told her mistress; and any servant who does not, *becomes the accomplice of thieves.*

Mrs Mulvany remained all that evening at Castle Hazard, and Mary, after seeing the folly of her ways, was reinstated in her mistress's favour, while those who deserved it, lost both place and character.

"I have heard," said the poor girl, before bidding her friend good night, "I have heard—from—*you know who.* In the midst of my trouble the letter came; he knows all; and what do you think he says? That he's got promoted, and is in the rank of a gentleman. A gentleman at sea!—and when I came to that, my heart sank. But a little farther on—here—you can read it yourself. He says that he will be home, and we shall be m—a—. There, dear Mrs Mulvany, *you* can read the word, and he does not think the worse of me FOR GOING TO SERVICE."

ECHOES.

THE manner in which echoes are produced, common as the phenomenon is, has not been very perfectly explained by writers on the subject of sound. Sound, it is now understood, is propagated by vibrations of the air, which, originating in a centre-point, pass spherically outwards, in all directions, like the waves produced by the dropping of a stone into a pool. On meeting any obstacle, these vibrating waves of elastic air must first sustain a certain degree of condensation, and then rebound in a direction contrary to that of their former movement, carrying back the sound. This repercussion constitutes what is called an echo. Of course, the reverberated sound is intrinsically the same as it was before; the difference lies only in the degrees of force and clearness.

This explanation is simple, and may seem, at first view, satisfactory. But it must be admitted that there are difficulties attending the subject, which are not explicable by a reference to any such simple fundamental theory. We find, by experiment, that sound is reflected in nearly the same manner as light; yet light requires a polished surface for reflection, whereas, in the case of many natural echoes, the repercussions of sound appear to be produced by the most uneven surfaces, by shapeless rocks, and even by clouds. In truth, all that we really understand of the matter is, that the columns of vibrating or sonorous air, by which any sound is propagated, meet a peculiarly shaped obstacle, and rebound, so forming an echo to any ear which is within the range of the repercussion. There will be no echo, however, if the original sound is still affecting the organ of hearing. The ear does not distinguish the succession of two sounds unless there be between them an interval of the twelfth of a second, and as sound travels about ninety-five feet in the course of a second, the obstacle or object which causes the repetition of a vocal sound must be half that distance away, or about forty-eight feet from the utterer, in order to permit the echo to be distinguishable by him.

A simple echo is that in which one repetition is heard; a compound echo, where two or more are audible. In the case of a single echo, there appears to be but one obstacle to the passage of sound; in that of compound echoes, there are either various obstacles, so placed that the separate reflections of sound caused by them strike the ear at different times, or the locality is such that the sound, once reflected, meets new obstacles, and is re-echoed for a greater or lesser number of times.

Compound echoes are those of course which have chiefly interested philosophers, simple echoes being comparatively common. One of the most remarkable echoes noticed any where, is that which Mr Addison mentions as existing at the villa of Simonetta, near Milan. A man's voice, speaking in full tones, is here repeated about forty times, and the report of a pistol about sixty times; but they follow each other so rapidly that it is scarcely possible to number them. According to travellers, this phenomenon is occasioned by the reflecting of the sound between the two parallel wings of the Simonetta mansion, which wings consist of dead walls, standing at right angles to the main edifice. This seems to be a case, therefore, where the echo of the original sound is *re*-echoed, again and again. At Woodstock, in Oxfordshire, there is another remarkable compound echo, which repeats a single sound not less than fifty times. In addition to this power, the Woodstock echo repeats, by day, seventeen syllables in succession, and by night twenty. This repetition of several syllables or words depends on the distance of the *obstacle* from the speaker. Before the repetition of the first word can reach the ear, the speaker has time to utter a number in succession, which, in like manner, do not reach the obstacle early enough to confuse the echo of the first.

At Roseneath, in Argyleshire, there is an echo, which, like the preceding, is compound in a double sense. If a person, placed at the proper distance, plays eight or ten notes of an air on a trumpet, the echo faithfully repeats them, but a *third* (that is, two notes) lower; after a short silence, another repetition is heard, in a tone still lower; and a third time, after another interval, the silence is broken by a third repetition, in a tone the lowest of all.

It has been mentioned as somewhat difficult to comprehend, how nature, without the aid of smooth reflecting surfaces, and indeed by the agency often of surfaces extremely rough and broken, can so perfectly concentrate and throw back sounds as we find done in the case of most natural echoes. The fact that sound obeys laws of reflection similar to those of light, rather increases than diminishes the difficulty. This fact will be apparent from a description of what is called the "magic mirror." This mirror is constructed as follows. A concave mirror is fixed in a vertical position, opposite to a partition-wall in which there is an aperture of the same size as the mirror, and facing it exactly. A small thin curtain may conceal this aperture, and also the mirror, without impeding the passage of the sound. On the other side of the wall, at a very short distance from it, a second mirror is placed, exactly facing the hole in the wall and the first mirror. If a small figure be fixed with its ear or head in the focus of one mirror, any person who places his ear in the focus of the second, will hear distinctly the slightest whisper which may be uttered in the ear of the figure alluded to. In other words, although the mirrors are in different rooms, the slightest sound uttered in the focus of one mirror is reflected from it, and conveyed in straight lines, through the aperture in the wall, to the other mirror, in the focus of which it is condensed so as to be audible there, and there alone. With the aid of thin curtains, and all proper apparatus, jugglers have made this magic mirror a source of mighty wonderment. It is upon the same principle that the famous echoing or whispering galleries of Florence and other places are constructed, or rather that they act, since such qualities were not intentionally given to them by the architects. In these galleries, the least whisper emitted at a certain point at one end is heard at a certain point at the other, or, in other words, in the focus of the echo. The following curious instance is mentioned in Herschel's Treatise on Sound:—"In the cathedral of Girgenti, in Sicily, the slightest whisper is borne with perfect distinctness from the great western door to the cornice behind the high altar, a distance of two hundred and fifty feet. By a most unlucky coincidence, the precise focus of divergence at the former station was chosen for the place of the confessional. Secrets never intended for the public ear thus became known, to the dismay of the confessors and the scandal of the people, by the resort of the curious to the opposite point (which seems to have been discovered accidentally), till at length one listener, having had his curiosity somewhat overgratified by hearing a confession of a disagreeable nature from his wife, this tell-tale peculiarity became generally known, and the confessional was removed."

A very peculiar echo has been noticed at a spot called Genesay, near Rouen. At this place the person who speaks or sings hears only his own voice, and not the echo; a person, listening near by, hears only the echo, and not the voice; to others, standing still farther apart, there appears to be a mixture of voices or sounds, to an amazing extent; and, finally, while one person hears it on the right, to another the echo or voice seems to be on the left, and so on. The report varies constantly with each party's position. This oblique echo is formed by a semicircular range of buildings, and in the Memoirs of the Academy of Sciences an attempt is made to explain the whole phenomena by a reference to the form and arrangements of the edifice. But the marvel is, why such echoes are not common, seeing that in the case of ordinary echoes we cannot generally discern any cause for the concentration of the echo into a single report. When a hill, or a building, or trees, form the resonant obstacles, as they do in most cases, we commonly observe about them so many angles and inequalities, that we might naturally expect them to yield, one and all, echoes similar to that of Genesay. A *convex* portion of the locality ought to yield a much weaker and more diffused sound than a *concave* object; and there can be no doubt that such causes will always produce such results, could we distinctly trace the connection on a large scale.

The subject of echoes is of great importance, when we consider it in relation to the diffusion of sound in churches and other public buildings. Where the echo and the original sound are heard in succession, as is the case in many large buildings, the effect is extremely disagreeable, and prevents the speaker from being heard. The desirable plan is, not to destroy the echo, but so to concentrate it, that it may chime in with and strengthen the speaker's voice. Dr Boswell Reid effected this in the temporary edifices for the two Houses of Parliament, by placing peculiarly shaped reflecting boards around the building, in order to concentrate the sound, and by flooring the house with a matted substance, which could not reflect or diffuse the sound anew.

But it is to natural echoes that we wish to confine ourselves at present, and we shall, in conclusion, give some remarks of Herschel upon the echoes of Menai. "Beneath the Suspension Bridge across the Menai Strait in Wales, close to one of the main piers, is a remarkably fine echo. The sound of a blow on the pier with a hammer is returned in succession from each of the cross beams which support the roadway, and from the opposite pier at a distance of 576 feet: and in addition to this, the sound is many times repeated between the water and the roadway. The effect is a series of sounds which may be thus described:—The first return is sharp and strong from the roadway overhead; the rattling which succeeds dies away rapidly, but the single repercussion from the opposite pier is very strong, and is succeeded by a faint palpitation, repeating the sound at the rate of twenty-eight times in five seconds, and which therefore corresponds to a distance of 184 feet, or very nearly the double interval from the roadway to the water. Thus, it appears that in the repercussion between the water and roadway, that from the latter only affects the ear, the line drawn from the auditor to the water being too oblique for the sound to diverge sufficiently in that direction. Another peculiarity deserves especial notice: the echo from the opposite pier is best heard when the auditor stands precisely opposite to the middle of the breadth of the pier, and strikes just on that point. As it deviates to one or the other side, the return is proportionably fainter, and is scarcely heard by him when his station is a little beyond the extreme edge of the pier, though another person, stationed (on the same side of the water) at an equal distance from the central point, so as to have the pier between them, hears it well." In this case, possibly from the superior skill and accuracy of the observer, we find an intelligible connection pointed out between cause and effect. It is only from a similarly close examination of natural echoes, in general, that architects will arrive at just principles for their guidance in the erection of buildings intended for public speaking.

GERAMB'S TRAVELS IN PALESTINE.*

TWENTY-FIVE years ago, there appeared in London a whiskered German baron, driving a chariot of inexplicable construction, dressed in a costume that combined the oddities of every nation under heaven, and proclaiming himself a victim of Napoleon's tyranny. Such an arrival at a time when the long war had made a foreigner a rare sight in England, produced a sensation of which the present generation can form no conception. Baron Geramb became the great lion of the day; his portrait appeared in every print-shop; his movements were recorded in every paper; no party was complete without his presence; even Carlton House courted him as a guest; and he never appeared in public without a crowd at his heels. He reigned supreme in the fashionable world some six or seven weeks longer than ever lion reigned before, but at length suddenly disappeared. After the lapse of nearly as much time as nature assigns to a generation of man, the baron suddenly comes again before the world as if he had risen from the dead, no longer a man of fashion, but a monk of La Trappe, in which capacity he informs us he has traversed Palestine as a humble pilgrim. The book before us is the result of his journey.

It must be owned at the outset that the guise under which the baron traversed Palestine, afforded him opportunities of becoming acquainted with some portions of the population which escape the notice of the generality of travellers. An Englishman or a Frenchman armed with a *firman* is transmitted from one Mahommedan authority to another, and all that he sees of the Christian population is in hasty visits to monasteries, and a few of the most celebrated churches. The humble monk visits the cottages of the Catholic Arabs, whose very existence is almost unknown to other tourists; and though our author gives fewer particulars of this interesting race than we could desire, still inquiries in other quarters have convinced us that his facts are authentic. The severe tasks which the Arabs generally impose upon their women have been fully described by Burckhardt and Niebuhr; the baron informs us that Christianity has not led to any amelioration of the female condition in Palestine, and his description of the toils that they are compelled to endure at Bethlehem possesses much melancholy interest.

"As the reservoirs and the canals which supply Bethlehem as well as Jerusalem with water, are in ruins, and dry eleven months in the year, the women are obliged to go a league to fetch what they want for household use, and to bring it back themselves in skins. Add to this the toil of climbing steep hills under their burden, and then say, my dear friend, if it be possible to suppress a painful feeling, especially when you consider that this task is to be performed three or four times a-week.

A few days since I was taking a walk outside the town with the *curé*. About three quarters of a mile from it, we met with a young girl returning with her provision. She had set down her skin upon a fragment of rock, and was standing beside it, out of breath, and wiping the perspiration from her face. Curious to know the weight of the skin, I begged her to put it on my shoulders; my request astonished her not a little; she nevertheless complied very cheerfully.

It was as much as I could do to take a few steps under the burden. 'Poor thing!' said I, as I threw it down, looking at the *curé*, 'how old is she? Not more than sixteen, I daresay.' 'Sixteen!' said he; 'she is not thirteen;' and, addressing her in Arabic, he asked, 'How old are you, my girl?' 'Twelve, sir.' I took from my pocket some pieces of money, which I handed to her, and which she accepted with a lively demonstration of joy. But to go so far for water is not the only task of the poor Bethlehemites. The town is destitute of wood, nor is any to be found nearer than some leagues. It is the women who are obliged to provide this also. But what wrings one's heart, and I must confess makes my blood boil, is to see these wretched worn-down emaciated creatures, having misery stamped on their faces, sinking beneath their loads, passing in sight of their husbands, listlessly seated in the public square, smoking and chatting by way of pastime, while not a thought ever enters the head of any of these heartless husbands to relieve his partner of her burden, and to carry for her at least from that spot to his home what she has had to bring whole leagues.

Is this all? No, my friend. At night, with this wood which has cost such toil, she is obliged to heat the water brought from such a distance, she has to wash the feet of that man, then to cook his supper, then to wait upon him standing—upon him and his eldest son—without taking the least share in the meal, and to wait till they have done before she can step aside to eat by herself what they have left. . . . . The pen drops from my fingers. Is it possible that a sex so worthy of all the cares, of all the attentions, of all the affections of man, can be thus treated by man? Is it possible that she can be thus treated, who carries him in her bosom, who brings him forth with pain, who suckles him with her milk, who warms him on her heart, who rocks him upon her knees, who guides his first steps, who strives by education to transfuse into him all that is gentle and kind, who delights to throw a charm over his life, who shares his sorrows, who best knows how to soothe his woes, to comfort him, to nurse him in illness and infirmity, to lighten and sometimes to embellish his old age, and to perform for him, until his last moment, services of which any other courage, any other devotedness, any other love, would be incapable? And that at Bethlehem!"

A deeper interest belongs to the condition of the Jews in Jerusalem; outcasts and aliens in the city of their fathers, with the symbol of foreign dominion and worship displayed over the spot where once their national temple stood—"the abomination of desolation in the holy place"—ever before their eyes; spurned alike by Mussulmans and Christians; slaves, nay, the bondsmen of a slave, it is no wonder that moral degradation has followed in the train of political suffering, and that intellect has been crushed beneath the hoofs which trampled down the heart. It is highly creditable to the baron, bigot though he be, that his sympathies were awakened for this proscribed race; indeed he speaks of them in more favourable terms than any preceding travellers, and we gladly do them the justice of quoting his testimony.

"The Jews of this country have been represented by some writers in a light that seems to me absolutely false. It is true that here, as every where else, they retain that characteristic type which distinguishes them from all the people in the world; that seal, that stamp, which neither time nor climate effaces; it is true that at Jerusalem the Jew is still a Jew, and there, too, interest is his idol; he has expatriated himself to come and die there. In order that after his death he may be laid beneath a few stones in the valley of Jehoshaphat, he has left the country in which he was born, his home, his relatives, his friends; with his eyes fixed on the spot where stood the temple, he deplores its ruin, and sheds floods of tears over the destruction of the holy city, and the dispersion of his nation: and with a heart wrung, with eyes yet dim with tears, he is ready to lend, at an exorbitant interest, to him who unfortunately is obliged to have recourse to his purse. But, on the other hand, it must be confessed that the Jews of Jerusalem are in general well educated, and not deficient in attainments; they understand several languages; almost all of them speak Spanish and Italian. The school in their synagogue, though inferior to that which they have at Tiberias, which is the most celebrated of all, is directed by masters who devote themselves with zeal to the instruction of the youth committed to their care. They treat their pupils with the more severity, because they conceive that in so doing they are conforming with the precepts of the Bible. When I visited the boys' school, I was struck to see a little urchin, seven or eight years old, tied with a cord, and receiving the bastinado on the soles of his feet. The poor fellow groaned deeply, but without crying as children generally do. I immediately solicited his pardon through my dragoman. It was willingly granted by the master. Notwithstanding the severity of the discipline, and the incessant studies to which they are kept, all these boys have a cheerful look. The parents, and even the children, have a certain politeness in their manners, which form a singular contrast with those of the inhabitants belonging to other nations.

I have never seen a Jew asking charity; I have never seen one covered with the rags of wretchedness, which are but too frequently met with among the Arabs and the Christians; and this is owing less to the relief which the poor receive from the rich, or from that which foreign synagogues transmit to their indigent brethren, than to activity and industry. The Jew is a stranger to that slothful fondness for rest so common among the people of the Levant, whose useless and indolent life is the principal cause of their indigence. The Jew employs himself; he spreads out sometimes upon a tottering stone, wares of such small value, that you are utterly astonished that he can hope to derive any profit from them; but should he sell no more than will enable him to procure a morsel of bread, that appears to him preferable to the shame he would feel in holding out his hand. There are Jews of all trades, of all professions; my tinman is a Jew. As I have occasion for a good many tin boxes and cases to hold valuable objects, I see him frequently; and his assiduity, his indefatigable activity, always fills me with surprise. A quality peculiar here to this class of persons, is a civility which forms a singular contrast with the rude, uncouth behaviour of the other inhabitants. Have you lost your way? Are you seeking a street? A Jew, be sure, will offer to conduct you; he will even accompany you for a considerable distance; and, too proud to ask for pay, too fond of gain to make an absolute sacrifice of it, when you have reached the place to which you are going he will look at your hand, he will cast an eye at your pocket: if you choose to take the hint, well and good."

The name of Djezzar Pacha has been made familiar to English ears by his desperate defence of Acre against Napoleon, which rolled back the tide of war from Syria to Egypt, and prevented the establishment of a French empire in the Levant. Even among oriental despots, Djezzar, or "the butcher," as his name signifies, holds the pre-eminence for remorseless cruelty; ears, eyes, and noses, were rare appendages among his courtiers; and had he preserved the heads of his victims, he might easily have raised a loftier pile than the ghastly monument erected by Nadir Shah. Yet Djezzar is regretted at Acre; he was inflexibly just when nothing interfered with his caprice; and there mingled in his judgments a bitter humour and sarcastic spirit of jesting, which were highly gratifying to oriental imaginations. The following specimen of his deciding disputed possession by a parable, affords a favourable view of his character:—

"A young Christian, carrying on business at St Jean d'Acre, had won the good graces of Djezzar by the dealings which he had had with him, when selling him various European commodities. He lived in a handsome house with his father, an aged and infirm man. The latter occupied the best and most convenient apartment on the second floor.

The young man, who was about to marry, requested his father to give up his room to him for a few weeks only, protesting that he would then restore it with many thanks. The old man complied; and going down to the first floor, though it was disagreeable and unwholesome, he settled himself in it. At the expiration of the time specified, he claimed his room; the young couple begged him to wait; he consented, and allowed a further term. At the end of it he again urged his claim. But this time the ungrateful son, unmindful of what he owed to his parent, insolently declared that he intended to stay where he was, and desired that he might not be troubled any more on the subject. The unfortunate father bore the injury in silence; but as his compliance with the wishes of his son, and the restrictions which he had attached, were known, the unworthy conduct of the young man soon became public.

Djezzar, by means of his numerous spies, knew all that passed. Being informed of this circumstance, he sent for the son. The young man relying on a good-will, of which he had previously received habitual testimonies, hastened to the pacha, without hesitation and without fear. He found him in the divan, surrounded by his ministers and his executioners, and very soon perceived that he had incurred his displeasure.

'Of what religion art thou?' cried Djezzar, darting at him a look that made him turn pale with fear, and deprived him of the power of reply. 'I ask,' he resumed, raising his voice, 'of what religion thou art?'

'I—I am a Christian, as your excellency knows.

'A Christian! thou liest! Let us see! Make the sign of the Christians!'

The young man, trembling, made the sign of the cross.

'That is not it,' said the pacha, clapping his hand upon his dagger. 'Pronounce aloud,' continued he; 'pronounce aloud the words which accompany that sign!'

'In the name of the Father, and of the Son, and of the Holy Ghost,' replied the terrified Christian.

'Repeat them,' said the pacha, 'and speak louder. I am old, and growing deaf.'

The young man lifted his right hand to his forehead, and repeated in as loud a voice as he could, 'In the name of the Father, and of the Son, and of the Holy Ghost.'

'Aha!' cried Djezzar, in a voice that made the divan shake, and thrilled the young man with horror. 'Aha! wretch! the Father is on the forehead, the Son on the breast! . . . . Knowest thou what that means?—the Father is above, and the Son below. Go, scoundrel! go home; and if in a quarter of an hour it is not so there, thy head shall roll in the dust.'

I need not say what haste the culprit made to throw himself at the feet of his father, to beg his pardon, and to give up the room which he had dared to withhold from him so unjustly."

We shall not follow the baron in his pilgrimage to the various localities which tradition has consecrated as the scenes of the events in Gospel history. His credulity on these subjects, whether real or affected, is so outrageously extravagant, that it is painfully ridiculous. His account of Egypt, though superficial and sketchy, contains some vivid descriptions, which bear internal proofs of their fidelity. His picture of the present state of Alexandria is equally accurate and amusing.

"In its present state it exhibits the most extraordinary, nay, even the most hideous contrasts: it is a confused assemblage of palaces and cabins, a mixture of luxury and poverty, of indolence and activity, of Turkish habits and European manners, which astonish the foreigner. Here you are amidst bustle, the din of business or of pleasure, there all is the silence and solitude of the desert. A man superbly dressed, covered with shawls of great value, walks by the side of a naked wretch; an English chariot, drawn by four magnificent horses, with footmen in laced liveries, is crossing a pile of camels

driven by squalid Arabs; European ladies, perfumed, in the most elegant costume, are tripping along by those hideous figures, barefooted, without any other garment than a chemise of blue cloth, that is falling to rags, without any other veil than a piece of dirty linen with which they keep nose and mouth constantly covered, and which leaves nothing exposed but two dull eyes that tell of distress and want; Europeans seated at a sumptuous banquet, singing about liberty, while at the moment men are driven along under their windows with sticks, and boys of twelve years old are dragged with chains about their necks, to be made soldiers and sailors against their will; intelligent workmen, under the direction of a skilful architect, erecting monuments which attest and do honour to the progress of the arts; while others are rummaging in the ground, breaking up capitals and shafts of columns, and statues, which time has spared.

One thing which appears to me worthy of remark, because I have not met with it elsewhere, is, that at the corner of every street you find asses well caparisoned, which boys eagerly offer to those who wish to inspect the city, or to go from one quarter to another, and whom they follow on the run without even flagging. There are few streets frequented for the sake of trade in which you do not meet with these animals going and coming almost incessantly; they are the hackney coaches and the cabriolets of the country."

We close these volumes with some feelings of pain and disappointment. Human nature delights in extremes; the change of the dandy into the ascetic, and of the baron into the monk, is not after all very surprising. But how a man possessing such talents as the baron manifestly does, should hope to gain sympathy, by displaying a spirit of sour fanaticism and acrimonious bigotry, is truly astonishing.

LAW PROCEEDINGS AGAINST ANIMALS.

It appears to have been by no means unusual in France, in the fifteenth and sixteenth centuries, to institute legal proceedings against animals, allowing them an advocate to defend them, and treating them in every respect as *fairly* as if they had been human beings. How far it was done in a serious spirit, and how far in the spirit of drollery, it would now be difficult to say; but certain it is that such proceedings occasionally took place, and were conducted with all the external gravity desirable in similar cases where human beings are concerned. The following is a notable instance.

From about the year 1522 to 1530, the rats in the bishopric of Autun had multiplied to a vast extent, insomuch that, from their ravages, serious apprehensions of famine were at length entertained. All human remedies having been tried without any important effect, a resolution was at length formed to petition the ecclesiastical judge of the district to excommunicate them. It was conceived, however, that this remedy was the more likely to be efficacious if all the usual forms of law were observed. A proctor therefore lodged a formal complaint against the rats. The judge ordered that they should be summoned to appear before him. The period having expired without their having presented themselves, the proctor obtained a first judgment by default against them, and demanded that the final judgment should be proceeded to. The judge, however, deeming it but fair that the accused should be defended, officially named M. Barthelemi Chassanée, a young advocate, to be their defender.

Chassanée, being like most young barristers anxious to distinguish himself, readily undertook the task; and knowing the discredit in which his clients were held, he resolved to do all he could to delay proceedings, in order to afford time for prejudices to subside. He at first contended that, the rats being dispersed amongst a great number of villages, a single summons was not sufficient to warn them all. He therefore demanded, and it was ordered, that a second notification should be given to them by the clergyman of each parish at the time of his sermon. This occasioned a considerable delay, at the end of which, the rats still failing to appear, M. Chassanée made a new excuse for the default of his clients, by dwelling on the length and difficulty of the journey; on the danger they were exposed to from the cats, their mortal enemies, who would lie in wait for them in all directions, &c. When these evasive pleas were exhausted, he rested his defence upon considerations of humanity and policy. "Was there any thing more unjust than general proscriptions levelled at whole families, which punished the child for the guilt of the parents, which involved, without distinction, those of tender years, and even those whose incapacity equally renders them incapable of crime," &c.

We are not informed how the case ended. But De Thou, who relates the circumstances above stated, adds that the ingenuity shown by M. Chassanée laid the foundation of his reputation, and he rose in time to be first president of the parliament of Provence. A more grave result has been hinted at. While he held this high office, severe proceedings were instituted against the Protestant Vaudois; and M. Chassanée was called upon to take the part assigned to him by his office in their persecution. The unfortunate people, at this juncture, put to him the severe question, how he could reconcile it to his conscience to dispense with the usual judicial forms towards them, his fellow-creatures, when he had some years before insisted on their scrupulous observance towards the rats of Autun. The president was staggered, and he actually seems to have, in consequence, given a silent protection to the Vaudois.

Gui Pope relates that going to Chalons (this must have been about the middle of the fifteenth century), to present his homage to the king, he saw upon a gibbet a pig which had been hanged for killing a child. On the 22d of September 1543, at an assembly held by the principal council of the city of Grenoble, one of the members represented that the slugs and caterpillars did dreadful mischief. He concluded by demanding "that they should petition the ecclesiastical judge to excommunicate the said creatures, and to proceed against them by means of restriction, to obviate the damage they daily committed, and would occasion in future;" and the council decreed in conformity to this demand. A similar case, which occurred in 1584, is more particularly related by Chorier in his History of Dauphiny. "This year," says he, "was remarkable for continual rains; there was an infinite number of caterpillars: and the same causes of corruption were renewed in 1585. Extraordinary measures were taken against the insects, which became extremely multiplied. The walls, the windows, and the chimneys of the houses, were covered with them, even in the towns. It was a lively and hideous representation of the plague of Egypt by locusts. The Grand Vicar of Valence caused the caterpillars to be cited to appear before him, and ordered an attorney to defend them. The cause was solemnly pleaded, and he condemned them to depart from the diocese. But they did not obey: human laws have no control over the instruments of divine justice. It was then deliberated and agreed upon to proceed against these animals by means of anathema and imprecation, and, as it is said, by malediction and excommunication. But two lawyers and two divines having been consulted, the grand vicar was induced to change his intentions, so that abjuration, prayers, and sprinkling with holy water, were alone had recourse to. The life of the caterpillar is short; and these devotions, having lasted during several months, were supposed to have had the miraculous effect of exterminating them!"

MR TOWNSHEND'S EXCURSION TO THE ROCKY MOUNTAINS.

Since the enterprising John Jacob Astor made his celebrated overland journey from the valley of the Mississippi to the shore of the Pacific in 1810, with the view of planting a fur-trading emporium on the Columbia river,* the vast territory lying between the United States and the Pacific Ocean has been repeatedly traversed by bands of white men engaged in carrying on a precarious though lucrative traffic in furs with the native tribes. Since the comparatively primitive times of Mr Astor, the region on both sides of the Rocky Mountains has become better known, the Indian races have diminished in numbers by their incessant wars, and the companies of fur-traders have now somewhat less to fear and suffer in their protracted wanderings. Still, all such excursions from the eastern to the western waters are not without many perils and troubles. The setting-out of an expedition resembles a caravan of pilgrims sallying forth across the African deserts; civilisation is for months, perhaps for years, left behind; no vestige of house or road is seen on the apparently interminable wastes; journeying is performed only on horseback during the day, while repose is enjoyed in tents pitched for the night; a constant outlook must be kept for prowling wild beasts, or the not less stealthy steps of the Pawnee Loup Indian; in short, all is wild nature, romantic enough, perhaps, to untamed minds, but, as we can imagine, altogether unendurable by persons accustomed to the quiet and orderly life of cities. Strange as it seems, however, there are highly cultivated individuals who, inspired by a love of science, or for the mere sake of sport—such as having a shot at a buffalo or black bear—voluntarily make part of the fur-trading bands, and consent to remain for years from home, friends, and the world of refinement. A notice of the excursion of a gentleman possessing the character of both naturalist and sportsman, will form the subject of the present, and probably a succeeding article; the traveller's own words, from his published narrative, being occasionally introduced.†

Mr Townshend, an enthusiastic ornithologist, accompanied by his friend Professor Nuttal (of Harvard University), an eminent botanist, being desirous of increasing the existing stock of knowledge in the departments of science to which they were respectively attached, agreed to accompany a body of traders, commanded by a Captain Wyeth, to the Columbia river, and adjacent parts. The traders belonged to an association called the Columbia River Fishing and Trading Company, and on this occasion they designed to fix a permanent branch-establishment in the west. On the evening of the 24th of March 1834, the two friends arrived in a steam-boat at St Louis, on the Missouri, from Pittsburg. At St Louis, which is the last great town within the settlements, they furnished themselves with several pairs of leathern pantaloons, enormous overcoats, and white wool hats, with round crowns, fitting tightly to the head, and almost hard enough to resist a musket-ball. Leaving their baggage to come on with the steamer, about three hundred miles farther up the Missouri, Mr Townshend and his friend set off to amuse themselves by walking and hunting leisurely through that distance, which is composed chiefly of wide flat prairies, with few and remotely situated habitations of the frontier settlers. At a small village on the river, the steamer arrived with the baggage, and part of the proposed company; and now the ulterior arrangements were made for setting out.

There were amongst the men, to compose the caravan, a great variety of dispositions. Some who had not been accustomed to the kind of life they were to lead, looked forward to it with eager delight, and talked of stirring incidents and hairbreadth escapes. Others, who were more experienced, seemed to be as easy and unconcerned about it as a citizen would be in contemplating a drive of a few miles into the country. Some were evidently reared in the shade, and not accustomed to hardships: many were almost as rough as the grizzly bears, and not a little proud of their feats, of which they were fond of boasting; but the majority were strong able-bodied men. During the day, the captain kept all his men employed in arranging and packing a vast variety of goods for carriage. In addition to the necessary clothing for the company, arms, ammunition, &c., there were thousands of trinkets of various kinds, beads, paint, bells, rings, and such trumpery, intended as presents for the Indians, as well as objects of trade with them. The bales were usually made to weigh about eighty pounds, of which a horse was to carry two. Captain Wyeth ensured the good-will and obedience of the men, by his affable but firm manner, and showed himself every way suitable for his very important mission.

On the 28th of April, at ten o'clock in the morning, all things being prepared, the caravan, consisting of seventy men and two hundred and fifty horses, began its march towards the west. All were in high spirits, and full of hope of adventure; uproarious bursts of merriment, and gay and lively songs, constantly echoed along the line of the cavalcade. The road lay over a vast rolling prairie, with occasional small spots of timber at the distance of several miles apart, and this was expected to be the complexion of the track for some weeks. For the first day and night the journey was agreeable, but on the second day a heavy rain fell, which made the ground wet and muddy, soaked the blanket bedding, and rendered camping at night any thing but pleasant. The description given of a nightly camp is interesting:—"The party is divided into messes of eight men, and each mess is allowed a separate tent. The captain of a mess (who is generally an 'old hand') receives each morning rations of pork, flour, &c., for his people, and they choose one of their body as cook for the whole. Our camp now consists of nine messes, of which Captain W.'s forms one, although it contains only four persons besides the cook. When we arrive in the evening at a suitable spot for encampment, Captain W. rides round a space which he considers large enough to accommodate it, and directs where each mess shall pitch its tent. The men immediately unload their horses, and place their bales of goods in the direction indicated, and in such manner, as, in case of need, to form a sort of fortification and defence. When all the messes are arranged in this way, the camp forms a hollow square, in the centre of which the horses are placed and staked firmly to the ground. The guard consists of from six to eight men, and is relieved three times each night, and so arranged that each gang may serve alternate nights. The captain of a guard (who is generally also the captain of a mess) collects his people at the appointed hour, and posts them around outside the camp in such situations that they may command a view of the environs, and be ready to give the alarm in case of danger. The captain cries the hour regularly by a watch, and *all's well*, every fifteen minutes, and each man of the guard is required to repeat this call in rotation, which if any one should fail to do, it is fair to conclude that he is asleep, and he is then immediately visited and stirred up. In case of defection of this kind, our laws adjudge to the delinquent the hard sentence of walking three days. As yet, none of our poor fellows have incurred this penalty, and the probability is, that it would not at this time be enforced, as we are yet in a country where little molestation is to be apprehended; but in the course of another week's travel, when thieving and ill-designing Indians will be out, lying on our trail, it will be necessary that the strictest watch be kept, and, for the preservation of our persons and property, that our laws shall be rigidly enforced."

Proceeding onwards, the party passed through a friendly tribe of Kaw Indians, with whom they traded a little. Some parts of the prairies are described by Mr Townshend as beautiful:—"The little streams are fringed with a thick growth of pretty trees and bushes, and the buds are now swelling, and the leaves expanding, to 'welcome back the spring.' The birds, too, sing joyously amongst them—grosbeaks, thrushes, and buntings—a merry and musical band. I am particularly fond of sallying out early in the morning, and strolling around the camp. The light breeze just bends the tall tops of the grass on the boundless prairie, the birds are commencing their matin carollings, and all nature looks fresh and beautiful The horses of the camp are lying comfortably on their sides, and seem, by the glances which they give me in passing, to know that their hour of toil is approaching, and the patient kine are ruminating in happy unconsciousness."

Some difficulties were encountered in passing one

of the larger streams, and in a day or two afterwards the camp was visited by three Indians of the Otto tribe. These people smoked the pipe of peace with the captain, and were otherwise friendly; but one of them was regarded with the most malignant looks by Richardson, an old weather-beaten hunter, who afterwards explained the cause of his anger to Mr Townshend. "'Why,' said he, 'that *Injen* that sat opposite to you is my bitterest enemy. I was once going down alone from the rendezvous with letters for St Louis, and when I arrived on the lower part of the Platte river (just a short distance beyond us here), I fell in with about a dozen Ottos. They were known to be a friendly tribe, and I therefore felt no fear of them. I dismounted from my horse, and sat with them upon the ground. It was in the depth of winter; the ground was covered with snow, and the river was frozen solid. While I was thinking of nothing but my dinner, which I was then about preparing, four or five of the cowards jumped on me, mastered my rifle, and held my arms fast, while they took from me my knife and tomahawk, my flint and steel, and all my ammunition. They then loosed me, and told me to be off. I begged them, for the love of God, to give me my rifle and a few loads of ammunition, or I should starve before I could reach the settlements. No—I should have nothing, and if I did not start off immediately, they would throw me under the ice of the river. And,' continued the excited hunter, while he ground his teeth with bitter and uncontrollable rage, 'that man that sat opposite to you was the chief of them. He recognised me, and knew very well the reason why I would not smoke with him. I tell you, sir, if ever I meet that man in any other situation than that in which I saw him this morning, I'll shoot him with as little hesitation as I would shoot a deer. Several years have passed since the perpetration of this outrage, but it is still as fresh in my memory as ever; and I again declare, that if ever an opportunity offers, I will kill that man.' 'But, Richardson, did they take your horse also?' 'To be sure they did, and my blankets, and every thing I had, except my clothes.' 'But how did you subsist until you reached the settlements? You had a long journey before you.' 'Why, set to *trappin'* prairie squirrels with little nooses made out of the hairs of my head.' I should remark that his hair was so long that it fell in heavy masses on his shoulders. 'But squirrels in winter, Richardson!—I never heard of squirrels in winter.' 'Well, but there was plenty of them, though; little white ones, that lived among the snow.'" Such is a trait of human nature in these far-western regions.

On the 18th of May, the party arrived at the Platte river, beyond which herds of buffalo begin to make their appearance, thousands, or rather tens of thousands, in a single herd. They generally fly from hunters, and are overtaken and shot only with great difficulty. Being shy and keen of scent, they cannot be easily approached in silence. The Indians resort to a remarkable stratagem for killing them. "The skin of a calf is properly dressed, with the head and legs left attached to it. The Indian envelopes himself in this, and with his short bow and a brace of arrows, ambles off into the very midst of a herd. When he has selected such an animal as suits his fancy, he comes close alongside of it, and, without noise, passes an arrow through his heart. One arrow is always sufficient, and it is generally delivered with such force, that at least half the shaft appears through the opposite side. The creature totters, and is about to fall, when the Indian glides around, and draws the arrow from the wound lest it should be broken. A single Indian is said to kill a great number of buffaloes in this way, before any alarm is communicated to the herd."

The surprise of our traveller was very great on first seeing one of the large buffalo herds. "Towards evening, on rising a hill, we were suddenly greeted by a sight which seemed to astonish even the oldest amongst us. The whole plain, as far as the eye could discern, was covered by one enormous mass of buffalo. Our vision, at the very least computation, would certainly extend ten miles, and in the whole of this great space, including about eight miles in width from the bluffs to the river bank, there was apparently no vista in the incalculable multitude. It was truly a sight that would have excited even the dullest mind to enthusiasm. Our party rode up to within a few hundred yards of the edge of the herd, before any alarm was communicated; then the bulls—which are always stationed around as sentinels—began pawing the ground, and throwing the earth over their heads; in a few moments they started in a slow clumsy canter; but as we neared them, they quickened their pace to an astonishingly rapid gallop, and in a few minutes were entirely beyond the reach of our guns, but were still sc near that their enormous horns, and long shaggy beards, were very distinctly seen. Shortly after we encamped, our hunters brought in the choice parts of five that they had killed."

Of the animals belonging to those vast herds which the hunters kill, only a small portion is usually taken for food. Mr Townshend and two of his associates having killed a bull buffalo, they proceeded to cut it up in the following approved manner:—"The animal was first raised from his side where he had lain, and supported upon his knees, with his hoofs turned under him; a longitudinal incision was then made from the nape or anterior base of the hump, and continued backward to the loins, and a large portion of the skin from each side removed; these pieces of skin were placed upon the ground, with the under surface uppermost, and the *fleeces*, or masses of meat, taken from along the back, were laid upon them. These fleeces, from a large animal, will weigh, perhaps, a hundred pounds each, and comprise the whole of the hump on each side of the vertical processes (commonly called the *hump ribs*), which are attached to the vertebræ. The fleeces are considered the choice parts of the buffalo, and here, where the game is so abundant, nothing else is taken, if we except the tongue and an occasional marrow-bone. This, it must be confessed, appears like a useless and unwarrantable waste of the goods of Providence; but when are men economical, unless compelled to be so by necessity?" The food of the hunters consists for months of nothing but this kind of buffalo meat, roasted, and cold water—no bread of any kind. On this rude fare they enjoy the best health, clear heads, and high spirits; and what more, says Mr T., does a man require to make him happy?

The country now began to alter in appearance for the worse. Having passed the Platte river, a considerable tributary of the Missouri, the party arrived on a great sandy waste, forming a kind of upper tableland of North America (about latitude 42 degrees north, and longitude 100 degrees to 105 degrees west of Greenwich)—a region without a single green thing to vary and enliven the scene, and abounding in swarms of ferocious little black gnats, which assail the eyes, ears, nostrils, and mouth of the unhappy traveller. It is necessary, however, to pursue a route in this direction, in order to find accessible passes through the Rocky Mountains, which are impenetrable more to the north-west. Making the best of their way over the inhospitable desert, and fortunately escaping any roving bands of unfriendly Indians, the cavalcade struck through a range of stony mountains, called the Black hills, and in a few days afterwards came in sight of the Wind river mountains, which form the loftiest land in the northern continent, and are at all times covered with snow of dazzling whiteness. From the great height above the level of the sea, which the party had attained, the climate was found to be cold, even although in summer; the plains were covered only by the scantiest herbage, and frequently there was great difficulty in obtaining a supply of water for the camp. The painfulness of the journey, therefore, was now extreme, both for man and beast.

At length, on the 19th of June, the party arrived on the Green river, or Colorado of the west, which they forded, and encamped upon a spot which was to form a rendezvous for all the mountain companies who left the states in spring, and also the trappers who come from various parts with furs collected by them during the previous year. Unfortunately, our traveller in passing the river was subjected to a severe ducking, which brought on a fever, and confined him to his tent for several days. His account of the encampment affords a glimpse of the wild life led by the mixed race of trappers and hunters.

"June 22.—We are now lying at the rendezvous. W. Sublette, Captains Serre, Fitzpatrick, and other leaders, with their companies, are encamped about a mile from us on the same plain, and our own camp is crowded with a heterogeneous assemblage of visitors. The principal of these are Indians, of the Nez Percé, Banneck, and Shoshoné tribes, who come with the furs and peltries which they have been collecting at the risk of their lives during the past winter and spring, to trade for ammunition, trinkets, and 'fire water.' There is, in addition to these, a great variety of personages amongst us; most of them calling themselves white men, French-Canadians, half-breeds, &c., their colour nearly as dark, and their manners wholly as wild, as the Indians with whom they constantly associate. These people, with their obstreperous mirth, their whooping, and howling, and quarrelling, added to the mounted Indians, who are constantly dashing into and through our camp, yelling like fiends, the barking and baying of savage wolf-dogs, and the incessant cracking of rifles and carbines, render our camp a perfect bedlam. A more unpleasant situation for an invalid could scarcely be conceived. I am confined closely to the tent with illness, and am compelled all day to listen to the hiccoughing jargon of drunken traders, and the swearing and screaming of our own men, who are scarcely less savage than the rest, being heated by the detestable liquor which circulates freely among them. It is very much to be regretted that at times like the present there should be a positive necessity to allow the men as much rum as they can drink; but this course has been sanctioned and practised by all the leaders of parties who have hitherto visited these regions, and reform cannot be thought of now. The principal liquor in use is alcohol diluted with water. It is sold to the men at *three dollars* the pint! Tobacco, of very inferior quality, such as could be purchased in Philadelphia at about ten cents per pound, here fetches two dollars! and every thing else in proportion. There is no coin in circulation, and these articles are therefore paid for by the independent mountain-men, in beaver skins, buffalo robes, &c.; and those who are hired to the companies, have them charged against their wages.

30.—Our camp here is a most lovely one in every respect, and as several days have elapsed since we came, and I am convalescent, I can roam about the country a little and enjoy it. The pasture is rich and very abundant, and it does our hearts good to witness the satisfaction and comfort of our poor jaded horses. Our tents are pitched in a pretty little valley or indentation in the plain, surrounded on all sides by low bluffs of yellow clay. Near us flows the clear deep water of the Siskadee, and beyond, on every side, is a wide and level prairie, interrupted only by some gigantic peaks of mountains and conical *buttes* in the distance. The river, here, contains a great number of large trout, some grayling, and a small narrow-mouthed white fish, resembling a herring. They are all frequently taken with the hook, and, the trout particularly, afford excellent sport to the lovers of angling. Old Isaac Walton would be in his glory here, and the precautionary measures which he so strongly recommends in approaching a trout stream, he would not need to practise, as the fish are not shy, and bite quickly and eagerly at a grasshopper or minnow. Buffalo, antelopes, and elk, are abundant in the vicinity, and we are therefore living well."

On the 2d of July the party bade adieu to the rendezvous, packed up their moveables, and journeyed along the bank of the river. The horses were much recruited by the long rest and good pasture, and, like their masters, were in excellent spirits for renewing the route across the wilderness.

PORT-ROYAL AND ITS SOLITARIES.

THE word "Port-Royal" must have repeatedly met the eye of general readers in connection with the names of various eminent writers of France, and must have excited a wish to know its meaning, and the object or objects to which it applied. Port-Royal, sometimes called Port-Royal-des-Champs (Port-Royal of the fields or country), was the title originally given to a conventual establishment for females, attached to the order of the Benedictines, and founded so early as the year 1204. Its site was about three leagues to the south of Versailles, and its foundress was Matilda, wife of Matthew de Marly, of the house of Montmerency. For four centuries the history of the convent was unmarked by any event of particular importance. Towards the close of that period, the establishment partook of the relaxation of discipline which gradually spread through so many of the cotemporary religious houses of the continent. A regenerator arose at length in the person of Maria Angelica Arnauld, who was appointed abbess of Port-Royal about the year 1608, and who speedily made the convent a model of order and discipline to all the similar institutions of France. The celebrity which she gave to it induced a number of the noblest ladies of the land, and even some of the princesses of the blood-royal, to take up successively their residence near Port-Royal, that they might participate in its religious exercises, and profit by the example and counsels there brought within their sight and reach.

Succeeding events elevated Port-Royal into still greater notice. Towards the middle of the seventeenth century, Antoine Arnauld, doctor of the Sorbonne, and one who left a standard name in French literature, was led to fix his abode at Port-Royal, where, besides his sister the abbess, his mother and five others of her daughters, with no less than six of his nieces, had their permanent residence. Arnauld was accompanied in his retreat from the stir of the world by his brother Arnauld d'Andilly, Antoine Lemaistre, an advocate famous for his eloquence, and by Simon Lemaistre and Isaac Louis Lemaistre, brothers of Antoine, and the latter of them well known for his translation of the Bible. Five or six other individuals, all of them men of talent and virtue, sought at the same period the seclusion of Port-Royal, disgusted with the follies of an age on which their lessons could make no impression. Their labours were more productive of good in the solitude to which they retired. Fixing their joint habitation near to the convent, they divided their time between the cultivation of their little lands, the instruction of the boarders of the convent, the education of young people confided to their care, and the composition of those learned works which have given immortality both to themselves and to Port-Royal. The "*Logic*" of Arnauld, the "*Rudimentary Greek and Latin Treatises*" of Lancelot, the "*Ethics*" of Nicole, and the "*Ecclesiastical History*" of Le Nain de Tillemont, are instances of the able and useful works which had their origin here.

Port-Royal, in fact, became a famous school, where many statesmen as well as men of letters of great subsequent celebrity received their training. It was here that the distinguished poet, the elder *Racine*, was educated, and here were those seeds of virtue sown in his mind, which, repressed for a time by the seductive flatteries of the world, burst forth into light and vigour at a more advanced period of his career. Racine showed his sense of the benefits he had derived from Port-Royal, not only by devoting various poems to the celebration of its many local beauties—its gardens, fields, waters, and woods—but by writing a history of the convent itself, and also a memoir vindicating the name and fame of its inhabitants. The virtuous *Pascal*, also, who had a sister and a niece in the establishment, enrolled himself in the band of the solitaries of Port-Royal, and, although he had his permanent dwelling elsewhere, remained in intimate relations with them up to the period of his death. Thus it was, that, in an age of gaudy show and glitter, these poor conventual sisters, who could boast of no attractive renown apart from that derived from their sanctity of life, became as it were a common bond of

Digitized by Google

union—a tie to gather and bind together in one spot all that was most eminent for rank, virtue, and learning, in the capital and country of France.

From the year 1648 to 1679, Port-Royal enjoyed its greatest celebrity, and stood at its highest point of utility. But its very renown gradually led to its fall, by exciting an envious and hostile spirit in other sections of the religious establishment of the country. Moreover, its friends and supporters, Pascal and Arnauld, had distinguished themselves by their opposition to the sect of the Jesuits, then the most powerful clerical body in France, as well at court as elsewhere. Through these adverse agencies and influences, a blight fell on the prosperity of Port-Royal. It ceased to be a seat of learning and education. The great men who had adorned it died away one by one, and others were afraid or were forbidden to take their places and sustain its repute. By various arbitrary means, the sisterhood were reduced to one-fourth of their original numbers, and, in part, were dispersed over the land. But the enmity of the party in power did not rest here. "After long years of inveterate persecution," says the author of a supplement to Racine's History, "the lieutenant of police, d'Argenson, bearing a royal warrant, and accompanied by various commissaries, notaries, and magistrates, as well as by three hundred policemen, took the road to the convent of Port-Royal early on the morning of the 29th of October 1709. On his arrival the lieutenant invested the building, took possession of the gates, caused all papers whatsoever to be delivered up, and formally put them under seal. When this part of his commission was ended, he announced the further orders with which he was charged to the sisterhood. They were in all a band of fifteen poor females, inclusive of the superior and seven lay or serving sisters. Without resistance, without protestation, without a murmur, they submitted themselves to their lot, chanting the while their accustomed closing services, in the midst of the men who pushed them from their home. Some of them were so aged and infirm that it was necessary to procure litters to take them away. They were conducted each to a different dwelling, as if their cruel enemies had resolved that no two of them should have the poor consolation of weeping together."

The enemies of Port-Royal were not satisfied even with the expulsion of every living being from within its walls. On the 22d of January 1710, another royal edict was issued, and prompt, indeed, was its execution. The venerable building was razed to the ground, with all the separate edifices which had been successively raised around it for its visitants and friends. The materials were sold, and the destroyers of Port-Royal seemed desirous of effacing every trace of its foundations.

Still there arose from the naked and desecrated spot a sweet-smelling savour, which was hateful to its ruthless enemies. The ashes of Lemaistre, Arnauld, Racine, and their kindred, yet lay there, and drew pilgrims to the scene. In 1711, the graves were opened, the mouldering bones of the illustrious dead torn from their resting-places, and scattered hither and thither, among the cemeteries of Paris and the adjoining villages!

This might indeed be termed the closing scene of the Port-Royal communion, when its members were not allowed even to enjoy the fellowship of the tomb. But its enemies could not throw oblivion on the memory of that band of brothers and sisters, and, even with all their destructive zeal, they left on the scene some tangible and visible memorials of its former inhabitants. One who recently made a pilgrimage to the spot gives the following account of the appearance which it now presents to the traveller's eye:—"A little to the right of the road leading to Chevreuse and Dampierre, stands the vale formerly inhabited by the conventual sisterhood of Port-Royal. It occupies a low situation, and is of small extent, being not more than twenty minutes' walk in length, and about ten in breadth. It is a little amphitheatre, enclosed on all sides by gently rising heights. The road descends into the vale by a pretty sharp inclination, and when the traveller has reached the centre of the hollow, he sees nought but the clear sky above, and on each side the acclivities of the hills, covered half way up with verdure, and tufted with thick woods. Silence and repose hang over the scene, and one's first thought is, that no place could have been better chosen as a retreat for those who were weary of the din of the world. On the eastern side of the vale, a vault or cellar is to be seen, being all that now remains of the mansions of the Duchesses of Liancourt and Longueville, two ladies who were among the first to retreat to the neighbourhood of Port-Royal. On the western declivity stood once the dwelling of Arnauld and his friends, and of this a considerable portion has escaped the destroyers of 1710. It is a brick building of antique fashion, and is now inhabited, in a repaired state, by a gentleman who has retained with feelings of veneration the old carved wooden staircase, worm-eaten though its materials be. The interior had been arranged into a series of little cabinets or rooms for study, and these the proprietor has also preserved in the order in which he found them. Above the door of one of these cabinets, these words are engraven: 'J. Racine. 1657, 1658;' on another, 'A. Arnauld. 1655;' and on a third, 'P. Nicole. 1657, 1658, 1659;' indicating the inhabitants to whom these places had been specially devoted for a time. The proprietor has had a stone placed over his principal porch, with the names of the principal occupants of the mansion engraven upon it. A number of these names have been mentioned. They amount in all to the number of twenty-two, every one of them of no mean repute in the annals or literature of France.

Before the house, is a garden on the site of the old one, and in the corner of which is to be seen the fragment of an old column, having a broad top, and so placed on the ground as to form a table, traditionally called the Table of the Recluses. Here it is pleasant to rest, and permit the mind to wander back to the time, when, in the calm of morn or eve, much grave and sweet discourse was wont to take place on the same spot, between Pascal and Arnauld, Nicole and Saci, and those others who had come hither to seek that peace not to be found among the haunts of men. From the site of these relics of the Port-Royal solitaries, it is necessary to descend into the centre of the vale, in order to reach the scene where once the old convent of Matilda de Marly stood. But its foundation stones were torn up and sold, and on the spot where it was, gardens and orchards now appear. A fragment of a turret (now a pigeon-house), covered with ivy, and decorated with the fantastic heads and busts of the antique architecture, is the sole remnant of the once massive and ample convent. The lake or pool which has been celebrated in the verses of Racine, and which will thence be remembered for ever in France, has been drained and dried up; a change to which scarce even the increased salubrity of the spot can reconcile a lover of friendship and poetry."

Such is the story of Port-Royal, and such was its fate. The claim of Louis XIV. to be called The Great, even were it not shaken by a thousand other circumstances, would be irretrievably so by his participation in the persecution and overthrow of the noble fellowship of Port-Royal.

KATERFELTO.

In that graphic and well-known passage of the "Task" of Cowper, where the poet describes the varied contents of a newspaper of his day, the following lines occur:—

"And Katerfelto, with his hair on end
At his own wonders, wondering for his bread."

The personage here alluded to was a distinguished juggler and quack doctor, who flourished in Britain at the close of last century. The name of Katerfelto, it is probable, was merely an assumed one, and certainly, if this was the case, the selection of it did credit to the magical professor's taste, as few names could be found more expressively appropriate to the character he bore. He took the title of Doctor—a German Doctor—and combined the profession of legerdemain with that of the art medical. The Task was written about the years 1782 and 1783. At that time, Dr Katerfelto was vending his nostrums to the people of London, who had then the misfortune to sustain a severe and very general attack of influenza. The Doctor, of course, knew the full value of mystery, and used it freely to enhance his medical pretensions. If any one got better or got worse on his hands, it is to be suspected that the Doctor's remedies were innocent alike of the good and the evil, and that the whole was attributable to the old principle, "Conceit can kill, and conceit can cure."

Katerfelto was one of the last specimens of a class that now live only in the pages of novelists—the race of travelling mountebanks, half quacks, half jugglers. In his journeys through England he was accompanied by his wife and daughter, two black attendants, and, though last, not least in importance, two or three black *cats*, usually termed Katerfelto's Devils. This goodly company were all packed together in a huge old coach or caravan, which contained, besides, the wizard's stock of apparatus. On reaching any town where it was thought fit to have an exhibition, the two sable (biped) assistants, dressed in antiquated green liveries with red collars, marched round the streets of the place, blowing trumpets, and expatiating on the wonderful powers and performances of Katerfelto and his cats. A portion of the doctor's exhibitions was really of a rational and creditable nature, consisting of magnetic, electrical, and chemical experiments, which he explained in a lively, humorous way. He was a good experimenter, and seldom failed in any thing he tried. But amusement was the object of those who went to hear him, and in this they were not disappointed. His appearance was provocative of mirth, his long thin person being commonly enveloped in a tawdry, old-fashioned green gown, while his head was covered by a square velvet cap, making him altogether as like as possible to the pictures of the old stage-doctors, of whom he was the genuine successor and representative.

We have no account of the particular uses to which he turned his feline familiars. One thing is certain, however, that he had brought them to a surprising pitch of docility and apparent intelligence. Katerfelto seems to have flourished through a considerable part of the last quarter of the eighteenth century. Sometimes, like the most of his class, he lived in comparative ease and affluence, and, at other times, found himself caged in jail, as a vagrant and impostor. Occasionally, his experiments brought him into awkward scrapes. While stopping at a small town in Yorkshire, on one of his journeys, he set up a fire-balloon, to the great amazement of the rustics around. But, in a few days afterwards, the conjuror was arrested by order of a farmer, upon one of whose hay ricks the balloon had alighted, and by which it had been burned to the ground. Poor Katerfelto could not pay the damages demanded, and was obliged to go to prison.

It has been mentioned that the name of Katerfelto was probably an assumed one. The conjuror, however, seemed by his speech to be really a foreigner. Some have asserted him to be a Prussian soldier, who had got his discharge. He is said to have died at Bristol about the beginning of the present century.

ACCIDENTS IN THE COAL-MINES OF NORTHUMBERLAND AND DURHAM.

The immense sacrifice of human life, occasioned from time to time by the explosion of inflammable gas in the extensive coal-mines of Northumberland and Durham, has been perhaps the most deplorable evil connected with the production of any great and valuable article of commerce. Previous to the introduction of the safety-lamp into those collieries, in the year 1815 or 1816, and of more improved methods of ventilation, explosions were necessarily of frequent occurrence, and attended with the most calamitous loss of life, and destitution to those connected with the sufferers. This rendered the vocation of the miners one of considerable danger and vicissitude, for they were in a great measure unprotected against the occurrence of explosions. It was an event of common occurrence for the miner to leave his home for his subterranean occupation, in the enjoyment of the most perfect health, and ere a few hours had elapsed, to be brought back to his family a mangled and distorted corpse. Nor was the loss of life directly occasioned by those accidents, deplorable enough though it was, by any means the extent to which they were confined. The great number of individuals dependent on the sufferers, consisting of their widows and families, whom those accidents in the coal-mines suddenly plunged into one common state of helpless destitution and bereavement, and left to public protection, was not the least lamentable part of the evil.

A few of the accidents arising from the explosion of hydrogen gas, which have taken place in the collieries of Northumberland and Durham, may be cited, to give the reader some idea of their extent and frequency. About the close of the last century, seventy-two persons were killed in a colliery at North-Biddick, in the county of Durham. A similar accident happened at Lambton colliery, in the same county, on the 22d of August 1766, when it is stated that "the noise of the explosion was heard above three miles round, and the flash was as visible as a flash of lightning," whilst the miners were forced up from the pit like balls out of a cannon, and every thing that resisted, shared the same fate. By two explosions which occurred in 1805, at Hepburn and Oxclose, forty-three widows and one hundred and fifty-one children were left wholly unprotected and unprovided for. In 1808, ninety persons were killed in a coal-pit at Lumley. On the 24th of May 1812, ninety-one persons were killed by an explosion at Felling colliery, near Gateshead, leaving forty-one widows and one hundred and thirty-three children to the protection of the public. In the burial-ground of the church, at Lower Heworth, in the county of Durham, there is a spiral square monument, with an inscription on a brass plate, commemorative of this last-mentioned accident. In 1815, fifty-seven persons suffered in the "Success Pit," near Newbottle, county of Durham. In 1817, thirty-eight were destroyed at the Row Pit at Harraton. By three explosions in the Sheriff-Hill colliery, in 1815 and 1817, fifty-one persons were killed. In 1821, fifty-two men and boys were killed at Russel's Wallsend colliery; and in 1823, fifty-three suffered at the Plain-pit, Rainton. Many more such accidents might be enumerated, but these will be sufficient to give the reader an idea of their extent and frequency.

In catastrophes of this kind (which are of much less frequent occurrence at the present day than formerly), the friends of the sufferers consider themselves peculiarly fortunate in being able to find and bury their remains, for it frequently happens that many of the sufferers are never heard of, being buried alive in the mine, far beyond the reach of the living; whilst others are so dreadfully shattered and mangled by the violence of the explosion, as to make their identity, in many instances, a matter of painful difficulty to their friends; in others, one of absolute impossibility. As was stated in a previous paper* in this Journal, the miners are so intimately connected by intermarriage, that when accidents occur in the mines, there are few of the survivors who have not to feel the loss of some one more or less nearly related to them. And it happens not unfrequently on such occasions, that there is some case which stands out in more affecting relief from the others, and excites a deeper and more general degree of commiseration; for example, where the father of a family, and perhaps three or four of his sons, share in one common and untimely end, and a widow and a few helpless children remain to mourn over their irreparable bereavement. A witness before the Parliamentary Committee on Accidents in Mines in 1835, stated a circumstance which must have had its due effect on the committee, namely, that after the accident at Felling, above mentioned,

* Songs of the Northern Coal-Miners.

Digitized by Google

upwards of ninety of the sufferers were taken out of the mine; and that, on a particular day afterwards, their funerals took place. He stated that the coffin of what might be called the first of the sufferers began the procession, which increased, before it got to the church, until it amounted to a procession of ninety coffins, with mourners.

Such were some of the calamitous consequences attendant on the working of the coal-mines of Northumberland and Durham previous to the year 1815, the period of the introduction of the miner's safety-lamp.

A brief sketch of the origin of this safety-lamp will, it is conceived, be acceptable. The frequency and extent of the dreadful calamities occasioned by explosions in coal-mines, excited the sympathy of several enlightened and humane individuals at Sunderland, in the county of Durham, who in 1813 formed themselves into a society for preventing accidents in coal-mines, and offered premiums for the discovery of new methods of lighting and ventilating them; but, it is said, this philanthropic association did not receive that zealous support from the coal-owners and viewers of those counties which had been anticipated. Dr William Reid Clanny of Bishopwearmouth, one of its principal members, presented to this society a safety-lamp constructed on the principle of insulating the light so as to burn without danger in an atmosphere of inflammable gas or fire-damp, for which he received a large gold medal from the Society of Arts. The Rev. Dr Gray of the same place, another of the leading members of this society, but now deceased, having solicited the attention of Sir Humphry Davy to this important subject, that eminent chemist visited the coal-mines of those counties in 1815, and on his return to London produced two lamps, in which the burners were insulated from the external air. He afterwards discovered the security of wire gauze, which, as is well known, is impervious to flame, and, though surrounded by inflammable air, prevents the communication of any inflammation with the burners.

There are different claims to the honour of having discovered the safety-lamp, about which there has been much angry controversy; but with this subject it is not our intention to interfere. Mr George Stephenson, the celebrated civil engineer, we believe claims to be the first person who discovered that carburetted hydrogen gas would not explode through small apertures. The idea of using wire gauze instead of perforated tin, appears to have originated with Sir Humphry Davy.

The safety-lamp of Sir Humphry Davy, and various others, continue to be used in the collieries of Northumberland and Durham, but not, we believe, with the regularity which is to be desired, the men often removing the gauze to increase the light. Hence explosions still occasionally take place, and are attended with fatal effects more or less extensive. Perhaps the most complete and certain expedient for avoiding accidents would be to establish air-tubes leading from all parts of the mine to a common tube at the pit's mouth, where it should be made to feed a fire: the draught occasioned by the fire would serve to clear the mine of all noxious vapour, and make the occasionally careless use of the safety-lamp of little consequence.

"CANST THOU NOT MINISTER TO A MIND DISEASED?"

Too little attention has been paid to the physical treatment of mental affections. I allude more particularly to those apparently trivial and unimportant deviations from a healthy condition of the mental and moral feelings. Any unusual depression of the spirits—whims and fancies—departures from accustomed modes of thinking, are all indications of mental disease, which, if not attended to, often produce serious consequences. The disposition to commit suicide is, in nine cases out of ten, preceded by lowness of spirits, a mental lethargy, a desire to avoid society and observation, a craving after solitude. If these mental conditions were attended to, much evil might be prevented. A timely-administered dose of medicine has often dissipated the suicide's murderous intention. It is recorded of Voltaire, that he had agreed with an Englishman, with whom he had been conversing on the various ills of life, to commit suicide on the following morning. When the time arrived, Voltaire declared that he had changed his mind—he had subjected himself to a course of purgation, and the desire to kill himself had vanished. The abstraction of blood has often prevented the commission of crime. Damien persisted to the last in declaring, that had he been bled, as he earnestly expressed a wish to be, he never would have attempted to assassinate the French king. The desire to commit suicide arises very frequently from intestinal irritation acting upon the brain. How important it is to watch the first dawnings of a feeling productive of so much injury to society! Good and evil dispositions are more connected with the conditions of our bodily organs than physicians or metaphysicians are willing to admit.—*Mr F. Winslow's Paper on Suicide.*

TREATMENT OF HORSES ON A JOURNEY.

Various opinions exist as to the best division of the stages which a horse should be ridden or driven when performing even a long journey. This must in some degree be regulated by his condition. If he is to perform a journey of a hundred and fifty miles, and has three days to do it in, I should divide the distances into twenty-five miles each, or as near as the accommodation of the road would permit, starting, especially in the summer time, early in the morning, and performing the first twenty-five miles before breakfast. This enables you to have your horse well dressed, and to afford him three or four hours' rest; and if he will eat two quarterns of oats, and a quartern of beans (which should be divided into two feeds), he will not take much harm. A moderate quantity of water must be given; at the same time it must be observed that too much will cause most horses to scour, and likewise to sweet more profusely; therefore the less he has in reason, the better, till his day's work is completed, when he should have as much as he is inclined to take. Gruel is an excellent thing, but it is not readily procured, properly made, on the road; it should invariably be boiled, and I prefer it made with wheat flour, as it remains longer on the stomach, and is less relaxing than when made with oatmeal. The usual method of preparing what they call gruel at inns is to mix oatmeal with warm water, in which state it is decidedly bad; its emollient quality is produced by boiling, and if I cannot procure it in that state, I prefer water.—*Old Sporting Magazine for October.*

THE WILDERNESS.

[BY J. NEVAY.]

The homeless wilderness!
How sweet, how beautiful, and O! how mild
Is nature in her summer dress
To me, thus wandering far alone!
Now be my thoughts as, when a little child,
I deemed that God's eternal throne
Was in the sun—so glorious, bright—
To bless the earth with loveliness and light.

Here breathes the peace I seek!
This heathy wild's a paradise to him
Who, musing, hears the voiceless speak—
Hears the calm eloquence of flowers,
And drinks sweet wisdom from their balmy hymn,
That charms, with beauty's chastest powers,
The vagrant winds their lips to kiss,
And tells that Nature's innocence is bliss.

Nor strife nor hatred here,
Nor envy, at a neighbour's good to writhe;
Each flower is to its sister dear—
This hates not that of fairer bloom,
And all are loved by pilgrim bee so blithe;
The prickly gorse, and gentler broom,
In peace dispread their gold together,
Nor scorn the lowlier blooming thyme and heather.

So live the good, and love—
For there is virtue yet upon the earth,
And by her seraph hand are wove
The feelings of ingenuous hearts
In happy friendship, sympathy, and mirth;
And kindly each to each imparts
The sunny light that heaven bestows,
And summer pleasure in each bosom glows.

The shafts of enmity
Can never wound my feelings, musing here!
In every little flower I see,
There breathes a balm, a holy charm;
And the glad song of every bird I hear
Tells me that envy cannot harm,
And sweetly teaches to forgive my foes—
My simple song forgives them as it flows.

But I could love the foe
Whose censure stern, and praise, alike are just;
Whose lip can curl, whose soul can glow,
As faults appear, or beauties shine;
Who scorns to give the undeserved thrust—
Scans every word of every line,
As one in whom there is no ruth,
While native candour still decides with truth.

Yet why obtrude such theme,
Where nature spreads around her sacred page?
To read aright, my aim supreme,
And cultivate each germ of thought
That in me lives; and win the holy pledge
Which I, since boyhood gay, have sought,
To be among the laurell'd blest, above
Yon sun rejoicing high—a home of love.

Thou, who all sweetness art,
And pure as sweet, thou sunborn summer wreath,
O, be the feelings of my heart,
Like thee, in moral beauty wove;
And as we muse, 'mid winter's gloom of death,
Of thy gay summer charms in love,
So, when beneath the sod I'm laid along,
Remembered be the votary of song.

—*Scotsman, Feb.* 1840.

HUMBLE AND UNNOTICED VIRTUE.

O my son!
The ostentatious Virtues which still press
For notice and for praise; the brilliant deeds
Which live but in the eye of observation—
These have their meed at once; but there's a joy
To the fond votaries of fame unknown,
To hear the still small voice of conscience speak
Its whispering plaudit to the silent soul.
Heaven notes the sigh afflicted goodness heaves,
Hears the low plaint by human ear unheard,
And, from the cheek of patient Sorrow, wipes
The tear, by mortal eye unseen, or scorned.

—*Mrs More's Works.*

TREASURY WRITERS AND OFFICIALS.

It is a pretty general opinion with the public, that the scribes of the Treasury and of the Foreign Office are themselves contributors to the newspapers. This, however, is rarely the case. The mode of communication between the Treasury and its journal* used to be this:—Every morning, the editor, the sub-editor, or sub-sub—for in respectable newspapers the assistant editor has also an *aide*—went to the Treasury and the Foreign Office to learn if there were any news, and to receive instructions as to the tone which the editor was to assume. If the editor in person paid this visit, he was usually received at the Treasury by what is called the Patronage-Secretary, who is the gentleman charged with the management of the secret machinery of the government, and the drilling of the ministerial members of the House of Commons, in which latter office he is assisted by the official whipper-in. This personage was the medium of communication between the cabinet and the editors of the newspapers which were in their interest, for notwithstanding the importance attached by some members of the cabinet to the support of newspapers, they rarely condescended to give audience to the editors. This affectation of superiority is almost exclusively confined to the English character. In France the editors of government newspapers are in direct communication with the ministers, and such is the case even in Germany and Russia, where literary men hold a higher rank than in England, although the pecuniary advantages which they possess may not be so great. At the English Foreign Office the editor had the high honour of being admitted to the presence of no less a person than the Under-Secretary of State; but if the sub-editor, or his sub, attended, he was generally turned over to the chief clerk, who, whilst the visitor waited, would communicate with his superior. If an article highly in favour of the government, and calculated, by the tact with which it was written, to serve their cause, appeared in a semi-official paper, it did not follow that the great men thought it worth while to communicate to the writer the expression of their satisfaction, although this was sometimes done; but if, on the contrary, by neglecting to pay the daily visit, in order to see which way the vane pointed, or from any other cause, the editor should have written some article, or paragraph of an article, which created displeasure, he was summoned to the presence of the Secretary of the Treasury, or of the Under-Secretary of the Foreign Office, as the case might be, and reminded, in polite but very positive terms, that he was not a free agent; and that, if the indiscretion were to be repeated, the government would feel it necessary to take some means of letting the public know that they had no direct connection with his journal. Some curious scenes have resulted from this temporary exercise of free agency. I remember an editor having been once sent for by an Under-Secretary of State of the Foreign Department, who, in his usual polite but truly official manner, expressed, in the name of his superior, the deep regret which was felt at the tone which he had for several days assumed; and informed him, that if the same line of conduct were to be persisted in, it would become necessary to inform the different embassies that the minister disowned it. "Your articles," said the Under-Secretary, "have already led to remonstrances from two of the ambassadors; and his lordship in vain replied, that as there is not, strictly speaking, an official paper in England, he can only advise, not control, the editors of those papers by which the government is generally supported. The ambassadors, who cannot conceive that papers affecting to advocate the cause of ministers can contain any article which has not been previously submitted for approbation, turn a deaf ear to all my lord's statements. You will see, therefore, how important it is to be careful in these matters; and understand, that if there be a repetition of such conduct on your part, the government must withdraw its patronage from your paper." Now, it had so occurred, that the very articles complained of by the Foreign Secretary had given great satisfaction to the Premier; and, only on the preceding day, the editor had received from the Secretary of the Treasury a letter, in which he expressed, by desire of that noble lord, the pleasure which they had afforded. On producing this important document, and placing it in the hands of the Under-Secretary, he could only express his astonishment, and request, as a particular favour, that the editor would keep secret the difference of opinion which appeared to exist between the Premier and the Secretary of State, on a question of such importance as the foreign policy of the British cabinet.—*A Newspaper Editor's Reminiscences, in Fraser's Magazine.*

* This kind of Treasury connection is said no longer to exist.

BORROWING ON ALL HANDS.

In Michigan there is little ceremony used in seeking the loan of each other's goods—"Mother wants your sifter; and she says she guesses you can let her have some sugar and tea, 'cause you've got plenty." This excellent reason, "'cause you've got plenty," is conclusive as to sharing with your neighbours. Whoever comes into Michigan with nothing, will be sure to better his condition; but woe to him that brings with him any thing like an appearance of abundance, whether of money or mere household conveniences! To have them, and not be willing to share them in some sort with the whole community, is an unpardonable crime. You must lend your best horse to *qui que ce soit*, to go ten miles over hill and marsh, in the darkest night, for a doctor; or your team to travel twenty after a "gal;" your wheelbarrows, your shovels, your utensils of all sorts, belong not to yourselves, but to the public, who do not think it necessary even to *ask* a loan, but take it for granted. The two saddles and bridles of Montacute spend most of their time travelling from house to house a-manback; and I have actually known a stray martingale to be traced to four dwellings two miles apart, having been lent from one to another, without a word to the original proprietor, who sat waiting, not very patiently, to commence a journey. * * * But the cream of the joke lies in the manner of the thing. It is so straightforward and honest—none of your hypocritical civility and servile gratitude. Your true republican, when he finds that you possess any thing which would contribute to his convenience, walks in with "Are you going to use your horses *to-day?*" if horses happen to be the thing he needs. "Yes, I shall probably want them." "Oh! well, if you want them, I was thinking to get 'em to go up north a piece." Or, perhaps, the desired article comes within the female department—"Mother wants to get some butter; that 'ere butter you bought of Miss Barton this mornin'." And away goes your golden store, to be repaid perhaps with some cheesy, greasy stuff, brought in a dirty pail, with "Here's your butter!" A girl came in to borrow a "wash-dish," "because we've got company." Presently she came back—"Mother says you've forgot to send a towel." "The pen and ink, and a sheet o' paper and a wafer," is no unusual request; and when the pen is returned, you are generally informed that you sent "an awful bad pen."—*Mrs Clavers's Western Life in America.*

NUMBER 426. SATURDAY, MARCH 28, 1840. PRICE THREE HALFPENCE.

THE DEFENSIVE.

DID it ever occur to any of our readers to consider how much of the labour, wealth, and possibilities of enjoyment, of the social world, is expended and sacrificed merely for the sake of defence against evils which do not necessarily exist? A middle-aged Englishman walks into the dockyards at Portsmouth, with his wife on one arm and his daughter on the other, and talks with pride, right and left, of the vast naval power of his native country. We suspect he does not reflect that all this mighty mechanism, and all these tremendous munitions, exist on account of absolute mischiefs to which it is distressing to think that we are exposed, namely, rapacity, self-love, and pure unreasonableness on the part of other nations—we, of course, being always rational and innocent belligerents. The Third Dragoons arrive in Leeds, there to take up their quarters for the winter; and all the ladies immediately begin to think what delightful balls they shall have, and for some time nothing is talked of but what a handsome set of officers, what an elegant man is Captain Goring, what a nice young fellow Cornet Jackson, and how extremely pretty the jackets are, and how beautiful the horses! Even the poor populace, one of whose foibles is a liking for the army, look with admiration on the gay and clanging march of the troops, and, as they parade along the streets, follow reverently and delightedly in their train, almost supposing that they are themselves a part of the corps. The ladies and the populace never once consider for a moment that Captain Goring and Cornet Jackson, and all the rest, even to the cymbals and kettledrums, exist for the purpose of defending the one party against some possible lawlessness in the other, and that there would be no balls and no gay parades, if it were not that those very poor fellows who follow the regiment so lovingly, are apt occasionally to become a little troublesome. It is equally worthy of remark, that, when a gentleman takes a stranger or country cousin to see the sights of the city in which he dwells, he is quite as likely to speak with pride of the County Jail, if it is a new and handsome one, as of the Royal Exchange or the last new club-house, never once considering that this large and superb edifice is a thing which only exists because the district or city is pestered with criminals, against whom it is necessary that society should be defended. So complete is this delusion, that, when a gentleman was not long ago showing a large prison to another who was connected with a distant county, the latter remarking that it seemed to him small, and having inquired how many offenders were generally brought forward there at a sessions, to which the answer was "generally about twenty," "Oh," said the stranger with an air of contempt, "that is a small affair indeed: we in S——shire have never less than two hundred!" Ordinary observers see only the fine ships, the well-dressed, well-drilled corps, the huge castellated building. They would require to look beneath the surface, to become aware that these things are only a subtraction from the productive industry of the country, and that Captain Goring and his friend the Cornet might have been left at liberty to act in some capacity which would have increased the general store, and the money expended on the ships and prisons been reserved for some really useful end, were it not for the irregular impulses which govern the human breast, and against which defensive measures are necessary.

It is quite humiliating, indeed, to think how many of the greatest things in the world exist only through this same necessity. What is the medical profession (meaning the men) but a great defensive band against the evils we bring on ourselves by breaches of nature's laws! What is the use of lawyers but to defend us against each other? The administration of public affairs is in great part only defensive. One-half the things which men toast with enthusiasm after public dinners, are only guards against the evils which beset them. How broad a feature is the defensive in ordinary domestic matters! Not a fair park, or goodly forest, is to be seen throughout the country, but what is surrounded by lofty walls, necessary for defending it. Not even a field, or paddock, not so much as a cottage garden, is without its angry hedge or surly wall, to protect it from dreaded aggression. Locks, bars, shutters, stancheons, how universal are they in our civilised land, showing that every where it is vain to have any thing without taking the means of defending it! Tailors arrange and fashion pockets with a view to defend their contents, and even breast-pins are thought now-a-days to be the better for having a little anchor and chain cable to make sure that rogues shall not furtively take possession of them.

Painfully conspicuous as are all these symptoms of the defensive, they are more endurable than those moral habits in which the same guardedness is called into force. In social existence, the necessity of defensive measures affects us to an immense extent, and human happiness is greatly diminished by it. When a few people are thrown together casually in travelling, they dare not converse freely with each other. They do not know each other, and though there may be a likelihood that all are respectable, still they cannot be sure, and therefore it is necessary to act on the defensive. Supposing one or two do break the ice, and find each other agreeable, they cannot encourage intimacy, for each fears the other may prove to be a person whom it would not be creditable to acknowledge as a friend. One may remit the defensive as far as chat for the hour is concerned, but not for a moment's intercourse after the conclusion of the journey. The fears which operate thus are of various kinds. The person of a certain grade in society fears he may be drawn into a disagreeable acquaintance with an inferior. The honest citizen is apprehensive that his pleasant neighbour may prove to be a rogue, whom the police are waiting for at the next stage. A mamma and her daughter dread giving the slightest encouragement to Mr Unsuitable. Every one has his or her peculiar bugbear, whom he or she fears this individual may prove to be. In fact, all mankind are Improper Persons to some of their fellow-creatures, however different may be the kinds and degrees of impropriety, and however excellent each may be in many respects. The unavoidable result is, that a remark from one's neighbour as to the fineness of the morning, or the pleasantness of the villas seen on the banks of the canal, or the wonderful swiftness of locomotive carriages, becomes an excessively alarming thing. The proposition may be assented to, but with a "humph!" or a toss of the head, or a chilling look, so as to make it clear that the assent is strictly limited *to* the proposition, and does not by any means signify that one thinks the proposer entitled to take one's arm in walking into the next town. The necessity for this reserve may be undoubted; but it is surely much to be lamented, for travelling would be generally more cheerful if the travellers could allow themselves to follow the dictates of their nature in associating harmoniously together, and being all "hail, brother, well met!"

A free-born Englishman is apt to be astonished at the military police of France, and the system of passports which prevails there and in other parts of the continent, arguing a necessity for the defensive such as it gives him pain even to think of. But let him look to the customs of his own country, and consider what would be the condition of a man who should take up his residence in a British city without any letters of introduction. Would such a man find a single human being to whom he could open his mouth? Would the gentler sex's gentlest specimen once for a moment allow herself to look at him? Would he obtain admission to a single house, besides the inns, or would he be allowed to attend a single ball? No: such a man would find himself a complete Pariah. Truly Byron's idea as to the solitude to be experienced in cities, would be realised in his case. And all this is because there are so many knaves and pretenders of all kinds in England, that the true gentleman requires to be attested by competent judges and witnesses: it is, in short, part of the defensive system which swindling and imposture render necessary among honest people. Benevolence laments the necessity, and we can readily see that, if the case were otherwise, the honest part of the world would both look more amiable and be more happy. But, nevertheless, the necessity is undoubted. Sometimes kind-natured persons are found to dispense with the usual certificates; but it often happens that they have occasion to regret their simplicity.

Even in society where all have been so far recommended to each other, it is still found necessary to act a good deal on the defensive. Many persons, quite respectable in station and general conduct, are of notedly disagreeable manners or unpleasant temper: these it is necessary to keep at a distance. Some are heedlessly familiar, and wanting in deference and respect where it is due: these it is desirable to chill. Some are recklessly extravagant in their style of life, and indulge in a great deal of not very select company: the advances of such persons it may be deemed prudent to check. A lady may think her circle of friends already as large as she ought to have, and she must therefore forbid herself to encourage the approaches of new acquaintance. For a thousand various and not easily described reasons, every person almost every day finds it necessary to act on the defensive against his fellow-creatures, not from any disrespect to them, possibly, but simply from a regard which he feels himself at liberty to entertain for his own tastes, likings, and convenience. Still the fact helps to show to what a vast extent this principle operates in the social world, and how vain, in the mean time, are all those sentimental preachments which enjoin men (without taking other things into view) to love each other as brothers.

Admitting the existence of this principle, and its results in detracting from human happiness, we are not bound to suppose that there is any particular amount of the defensive which must necessarily exist in the mass of the world, or be practised by individuals. The amount of the defensive called for must be in proportion to the evils which give occasion for it. The wooden walls of Old England, the Third Dragoon Guards, the castellated county jails, are they to be needed for ever? Let this question be answered by what remains of Raby and Conway Castles, by Lochmaben and Dunnottar, and all the other "towers along the steep" now no longer in strength. Once these fortresses were needed by our nobles and county gentlemen as a means of defending themselves from each other; but now a locked door in an ordinary house serves all the purpose. So may the time arrive when the bristling of a Russian fleet in the Black Sea will not set hammers a-going at Portsmouth; when the swart artisans of Sheffield and Birmingham will be on so right a footing that Captain Goring's occupation will be gone; and when the amount of irregular and untrained impulse in the country will be so small, that the jail, in place of being the biggest building in all our towns, will become the smallest. The prospect of such improvement may be considered visionary;

Digitized by Google

but so would it have been held visionary in the sixteenth century, if any one residing on the border had suggested that the time might come when gentlemen would not live in towers surrounded by barmkin walls. It is scarcely necessary to remark, that doing away with the defensive on these great points must leave a vast amount of capital and labour free to be expended on objects producing a return of useful commodities to human beings, not to speak of the lessening of positive misery and pain to mortals which must follow from the same cause. Shall we ever be able to dispense in like manner with the defensive measures which are at present generally deemed requisite against imposture, aggression, injury, and unpleasant communications? For analogous reasons, we would be hopeful on this point also. People going home at night through the streets of London are not now in danger of being assaulted by the gentlemen styled Mohocks. Here the defensive has been remitted on a great point. May it not also be remitted on other points, when the causes for it shall in like manner have become obsolete, and out of date? To make these causes obsolete, is an object in which every generous nature, we should think, must be interested, for to such natures the defensive must always be disagreeable, if not indeed on many occasions positively impracticable. Let the prospect of getting quit of this harassing necessity serve, we would say, as a stimulus to every philanthropic mind, to exert itself for the improvement of human character.

POLYTECHNIC SCHOOL OF PARIS.

In the modern historical records of France, and especially in the accounts of the revolutionary changes that have recently taken place there, mention is frequently made of the Polytechnic School of Paris, and of its élèves, or students; and many ordinary readers may have been surprised at the important part which these scholars are said to have played, on many occasions, on the stage of public affairs. But the truth is, that this school and its pupils are of a very uncommon order, and must not be judged of by a comparison with our own academies for the young. The object of the Polytechnic School of Paris is to furnish a continual supply of men capable of directing all the civil and military undertakings of the nation for the management of which *science* is necessary. The institution had its origin in the stormy times of the first revolution. Monge, one of the best mathematicians of his age, was the original proposer of it, and in 1794 he succeeded in getting his views carried into effect, with the aid of Lamblardie, then Director of Roads and Bridges, of Carnot, and of Fourcroy. To the establishment the name of the "Central School of Public Works" was originally given, and it was opened on the 30th of November 1794, under the directorship of Lamblardie.

When the great names of Lagrange, Laplace, Monge, Berthollet, Fourcroy, Chaptal, Guyton de Morveau, Vauquelin, Fourier, and Prouy, are mentioned as those of the original or early professors, it will be admitted, that as regarded the matter of teaching, this new school commenced with the most brilliant prospects. Three hundred and forty-nine students were in the first instance enrolled, and these were of all ages, from twelve to twenty-five years, though the majority ranged between sixteen and eighteen. The plan of choosing them was as follows. In each of the twenty-two largest towns of France, an examinator was named, whose duty it was to examine and decide on the qualifications of the young candidates. These qualifications, generally speaking, were previous good conduct, and a pretty extensive knowledge of the elements of arithmetic, algebra, and geometry. The government gave to the students, thus selected, a salary considered sufficient for the supply of their ordinary wants, and they were lodged or boarded with families selected for the purpose among the residents of the city of Paris. No fees, of course, were exacted, the whole being at the public expense.

The course of instruction established had chiefly in view the training of the pupils to every species of engineering, civil and military. "In mathematics the students were supposed to know already the elements of geometry and algebra. Their attention was therefore turned immediately to *analysis* and *descriptive geometry*. The former was principally confined to the elements, first, of geometry of three dimensions; second, mechanics and hydrostatics; third, the effects of machinery. The latter was applied to the arts of design, architecture, and fortification." These three last branches of instruction included "the cutting and arrangement of stone and wood in building, the projection of shadows, perspective both with regard to the apparent form and tints of objects, the formation of maps and plans, and the operations of surveying, and also the drawing of machinery simple and compound; the construction of roads, bridges, canals, and ports, the plans of mining operations, and the ordinary processes of building; while in fortification the general principles of the method were to be taught, in addition to the construction of works and the operations of attack and defence."* In physics, the course was divided into what are called general physics, and chemistry with its application to all the useful arts. Oral lectures, and practical demonstrations, engaged alternately the attention of the students, and occupied about twelve hours of their time each day. "Chefs de brigade," or monitors, were selected from the more advanced pupils, and placed each over a division of the school, in order to guide and privately instruct those under their charge.

Such was the original plan of this Parisian School, on which the title of Polytechnic was bestowed in the second year of its existence. The establishment had to struggle with many difficulties in its infancy. The students were not exempted from serving in the ranks of the national guard, and in this character they were called out in 1795 to protect the government against the factions by which it was then menaced. Great confusion was thus introduced into the establishment, and, what was worse, the spirit and boldness evinced by the students rendered them an object of dread to the parties then in power. The latter complained of the expense attending the maintenance of the school, curtailed the range of instruction in various ways, and in fact endeavoured to crush it altogether. But the enthusiasm and energy of the professors, who, as a council, headed by a president, governed the institution, had the effect of counteracting the jealous hostility of the Directory. When Bonaparte came into power, the Polytechnic School rose into a much more advantageous position, though not until its enemies had succeeded in procuring the expulsion of four pupils, on a charge of *incivism*. After his Italian campaigns, Bonaparte visited the school frequently in person, and listened to the instructions delivered. When he went to Egypt, he took with him thirty-nine of the more distinguished students, and of these, seventeen were made members of his celebrated Egyptian Commission. This attention, on the part of a man so influential, drew the general favour of the public upon the Polytechnic School; and its pupils, besides, were beginning to exhibit such occasional proofs of talent as confirmed the impression. One young lad, for example, of the age of eighteen, gave in a paper to Lagrange, containing some suggested improvements on the profoundest parts of that great mathematician's works, which suggestions he avowed his intention to adopt. The young man was Poisson, now one of the first of living analysts. This and other similar circumstances became readily known to the public, and indeed to all Europe, by means of the Polytechnic Journal, a periodical instituted nearly at the commencement of the school, and continued through succeeding years. It described the progressive operations of the establishment, and proved altogether a valuable record of scientific knowledge.

As Napoleon's ambition widened in its circuit, and his war-system grew more and more gigantic, the Polytechnic School supplied his armies with engineers and artillery officers of the ablest description. Not only was this the case, but he also, in the most unjustifiable manner, included the students within the range of his terrible conscription, and ninety of them were pressed as private soldiers. Notwithstanding, the emperor was so deeply sensible of the value of the school as a nursery of practical science, that in 1805 he made important changes on its constitution, with the view of increasing its future efficiency. He decreed that the students should all live together, and gave them the College of Navarre for a school and dwelling. He decreed that each student should pay a certain yearly sum towards his maintenance, with the exception of a few bursars. Finally, he established in the school a strict military discipline, and gave it the character nearly of a fortress. Having thus rendered the institution as well fitted as possible for the advancement of his own system, he drew from it all the talent which it developed, for the supply of the engineering department of his armies. So certain, indeed, was the display of talent to bring a commission upon its owner, that all who did not choose a military life were obliged to conceal their knowledge. When France was threatened, however, by the allies, no Polytechnic student showed an aversion to war. They made an offer to Napoleon to fight in a body in his ranks. He declined their offer at the time, saying, "I am not so far reduced as to kill the hen that lays me golden eggs;" but he afterwards consented to their enrolment as a corps of artillery, and the little band behaved with distinguished gallantry in the battle fought under the walls of Paris in 1814. On a former occasion, also, when Bonaparte projected the invasion of Britain, the students had besought permission to take a share in the "great action," and offered to construct a gun-boat with their own hands, and at their own expense. The offer was accepted, and immediately, says a French writer, "the school became a workshop, the library was filled with models, and other places with blacksmiths and sail-makers." The boat was soon made, and actually launched under the command of a student of the establishment. It never was put to its original purpose; but its history is interesting as exhibiting the practical character of the training to which its builders had been subjected.

There is another feature in the progressive career or annals of this school which ought not to be overlooked. This was the publication of successive treatises, of an admirable kind, by its various professors, and, in some instances, by its pupils. In one or other, or both, of these characters, Biot, Arago, Poisson, Gay-Lussac, Petit, Haüy, Lacroix, and many other philosophers of European celebrity, became connected with the school, and furthered its interests by their teaching and their writings. A treatise on physics by Haüy, one on mechanics by Poisson, one on chemistry by Thenard and Fourcroy, and one on the theory of functions by Lagrange, may be mentioned merely as specimens of the able works which were produced originally for the use of the Polytechnic School, though the world saw their value too clearly to permit their usefulness to rest there. Pursuing the history of the school after the fall of Bonaparte, we find that it was an object of deep dislike to the restored Bourbons. It is curious enough, that the Directory accused the students of incivism or aristocratic tendencies; that Bonaparte charged them with republicanism; and that the Bourbons blamed them for imperialism. M. Lisdieres, who was a pupil of the school, and who gives a sketch of its history in the Book of the Hundred and One, declares that these various charges all originated in the fact that the Polytechnic students hated and opposed despotism in all its forms, whether directorial, imperial, or regal. However this may be, it is certain that the Bourbons attempted to extinguish the establishment. Taking advantage, in April 1816, of a riotous demonstration on the part of the pupils, Louis XVIII. dissolved the school by a royal ordonnance. But he found it necessary, or at least prudent, to re-establish it in September of the same year. The military features of the institution, however, were then abolished, and remained so till 1822, when it was held proper, for the sake of restoring more perfect discipline, to revert to the garrison-like organisation of Napoleon. In the same state it has remained up to this hour, with unimportant changes. The war-minister has the ostensible direction of the whole. A governor and a sub-governor are the actual managing superiors, and under them are *chefs des études* and *chefs de brigade*, these being perfected and advanced pupils, who take charge of the rest by divisions. The pupils are still selected by district examinations, which are more strict than formerly. Each pupil pays forty pounds sterling a-year, and remains usually two years in the school, but never more than three. There are twenty-four royal bursaries for poorer candidates. All wear a uniform, and, as has been said, are kept under the usual forms of military discipline.

Selected from the ablest youth of France, listening to the ablest lecturers, aided in their progress by the best books, and having their attention seldom distracted from their studies by extraneous causes, the students of the Polytechnic School are distinguished for the proficiency which they attain. It may be interesting to point out the proportions in which the various branches of science are brought under their notice by the professors. In 1830, according to a paper in the Educational Journal already alluded to, the number of hours devoted to each department of science, in the first and second year's courses, stood as follows:—

FIRST YEAR.	Hours.
Mathematical Analysis,	52
Geometry,	15
Statics,	34
Dynamics,	18
Descriptive Geometry and Applications,	108
Analysis applied to Geometry,	94
Physics,	51
Chemistry,	54
History, Belles Lettres, &c.	34

SECOND YEAR.	Hours.
Mathematical Analysis,	65
Geometry,	15
Mechanics,	75
Geodesy,	28
Machines,	22
Political Arithmetic,	6
Physics,	42
Chemistry,	54
Architecture,	51
History, Belles Lettres, &c.	34

These are merely the hours, it is to be observed, in which the lecturers are actually engaged in communicating information. The student is allowed a portion of time after each lecture for meditation or application, and in this he is assisted by others if he requires it; so that the students are perpetually occupied, and have all the *tutorial* advantages which the best universities afford. It is a wise regulation, that a considerable portion of the allotted amount of study, and the degree of application, should be voluntary, or at the option, to a certain extent, of each individual.

We have now given a pretty comprehensive view of the plan and character of the Polytechnic School of Paris. It is an institution of great value in the eyes of the nation, and justly so, seeing that it represents, in a very perfect degree, the rising talent and spirit of the country. As regards their public appear-

assess on the political stage, it must be admitted that the Polytechnic students, when called from their own more appropriate sphere by the exigencies of the time, have ever taken the side of freedom. They were important agents in effecting the last revolution, and fought with distinguished gallantry for the popular cause.

MATTHEWS THE MADMAN AND IMPOSTOR.

A FEW years ago, a considerable sensation was created in the state of New York, by the mad and grotesque pranks of a personage who presumptuously laid claim to the divine character, and had the address to impose himself as a superior being upon some of the most respectable members of society. As no account, as far as we are aware, has ever been published in Britain of this remarkable affair, notwithstanding the interest which it excited in America, we propose to introduce a notice of it to our readers.

Robert Matthews was a native of Washington county, in the state of New York, and of Scotch extraction. At an early age he was left an orphan, and was brought up in the family of a respectable farmer in the town of Cambridge, where in his boyhood he received the religious instruction of the clergyman belonging to the Antiburgher branch of Seceders. At about twenty years of age he came to the city of New York, and worked at the business of a carpenter and house-joiner, which he had partially learned in the country. Possessing a genius for mechanical pursuits, and being of active habits, he was an excellent workman, and was in constant and lucrative employment. In 1813, he married a respectable young woman, and removed to Cambridge for the purpose of pursuing the business of a store-keeper; but the undertaking, after a trial of three years, failed; he became bankrupt, involving his father-in-law in his ruin; and in 1816 he returned once more to New York, where for a number of years he wrought at his old profession of a house-carpenter. Being at length dissatisfied with his condition, he removed in 1827 to what he thought a better field for his talent, in Albany. While settled in this city, a remarkable change took place in his feelings. Hitherto he had belonged to the Scotch church; but now, disliking that communion, he attached himself to the Dutch Reformed congregation, and, there gathering fresh ardour, at length surrendered his whole mind to spiritual affairs. While in this condition, he went to hear a young and fervent orator, the Rev. Mr Kirk, from New York, preach, and returned home in such a frenzy of enthusiasm as to sit up the greater part of the night, repeating, expounding, and commending passages from the sermon. From this period his conduct was that of a half-crazy man. He joined the temperance society, but went far beyond the usual rules of such associations, contending that the use of meats should be excluded, as well as of intoxicating liquors; proceeding on this notion, he enforced a rigid system of dietetics in his household, obliging his wife and children to subsist only on bread, fruits, and vegetables.

During the year 1829, his conduct became more and more wild and unregulated. His employment was still that of a journeyman house-joiner; but instead of minding his work, he fell into the practice of exhorting the workmen during the hours of labour, and of expounding the Scriptures to them in a novel and enthusiastic manner, until at length he became so boisterous, that his employer, a very pious man, was obliged to discharge him from his service. He claimed at this time to have received by revelation some new light upon the subject of experimental religion, but did not as yet lay claim to any supernatural character. Discharged from regular employment, he had abundant leisure for street-preaching, which he commenced in a vociferous manner—exhorting every one he met upon the subject of temperance and religion, and holding forth to crowds at the corners of the streets. Having made a convert of one of his late fellow-workmen, he procured a large white flag, on which was inscribed "Rally round the Standard of Truth;" this they raised on a pole, and bore through the streets every morning, haranguing the multitudes whom their strange appearance and demeanour attracted around them. A young student of divinity, catching the infection, as it seemed, united himself with Matthews, and assisted in the preachings in the public thoroughfares. Matthews, however, was a remarkably bad preacher, and made little or no impression on his auditors. His addresses were incoherent, consisting of disjointed sentences, sometimes grand or bombastic, and at other times low and ridiculous, but always uttered at the highest pitch of the voice, and designed both in matter and manner to terrify and startle his hearers. The favourite doctrine which he attempted to enforce, was, that Albany would be immediately destroyed, unless the people were converted; and he harped so wildly on this theme, that in a short time he became utterly distraught. All the efforts of his poor wife to restrain him in his mania were unavailing. One night he aroused his family from their slumbers, declared that the city would be destroyed before morning, and fled from his home, taking with him three of his sons, the youngest an infant of only two years. With these he travelled maniacally on foot for twenty-four hours, till he reached the house of his sister in the town of Argyle, a distance of forty miles.

The religious wanderings of Matthews the prophet, as he was called, may now be said to have commenced. With a bible in his hand, and his face garnished with a long beard, which he had for some time been suffering to grow in obedience to a scriptural command, he wandered about, collecting crowds to listen to his ravings, and frequently disturbed the peace of regular meetings in the churches. Finding that he made no impression in the old settled part of the country, he set out on a missionary tour through the western states, penetrating the deepest forests, crossing the prairies, and never stopping till he had proclaimed his mission amid the wilds of the Arkansas. Thence he turned his steps to the south-east, recrossed the Mississippi, traversed Tennessee, and arrived in Georgia with the view of preaching to the Indians; but here he was seized by the authorities, and placed in confinement as a disturber of the public peace. Ultimately he was dismissed, and permitted to return towards his old haunts in New York and its neighbourhood, where he arrived in a somewhat new character. It would appear that till about this period Matthews was simply in a state of mental derangement, and, like all madmen in similar circumstances, was perfectly sincere in his belief. The small degree of success on his journey, his imprisonment in Georgia, and his utter poverty, may be advanced as a cause for an alteration in his conduct. He now lost a portion of his frenzy, and in proportion as he cooled in this respect, the idea of imposture seems to have assumed a place in his mind. There is at least no other rational mode of explaining his very singular behaviour. In the capacity, therefore, of half madman half knave, Mr Matthews may be viewed as entering on his career in New York, in the month of May 1832.

In ordinary times and circumstances, the intrusion of such a madman into a quiet mercantile city would lead to no other result than the committal of the intruder to the house of correction or a lunatic asylum; but at the period of Matthews's appearance in New York, a pretty large portion of the public mind was prepared for any kind of extravagance in religion, and therefore the declaration of his mission was looked upon only as another act in the drama which had for some time been performing. About the year 1822, a few ladies became dissatisfied with the existing means of religious instruction in the city, and set on foot the bold project of converting the whole population by a system of female visitation; in the execution of which, every house and family was to be visited by committees of two, who were to enter houses indiscriminately, and pray for the conversion of the inmates whether they would hear or not. This scheme created no little noise at the time, but, like all frenzies, it only lasted its day, and was succeeded by other schemes, perhaps equally well-meaning but equally visionary. Among the class of perfectionists, as they were termed, there were doubtless many estimable persons, and none more so than Mr Elijah Pierson and his wife. Mr Pierson was a merchant by profession, and by a course of industry and regularity in all his undertakings, was now in opulent circumstances. Until the late religious frenzy agitated the city, he had been noted for his intelligence and unaffected piety, and not less so was his lady. In a short period his devotional feelings underwent a remarkable change. In 1828, after passing through a state of preliminary excitement, he became afflicted with monomania on the subject of religion, while upon all matters of business, as far as they could be disconnected from that on which he was decidedly crazed, his intellectual powers and faculties were as active and acute as ever. During his continuance in this state of hallucination, in the year 1830, his wife died of a pulmonary affection, which had been greatly aggravated by long fasting and other bodily severities. This event only served to confirm Mr Pierson in his monomania. He considered that it would afford an opportunity for the working of a miracle through the efficacy of faith. By a gross misinterpretation of Scripture (Epistle of James, v. 14, 15), he believed that his wife should be "raised up" from death while lying in her coffin, and accordingly collected a crowd of persons, some of whom were equally deluded with himself, to see the wonder performed in their presence. The account of this melancholy exhibition, which is lying before us, is too long and too painful for quotation; and it will suffice to state, that notwithstanding the most solemn appeals to the Almighty from the bereaved husband, the corpse remained still and lifeless; and by the remonstrances of a medical attendant, who declared that decomposition was making rapid and dangerous progress, the body was finally consigned to the tomb.

Such was the hallucination of Mr Pierson, which many pitied, and some were found to approve. Among the latter was Mr S——, also a merchant in good circumstances, but who had latterly become a victim to the religious excitement which prevailed, and, like Mr Pierson, often subjected himself to fasts for a week at a time, greatly to the injury of his health, and the confirmation of his mania. Both gentlemen being thus in a state of mind to look for extraordinary events, a stranger presented himself before them on the 5th of May 1832. He had the beard of a patriarch, a tall form, and his language was of a high-flown cast on religious topics, which at once engaged their attention and sympathy. This imposing stranger was no other than Robert Matthews. The pretensions which he made were of a nature which we can scarcely trust ourselves even to hint at. That the tale may be told with as little pain to our readers as possible, let it suffice to say that the *very highest imaginable character* was assumed by this unhappy man, and that the pretension was supported merely by the perversion and misinterpretation of one or two passages of scripture. The character which he assumed he pretended to be in the meantime incorporated with the resuscitated person of the Matthias mentioned in the New Testament; and he accordingly was not now any longer Matthews, but Matthias. He had the power, he said, to do all things, not excepting those which most peculiarly belong to the divine nature. Mr Pierson and his friend believed all that he set forth of himself, then and subsequently, no matter how extravagant or blasphemous; and he in turn recognised them as the first members of the true church, whom, after two years' search, he had been able certainly to identify. He announced to them, that, although the kingdom of God on earth began with his public declaration in Albany in June 1830, it would not be completed until twenty-one years from that date, in 1851; previous to which time wars would be done away, the judgments finished, and the wicked destroyed. As Mr Pierson's Christian name was Elijah, this afforded Matthews the opportunity of declaring that he was a revivification of Elijah the Tishbite, who should go before him in the spirit and power of Elias; and as Elias, as every body knows, was only another name for John the Baptist, it was assumed that Elijah Pierson was the actual John the Baptist come once more on earth, and by this title he was henceforth called.

Mr Pierson very soon relinquished preaching, as did Mr S——, and the work of the ministry devolved entirely on Matthews, who, jealous of his dignity, would bear no rivals near the throne. The prophet was now invited to take up his residence at the elegantly furnished house of Mr S——, and acceding to the invitation, he remained there three months. The best apartments were allotted to his use, and the whole establishment was submitted to his control. It was not long before he arrogated to himself divine honours, and his entertainer washed his feet in token of his humility. The female relations of the family were sent away by the impostor, and he allowed no one to reside there but the black domestics who were of the true faith. From fasting, he taught his disciples to change their system to feasting; and having their houses at his command, and their purses at his service—loving the good things of this world, and taking all the direction in procuring supplies—he caused them to fare sumptuously every day. But this splendid style of living was not enough. The prophet was vain of his personal appearance, and proud of wearing rich clothes. It was now necessary that he should be arrayed in garments befitting his character, and the dignity of his mission. His liberal entertainer, therefore, at his suggestion, furnished him with an ample wardrobe of the richest clothes and finest linens. His favourite costume consisted of a black cap of japanned leather, in shape like an inverted cone, with a shade; a frock-coat of fine green cloth, lined with white or pink satin; a vest, commonly of richly-figured silk; frills of fine lace or cambric at the wrists; a sash around his waist of crimson silk, to which were suspended twelve gold tassels, emblematical of the twelve tribes of Israel; green or black pantaloons, over which were worn a pair of well-polished Wellington boots. Add to this, hair hanging over his shoulders, and a long beard, flowing in ringlets on his breast, and we may have an idea of him in his public costume. In private he disused the black leather cap, and sometimes appeared in a nightcap of the finest linen, decorated with twelve points or turrets, and magnificently embroidered in gold by his female votaries. He usually preached in a suit of elegant canonicals.

Lodged, fed, and decorated in this sumptuous manner, Matthews spent his time so agreeably that he became less anxious to make public appearances. His preaching was confined to select parties of fifty or sixty individuals, composing, as he styled it, "the kingdom," and by these he was held in the most reverential esteem. Occasionally, strangers were invited to attend his ministrations, but this was only as a great favour; and at all meetings he made it a rule to allow no one to speak but himself. He declared his rooted antipathy to arguing or discussion. If any one attempted to question him on the subject of his mission or character, he broke into a towering passion, and said that he came not to be questioned, but to preach. Among other of his vagaries, he declared that he had received in a vision an architectural plan for the New Jerusalem, which he was commissioned to build, and which for magnificence and beauty, extent and grandeur, would excel all that was known of Greece or Rome. The site of this great capital of the kingdom was to be in the western part of New York. The bed of the ocean was to yield up its long-concealed treasures for its use. All the vessels, tools, and implements of the New Jerusalem, were to be of massive silver and pure gold. In the midst of the city was to stand an immense temple, to be surrounded with smaller ones: in the greater temple he was to be enthroned, and Mr Pierson and Mr S—— were each to occupy a lesser throne on his right hand and on his left. Before him was to be placed a massive candlestick with seven branches, all of pure gold.

Any man in his senses must have perceived that this was the vision of a madman, but by his humble

Digitized by Google

votaries it was considered a sure prediction of what would speedily come to pass. As long as it was confined to mere harangues, the public were not called on to interfere; the case, however, was very different when Mr S——, in obedience to the injunctions of the prophet, commenced ordering expensive ornaments for the proposed temple from a goldsmith in the city. Matters were now going too far for S——'s friends to remain any longer calm spectators of his folly, and both he and Matthews were taken up on a warrant of lunacy, and consigned to an asylum for the insane. Poor S—— was too confirmed in his madness to be speedily cured, and therefore remained long in confinement; but Matthews had the address to appear perfectly sane when judicially examined, and was relieved by a writ of habeas corpus procured by one of his friends.

Upon his release from the asylum, he was invited to take up his residence with Mr Pierson, but that gentleman shortly afterwards broke up his establishment, though he still rented a house for Matthews and one or two attendants, supplying him at the same time with the means of living. In the autumn of 1833, he was, on the solicitations of Mr Pierson, invited to reside at Singsing, in Westchester county, about thirty miles from town, with a Mr and Mrs Folger, two respectable persons, whose minds had become a little crazed with the prevailing mania, but who as yet were not fully acquainted with the character of the prophet. Mr Pierson afterwards became a resident in the family, and thus things went on very much in the old comfortable way. Only one thing disturbed the tranquillity of the establishment. Mrs Folger, who had a number of children, and was of an orderly turn of mind respecting household affairs, felt exceedingly uneasy, in consequence of certain irregular habits and tendencies in the prophet, who set himself above all domestic discipline. The great evil which she complained of was, that he always took the meal time to preach, and generally preached so long that it was very difficult to find sufficient time to get through the duties of the day. He often detained the breakfast table so long, that it was almost time for dinner before the meal was over; in the same manner he ran dinner almost into supper, and supper was seldom over before midnight—all which was very vexing to a person like Mrs Folger, who was accustomed to regularity at meals, and could not well see why the exercises of religion should supersede the ordinary current of practical duties.

The infatuation of both Pierson and Folger in submitting to the tyranny and pampering the vanity of Matthews, was demonstrated at this period in many acts of weakness which astonished the more sober part of the community. The impostor was furnished with a carriage and horses to convey him to and from New York or any other place in which he chose to exhibit himself. Money to a considerable amount was given him on various pretences; and to crown the absurdity, an heritable property was conveyed to him for his permanent support. An allowance of two dollars a-day was further made to his wife in Albany; and several of his children, including a married daughter, Mrs Laisdel, were brought to reside with him in Mr Folger's establishment. After a short time, however, Mrs Laisdel was under the necessity of returning home, in consequence of her father's violent treatment.

This very agreeable state of affairs was too pleasant to last. Mr Folger's business concerns became embarrassed, and he was obliged to spend the greater part of his time in New York. The entire government of the household now devolved on Matthews; and he, along with Katy, a black female cook, who was a submissive tool in all his projects, ruled the unfortunate Pierson, Mrs Folger, and the children, with the rod of an oppressor. Certain meats were forbidden to appear at table; the use of confectionary or pastry was denounced as a heinous sin; and the principal food allowed was bread, vegetables, and coffee. What with mental excitement and physical deprivations, Mr Pierson's health began to decline; he became liable to fainting and apoplectic fits; but no medical man was permitted to visit him, and he was placed altogether at the mercy of the impostor. At this crisis Matthews showed his utter incapacity for supporting the character he had assumed. Instead of alleviating the condition of his friend, he embraced every opportunity of abusing him, so as to leave little doubt that he was anxious to put him out of the way. One of his mad doctrines was, that all bodily ailments were caused by a devil; that there was a fever devil, a toothache devil, a fainting-fit devil, and so on with every other malady; and that the operations of such a fiend were in each case caused by unbelief or a relaxation of faith in Matthews's divine character. The illness of Pierson was therefore considered equivalent to an act of unbelief, and worthy of the severest displeasure. On pretence of expelling the sick spirit, he induced his friend to eat plentifully of certain mysteriously prepared dishes of borries, which caused vomiting to a serious extent, and had a similar though less powerful effect on others who partook of them. The children also complained that the coffee which was served for breakfast made them sick. On none of these occasions did Matthews taste of the food set before Mr Pierson or the family; and from the account of the circumstances, there can be no doubt of his having, either from knavery or madness, endeavoured to poison the family, or at least to destroy the life of his deluded patron. Besides causing Mr Pierson to swallow such trash as he offered him, he compelled him to receive the contents of a pitcher of water poured into his mouth from a height of four or five feet. This horrid operation, in which Katy the black servant assisted, brought on strong spasmodic fits, in which the sufferer uttered such dismal groans and sighs as shocked Mrs Folger, and might have induced her to discredit the pretensions of the impostor, and to appeal to a magistrate for protection; but excellent as was this lady's general character, she possessed no firmness to decide in so important a matter, and her sympathy was dissolved in a flood of useless tears.

The water-torture, as it may be called, hastened the fate of the unhappy gentleman, and he was shortly afterwards found dead in his bed. The intelligence of Mr Pierson's death immediately brought Mr Folger from New York, to inquire into the cause of the event, and to superintend the arrangements for the funeral. The representations of the case made by Mrs Folger did not suggest the possibility of Matthews having used any unfair means towards Mr Pierson, but that his death was in some way caused by him through supernatural power. Matthews, indeed, boasted that he could kill any one who doubted his divine character, by a mere expression of his will. Singular as it may seem, this madness or villany did not yet release Folger from the impression that Matthews was a divine being; and fearing his assumed power, he had not the resolution to order his departure. In a few days, however, all ceremony on the subject was at an end. An action having been raised by Pierson's heirs to recover the property which the impostor had obtained on false pretences, Matthews refused to resign it, and attempted to justify his conduct to Folger by reasons so completely opposed to the principles of common honesty, that that gentleman's belief at once gave way, and he ordered him to quit the house. This abrupt announcement was received with anything but complacency. The prophet preached, stormed, and threatened; tears likewise were tried—but all was unavailing. Folger respectfully but firmly told him that circumstances required a retrenchment of his expenditure, and that he must seek for a new habitation. Matthews, in short, was turned out of doors.

He was again thrown upon the world, though not in an utterly penniless condition. The right which he held to Pierson's property was in the course of being wrested from him, but he possessed a considerable sum which he had gathered from Folger and a few other disciples, and on this he commenced living until some new and wealthy dupe, as he expected, should countenance his pretensions, and afford him the means of a comfortable subsistence. This expectation was not realised in time to save him from public exposure and shame. Folger, having pondered on a variety of circumstances, felt convinced that he had been the victim of a designing impostor, that Pierson's death had been caused by foul means, and that the lives of his own family had been exposed to a similar danger. On these suspicions he caused Matthews to be apprehended, for the purpose, in the first place, of being tried on a charge of swindling. On the 16th of October 1834, this remarkable case came on for trial before the Court of Sessions in New York, on an indictment setting forth that Matthews was guilty of "devising by unlawful means to obtain possession of money, goods, chattels, and effects of divers good people of the state of New York; and that the said B. H. Folger, believing his representations, gave the said Matthias one hundred pieces of gold coin, of the value of five hundred and thirty dollars, and one hundred dollars in bank notes, which the said Matthias feloniously received by means of the false pretences aforesaid." Matthews pled not guilty to the charge, but, upon the solicitation of Folger, who seems to have been ashamed to appear publicly as prosecutor, the district attorney dropped the case, and the prisoner was handed over to the authorities of the county of Westchester, on the still more serious accusation of having murdered Mr Pierson.

To bring to a conclusion this melancholy tale of delusion, imposture, and crime, Matthews was arraigned for murder before the court of Oyer and Terminer at Westchester, on the 16th of April 1835. The trial excited uncommon interest, and many persons attended from a great distance, to get a view of the man whose vagaries had made so much noise in the country. The evidence produced for the prosecution was principally that of medical men who had been commissioned to disinter the body of the deceased, and examine the condition of the stomach, it being a general belief that death had been caused by poison. Unfortunately for the ends of justice, the medical examinators could not agree that the stomach showed indications of a poisonous substance, some alleging that it did, and others affirming the reverse. In this doubtful state of the question, the jury had no other course than to offer a verdict of acquittal. On the announcement of the verdict, the prisoner was evidently elated; but his countenance fell when he found that he was to be tried on another indictment for having assaulted his daughter, Mrs Laisdel, with a whip, on the occasion of her visit to him at Singsing; her husband was the prosecutor. Of this misdemeanour he was immediately found guilty, and condemned to three months' imprisonment in the county jail. In passing sentence the judge took occasion to reprimand him for his gross impostures and impious pretensions, and advised him, when he came out of confinement, to shave his beard, lay aside his peculiar dress, and go to work like an honest man.

Of the ultimate fate of Matthews we have heard no account, and therefore are unable to say whether he renewed his schemes of imposture. From the tissue of strange details which we have been able to present, the reader will doubtless mark the resemblance which the pretensions and career of Matthews bore to those of the madman Thoms, of Kentish memory; but with this remarkable difference in the two cases, that while Thoms practised on a crowd of ignorant and credulous peasantry, Matthews found followers among the most respectable and intelligent inhabitants of a great city—ladies, educated, accomplished, virtuous—gentlemen acute in business, possessing wealth and information, and of great public and private worth. Comment is unnecessary.

"UNION IS STRENGTH."

BY MRS S. C. HALL.

"UNITED IRISHMEN!"—the phrase will startle many who think, and think rightly, that I am no politician; though, as far as zeal *for*, and love *of*, country goes, I hope I am a patriot. With *political united Irishmen* I have nothing to do; my object is simply to show how much Irishmen *could* do, if they were united—how much they lose by not being united. "Union is strength," said old Dick Delany—unconsciously quoting the memorable expression of a mighty mind—when lecturing his five sons on the unfortunate propensity they had of all pulling different ways. "Union is strength," repeated the old man—and he was right.

I would have every Irishman, rich and poor, both in and out of his country, read and ponder over the fable of the bundle of sticks, and remember, that though it is easy enough to break *one*, it is impossible to do so *when they are combined*. It has always seemed to me a strange contradiction in the Irish character, that they who are so kindly to each other in their own land, should be any thing but kindly to each other in the land of strangers. In Ireland they assemble together to assist in building a house, in getting in harvest, in digging potatoes, in cutting and bringing home turf; they do it right cheerfully; and, according to the happy and merry maxim that "many hands make light work," so does such labour pass off pleasantly; but this generosity of feeling is almost confined to the peasantry, and they lose it in a great degree when they emigrate.

Take an example:—In our village is a baker, a Scotchman; he employs three men, two of whom were Scotch, the third an Englishman. One of these men was much respected by the gentry; he had been a long time in Mr Macneil's employment, and at last we missed him, and inquired where he was gone to.

"Oh, he's awa'," replied Macneil; "he's awa' to Wimbleton to a business o' his ain; he was as steady a lad as ever drew a batch of bread, and saved mair than you could ha'e thought possible; and having a mind to marry, he spoke to me about it; and though I shall *miss him for mony a lang day, yet we maun help each other*—and I lent him a trifle, forby his savings, to begin on."

Another of our tradesmen is Charley Murphy, the butcher, a native of Dublin; *he* deemed it necessary to apologise in a degree one day for employing *an Irishman* as his foreman. "He's of *very decent people* in the county Longford," said Charley, "or he would not be here."

"Is he a good butcher?"

"Oh, never a better between this and Dublin."

The foreman was also a well-conducted steady young man; being an Irishman, he was civil and obliging of course, and much liked by his master's customers. Suddenly, however, there arose a schism between him and his employer, and the young man applied to a friend of ours, a very peace-loving magistrate, to take an oath that his master owed him some money, and would not pay him. Our friend said that was an illegal course of proceeding, that he must take out a summons; but being anxious to prevent litigation, he thought he might as well send for Charley Murphy, and endeavour to adjust the difference.

"If your honour plaises," said the foreman, "I have *slaved* late and early for this man for *next to half* what he'd have to pay any other man in the world. And now, when I've an opportunity of bettering myself, he says *I'm striving to cut his throat behind his back*, gives me no peace, nor will he pay me the thrifle of wages, which, small as it is, would help to set me up in the world."

"He's behaved like a traitor, that he has," was the reply; "with his winning ways he has got the inside of the houses of all my customers, and has the assurance to ask me to lend him money to help to set him up."

"And if you *had* lent me a thrifle," answered the young Irishman, "it would have been nothing so very wonderful. I didn't want to try my luck at all in this neighbourhood. See what Macneil did for his countryman. But," he added, "it's true enough what they say here, that no Irishman ever helps another, *barring it is down the hill*."

"Suppose," suggested my friend, "you were to arrange it thus: if it is not convenient to you, Murphy, to pay this demand, give this young fellow a share in your business; you are countrymen, and ought to help each other. There are frequent instances amongst the English and Scotch of this sort of arrangement: one

Digitized by Google

partner brings youth and zeal as a set-off against the money and connection which his older but less active partner has to offer. What say you?"

"I say, plaise your honour," replied the foreman hastily, "I'd sooner beg my bread than be *behoulden* to him. Let him pay me my wages; that's all I'll ask."

"I don't owe you any wages; and I've had enough of you already; and more than that, you're *the last Irishman I'll have any call to*. I'll keep clear of my countrymen in future; for when they find one of themselves a little up in the world, they'll try to pull him down, and hardly give a 'thank ye' for all you can do."

Our worthy friend cited the Scotch baker as an example of how much people even in small trade might do for each other by being united; he urged, that it was our duty to assist each other, and used every argument in his power to dissuade them from "going to law," but in vain. Charley Murphy entered into a long story as explanation about board and lodging, and weekly money, and a feather bed, and new blue sleeves and apron, and the grinding of a knife and steel, which detail caused his foreman to exclaim against his meanness. One offered to take an oath that *this* was the case, and the other that *that* was the case, and at last the magistrate was obliged to tell them that they had better go to Queen Square to settle the business. To Queen Square they accordingly went, and the magistrate decided that the wages were due, and ought to be paid, and paid they were, though, having run on for a considerable time, to get together the amount caused Charley Murphy to run in debt; for the young foreman, irritated by his master's conduct, would grant no time. But this was not all: Charley had a daughter, and this daughter and the young foreman had become strongly attached to each other. At first Charley Murphy used to laugh at this young love, but afterwards refused his consent. The daughter, English born, had more of English wilfulness than Irish yielding in her disposition, and married without his consent. This was certainly an imprudent step, as little by little they fell into poverty, and Charley Murphy confessed, when too late, that if he had assisted his countryman at the commencement, if he had behaved justly, if they had remained together *like the bundle of sticks*, he would not have been left in his old age without his pretty daughter to keep his books, or a hale hearty son-in-law to attend to their mutual business. As it was, the young people migrated to Australia; while the baker's daughter, who with her father's consent married the Scotchman, is able to drive over in their own comfortable cart on Sundays to see Macneil, whose national and most praiseworthy consideration for his own countryman secured his "Jessie" in the end a comfortable home and a good husband.

"I *hate* the Scotch," exclaimed a hot-headed Irish friend of mine, the other day, "they are so '*clannish*.'" I could not help asking him if he did not think a little of the same quality would wonderfully improve his countrymen! This young man is now doing very well in the world, and I hope felt too much the bitter loneliness of an Irishman in London, to be cold, without a reason, to those of his own land who come hither to seek their fortunes. The prejudice in England for a length of time was cruelly great against my countrymen. When a handsome young Irishman got into English society, I have seen the chaperons draw more closely to their charges, and, while they looked icebergs and daggers at the good-humoured face of the somewhat forward youth, whisper the young ladies to "beware, for an Irish adventurer had entered the charmed circle." I do not attempt to deny that the young man made the most of his handsome face, and "blarneyed" to the best of his ability; but English, ay, and Scotch men too, do the same thing; and if they do not succeed as well as the Irishman, it is only because they lack ability, not inclination. I do not mean for a moment to defend the unprincipled adventurer of any country; but I do sincerely rejoice that the English have discovered that imposition is not by any means the necessary attendant on an Irish face or an Irish tongue. But to the answer to my question.

"Indeed and you are right," he said. "When I was coming to London, I bothered the very life out of every one I knew in Dublin, to give me letters of introduction to *all* the Irish *they* knew in the *grate* city. I did not care so much for letters to the English, like a fool as I was, for I was not aware then that when once you are known by the English, your hold upon their friendship is as firm as the Rock of Cashel; and so I thought my fortune was made when I had secured introductions to several Irish leaders. Well, I left a card and a letter at one house, and received a note saying that really the influx of young Irish gentlemen seeking employment was so great, that he had, however painful to his feelings, been *obliged* to decline receiving introductions at all. Several asked me to dinner: others to 'tea and turn out.' The member for our town, who had made fierce love to my aunt, and spoken of my uncle as 'his talented and distinguished countryman' *during* the election, by some strange chance was never at home when I called, as I well knew, for I heard him tell the servant so himself. One fellow gave me an introduction to his friend in the city, and I afterwards found out that he clearly said, though he wished me well, he would not be *answerable* for me, as I was *Irish*. Another could not introduce me to his partner, who had the management of his business, because *he had a family of daughters*. Certainly, out of about five-and-twenty, I found one whose warm manners sprang from his warm heart, and he made up for the rest, though I was on the *shaughraun* for months and months before I could earn as much as would afford me a dinner. Now, it is not more than eighteen months ago since a Scotch lad, Alexander Fergusson, came up from Aberdeen with letters to only two or three Scottish manufacturers; why, in less than a week he was provided for; every Scottish house in the city was applied to, till a suitable situation was found him. *I doubt if they asked him half as often to dinner as my countrymen invited me;* but they provided for him, and quickly, they are so *clannish*."

"If they were less so," I said, "I should not esteem them as highly as I do. I confess that I think *clannishness*, as you call it, the root of much noble action. If every country provided for those of its own who need provision, we should have no distress. There is something in the everlasting affection the Scotch bear each other, that elevates them in my esteem almost beyond the inhabitants of all other countries. I have seldom known a Scotchman whom I did not respect; and I wish, with all my heart, that the Irish were as united by the magic of the sound of 'Native Land.' In this should be sunk all political differences—all religious animosities. There is no country in the world that has sent forth finer soldiers, better sailors, firmer patriots, more eloquent statesmen. *Single-handed*, an Irishman conquers. *Singly* triumphant in art and literature, what might they not have accomplished long ere this for the good of their ill-used country, if they had only been *united*—only known the inestimable value of domestic and social union—only remembered that a house divided against itself *cannot* stand—and also kept in mind poor old Dick Delany's quotation, which the practice of ages has proved true, that 'union is strength!'"

I will endeavour, on a future occasion, to illustrate this subject more fully, by showing the light and dark, the union and disunion, and their effects.

MR TOWNSHEND'S EXCURSION TO THE ROCKY MOUNTAINS.

CONCLUDED.

THE party of fur-hunters with whom Mr Townshend travelled in his western expedition, had now reached the confines of the Rocky Mountains, from which originate the upper tributaries of the Missouri on the one side, and those of the Columbia on the other. The plains in this high region are more rugged and barren than in the lower territories, and occasionally present evidences of volcanic action, being thickly covered with masses of lava, and high basaltic crags. The principal vegetation on the hills is small cedars, while on the plains nothing flourishes but the shrubby wormwood or sage. Mr Townshend had an opportunity, in these melancholy wastes, of becoming acquainted with a variety of animals, particularly birds. He met with flocks of a beautiful bird called the cock of the plain (*Tetrao urophasianus*), which was so very tame, or rather so little accustomed to evil treatment, as to mingle familiarly with the cavalcade, and to suffer itself to be knocked down by whips.

On the 14th of July (1834), the party pitched their tents on the banks of the fine large river Shoshoné, or Snake river, a stream which pours its waters directly into the Columbia. A temporary fort or camp was now formed for the repose of the men and horses, and a small body of hunters sent out in quest of provisions, both for present and future necessities. One evening, as the party sat around the camp fire, wrapped in their warm blankets, the old hunters became garrulous, and related their individual adventures for the general amusement. "The best story, however, was told by Richardson, of a meeting he once had with three Blackfeet Indians. He had been out alone hunting buffalo, and towards the end of the day was returning to the camp with his meat, when he heard the clattering of hoofs in the rear, and upon looking back, observed three Indians in hot pursuit of him. He immediately *discharged his cargo* of meat to lighten his horse, and then urged the animal to his utmost speed, in an attempt to distance his pursuers. He soon discovered, however, that the enemy was rapidly gaining upon him, and that in a few minutes more he would be completely at their mercy, when he hit upon an expedient, as singular as it was bold and courageous. Drawing his long scalping-knife from the sheath at his side, he plunged the keen weapon through his horse's neck, and severed the spine. The animal dropped instantly dead, and the determined hunter, throwing himself behind the fallen carcass, waited calmly the approach of his sanguinary pursuers. In a few moments one Indian was within range of the fatal rifle, and at its report his horse galloped riderless over the plain. The remaining two then thought to take him at advantage by approaching simultaneously on both sides of his rampart, but one of them happening to venture too near in order to be sure of his aim, was shot to the heart by the long pistol of the white man, at the very instant that the ball from the Indian's gun whistled harmlessly by. The third savage, being wearied of the dangerous game, applied the whip vigorously to the flanks of his horse, and was soon out of sight, while Richardson set about collecting the trophies of his singular victory. He caught the two Indians' horses, mounted one, and loaded the other with the meat which he had discarded, and returned to his camp with two spare rifles, and a good stock of ammunition."

The Indians in the remote region of the far-west, are, with the exception of the Blackfeet and their hereditary foes the Bannecks, generally more simple and docile than the tribes nearer the settlements, a circumstance apparently arising from their extreme poverty, and the difficulty of procuring sufficient sustenance. A party of Nez Percés, Chinooks, and Kayouse, encamped near the hunters, are described as possessing a most amiable spirit of sincere piety, and their toleration of the creed and religious observances of the white men might well teach a lesson to civilisation. "After supper was concluded," says Mr Townshend, "we sat down on a buffalo robe at the entrance of the lodge, to see the Indians at their devotions. The whole thirteen were soon collected at the call of one whom they had chosen for their chief, and seated with sober sedate countenances around a large fire. After remaining in perfect silence for perhaps fifteen minutes, the chief commenced an harangue in a solemn and impressive tone, reminding them of the object for which they were thus assembled, that of worshipping the 'Great Spirit who made the light and the darkness, the fire and the water,' and assured them that if they offered up their prayers to him with but 'one tongue,' they would certainly be accepted. He then rose from his squatting position to his knees, and his example was followed by all the others. In this situation he commenced a prayer, consisting of short sentences, uttered rapidly, but with great apparent fervour, his hands clasped upon his breast, and his eyes cast upwards with a beseeching look towards heaven. At the conclusion of each sentence, a choral response of a few words was made, accompanied frequently by low moaning. The prayer lasted about twenty minutes.

After its conclusion, the chief, still maintaining the same position of his body and hands, but with his head bent to his breast, commenced a kind of psalm or sacred song, in which the whole company presently joined. The song was a simple expression of a few sounds, no intelligible words being uttered. It resembled the words *Ho-ha-ho-ha-ho-ha-ha-a*, commencing in a low tone, and gradually swelling to a full, round, and beautifully modulated chorus. During the song, the clasped hands of the worshippers were moved rapidly across the breast, and their bodies swung with great energy to the time of the music. The chief ended the song by a kind of swelling groan, which was echoed in chorus. It was then taken up by another, and the same routine was gone through. The whole ceremony occupied perhaps an hour and a half; a short silence then succeeded, after which each Indian rose from the ground, and disappeared in the darkness with a step noiseless as that of a spectre. I think I never was more gratified by any exhibition in my life. The humble, subdued, and beseeching looks of the poor untutored beings who were calling upon their heavenly father to forgive their sins, and continue his mercies to them, and the evident and heartfelt sincerity which characterised the whole scene, was truly affecting, and very impressive.

The next day being the Sabbath, our good missionary, Mr Jason Lee, was requested to hold a meeting, with which he obligingly complied. A convenient shady spot was selected in the forest adjacent, and the greater part of our men, as well as the whole of Mr M'Kay's company, including the Indians, attended. The usual forms of the Methodist service, to which Mr Lee is attached, were gone through, and were followed by a brief but excellent and appropriate exhortation by that gentleman. The people were remarkably quiet and attentive, and the Indians sat upon the ground like statues. Although not one of them could understand a word that was said, they nevertheless maintained the most strict and decorous silence, kneeling when the preacher kneeled, and rising when he rose, evidently with a view of paying him and us a suitable respect, however much their own notions as to the proper and most acceptable forms of worship might have been opposed to ours. A meeting for worship in the Rocky Mountains is almost as unusual as the appearance of a herd of buffalo in the settlements. A sermon was perhaps never preached here before, but for myself I really enjoyed the whole scene; it possessed the charm of novelty, to say nothing of the salutary effect which I sincerely hope it may produce."

On the 6th of August, the encampment broke up, and the company, now consisting of but thirty men, and one hundred and sixteen horses, set out on its farther travels. Sterile plains, craggy steeps, foaming rivers, were passed with more or less difficulty, but without any accident. At night the camp was generally beset by wolves, whose howling cries disturbed the repose of the wayfarers. Provisions at length became scarce, and the only supplies were an occasional wild animal brought down by a bullet, or dried salmon procured from the Snake or Shoshoné Indians. Our traveller's account of a visit to a Snake village does not give one a taste for savage social life.

"Early in the morning I strolled into the Snake camp. It consists of about thirty lodges or wigwams, formed generally of branches of trees tied together in a conic summit, and covered with buffalo, deer, or elk skins. Men and little children were lolling about the ground all around the wigwams, together with a heterogeneous assemblage of dogs, cats, some tamed prairie wolves, and other 'varmints.' The dogs

Digitized by Google

growled and snapped when I approached, the wolves cowered and looked cross, and the cats ran away and hid themselves in dark corners. They had not been accustomed to the face of a white man, and all the quadrupeds seemed to regard me as some monstrous production, more to be feared than loved or courted. This dislike, however, did not appear to extend to the bipeds, for many of every age and sex gathered around me, and seemed to be examining me critically in all directions. The men looked complacently at me—the women, the dear creatures, smiled upon me, and the little naked, pot-bellied children crawled around my feet, examining the fashion of my hard shoes, and playing with the long fringes of my leathern inexpressibles. But I scarcely know how to commence a description of the *tout ensemble* of the camp, or to frame a sentence which will give an adequate idea of the extreme filth and most horrific nastiness of the whole vicinity. I shall, therefore, but transiently glance at it, omitting many of the most disgusting and abominable features.

Immediately as I entered the village, my olfactories were assailed by the most vile and mephitic odours, which I found to proceed chiefly from great piles of salmon entrails and garbage which were lying festering and rotting in the sun, around the very doors of the habitations. Fish, both fresh and half dried, were scattered all over the ground, under the feet of the dogs, wolves, and Indian children; and others which had been split, were hanging on rude platforms erected within the precincts of the camp. Some of the women were making their breakfast of the great red salmon eggs, as large as peas, and using a wooden spoon to convey them to their mouths. Occasionally, also, by way of varying the repast, they would take a huge pinch of a drying fish which was lying on the ground near them. Many of the children were similarly employed; and the little imps would also have hard contests with the dogs for a favourite morsel, the former roaring and blubbering, the latter yelping and snarling, and both rolling over and over together upon the savoury soil. The whole economy of the lodges, inside and outside, was of a piece with every thing else about them—filthy beyond description—the very skins which covered the wigwams were black and stiff with rancid salmon fat, and the dresses, if dresses they may be called, of the women, were of the same colour and condition, from the same cause. These *dresses* are little square pieces of deer-skin, fastened with a thong around the loins, and reaching about half way to the knees; the rest of the person is entirely naked. Some of the women had little children clinging like bull-frogs to their backs, without being fastened, and in that situation extracting their lactiferous sustenance from the breast, which was thrown over the shoulders. It is almost needless to say, that I did not remain long in the Snake camp; for although I had been a considerable time estranged from the abodes of luxury, and had become somewhat accustomed to, at least, a partial assimilation to a state of nature, yet I was not prepared for what I saw here. I never had fancied any thing so utterly abominable, and was glad to escape to a purer and more wholesome atmosphere."

Occasionally the tedium of the journey was relieved by an adventure such as the following:—"In the afternoon, one of our men had a somewhat perilous adventure with a grizzly bear. He saw the animal crouching his huge frame in some willows which skirted the river, and approaching on horseback to within twenty yards, fired upon him. The bear was only slightly wounded by the shot, and with a fierce growl of angry malignity, rushed from his cover, and gave chase. The horse happened to be a slow one, and for the distance of half a mile the race was hard contested, the bear frequently approaching so near the terrified animal as to snap at his heels, while the equally terrified rider—who had lost his hat at the start—used whip and spur with the most frantic diligence, frequently looking behind, from an influence which he could not resist, at his rugged and determined foe, and shrieking in an agony of fear, 'shoot him, shoot him!' The man, who was one of our greenhorns, happened to be about a mile behind the main body, either from the indolence of his horse, or his own carelessness; but as he approached the party in his desperate flight, and his lugubrious cries reached the ears of the men in front, about a dozen of them rode to his assistance, and soon succeeded in diverting the attention of his pertinacious foe. After he had received the contents of all the guns, he fell, and was soon dispatched. The man rode in among his fellows, pale and haggard from overwrought feelings, and was probably effectually cured of a propensity for meddling with grizzly bears."

In proceeding through the hilly district within the Rocky Mountain ranges, a party of nine men were detached on a trapping excursion, with orders to join the main body at the fort on the Columbia in the ensuing winter. The cavalcade was now reduced to seventeen men, who continued their perilous route towards the north-west for about a fortnight. On the 2d of September, after a toilsome march through ravines and gullies, they had the inexpressible pleasure of seeing the noble Columbia burst at once upon their view. "I could scarcely repress a loud exclamation of delight and pleasure as I gazed upon the magnificent river, flowing silently and majestically on, and reflected that I had actually crossed the vast American continent, and now stood upon a stream that poured its waters directly into the Pacific. This, then, was the great Oregon, the first appearance of which gave Lewis and Clark so many emotions of joy and pleasure, and on this stream our indefatigable countrymen wintered, after the toils and privations of a long and protracted journey through the wilderness."

They now immediately reached the fort, at which a hearty welcome and many comforts awaited them. After remaining a few days, Mr T. and his companion Mr Nuttal, the one loaded with specimens of birds, and the other with his collection of plants, proceeded down the Columbia in a canoe to Fort Vancouver.

The passage down this large river was attended with many formidable difficulties. The bottom and banks of the stream are rugged and rocky, in some places the great body of water forcing its way through narrow gullies, and at others rushing down long rapids, in which canoes can only with the greatest difficulty and danger be navigated. The Columbia abounds in salmon of the finest kind. So plentiful is this fish at certain seasons, that they can be caught in nets or speared with the greatest ease, and brought to the shore in immense masses. One of the objects of the trading company to which Captain Wyeth belonged, was to fish for salmon in the Columbia, and export them cured and barrelled to the States. From the scattered hints of Mr Townshend, we learn that the company, from some unforeseen causes, failed in realising the profits which were anticipated, and, like many similar associations, it is probably broken up.

At Fort Vancouver, Mr Townshend procured a passage on board an American vessel, which carried him to the Sandwich Islands, and there he passed the winter months. He afterwards returned to the Columbia and its environs among the Rocky Mountains, to pursue his scientific researches; and his purpose being at length fulfilled, he returned by sea, touching at Valparaiso, on the South American coast, and reached home after an absence of three years.

WORKMEN IN LONDON.

We gather the following particulars respecting the wages and general character of workmen in the metropolis, from the recently published Report of J. Mitchell, Esq. LL.D., to Parliament, on the condition of the Hand-Loom Weavers.

CARPENTERS.

The wages of the carpenters are 5s. per day from March to November, and 4s. 9d. a-day the rest of the year. A carpenter is at considerable expense in finding his tools. The carpenters are described as the most sober and steady body of working men in the metropolis.

BRICKLAYERS.

Their wages are 5s. a-day. They work from six to six, but have half an hour to breakfast, an hour at dinner, and half an hour at four. They therefore work ten hours a-day in summer. They seldom get any thing by working over time.

Bricklayers' labourers have 2s. 9d. or 3s. a-day. They work, of course, the same hours as the bricklayers. Both bricklayers and their labourers lose much time by frost and want of employment. They do not generally save any money when in work, but trust to charitable subscriptions and to credit, and when employed to pay off their debts. They often marry at eighteen or twenty.

HOUSE-PAINTERS.

There are about 1000 master painters in the metropolis. The permanent journeymen employed all the year are from 3000 to 4000, and those employed only about seven months in the year are from 6000 to 8000 in number. The wages paid to good hands are in summer 4s. 6d. to 5s. a-day, and in winter 4s. to 4s. 6d. Painters now suffer much less than formerly from the effects of their profession, in consequence of their greater intelligence and cleanliness. By throwing off their soiled clothes, and washing their hands, when done with their work, many lives have been saved. They are not remarkable for temperance, but this is chiefly owing to the vicious practice of resorting to houses of call, which are public-houses, for work. Their occupation is favourable to the exercise of the mental powers. In general, they can read and write, and are sharp clever persons; few of them appear at the Old Bailey. They necessarily acquire a habit of honesty, as in their occupation they are admitted into the most private part of houses, where property is within their reach; and they must exercise self-control, or they would soon be marked out if suspected of dishonesty, and would not be employed.

TAILORS.

The tailors in shops usually work twelve hours a-day, beyond the time employed for meals. The larger part now work by the piece; when thus employed, a few gain 36s. a-week, but some gain only 30s., others 25s., and old men 20s. When working by time, the payment is 6d. per hour. Not many are in constant employment. Men working at home get their wives to assist them. The earnings of wives may be equal to 9s. a-week, and about half the trade have wives able to earn this sum. The tailors belonging to societies are estimated at 3000 in number.

There are tailors called sweaters, who are thus described:—"A sweater will fit up a room as a workshop, and will employ women and boys, perhaps a dozen, to work for him. He takes home the clothes, and on the Saturday he draws the money for them, and he pays his work-people at what rate he may have bargained, altogether without reference to the prices paid by the trade. The wages paid to women are usually 1s. 6d. a-day and their tea." A third part of the clothes made in London are said to be done by women who set up workshops, and employ other women and girls.

Much of this employment of women and boys has been caused by strikes among the journeymen tailors. One person being asked if the tailors suffered much from the strike of 1834, answered, "Very much so; we have never recovered from the blow which we then sustained. We were urged on by scheming men to join the general union of the trades of the whole kingdom, and we were made the forlorn hope to first make the attack. We were promised great support from other trades, but we did not receive it. Many considerate men disapproved of it; but it was all in vain. There were the secret signs, and the secret oaths, and all such folly; and the whole quite illegal. Since that time, the general appearance of the trade is horrible, and the societies cannot pay sick-money and funeral-money as formerly."

BOOT AND SHOE MAKERS.

The wages of the men who make the bottoms of boots are from 20s. to 24s. a-week, and some get 30s. They are paid by the piece. From the evidence presented, it appears that the shoemakers are of a dissolute character. Mr Grove's evidence is of too original a description to bear condensing.

"*Question.* How many hours a-day do they work?—*Answer.* No man on earth can tell that. They begin in the morning when they like; but if any mortal thing happen, up they are from their stools, and after it; and sometimes they will go and spend their time drinking with an acquaintance; and, to make up for it, they will work sometimes till 11 and 12 o'clock at night.

Then they do not come to your shop to work?—No, that is against their laws. I dare not keep a man at my shop to work for me; they would all strike if I did.

Do they annoy you much with strikes?—I am not master of my own shop; they keep me quite under slavery to their rules.

Are there many steady men amongst them?—I never knew a dozen steady stable men amongst them in my life.

Do they keep their families comfortably?—Any thing but that. Their families are in a filthy, abominable state; all in dirt, and wretched.

How do they manage when they are out of work?—Any way they can; they must try to live upon credit; sometimes they pick up a little job. One man out of work, and who has no money, will meet an old shopmate who has money, and they go drinking together, and the man who has money pays for both.

Then they must often be in distress?—Very often; half of them have not a feather to fly with. They drink a monstrous deal. Hardly a steady man amongst them. A man will send out his coat from the taproom to pawn, or even his shoes, in order to get money to keep up the fuddle.

Their money is generally gone by Monday night, I presume?—It very seldom lasts out the Sabbath day; it is spent at the public-houses. Only go and see them at the Lion, in Pearl-row, Blackfriars' Road. Not one in ten goes to a place of worship. By Monday they will be coming to the shop a-kicking, as they call it, that is, borrowing on account of their wages which fall due on the Saturday night. One man will say, 'Master, let me have a shilling;' another will say, 'Let me have two shillings;' and that is the way they go on. There was a man to whom I had to pay last Saturday only 6s. 6d. He might have earned good wages if he had stuck to it; but he earned last week only 16s., and he had had 9s. 6d. on account. He is not exactly a drunkard; he is a coffee-shop frequenter. He will sit all day in the coffee-shop over two-penn'orth of coffee. He is a great politician and a great radical, and talks wonderfully about the affairs of the nation.

There must be some prudent men amongst them?—If there be, I do not know where to find them. I once employed a man who came from the city. He was an excellent workman; he suited me exceedingly well, and I wished to serve him. He removed to near me, and I went to see him one day about some work. There was he, sitting on a heap of straw in the corner of his room, and never a bit of stick or furniture was there in that room, but the man and the heap of straw. He told me of his misfortunes, and I took pity on him, and got him a rug and fire-irons, and a bit of a carpet, and a bed and a mattrass, and an old table and chair or two, and made the place comfortable and Christian-like. About a month after, I called at his place again. There was he, sitting at work in the corner of the room on the straw; every stick was gone; he had sold every thing, and turned it into drink. There is not such a drunken set as these fellows in the world.

And these men make laws to rule you?—Ay, to be sure they do. They hold a meeting of their union, and fix their prices; and one or two of them will afterwards come into my shop and throw down a bit of paper, saying, 'Sir, these are the regulations that we have come to.' I soon see what it is; they have raised the price. I say to them, 'I cannot pay these wages; the trade cannot afford it.' They say, 'Well, you will take your time to think on it; we cannot work for any less;' and away they go; and if I do not comply, never a man can I get to work for me. They are all bad alike.

Digitized by Google

Have they never suffered by their strikes and unions?—The trade has suffered sadly, but they are none the better. About thirty years ago, the shoes sold in the shops were all made in London; but the fellows raised their prices, so that the masters could not give it. That set employers a-thinking of cutting out their boots and shoes, and sending them down to Northampton to be made. They got them done there for little more than half the money, so the men lost all that work; but yet you see they are now just such a set of fellows as I have told you."

BAKERS.

The wages and employment of bakers differ in different parts of the metropolis. Foremen are generally paid from 26s. to 28s. per week; in addition to which, they are allowed to eat what bread and potatoes they please at the bakehouse, and they take home a quartern loaf a-day, and on the Saturday night half a quartern of flour, to their families. A second class of bakers are paid from 16s. to 18s., and have the same allowances of bread and flour as just stated.

The following is the course of work in a district in the eastern part of the metropolis, in a bakehouse where only two journeymen are employed:—"They come at 11 o'clock at night, make the dough and light the furnace; this occupies an hour. One of the two may then lie down to sleep for two hours and a half; the other also may rest himself, but must occasionally open his eyes, to see that the furnace does not go out. At half-past two both men go to work; they throw out the dough, scale it off, that is, weigh it off in suitable portions for the loaves; they work the dough, and put it into the oven; this occupies till about five. The men now lie down again to rest. At seven they draw the bread out of the oven, and put it into the shop; they then prepare the fermentation for next day. At eight they go to breakfast, which occupies from three quarters of an hour to an hour. After breakfast there may be a second batch of bread to draw, if the master have sufficient business. At two o'clock they may go home; one returns at five, and the other at eleven at night."

It is a matter of notoriety that the bakers as a body are much given to intoxication. The leisure time which they have from five till eleven at night, exposes them to the temptation of going to public houses to fill up their time. When the trades' unions marched from Copenhagen-fields to Kennington, the bakers were remarked to be the least respectable in appearance of the whole.

We may afterwards extend these extracts; in the meanwhile, we conclude with the single remark, that much of the misery of the working-classes in the metropolis, as elsewhere, appears to arise from the practice of resorting to public-houses to spend their leisure time. In this they are to be more pitied than blamed; for society provides no public amusements of a harmless and entertaining kind for the relaxation and improvement of the humbler orders.

THE OLD FORTUNE-TELLER.

FROM THE FRENCH.

THERE is not, perhaps, a single little town in all France, which does not possess its professional fortune-teller, a person who lives by card-reading, and by the predicting of all that is good and happy for those who desire thus to learn their destiny. This card-prophet is usually, or rather uniformly, a woman, the sex having had no rivals in this department since the days of the astrologers—who, after all, were but a parcel of old women. Of course, too, the fortune-teller is advanced in years, and has all the ordinary witch-like attributes of face and figure. Though every person possessing any pretensions to sense or education would blush to admit openly that he or she ascribed any weight to such magical pretences, yet it is amazing how many people of the better classes, in these small French towns, fee the old fortune-teller, at one period or other of their lives, to unravel some knotty point in their destiny. To do them justice, such references may be made, rather from a conviction of the fortune-teller's general shrewdness, and of the care she takes to acquire all possible information about her neighbours in the ordinary way, than from any trust in her powers of obtaining knowledge by supernatural means. But it is unnecessary either to give explanations, or make apologies, on this subject. The matter in hand is to tell a little story—a story of real life—and to that we come without more delay.

Once on a time I was invited to spend some weeks with a friend, at a town not a thousand miles from Paris. My friend was married. I had calculated on this circumstance as likely to be troublesome, seeing that it might interfere with the bachelor luxuries of cigar-smoking and unrestrained chat; but my friend's wife was so charming a woman, that I soon decided things to be better as they were. She doated upon her husband, and he was not behind in reciprocating the feeling. They had two pretty children, whose smiling faces and delightful prattle would have made any one envy the parents. To the pleasure derived from the society of my host and hostess, was added the entertainment arising from an occasional reunion of all the magnates of the place, around the hospitable board of my friend. It was an agreeable task for one sated with the gloss and refinement of city life, to study the characters of these comparatively unsophisticated mortals, and to listen to their simple sentiments and views on topics brought accidentally before them.

Fortune-telling became the subject of our converse one evening. The mayor of the town, who chanced to be present, and who thought it befitting his office to seem as wise and enlightened as possible, gave us a descant on the folly of such superstitious practices. He called divination by cards, and palmistry, a remnant of the barbarism of the middle ages, and altogether unworthy the illumination of modern days. The schoolmaster and notary of the town, as in duty bound, thought as the mayor did. In fact, nobody dissented from the venerable truisms of the worthy gentleman. Flushed with his triumph, the mayor turned to our hostess, and continued confidently, "I am sure, madam, you have never had recourse to fortune-telling." I had noticed something like a smile on the lady's lips during the harangue of the mayor. The smile now became marked and undeniable, and on her husband's lips there played a similar expression, as the two glanced at each other in obvious intelligence. "Yes, sir," said our hostess at length, replying to the mayor, "I have had recourse ere now to fortune-telling." She again looked at her husband, and it was plain that some pleasant reminiscence was embodied in the glance. They reciprocally held out their hands, and my friend pressed and kissed that of his wife. These signs of mutual feeling did not pass unnoticed by any member of the assembled company. Seeing their faces full of inquiring interest, the lady continued—"I observe you are all surprised. But there is nothing extraordinary in the matter. Listen, and you shall judge."

She then told us as follows:—"My marriage with Alphonse [her husband] was nearly arranged. Inclination, parental consent, and, in short, every favouring circumstance, were on the side of our union. Alphonse had the free entry of my father's house, and we had leave to see each other, to talk together, and to walk together. All went on pleasingly, till one fine day Monsieur Alphonse chose to assume a cold look, to speak in monosyllables, and, in place of calling me Anna, to call me Ma'mselle. I wept the whole night after. To what cause to attribute this sudden coldness, I knew not. I was in despair; but, too proud to seek an explanation, I concealed my uneasiness, and even affected unusual gaiety before my lover. Poor Alphonse! I have since learned what he suffered, but indeed I might have known it pretty well at first, from a consciousness of my own tortures.

Monsieur Alphonse, it seemed, was jealous; jealous of one of my cousins, a student, who came from Saint Cyr to pass a few days of his vacation beside us. This youth had taken the liberty of saluting me, and perhaps of once or twice putting his arm around me. Alphonse was neglected one whole day for the little cousin. 'Doubtless,' thought the former, 'this cousin is preferred. As for me, the marriage with which I am to be honoured is plainly but a matter of convenience, and heaven knows what my fate may be afterwards.' Hence the frozen aspect, the Othello-like visage of Monsieur Alphonse, and my assumed gaiety seemed but to prove and crown my perfidy. He felt himself bound to quit such an ingrate, to banish from his heart a love so unworthy. Let her go and marry this cousin of hers, thought he, since she will not even give herself the trouble of dissimulating before me. As for himself, he would go abroad; nothing like travelling for banishing the recollection of an unfortunate love.

While Alphonse was occupied with these thoughts, all at once an idea struck him—he would go and consult the old woman, the fortune-teller. Without giving himself time to reflect either on the utility or inutility, the wisdom or the folly, of such a step, his restless impatience led him to run to the dwelling of the old fortune-teller. He waited not to knock at the door, but entered, and mounted the steps to the wise woman's attic by threes and fours at a time.

The card-prophetess was at the moment engaged with a young girl, and both of them were so entirely absorbed with the matter in hand, that neither of them perceived or heard the approach of the new visitor. The chamber of the sorceress was dark and gloomy. Alphonse placed himself in a corner to observe what passed. The old woman was looking attentively at the girl before her, and examining now and then the lines of her visitor's hand. Then she placed her hand over the girl's heart, and a card was drawn. The meaning of this card, as apparent to her wonder-seeing eyes, was as follows (the old woman spoke the oracle aloud):—'At this moment you have a great trouble oppressing you, which would cease if you dared to speak; but you have a lucky star, and the person who causes your uneasiness will soon see his error and atone for it.'

'Oh, my good mother,' cried the girl, 'can this be true? How have you guessed my trouble? Read it again to me.' The old woman did as she was desired. 'Oh, if this be true,' cried the girl, shedding tears in abundance, 'how happy you have made me, mother, by giving me this hope! Here is some recompense for you.' At the same time she drew from her purse a piece of several francs, and having given it to the fortune-teller, turned round to depart, wiping the joyful tears from her eyes, and murmuring, 'Dear Alphonse! he will yet be mine!'

But Anna (for you may guess that it was I)," said our hostess, blushing divinely at the recollection of the weaknesses into which she had been led by her youthful passion, "Anna started, and uttered a cry of surprise on meeting Alphonse face to face. 'How!' said she, 'have you followed me hither? or have you, too, come to hear'—— 'Yes,' said Alphonse, in a voice more tender than I had ever heard it before; 'yes, my Anna, my angel, I came to learn my fortune, but you have fixed the fate of both. Pardon me—love is suspicious.' 'I told you this,' said the fortune-teller triumphantly; 'the cards never fail.'

Alphonse and I came away together, more attached to one another than ever. Alphonse explained the affair of the cousin, and I wondered that he could have been disturbed by such a trifle. But I took care that no trifle of the same kind should ever occur to disturb him again. This is our story; and this, Monsieur le Maire, was the occasion on which I had recourse to fortune-telling. You see that it may sometimes lead to a happy issue, though not perhaps in the very way that may be pretended by its professors. The old woman still lives, hard by, and the mayor may perhaps find a good wife by consulting her."

This remark suggested an idea to me. "Come," said I, "let us all go and see this wonderful woman, and hear what she has to promise to each of us." The mayor, mindful of his eloquent tirade, was alone disposed to demur to the proposition. He muttered something about the "gravity of his office," but every body promised to keep the matter secret, and curiosity led the worthy magistrate at length to forget that the middle ages were past, and to go with the rest. The sorceress received the whole party of us politely, and bent on us a pair of as quick and searching eyes as ever shone in human head. The mayor tried the cards. They announced to him that he was to lose his place at the next municipal elections. [When they came, he was kicked out.] The notary's jolly red face grew rather lengthy when it was foretold to him that a paralysis would by and bye unfit his fingers for holding the pen of office. [The poor notary was ere long obliged to resign his place for this very cause.] In short, the old prophetess, with the most consummate coolness, gave every one of us in turn something to look forward to, of much the same pleasing character as the preceding predictions. No doubt the old gipsy thought that such a band could only come to mock her, and was resolved to turn the tables upon us, and she succeeded to admiration. Like all fortune-tellers, a large share of natural shrewdness, private knowledge of facts, and a desire to please her customers, formed the "sole witchcraft which she had used."

NEW VOLUME OF TABLE-TALK.

A LITTLE volume, entitled "Delicias Literarias, a New Volume of Table-Talk," has lately been published in Edinburgh,* being the first volume of the kind, we believe, which has been produced in our country. It is evidently the composition of a man of extensive and curious reading, much accuracy, and no small amount of taste and acumen. We select from it the following article on a subject which we ourselves once partially treated—

FOOT-PRINTS IN ROCKS AND STONES.

The similarity or the identity of the superstitions of nations has recently attracted considerable attention. Many books on the subject have appeared on the continent, and a few in our own land, among which the pleasing works of Mr Keightley deserve prominent notice. He alludes to "the marks which natural causes have impressed on the solid and unyielding granite rock, but which, according to the popular creed, were produced by the contact of the hero, the saint, or the god." I have collected some instances of the almost universal diffusion of this superstition.

We meet it in every district of Scotland, at Maidenkirk and beyond John-o'-Groat's. According to old Andrew Symson, "Kirkmaiden in Galloway is so called, because the kirk is dedicated to the Virgin Mary, the print of whose knee is fabulously reported to be seen on a stone, where she prayed somewhere about a place in this parish called Mary Port, near to which place there was a chapel long since, but now wholly ruined." In our Lady's Kirk in South Ronaldsha, in Orkney, Brand saw "a stone lying, about four feet long and two feet broad, but narrower and round at the two ends; upon the surface of which stone is the print of two feet, concerning which the superstitious people have a tradition that Saint Magnus, when he could not get a boat on a time to carry him over Pighthand Firth, took this stone, and setting his feet thereupon, passed the firth safely, and left this stone in this church, which hath continued here ever since." Martin adds, that "others have this more reasonable opinion, that it has been used in time of Popery for delinquents, who were obliged to stand barefoot upon it by way of penance." The Reverend George Forbes, in the Statistical Account of the Parish of Leochel in Mar, informs us that "the castle of Corse, now in ruins, was built in 1581 by William Forbes, father of Patrick Forbes, bishop of Aberdeen. Tradition bears, and the common people still believe, that the devil visited the bishop in this castle; that they differed [quarrelled]; and that the devil on his departure carried away with him the broad side of the castle, on the stone stairs whereof they still pretend to point out his footsteps." In describing the vitrified site of the

Top of Noth in Strathbogie, Dr Hibbert speaks of "a lofty upright stone on the westerly flank of the hill, connected with which is a monstrous traditional story of its having been placed there by a giant, the print of whose heel in it is still visible." In Stratherne, the marks of Saint Fillan's knees are shown in a rock on which he used to kneel in his frequent devotions. In Glenalmond tourists are taken to see "a stone on which are the marks of people's feet, and the hoofs of horses, cows, and sheep." And a ballad of Galloway assures us, that

> "Tho' the Brownie o' Bledmoch lang be gane,
> The mark o' his feet's left on many a stane."

The popular legend of the building of Stonehenge shows that a similar superstitious belief maintains in England.

In Wales, during the last century, they showed, says the Reverend John Price, in his account of Holyhead in Anglesey, "the print of Kybi's foot in a rock by the east end of the chancel, till it was lately destroyed by Mr Ellis, fellow of Jesus College, Oxford, then curate of this place."

Ireland is fertile in monuments of this kind. Mr Crofton Croker narrates the legend of Clough-na-Cuddy, "a stone in Lord Kenmare's park at Killarney, impressed with the mark of Father Cuddy's knees." The same sprightly gentleman describes the *Clough-a-Regann* near Limerick, "That stone is far taller than the tallest man, and the power of forty men would fail to move it from the spot where it fell. Deeply imprinted in it are still to be seen the marks of the fingers of the hag Grana."

In Scandinavia is a rock on which may be traced the large footsteps of Olaf Tryggvason, as plainly as if he had trodden on the newly fallen snow.

In Germany there is such another rock at Heidelberg, as a friend informs me; a second near Vienna; and a third somewhere on the Danube.

In Italy, near the monastery of Vallambrosa, is a stone, on which is the figure of Saint John Gualbert, the founder of the religious order of Vallis Umbrosa. The legend is, that while the saint was praying on the top of a neighbouring precipice, he was seized by the devil and cast down on a rock with such violence, that it was impressed with the mark of his body. This incident seems to have escaped the Reverend Mr Butler's notice: according to him, the monk having most devoutly received the last sacraments, died happily on the 12th of July 1073, being seventy-four years old.

Captain Slidel saw in the cathedral of Toledo in Spain a stone on which it is said the Blessed Virgin alighted, and which retains the impression of her feet, although now much worn by the hands of the faithful, who touch it with the ends of their fingers when grieved by disease or affliction.

In France, at the church of Saint Radegonde in Poitou, is a stone which bears the print of our Saviour's foot. In the same district is another, on which the mare of Saint Jouin indented her hoof one day when her holy rider was sorely vexed by the devil. That respectable personage himself has left the prints of the soles of his feet, and of his hinder parts, on a rock near Hambert in Maine; and in the department of Charente is a rock bearing the mark of the slipper of Saint Mary Magdalen.

Of all the countries on the earth, Palestine has the richest store of such relics. In the mosque of Saint Omar at Jerusalem, is a stone bearing the print of the angel Gabriel's fingers, and the prophet Mahomet's foot; and in the church which crowns the Mount of Olives, is preserved a fragment of rock imprinted with the mark of our Saviour's foot while in the act of ascension. Sir John Mandeville describes many others —such as a rock on Mount Sinai impressed with the figure of Moses; a rock in the valley of Jehoshaphat retaining the footsteps of the ass on which Christ rode into Jerusalem; a rock at Gethsemane marked with the print of His hand; and a rock near Nazareth imprinted with His footsteps. Travellers in the seventeenth century were shown in Jerusalem "the house of Annas, where our Saviour being hurried with violence down a steep place, to prevent falling He laid hold of the corner of a wall, where there is a place in one of the stones fit for a man's hand, which the monks think a great miracle; and Simon the Pharisee's house, where there is a stone with the print of a foot which they say our Saviour made when He stood to pardon Mary Magdalen her sins; and St Stephen's gate, and, a little out of the city, the place where Stephen was stoned: and the monks fancy that there is the print of his hands, face, and knees when he fell down." Ibn Batuta, an Arabian traveller of the fourteenth century, says, that "outside of Damascus on the way of the pilgrimage is the Mosque of the Foot, which is held in great estimation, and in which is preserved a stone, having upon it the print of the foot of Moses. In this mosque they offer up prayers in times of distress." Mr Cooley remarks on this passage, that "the stone bearing the impression of a foot merits some consideration. Monuments of this kind are generally supposed to be remains of Budhaïsm; yet it is possible, though they seem at present to belong properly to that religion, that they may have claims to a much higher antiquity. The mark of a foot, seen by Herodotus near the river Tyras, was ascribed to Hercules. A similar impression in Ceylon, or among the Burmese, would be called the foot of Buddha: in Damascus it was thought to be the foot of Moses. The great distance between the countries in which this singular sort of monument has been found, and its existence at Damascus, tend equally to prove its great antiquity."

Of all these foot-prints the most famous by far is that of Adam in Ceylon. A description of it is given by Robert Knox, who was nearly twenty years a prisoner in the country, of which he published an account at London in 1681. "On the south side of Conde Uda," he says, "is a hill supposed to be the highest on this island, called, in the Chingulay language, Hamalell, but by the Portuguese and the European natives, Adam's Peak. It is sharp like a sugar-loaf, and on the top is a flat stone with the print of a foot like a man's on it, but far bigger, being about two feet long. The people of this land count it meritorious to go and worship this impression; and generally about their new year, which is in March, men, women, and children, go up this vast and high mountain to worship." The print of the foot is supposed to be that of Buddha, which he left when ascending to heaven. He has no temple on this mountain according to Knox, but "unto this footstep they give worship, light up lamps, and offer sacrifices, laying them upon it as upon an altar." There was in Knox's time a tree in the north of the island, which was annually resorted to at the same time with the footstep, and was held in equal honour: it was said to have flown over from the mainland, and to have planted itself: when Buddha was on earth, he loved to sit under its branches.

Colonel Syme met more than one of these monuments in Ava. "In the course of our walks," he says, "not the least curious object that presented itself was a flat stone of coarse grey granite, laid horizontally on a pedestal of masonry six feet long and three feet wide, protected from the weather by a wooden shed. This stone, like that of Pouoodang, was said to bear the genuine print of the foot of Guadma; and we were informed that a similar impression is to be seen on a large rock situated between two hills one day's journey west of Memboo."

Near the town of Boukhtarma, on the Irtisch, in Western Siberia, Captain Cochrane accompanied his guide "to view what was deemed an object of curiosity in that part of the world. It was a large stone near the bank of the river, on which are imprinted the marks of the feet of a man and of a horse; they are in a perfect state, and to all appearance have been formed by nature. The heels are towards the river, the feet of the man in advance of those of the horse, very well representing the situation of a man holding the horse. I could gather nothing of its origin beyond the silly tradition of the place."

I have mislaid a reference to the volume in which the foot-print is described of a god worshipped in one of the islands of the Pacific Ocean; but two instances may be cited of the existence of the superstition in the New World.

Dr Benjamin Smith Barton, in a tract on American Antiquities published about 1783, quotes the work of Mr Kalm, a traveller in Canada, who saw, "in two or three places, at a considerable distance from each other, impressions of the feet of grown people and children in a rock." And Mr Jefferson, in his Notes on Virginia, written in 1781, recites an Indian "tradition handed down from their fathers, that in ancient times a herd of Mammoths came to the Big-bone-licks on the river Ohio, and began an universal destruction of the bear, deer, elk, buffalo, and other animals which had been created for the use of the Indians: that the Great Man above (so they call their chief Deity), looking down and seeing this, was so enraged that he seized his lightning, descended on the earth, seated himself on a neighbouring mountain *on a rock, on which his seat and the prints of his feet are still to be seen*, and hurled his bolts among them till the whole were slaughtered except the big bull, who, presenting his forehead to the shafts, shook them off as they fell, but missing one at length, it wounded him in the side, whereon springing round, he bounded over the Ohio, over the Wabash, the Illinois, and finally over the great lakes, where he is living at this day."

WITTY JUDGMENTS OF THE DUKE OF OSSUNNA.

The Duke of Ossunna, viceroy at Naples for the king of Spain, to whom the Neapolitan territory was then subject, acquired great celebrity for the tact and wisdom of the judgments he delivered. This nobleman, on visiting the galleys one festival day for the purpose of liberating a captive, according to use and wont, found all the prisoners loud in asserting their innocence. One declared that his condemnation was the work of enemies; another asserted that he had been informally and unjustly convicted; a third declared that he had been mistaken for another person; and so on. All declared themselves guiltless as cradled babes. At last the duke came to one man who took a very different tone—"I do not believe, my noble lord," said he, "that there is a greater rascal in all Naples than myself. They were too lenient with me to send me to the galleys." The duke, hearing these words, turned immediately round to the keeper of the galleys, and exclaimed, "Loose this scoundrel's chain, and turn him immediately about his business. If he is allowed to stay, he will certainly corrupt these honest, innocent men here. Take him away." While his orders were being obeyed, he wheeled round to the other captives, and said to them, with the most civil air imaginable, "Gentlemen, I have no doubt you will thank me for ridding you of this pestilent fellow. He might have undermined your innocence."

The Duke of Ossunna was somewhat like Haroun Alraschid, a little despotical even in his good doings. Ferromelle, a rich merchant of Naples, whose predominant passion was avarice, chanced to lose an embroidered purse, containing fifty golden ducats, fifty Spanish pistoles, and a ring of the value of a thousand crowns. This loss vexed him grievously, and he caused a proclamation to be made, offering fifty Spanish pistoles to any one who should restore the missing articles. An old woman found the purse, and brought it to the owner. Ferromelle, as soon as he saw his property, could not withstand the temptation of trying to avoid payment of part of the reward. In counting the fifty pistoles, he dexterously laid aside *thirty*, and said to the finder, "I promised fifty pistoles to whoever found the purse. Thirty have been taken out of it already by you; here are the other twenty, and so you are paid." The old woman remonstrated in vain against this treatment, but she would probably have remained content with her twenty pistoles, had not some one advised her to apply for justice to the Duke of Ossunna. The duke knew the man well, and sent for him. "Is there any likelihood," said he to Ferromelle, "that this old woman, who had the honesty to bring you the purse when she might have taken all, would be guilty of taking your thirty pistoles? No, no. The truth is, the purse *cannot be yours*. Your purse had fifty pistoles, and this had but thirty. The purse cannot be yours. The merchant stammered out, "My lord, I know the purse, the ducats, the ring"—— "Nonsense!" exclaimed the duke; "do you think there never was a purse, or ducats, or a ring, like yours? Here, good woman," continued he, addressing the old woman, "take you the purse, and its contents. It cannot be this good gentleman's, since he says his had fifty pistoles." This judgment was enforced. The duke might have been morally certain of the miser's attempt to cheat, but, as has been said, this was a very Haroun-Alraschid-like kind of a decision.

The duke had one day to hear the case of Bertrand de Sols, a proud Spanish gentleman, who was in the habit of walking in the streets with his head elevated like a cameleopard's. While thus marching, a porter, carrying a heavy load, had run against him, but not without first crying "Beware!" which is the ordinary mode of giving warning in such cases. The porter's load consisted of fagots, and one of them fell off in the concussion, and tore the Spaniard's silk mantle. He was mightily enraged, and sought redress from the viceroy. The duke knew that porters usually cry "Beware," and having seen the porter in this case, he learned that he had cried the word, though de Sols avouched the contrary. The duke advised the porter to declare himself dumb when the cause came for judgment. The porter did so through a friend, and the duke immediately said to de Sols, "what can I do to this poor fellow? You see he is dumb." Forgetting himself, the enraged Spaniard cried out, "Don't believe the scoundrel, my lord; I myself heard him cry 'Beware!'" "Why, then, did you not beware?" replied the duke, and he made the mortified Spaniard pay all expenses, and a fine to the poor.

GEMS FROM THE OLD ENGLISH POETS.

NIGHT SHOWETH KNOWLEDGE.

William Habingdon (1605-1654).

When I survey the bright
Celestial sphere,
So rich with jewels hung, that night
Doth like an Ethiop bride appear;

My soul her wings doth spread,
And heavenward flies,
The Almighty's mysteries to read
In the large volumes of the skies.

For the bright firmament
Shoots forth no flame
So silent, but is eloquent
In speaking the Creator's name.

No unregarded star
Contracts its light
Into so small a character,
Remov'd far from our human sight;

But if we steadfast look
We shall discern
In it, as in some holy book,
How man may heavenly knowledge learn.

It tells the conqueror,
That far-stretched power,
Which his proud dangers traffic for,
Is but the triumph of an hour.

That, from the farthest north,
Some nation may
Yet undiscovered issue forth,
And o'er his new-got conquest sway.

Some nation, yet shut in
With hills of ice,
May be let out to scourge his sin,
Till they shall equal him in vice.

And then they likewise shall
Their ruin have;
For as yourselves your empires fall,
And every kingdom hath a grave.

Thus those celestial fires,
Though seeming mute,
The fallacy of our desires,
And all the pride of life, confute.

For they have watch'd since first
The world had birth;
And found sin in itself accurst,
And nothing permanent on earth.

MISANTHROPY.

MISANTHROPY, or that state in which one individual out of the mass of mankind presumes to hate and despise all the rest, may arise from various causes, and may take possession of minds constitutionally a good deal different from each other; but we are prepared to contend that all minds in which it is considerably developed, must agree in one essential point.

One of the circumstances which we most frequently see producing misanthropy, is personal deformity. A slight malformation of one limb is now believed to have been the chief source of this feeling in Byron. He shrunk from human society because the calf of his right leg was a little shrunk, and the heel a little raised off the ground, so that he appeared slightly inferior to other people. It was this ever-present sense of a trifling and merely bodily defect which gave so strange a tinge to his life and poetry. He could not endure mankind as a mass, because they for the most part had calves exactly of a match, and limbs strictly equal in length. But if so small a personal blemish made the great poet misanthropical, how much more misanthropical ought all persons to be whose fate it has been to be still more deformed! Those, for instance, who want limbs altogether, or have them hopelessly crooked and shrunk up, so as to be of no use, ought to hate mankind ten times more than Byron did. Many, however, who are thus miserably deformed, do not appear in the least misanthropical, but, on the contrary, are remarkable for very great kindliness of nature. The explanation of this seeming contradiction is, that the immediate cause of the misanthropy in Byron was, not his shrunk leg, but the pride which made him anxious to have as good legs as his neighbours. He was a man of great self-esteem, as we may readily discover in many other parts of his story; and this it was which chafed and fretted him under a small natural evil, which banished him from the common haunts of his kind, and prompted that strain of morbid feeling which runs through the whole of his writings. The deformity was only the remote cause, and, with a man of different nature—as with Scott, for example, whose lameness was greater, but who had little self-esteem—it might have had a very different effect, or none at all.

If we carefully examine other cases of misanthropy, where it seems to arise from deformity, we shall generally find reason to conclude that self-esteem is also present, and is the immediately operating cause. From all that we know of Richard III., it is clear that he possessed great self-esteem: he could not have otherwise been so ambitious. In the dwarf whom Scott took up and idealised in one of his tales, self-esteem could be traced as the direct and immediate cause of the misanthropy which possessed him: he not only wished to live, but he desired even to be buried, apart from the common herd of men, whom he regarded as mere rubbish. Proverbial wisdom speaks of the ill-nature of cripples, and fiction usually represents them as malignant and misanthropical; altogether overlooking the fact that many cripples are persons of extremely sweet and placid nature. To be strictly correct, we should say, and fiction should assume, that a cripple with much self-esteem is apt to be cankered, but that a modest man may scarcely have the general appearance of a human being, and yet be a great lover of his kind.

Misanthropy, again, often seems to spring from disappointments in life. One who entered the world under favourable circumstances, and with high hopes, finds in time that his efforts have been in a great measure in vain. His talents have not been appreciated; his friends have not supported him as they ought to have done; he has, in short, failed to advance, while many whom he believed to be inferior to himself have been greatly encouraged, and are now in high, but, as he thinks, ill-deserved places. Now, what is the misanthropy of such a man but wounded self-esteem? The modest man who fails, sits down quietly with his disappointment, and is ready to believe that his fellow-creatures have encouraged the right men. *He* is in no danger of becoming a misanthrope. Or we shall suppose another very common case. A man long prosperous, and surrounded, as the prosperous usually are, with friends, experiences a sudden reverse, which makes him a poor man. He has been remarkable, in the day of his good fortune, for an uncalculating liberality, and his house has for years been the scene of social enjoyment. But now he no more finds himself in the situation of a hospitable and admired landlord. The visits which he receives are chiefly of a melancholy and admonitory kind. He is not asked so much into company as he was. He finds, indeed, that he is now in a totally different sphere from what he lately occupied. Instead of exerting himself in his own behalf, he waits in some vague expectation that his friends are to behave the same to him as ever; and when he at length finds that this hope is fallacious, he begins to speak of the perfidy of mankind, their selfishness, and how little old friendship is regarded. Now, the misanthropy into which this man ultimately falls, is a pure emanation of self-esteem. Without this sentiment very active in his nature, he could never have supposed himself a person of such consequence, or his late entertainments a matter of so much obligation, that his fellow-creatures were to be expected to do so much in his behalf. Literature is ridiculously full of allusions to summer friends, and in "Timon of Athens" we have an absolute fool and prodigal becoming a misanthrope, because the parasites on whom he had spent his substance refuse to succour him in the time of his distress. The real truth is, that, wherever intimacy has been attended with mutual esteem, and the unfortunate party makes the vigorous efforts which he ought to do to retrieve his circumstances, it rarely happens that sympathy and aid are withheld. The point on which the whole matter turns is self-esteem. The modest man submits to his fate, and chiefly looks to himself for the means of improving it. The proud man thinks that the world ought to come to his feet, and, when it does not come, as it never does to any, he becomes a misanthrope.

Turn misanthropy, indeed, as we will, we shall find self-esteem at the bottom of it. Take any man who is possessed by this dismal sentiment, and you must find, that either there is a difference between the real appearance of his person and what he wishes his person to be, or that his endowments of mind are not such as to command all the homage which he wishes, or that he has not got what he thinks his deserts in the distribution of the gifts of fortune, or that mankind have in some way failed to do for him all which he thinks he deserves at their hands. Taking the feeling quite abstractedly, it implies in its very nature an overweening self-esteem. By the misanthrope, mankind are described as knaves and fools—a set of beings deserving nothing but hatred and contempt. *He always excepts himself.* All but *I* are wretches—this is the formula of his belief. Now, what is there in any man to entitle him to think that he alone, of all who live, is honest, or worthy, or enlightened, or of correct judgment? He is born a member of the race; he has all their lineaments in body and mind, all their wants, and he goes on towards the same inevitable fate. Truly it would be a strange chance which should have made all bad but HE!

We present these views in an emphatic manner, because misanthropy is a vice of by no means unfrequent occurrence, and one which it is desirable to keep down by all right means. Wherever it takes root, it brings with it a blight, both to the character of the individual himself and to all around him. If we shall have succeeded in warning any one against it by an exposition of the sordid basis on which it always rests, our object will have been accomplished.

CHANGES OF LEVEL IN THE EARTH'S SURFACE.

WITHIN the last few years, a number of observations have been made respecting changes of level in the earth's surface, with which it seems to us possible that we may interest in some degree the imaginations, at the same time that we are instructing the minds, of our readers.

The attention of scientific men was first drawn in a decided manner to this subject, by a remarkable occurrence which took place in Chili, on the west coast of South America, in 1822. On the morning of the 20th of November of that year—a widely felt and destructive earthquake having taken place the day before—it was discovered that a broad line of sea-beach, for more than a hundred miles along the coast, had been deserted by the sea and left dry. Much of this tract was covered by shell-fish, which, being unrefreshed by the sea, and therefore soon dying, exhaled the most offensive effluvia. Between the old low-water mark and the new one, the fishermen found burrowing shells, which they had formerly had to search for amidst the surf. Rocks a little way out to sea, and formerly covered, were now laid dry at half ebb tide. In short, it was evident from many circumstances that a large addition had been made to the dry land.

The country people imagined that the sea had retired from the land and sunk below its former level—a notion of the same kind with that which a child has respecting the hedges which he sees flying past him when he first travels in the inside of a coach. The real state of the case was *a rise of the land*. It had risen at Valparaiso three, and at Quintero four feet. It was also observed that the water-course of a mill, about a mile inland from the sea, had gained a fall of fourteen inches in little more than a hundred yards, and it was hence inferred that the rise was greater in some parts of the inland country than on the coast. Chili is a long narrow country sloping from the Andes to the sea: over a great part of it, from the foot of the mountains to some distance under the sea, a rise is supposed to have taken place, and the average of that rise is believed to have been about five feet. That the rise was of the nature of a *swell* from a centre below, and not a general and equable elevation, seemed to be proved by the numerous cracks which had taken place in the granitic rock forming the basis of a large part of the country. The cause of the rise is generally surmised to have been connected with the volcanic matter which is supposed to be constantly working at no great distance beneath the surface of the South American continent, and for a considerable way under the sea to the westward. Calculations have been formed as to the quantity of solid matter which was on this occasion elevated above the former level: it has been estimated as equal to a mass of fifty-seven cubic miles, or about the size of Mount Etna; and it is supposed that the Ganges, which annually carries down mud into the sea to an amount equal to the bulk of sixty times the great Pyramid, would require seventeen centuries and a half to deposit a mass equal to

what was now, in a single night, raised above the Pacific.*

Soon after this event, an intelligent British traveller who visited the place,† observed that, inland, till a height of about fifty feet above the level of the sea, there was a succession of terraces, composed of mingled shingle and sea-shells, and in all respects resembling the beach which had lately been left dry. No doubt was entertained that these had each in succession been the sea-coast, and that the land had undergone as many elevations as there were terraces.

We must now take our readers from the west coast of South America, and request them to accompany us to the shores of the Baltic. Sweden, and the other countries bordering on this inland sea, are well known to be little subject to earthquakes or any of the other demonstrations of volcanic violence; yet there can be no doubt that, for centuries past, some parts of the coasts of the Baltic have been *slowly rising above the level of the sea*. This fact has been the subject of philosophical observation since the early part of the last century. It has been found that, in many places, the land has been left uncovered by the sea; sea-ports have become inland towns; and the sea near the land has been much shallowed. Upwards of a hundred years ago, lines marking the then surface of the sea were made, under the direction of scientific men, upon cliffs rising above the waters; and it has consequently been ascertained that the land in those places is rising at the rate of about forty-five English inches in a century, or a foot every twenty-five years. Here, also, the popular opinion is, that the sea is retiring; but the real state of the case is strikingly proved in this instance by the fact, that, in some places, the ground is at the same level as it was several centuries ago, and *in others is sinking*.‡ If the sea were from any cause retiring, it would sink every where to the same extent. Other proofs of the rising of the land are to be found in the great quantities of sea-shells which are imbedded in the soil on the considerably elevated grounds. At Uddevalla, in Gotheburg, a port at the entrance of the Baltic, there is a raised beach of the general character of those on the coast of Chili, full of shells, many of them entire and some broken, as is usual on beaches, and of the same species as those existing on the neighbouring coasts. This beach is *two hundred feet* above the present level of the Baltic. It rests on a great platform of gneiss rock, which rises in a cliff above it, and on that cliff the shells of barnacles are still found attached, the animals having taken up their residence there many ages ago, when the sea daily rose and fell in tides against the face of the rock!§

The publication of the above facts has caused attention to be directed to similar wonders in our own country, and it is now ascertained that raised beaches exist in many parts of Great Britain and Ireland, not only near the present coasts, but in many inland situations. In the vale of the Ribble in Lancashire, Mr Murchison found terraces at various elevations under three hundred feet, composed of loose sands, gravels, and marls, such as are deposited by the sea upon beaches. Along both sides of the Firth of Forth, there runs a terrace about twenty feet above the present level of the sea, and which may be traced at generally a short distance from the shore, with a bank rising above it, and a narrow level space between it and the present line of coast: this terrace, which, on being dug, is found full of marine shells, is nothing but a beach which has been raised to a higher level by a general elevation of the land.‖ A similar terrace is a striking feature in the coast scenery of the Firth of Clyde. It is between thirty and forty feet above the present high-water mark, and is conspicuous wherever the violence of the Atlantic has not made inroads upon it. The grand cliffs which rise on the northern coast of Ayrshire, at a little distance inland, are conceived to have been formed by the beating of the sea at their base in old times.¶ The Firth of Cromarty also presents indubitable remains of raised beaches, the present town of Cromarty being seated on one of them. They are best defined on what are or have been the coasts of inland seas, for there the water is comparatively quiet, so as to allow of a bank of soft or loose matter being formed on the brink of the sea. The shells of at least the Forth and Clyde terraces are identical or nearly so with those of the present seas, thus showing that the same general circumstances existed at the time when the old beaches were formed, as at present; but we are not for that reason to suppose that the rise which they argue in the land is of modern date. There is good reason to conclude that the British island is not higher at present than in the days of the Romans. The rise, whenever it took place, was probably abrupt and effected at once, like the rises which take place in Chili, for if it had been slow and gradual, the old beach would not have been left entire.

But raised beaches not only encincture the present coasts of our inland seas: they are found marked on the sides of mountains now far from the sea, and at a great height above its level. Most of our readers probably are acquainted more or less with what are usually called the parallel roads of Glenroy, in Inverness-shire, namely, a range of terraces which mark, at different heights, the sides of that vale, as well as the sides of some glens adjacent to it. The traveller who enters those lonely vales unprepared, is surprised to observe three level lines proceeding along the mountain sides, exactly parallel to each other, and each at one side exactly corresponding in level with one at the other. It has lately been nearly made out to the satisfaction of the scientific world, that these terraces were once the borders of inland seas, like those which still penetrate the West Highlands, and that they were raised into their present situation by a succession of general elevations of the land.* Similar terraces are found in the vale of the Spey, in Glen Tilt, and in the vale of the Tay between Perth and Dunkeld.

We are, then, to understand that great islands and even continents have risen, either slowly or by quick and abrupt movements, out of the sea. But land also occasionally sinks. Some parts of the shores of the Baltic are stationary, or have fallen to a lower level than formerly. The existence of submarine forests on some parts of the British coast shows that, at a comparatively recent period, portions of our soil have sunk. A curious proof of the sinking of great chains of mountains has recently been detected by the eminent Agassiz, on the fronts of some of the Alps, near his residence at Neufchatel in Switzerland. The caked snow (glaciers) of those mountains is known to be constantly though imperceptibly moving downwards along the slopes, new snow being constantly added above. As the mass descends, it wears and polishes the rock below. Masses of stone are also sometimes detached from projecting cliffs, and carried down fixed in the under surface of the glacier, so as to cut deeply into the smoothed surface. The Alps, therefore, in the parts covered by snow, present a smoothed and scratched exterior. It is also to be remarked, that, at the place where congelation ceases, and the glacier melts, the detached stones, left disengaged, are accumulated in a kind of mound, or what is locally called a *moraine*, around the side of the mountain. Now, it is a very striking fact, that moraines exist much below the present point of congelation, and that when the soil is taken off the lower flanks of the mountains, even in places where the vine grows, the surface of the rock is smoothed and scratched exactly as it is in the parts now covered by snow. To us these facts argue that the hills were once higher than at present, and enveloped in the region of perpetual ice, and that they have since sunk many hundred feet.

Another most remarkable circumstance, proving both great depression and great elevation as having taken place at a particular part of the earth's surface, was observed by Mr Darwin in South America. In a dangerous excursion which he made across the Andes, observing that the lower chain of hills parallel to the great Cordillera was composed of submarine lavas and sedimentary deposits, he made search for silicified or petrified wood, which is often found connected with those rocks, and soon was gratified in an extraordinary manner. He saw on a bare slope, at an elevation of probably 7000 feet, some snow-white projecting columns, which on examination proved to be petrified trees, of a kind allied to the araucaria. "It required," he says in his journal,† "little geological practice to interpret the marvellous story which this scene at once unfolded; though I confess I was at first so much astonished, that I could scarcely believe the plainest evidence of it. I saw the spot where a cluster of fine trees had once waved their branches on the shores of the Atlantic, when that ocean (now driven back 700 miles) approached the base of the Andes. I saw that they had sprung from a volcanic soil, which had been raised above the level of the sea, and that this dry land, with its upright trees, had been subsequently let down to the depths of the ocean. There it was covered by sedimentary matter, and this again by enormous streams of submarine lava—one such mass alone attaining the thickness of a thousand feet; and these deluges of melted stone and aqueous deposits had been five times spread out alternately. The ocean which received such a mass must have been deep; but again the subterranean forces had exerted their power, and I now beheld the bed of that sea forming a chain of mountains more than 7000 feet in altitude. Nor had those antagonist forces been dormant, which are always at work to wear down the surface of the land to one level; the great piles of strata had been intersected by many wide valleys; and the trees, now changed into silex, were exposed projecting from the volcanic soil, now changed into rock, whence formerly, in a green and budding state, they had raised their lofty heads. Now, all is utterly irreclaimable and desert; even the lichen cannot adhere to the stony coats of former trees. Vast, and scarcely comprehensible as such changes must ever appear, yet they have all occurred within a period recent, when compared with the history of the Cordillera; and that Cordillera itself is modern as compared with some other of the fossiliferous strata of South America."

The time here spoken of as recent is probably very remote; but both elevations and depressions of the surface are clearly ascertained to have taken place to a considerable extent within times which even civil history does not call distant. From remains of articles of human workmanship found imbedded in the alluvium or clayey and gravelly deposit where the sea formerly stood, it is certain that Sweden has risen 60 and Chili 85 feet above the present level of the sea, since the countries were first inhabited by man. When we turn to that part of the coast of Italy which is specially under volcanic influence, we find a lively and most interesting proof of still more modern elevation and depression. On that coast, near Puzuoli, on a platform nearly on a level with the sea, and occasionally soaked by it, there are the remains of a fine building, which apparently had been constructed in ancient times as a public bath, although usually called the Temple of Serapis. From the pavement, which is still entire, spring three or four tall columns, which for twelve feet from the base are clean and unworn. Above that point, however, for nine or ten feet, the stone has been pierced by great numbers of a marine shell-fish, called the lithodomus, the prominent instinct of which leads it to take that means of forming for itself a quiet residence. As these animals could have had no access to the pillars elsewhere than in the sea, it is evident that the temple, and the ground upon which it stands, must have been at one time let down into the waters of the bay, and, after an interval, once more raised to their present situation. To account for the stone being uninjured for the first twelve feet, we must suppose it to have been protected for that space by an accumulation of mud or rubbish. The top of the part perforated by the lithodomus, and which we consequently suppose to have been exposed to the sea, is twenty-three feet above the existing level of the bay. Consequently, the subsidence and subsequent elevation must have been to that extent at least. Both events have probably taken place since the Christian era.* It is at the same time worthy of remark, that the Mediterranean is found, in many old ports along its shores, to maintain exactly the same level as in the days of the Romans.

If we were to go back to the early geological epochs when the coal strata were formed, we might show more wonderful examples of changes of level in the earth's surface, for it is held by many geologists that each bed must have at one time been a forest exposed to the open air; that it must in time have gone down into the sea, and been covered over by mud or sand forming a new soil; that, the ground being once more raised, a new forest grew on the place, afterwards to be submerged and covered over as before, and *this* for twenty or thirty times, or as often as there may be strata of coal at the spot. But we are disposed to limit our views for the present to the comparatively recent epochs, namely, those immediately before and since man's appearance on the earth. The great question remains, By what agency are these risings and fallings occasioned? Can it be from the working of molten matter beneath the crust of the globe, or from inflammations brought about by great chemical unions taking place in the same quarter, or has electric agency any thing to do with it? Science is yet unable to answer these questions, but we may in the mean time look on and admire the great ends which appear to be in view. The dry land is known to have once been very limited, only a few islands being scattered, for instance, over the space now composing Europe. South America was once but a long range of islands, which have since become the tops of the Cordillera of the Andes. But a constant progress has been made by the subterranean agency in causing the land to appear. Little islands must have risen till they became large; then they must have become connected with each other, and finally they would be aggregated into continents. Vast tracts must occasionally have been laid bare by a comparatively slight elevation, for it is stated that the sinking of the South American continent for less than a thousand feet would submerge the whole of the vast tract between the Andes and the Atlantic. Thus there has gradually been rescued from the enveloping sea the firm platform which was necessary as a theatre in which mankind were to live and move, and work out all those great moral problems which make them so much a wonder even to themselves. It is probable that the chief part of the business has long been over; but still it may be necessary that both the gradual and the abrupt elevations should not altogether cease, for the air and the water and the wind are so many agents constantly at work to wear down elevated land and carry it back into the sea, so that it could not fail in time to be entirely submerged, unless there were some counter-

vailing forces. In all of these operations we discover a new and surely most sublime cause for admiring that great Providential agency to which nothing seems too vast or too minute, if only it can serve the end of furnishing living creatures with the means of enjoyment.

THE CONFESSIONS OF HARRY LORREQUER.*

THE Confessions of Harry Lorrequer, to which we have previously referred, originally appeared in the pages of the Dublin University Magazine, where they excited much attention from their vivid and accurate delineations of Irish and of military life. They delineated a state of manners fast fading away. The condition of Ireland within the last twenty years has been more changed than that of any other country in Europe; the aspect of society has undergone a still greater alteration; and those who have visited it at long intervals, feel as if they met a different country and a different people. It is much easier to perceive such a change than to describe its nature. It will perhaps be sufficient to notice the most marked difference: business is more a pleasure, and pleasure is less a business. However advantageous such a change may be, it is fatal to the originality of character, the developement of whim, the pranks of humour, and the ebullitions of wit, which were common in earlier days.

A change in the habits of military men is scarcely less perceptible. At the close of the war there was an abundant supply of old campaigners, full of the reckless jollity, the keen sense of present enjoyment, and the disregard of consequences, naturally produced by the hardships and vicissitudes of such a war as that of the Peninsula. To such men, Ireland, with its excitable population, ever ready for frolic or for mischief, and always preferring the practical jokes which unite both, was far more agreeable than the solemn steadiness of England and the acute caution of Scotland. From 1815 to 1830, Ireland seemed made for the army, and the army for Ireland; both have since changed, but the recollection of former days of merriment is not yet effaced, and a more worthy chronicler than Harry Lorrequer could not be found to give them a permanent record.

Lord Bacon once said of a story that was told him, "I believe it, not because it is like the truth, but because it is so unlike the truth that I would not give any human being the credit of the invention." The remark is applicable not only to Harry Lorrequer's anecdotes, but to most Irish stories. All the circumstances noted by the Edinburgh reviewers as improbable in Miss Edgeworth's Patronage, were proved to have occurred in the history of her own family; and the principal incident in Rory O'More, the conviction of a man for murder after his supposed victim had been produced in court, which some critics denounced as the most improbable of inventions, was unexpectedly confirmed by Chief-Justice Bushe, who, we believe, acted as counsel for the prisoner on that memorable occasion.

At a future opportunity, we will take the liberty of culling a few of the more striking drolleries with which the volume abounds, in the meanwhile contenting ourselves with an abridgement of an off-hand sketch respecting one of Lorrequer's continental adventures, called

JACK WALLER'S STORY.

"And now, Jack, tell me something of your own fortunes since the day you passed me in the post-chaise and four."

"The story is soon told. You remember that when I carried off Mary, I had no intention of leaving England whatever: my object was, after making her my wife, to open negociations with the old colonel, and after the approved routine of penitential letters, imploring forgiveness, and setting forth happiness only wanting his sanction to make it heaven itself, to have thrown ourselves at his feet, sobbed, blubbered, blown our noses, and dressed for dinner, very comfortable inmates of that particularly snug residence, 'Hydrabad Cottage.' Now, Mary, who behaved with great courage for a couple of days, after that got low-spirited and depressed; the desertion of her father, as she called it, weighed upon her mind, and all my endeavours to rally and comfort her were fruitless and unavailing. Each day, however, I expected to hear something of or from the colonel that would put an end to this feeling of suspense; but no—three weeks rolled on, and although I took care that he knew of our address, we never received any communication. You are aware that when I married, I knew Mary had, or was to have, a large fortune; and that I myself had not more than enough in the world to pay the common expenses of our wedding tour. My calculation was this—the reconciliation will possibly, what with delays of post, distance, and deliberation, take a month—say five weeks; now, at forty pounds per week, that makes exactly two hundred pounds, such being the precise limit of my exchequer, when, blessed with a wife, a man, and a maid, three imperials, a cap-case, and a poodle, I arrived at 'the Royal Hotel' in Edinburgh. Had I been Lord Francis Egerton, with his hundred thousand a-year, looking for a new 'distraction' at any price; or, still more, were I a London shopkeeper, spending a Sunday in Boulogne-sur-Mer, and trying to find out something expensive, as he had only one day to stay, I could not have more industriously sought out opportunities for extravagance, and each day contrived to find out some two or three acquaintances to bring home to dinner. And as I affected to have been married for a long time, Mary felt less *genes* among strangers, and we got on famously. Still the silence of the colonel weighed upon her mind, and although she partook of none of my anxieties from that source, being perfectly ignorant of the state of my finances, she dwelt so constantly upon this subject, that I at length yielded to her repeated solicitations, and permitted her to write to her father. Her letter was a most proper one; combining a dutiful regret for leaving her home, with the hope that her choice had been such as to excuse her rashness, or, at least, palliate her fault. It went to say, that her father's acknowledgment of her was all she needed or cared for, to complete her happiness, and asking for his permission to seek it in person. This was the substance of the letter, which, upon the whole, satisfied me, and I waited anxiously for the reply. At the end of five days the answer arrived. It was thus:—

'DEAR MARY—You have chosen your own path in life, and having done so, I have neither the right nor inclination to interfere with your decision; I shall neither receive you nor the person you have made your husband; and, to prevent any further disappointment, inform you, that as I leave this to-morrow, any future letters you might think proper to address will not reach me.—Your's very faithful, C. KAMWORTH.

Hydrabad Cottage.'

This was a tremendous coup, and not in the least anticipated by either of us; upon me the effect was stunning, knowing as I did that our fast diminishing finances were nearly expended. Mary, on the other hand, who neither knew nor thought of the exchequer, rallied at once from her depression, and after a hearty fit of crying, dried her eyes, and putting her arm round my neck, said,

'Well, Jack, I must only love you the more, since papa will not share any of my affection.'

'I wish he would his purse though,' muttered I, as I pressed her in my arms, and strove to seem perfectly happy.

I shall not prolong my story by dwelling upon the agitation this letter cost me; however, I had yet a hundred pounds left, and an aunt in Harley Street, with whom I had always been a favourite. This thought, the only rallying one I possessed, saved me for the time; and as fretting was never my forte, I never let Mary perceive that any thing had gone wrong, and managed so well in this respect, that my good spirits raised hers, and we set out for London one fine sunshiny morning, as happy a looking couple as ever travelled the north road.

When we arrived at the 'Clarendon,' my first care was to get into a cab and drive to Harley Street. [Here Jack found that his aunt had gone to Paris, and next morning, he continues]—I called upon her lawyer, and having obtained her address, sauntered to the 'Junior Club,' to write her a letter before post hour. As I scanned over the morning papers, I could not help smiling at the flaming paragraph which announced my marriage to the only daughter and heiress of the millionaire, Colonel Kamworth. Not well knowing how to open the correspondence with my worthy relative, I folded the paper containing the news, and addressed it to 'Lady Lilford, Hotel de Bristol, Paris.'

When I arrived at the 'Clarendon,' I found my wife and her maid surrounded by cases and band-boxes; laces, satins, and velvets, were displayed on all sides, while an emissary from 'Storr and Mortimer' was arranging a grand review of jewellery on a side table, one half of which would have ruined the Rajah of Mysore to purchase. My advice was immediately called into requisition; and pressed into service, I had nothing left for it but to canvass, criticise, and praise, between times, which I did with a good grace, considering that I anticipated the 'Fleet' for every flounce of Valenciennes lace.

As at length one-half of the room became filled with millinery, and the other glittered with jewels and bijouterie, my wife grew weary with her exertions, and we found ourselves alone.

When I told her that my aunt had taken up her residence in Paris, it immediately occurred to her, how pleasant it would be to go there too; and although I concurred in the opinion for very different reasons, it was at length decided we should do so; and the only difficulty now existed as to the means—for though the daily papers teem with 'four ways to go from London to Paris,' they all resolved themselves into one, and that one, unfortunately to me, the most difficult and impracticable—by money.

There was, however, one last resource open—the sale of my commission. I will not dwell upon what it cost me to resolve upon this; the determination was a painful one, but it was soon come to; and before five o'clock that day, Cox and Greenwood had got their instructions to sell out for me, and had advanced a thousand pounds of the purchase. Our bill settled—the waiters bowing to the ground—(it is your ruined man that is always most liberal)—the post-horses harnessed, and impatient for the road, I took my place beside my wife, while my valet held a parasol over the soubsette in the rumble, all in the approved fashion of those who have an unlimited credit with Coutts and Drummond; the whips cracked, the leaders capered, and with a patronising bow to the proprietor of the 'Clarendon,' away we rattled to Dover.

After the usual routine of sea-sickness, fatigue, and poisonous cookery, we reached Paris on the fifth day, and put up at the 'Hotel de Londres,' Place Vendome.

To have an adequate idea of the state of my feelings as I trod the splendid apartments of this princely hotel, surrounded by every luxury that wealth can procure, or taste suggest, you must imagine the condition of a man who is regaled with a sumptuous banquet on the eve of his execution. The inevitable termination to all my present splendour was never for a moment absent from my thoughts, and the secrecy with which I was obliged to conceal my feelings, formed one of the greatest sources of my misery. The coup, when it does come, will be sad enough, and poor Mary may as well have the comfort of the deception as long as it lasts, without suffering as I do. Such was the reasoning by which I met every resolve to break to her the real state of our finances, and such the frame of mind in which I spent my days at Paris—the only really unhappy ones I can ever charge my memory with.

We had scarcely got settled in the hotel, when my aunt, who inhabited the opposite side of the 'Place,' came over to see us, and wish us joy. She had seen the paragraph in the Post, and like all other people, with plenty of money, fully approved a match like mine.

She was delighted with Mary, and despite the natural reserve of the old maiden lady, became actually cordial, and invited us to dine with her that day, and every succeeding one we might feel disposed to do so. So far so well, thought I, as I offered her my arm to see her home; but if she knew of what value even this small attention is to us, am I quite so sure she would offer it? However, no time is to be lost; I cannot live in this state of hourly agitation; I must make some one the confidant of my sorrows, and none so fit as she who can relieve as well as advise upon them. Although such was my determination, yet somehow I could not muster up courage for the effort. My aunt's congratulations upon my good luck made me shrink from the avowal; and while she ran on upon the beauty and grace of my wife, topics I fully concurred in, I also chimed in with her satisfaction at the prudential and proper motives which led to the match. Twenty times I was on the eve of interrupting her, and saying, 'But, madam, I am a beggar—my wife has not a shilling—I have absolutely nothing.'

Such were my thoughts, but whenever I endeavoured to speak them, some confounded fulness in my throat nearly choked me; my temples throbbed, my hands trembled; and whether it was shame, or the sickness of despair, I cannot say, but the words would not come, and all that I could get out was some flattery of my wife's beauty, or some vapid eulogy upon my own cleverness in securing such a prize.

But this is growing tedious, Harry; I must get over the ground faster. Two months passed over at Paris, during which we continued to live at the 'Londres,' giving dinners, soirées, dejeuners, with the prettiest equipage in the 'Champs Elysees.' We were quite the mode. My wife, which is rare enough for an Englishwoman, knew how to dress herself. Our evening parties were the most recherché things going; and if I were capable of partaking of any pleasure in the eclat, I had my share, having won all the pigeon-matches in the Bois de Boulegard, and beat Lord Henry Seymour himself in a steeple-chase. The continual round of occupation in which pleasure involves a man, is certainly its greatest attraction—reflection is impossible—the present is too full to admit any of the past, and very little of the future; and even I, with all my terrors awaiting me, began to feel a half indifference to the result in the manifold cares of my then existence. To this state of fatalism, for such it was becoming, had I arrived, when the vision was dispelled in a moment by a visit from my aunt, who came to say, that some business requiring her immediate presence in London, she was to set out that evening, but hoped to find us in Paris on her return.

[Jack now summons up sufficient courage to hint, in the course of a conversation with his aunt, the nature of his situation and wishes, which she appeared so readily to comprehend as to spare particular explanation.]

'Indeed,' she replied, 'I think I have anticipated your wish in the matter; but as time presses, and I must look after all my packing, I shall say good bye for a few weeks, and in the evening Jepson, who stays here, will bring you "*what I mean*," over to your hotel; once more, then, good bye.'

'Good bye, my dearest, kindest friend,' said I, taking a most tender adieu of the old lady. 'What an excellent creature she is!' said I, half aloud, as I turned towards home; 'how considerate, how truly kind!—to spare me too all the pain of explanation! Now I begin to breathe once more. If there be a flask of Johannisberg in the "*Londres*," I'll drink your health this day, and so shall Mary.' So saying, I entered the hotel with a lighter heart and a firmer step than ever it had been my fortune to do hitherto.

[During the evening, a packet arrives from her ladyship; and the servants having left the room, Jack hastened to open it.]

I read, with what feelings I leave you to guess, the following:—'DEAR NEPHEW AND NIECE, the enclosed will convey to you, with my warmest wishes for your happiness, a ticket on the Frankfort Lottery, of which I enclose the scheme. I also take the opportunity of saying that I have purchased the Hungarian pony for Mary—which we spoke of this morning. It is at Johnston's stable, and will be delivered on sending for it.'

'Think of that, Jack—the Borghese pony, with the silky tail; mine—oh! what a dear good old soul; it was the very thing of all others I longed for, for they told me the princess had refused every offer for it.'

While Mary ran on in this strain, I sat mute and stupified; the sudden reverse my hopes had sustained deprived me for a moment of all thought, and it was several minutes before I could rightly take in the full extent of my misfortunes.

How that crazy old maid, for such, alas, I called her to myself now, could have so blundered all my meaning

Digitized by Google

—how she could so palpably have mistaken, I could not conceive. What a remedy for a man overwhelmed with debt!—a ticket in a German lottery, and a cream-coloured pony, as if my whole life had not been one continued lottery, with every day a blank; and as to horses, I had eleven in my stables already. Perhaps she thought twelve would read better in my schedule, when I, next week, surrendered as insolvent.

Unable to bear the delight, the childish delight, of Mary, on her new acquisition, I rushed out of the house, and wandered for several hours in the Boulevards. At last I summoned up courage to tell my wife. I once more turned towards home, and entered her dressing-room, where she was having her hair dressed for a ball at the embassy. My resolution failed me—not now, thought I—to-morrow will do as well—one night more of happiness for her, and then—— I looked on with pleasure and pride, as ornament after ornament, brilliant with diamonds and emeralds, shone in her hair and upon her arms, heightening her beauty, and lighting up with a dazzling brilliancy her lovely figure. But it must come—and whenever the hour arrives, the reverse will be fully as bitter. Besides, I am able now; and when I may again be so, who can tell? Now then be it, said I, as I told the waiting-maid to retire; and taking a chair beside my wife, put my arm round her.

'There, John, dearest, take care; don't you see you'll crush all that great affair of Malines lace that Rosetta has been breaking her heart to manage this half hour?'

'And then,' said I.

'And then? I could not go to the ball, naughty boy. I am bent on a great conquest to-night; so pray don't mar such good intentions.'

'And you should be greatly disappointed were you not to go?'

'Of course I should. But what do you mean?—is there any reason why I should not? You are silent, John; speak—oh, speak—has any thing occurred to my——'

'No, no, dearest; nothing that I know has occurred to the colonel.'

'Well, then, who is it? Oh, tell me at once.

'Oh, my dear, there is no one in the case but ourselves;' so saying, despite the injunction about the lace, I drew her towards me, and in as few words, but as clearly as I was able, explained all our circumstances—my endeavour to better them—my hopes—my fears—and now my bitter disappointment, if not despair.

The first shock over, Mary showed not only more courage but more sound sense than I could have believed. All the frivolity of her former character vanished at the first touch of adversity, just, as of old, Harry, we left the tinsel of our gay jackets behind, when active service called upon us for something more sterling. She advised, counselled, and encouraged me by turns; and in half an hour the most poignant regret I had was, in not having sooner made her my confidante, and checked the progress of our enormous expenditure somewhat earlier.

I shall not now detain you much longer. In three weeks we sold our carriages and horses; our pictures (we had begun this among our other extravagances) and our china followed; and under the plea of health set out for Baden; not one among our Paris acquaintances ever suspecting the real reason of our departure, and never attributing any monied difficulties to us, for we paid our debts.

The same day we left Paris, I dispatched a letter to my aunt, explaining fully all about us, and suggesting that as I had now left the army for ever, perhaps she would interest some of her friends—and she has powerful ones—to do something for me.

After some little loitering on the Rhine, we fixed upon Hesse Cassel for our residence. It was very quiet—very cheap—the country around picturesque—and last, but not least, there was not an Englishman in the neighbourhood. The second week after our arrival brought us letters from my aunt. She had settled four hundred a-year upon us for the present, and sent the first year in advance; promised us a visit as soon as we were ready to receive her; and pledged herself not to forget when an opportunity of serving me should offer.

From that moment to this," said Jack, "all has gone well with us. We have, it is true, not many luxuries, but we have no wants, and, better still, no debts. The dear old aunt is always making us some little present or other; and somehow I have a kind of feeling that better luck is still in store; but faith, Harry, as long as I have a happy home, and a warm fireside, for a friend when he drops in upon me, I scarcely can say that better luck need be wished for."

"There is only one point, Jack, you have not enlightened me upon; how came you here?"

"Oh! that was a great omission in my narrative; but come, this will explain it; see here." So saying, he drew from a little drawer a large lithographic print of a magnificent castellated building, with towers and bastions, keep, moat, and even drawbridge, and the walls bristling with cannon, and an eagled banner floating proudly above them.

"What in the name of the Sphynxes is this?"

"There," said Jack, "is the Schloss von Eberhausen; or, if you like it in English, Eberhausen Castle, as it was the year of the deluge; for the present mansion that we are now sipping our wine in bears no very close resemblance to it. But to make the mystery clear, this was the great prize in the Frankfort lottery, the ticket of which my aunt's first note contained, and which we were fortunate enough to win. We have been here only a few weeks, and though the affair looks somewhat meagre, we have hopes that in a little time, and with some pains, much may be done to make it habitable. There is a capital chasse of some hundred acres; plenty of wood and innumerable rights, seigneurial, manorial, &c., which, fortunately for my neighbours, I neither understand nor care for; and we are therefore the best friends in the world. Among others I am styled the graf or count."

"Well, then, Monsieur le Comte," said Mary, "do you intend favouring me with your company at coffee this evening, for already it is ten o'clock; and considering my former claim upon Mr Lorrequer, you have let me enjoy very little of his society."

We now adjourned to the drawing-room, where we gossipped away till past midnight; and I retired to my room, meditating over Jack's adventures, and praying in my heart, that despite all his mischances, my own might end as happily.

DEMORALISING AND IMPOVERISHING EFFECTS OF PARTY SPIRIT.

[Abridged from Dr Mitchell's Report to Parliament on the Condition of Hand-Loom Weavers.]

THERE is no cause which has had so direful an effect on the prosperity of the trade in Norwich, as party spirit. In almost every town possessing parliamentary representation, there is a complaint of party spirit; but in Norwich it far exceeds that of any other place, and is carried to an extent which is utterly amazing. The people are distinguished by colours; "purple and orange" denote the Tories, and "blue and white" the Whigs or Radicals. The party to which every man in Norwich belongs, from the highest to the lowest, is as well known as if he daily wore clothes of the colours by which it is designated. The exasperation of the one party against the other is such as to make every man lament that human nature should be capable of such feelings.

The spirit of party enters into every thing; every institution of the town is a subject of party spirit; it is like two towns in one, and acting in hostility against each other. It may be asked, why machinery and other improvements in trade have not been introduced into the town, so that it may keep pace with other places. The cause is the violent and odiously virulent party spirit. This feeling continues to operate, as it has always done, to defeat all attempts to improve the state of the city, pecuniarily, morally, or mentally. No man of either political party, be it which it may, could introduce machinery into this city, though it were as evident as the sun at noonday that it must necessarily be for the general good, but he would in all probability, at some paltry election contest (particularly if he took an active part in it), be held up as an obnoxious individual, perhaps as one who had been the cause of the lowering of wages, or some such absurdity, and his property, and perhaps his life, would be endangered; and whilst the present detestable party animosity exists, no one will attempt to keep pace with any other manufacturing communities.

Besides impoverishing, politics greatly demoralise the place; they hold out the temptation of drinking, and the temptation of money to induce men to violate their consciences; "it is not only in the election of members of Parliament, but in the municipal elections also. Ten pounds are given commonly enough in a municipal election; I have known L.100 to be given when the contest was likely to run very close. We have eight wards in this city; two of them are so decidedly Whig, that there is little contest there. Another ward, inhabited by the aristocracy, is Tory, and there is no contest there. But the other five wards must be regularly bought, and the real contest is merely which party has got the best purse. The Whigs are as bad as the Tories, and the Tories are as bad as the Whigs, and there is not a pin to choose between them.

There is not an election of any sort into which politics do not enter, from the election of the sexton of the poorest parish in Norwich to the election of the mayor of the city. In our charities, and in our literary institutions, and in every thing, it is the same. In choosing the committee of the public library there is always a struggle between the Whigs and the Tories. The last general election at Norwich was followed by an election amongst the boys, which, although amusing, shows how fully, even from their earliest youth, the natives of Norwich are imbued with party spirit. When the parents thus train them in the way that they should go, we may feel but too sure that when they are old they will not depart from it. It was a real contest, carried on with great zeal, and every formality duly observed. At first all the voters were unpaid; but as the contest drew towards a close, every means fair and foul was adopted to get boys to the poll; some were seized by force, others were induced by hire. At first marbles were given for votes; by and bye the price rose to pence; and towards the very close, from 1s. to 1s. 6d. was the reward of the suffrage. The 'blue and white' had a majority. There was a chairing procession, and a grand dinner and ball to celebrate the event. That might pass for a comedy, but politics render every thing more of a tragedy in Norwich.

Their success in the boys' election was not the only triumph of the 'blue and white' party; the lower orders had their triumph also. Two pugilistic heroes, the one a 'blue and white,' and the other a 'purple and yellow,' agreed to decide in their way the merits of their principles. The Whig hero was a weaver, in the employment of Mr Etheridge; that gentleman states, 'The man was a month in training. About a fortnight before the battle he declined a piece of work because he could not be spared from preparatory exercises. The man is in my employment now. Many of my weavers went to see the battle; there was a strong muster of the operative politicians on both sides of the question, and a grand dinner among the 'blue and white' men afterwards, to celebrate the triumph of their champion. You may see the parties when you come to my warehouse.' Men present at the battle were afterwards seen, and the following further particulars were stated:—'Mr Edward Painter, formerly a professional pugilist, supplied the ropes and stakes; the scene of action was about eight miles from Norwich; each party went out with cockades in their pockets, and when the 'purple and yellow' hero could not come to time, the 'blue and white' partisans mounted their cockades, and displayed their flag, and they returned with shouts of triumph to the city. The 'purple and yellow' weavers, however, console themselves with the fact that their hero, though unfortunate in his inferior science, displayed a valour and hardihood which, under better tuition, would have secured him the victory.'"

The last general election at Norwich afforded a striking view of the party spirit of the city, and of the practices by which the leading men have acted on the poverty, the necessities, and the frailty and wickedness of the poorer citizens, many of whom are weavers, and whose interests have much suffered in consequence. The number of voters for the 'purple and orange' candidates was 1865 and 1863; and for the 'blue and white' candidates, 1843 and 1831; of whom 1400 voted under the influence of the most open application of pecuniary temptation.

The money spent, according to the information given to me by two gentlemen who could not but know, was about L.44,000. The 'blue and white' party spent more money than the 'purple and orange' party; and this is attributable to what many consider to have been a blunder in their tactics, and which is thus explained.

The 'purple and orange' party had felt secure that there would be no opposition; and if the 'blue and white' party had kept quiet until close on the day of election, which was on a Tuesday, it is supposed that they might have taken their opponents by surprise, and snatched a victory. But they commenced operations on the Wednesday, being six days before the election, and began actively to buy votes, and to carry off the voters 'into coop.' They had thus the expense of six days to defray. But as soon as the 'purple and orange' party saw what was doing, they sent off to London for money, which arrived on Saturday, and they had time to buy back their friends from the 'blue and white' party; and those whom they carried into coop, they had to keep only three days, which was much less expensive than keeping them six days. One of the chiefs of the 'blue and white' party admitted the impolicy of their early declaration of a contest, but said that his views had been overruled in the committee.

The contest was carried on very openly. There was no hypocrisy, no concealment, on either side. There were 1400 to be bought, and about these lay the struggle. One gentleman stated to me that he himself had the distribution of money to the voters on the day of election. He sat at a table in a large room, having before him parcels coiled up of bank-notes of L.10, of L.15, of L.20, of L.25, of L.30, of L.35, of L.40 value, all in readiness, that there might be no loss of time in counting. The voters, one at a time, entered at one door, passed through the room, and out at another door. Every man was asked what he had agreed for, and it was handed to him. One man would be so innocent as to ask for only L.10; the next man would ask for L.20; and both were paid with equal readiness. Then might come, perhaps, one who would ask for L.15, and it would be paid; but with a caution given to him not to spoil the market by letting any body know that he had got more than L.10. But the other sums were given. A grocer or other substantial tradesman looked for L.40, and there were the cases of two professional men who each had L.50.

The gentleman who paid the money gave this information with the most hearty frankness; and when told that the guilt of all these doings rested upon him, and on the other criminals who composed the committee, he laughed, consoling himself that he had many coadjutors with whom to support the burden. Towards the close of the poll, nobody could say on which side lay the victory; every vote therefore was sought out, and no money was thought too much. The case of one poor man deserves to be particularised. Some years ago, being then in great distress, a manufacturer took pity on him, and gave employment both to him and his wife. They proved steady people, and they were never allowed to be out of work. A general election came on, and the man was offered L.15, and he refused it, and voted on the same side with his employer. Another election came on, and he was again tempted, and again stood firm. He said that the manufacturer had now for many years employed him and his wife, and he had never been without work, and thereby had had a comfortable living, and he should consider himself the most ungrateful of men, if for money he were to vote against him. After the close of the last election, the manufacturer was told that this man had voted against his party, and he sent for him, and made the inquiry. The man looked very uneasy, and said that it was really so. The manufacturer said, 'Did you not say that you would be the most ungrateful of men if you ever voted against me?' 'I did so,' said he,

Digitized by Google

'and I never intended to do otherwise; but there was a great deal of money offered me, a great deal indeed, and I was quite unable to resist it.' The manufacturer said, 'And what might be the money; was it L.100?' The man said, 'Sir, a great deal more than that.' It is known that the sum paid was L.135. This statement was made to me by the manufacturer himself. To pass by the base seducers, and to bestow blame on the poor man to whom such an irresistible sum was offered, would be demanding from poor men a strength of feeling which the condition of human nature does not entitle us to expect. At the election previous to the last, the number of voters to be bought was 900; at the last election it was 1400. It is the tendency of the system to extend its corrupting ravages, and on every returning occasion to draw more and more within its vortex.

Independent of the loss of about a month's work at these contested elections, the city languishes from the continual absorption of mental energy in party politics. But for this, long before now the town would have had an efficient police, and the majesty of the law would have attained respect; enterprising men would then have ventured to establish machinery in their manufactures, which they have not dared to do. The probability is, that in such circumstances the vast spaces of ground now empty within the walls, and much land in the vicinity, would have been covered with buildings, and the population, instead of 60,000 or 70,000, would have been 120,000, or 180,000; the ground would be yielding a rental many times over what it does at present; there would have been many more opulent manufacturers and tradesmen of every description, and Norwich would have been one of the chief places in the empire. Such, however, has not been the case, and until party spirit subside, little hope can be entertained of its prosperity.

SONGS OF BERANGER.

Though Beranger was in heart and mind a republican, he could not help being dazzled by the intellectual greatness of Napoleon, and again and again in his writings he has given vent to expressions of admiration for the genius of the emperor, and regret for his fall. Considering the height of power to which Napoleon raised the people of France, there is indeed every excuse to be made for a native of the country on this score. The more fervent the patriotism of such a one, the more apt would he be to mistake the sword-sustained greatness of France under Bonaparte for something substantial and durable, and to accord praise to him from whom it flowed. Hence it is that we must not judge harshly of Beranger for the tenor and tone of such pieces as the one that follows, and which is much admired by his countrymen. He calls it "Les Souvenirs du Peuple"—"The Recollections of the People."

They will speak of all his glory
Round the fire for many a day;
Lowly hearths will hear his story,
When all other themes decay.
Villagers at eve will cry
To some dame with temples grey
"With the tale of times gone by,
Grandame, while an hour away.
Though he tolled us sore," they'll say,
"Yet his name we still revere;
His fame no time can dim:
Of him, good mother, let us hear—
Oh speak to us of him!"

'Through this village, children, know,
King-attended, did he pass;
Ah, how long it is ago!
Newly wedded then I was.
Where to look on him I sat,
Up the hill he made his way,
Drest in treble-peaked hat,
And with riding-suit of grey.
Much abashed I felt that day,
But he cried, 'Good morn, my dear,
'Good morn, my dear,' he cried."
"Then he spoke, grandame, when near?
He spoke when by your side?"

"In another twelvemonth's date,
Then I saw him once again
Walk to Notre-Dame in state,
Followed by his courtly train.
Pleasure beamed in every eye,
All admired the great display;
'Glorious time!' was then the cry,
'Heaven favours him alway!'
Ah, how sweet his smile that day!
Heaven willed that he a sire became—
One son rejoiced his view!"
"Oh what a day for you, grandame!
How bright a day for you!"

"When the land of France anon
Fell a prey to stranger hordes,
Braving every foe alone,
Strove he to unloose our cords.
Scarce a day it seems to me,
Since a knock came to my door;
Opening it—good Heavens! 'twas he!
With an escort small and poor.
Where I sit, he sat before;
'Oh this war!' did he exclaim,
'Oh what a war of care!'"
"Was he seated there, grandame?
Oh was he seated there?"

"Hunger prest him sore, and I
Had to give but bread and beer.
Then his dress he tried to dry,
And awhile he slumbered here.
Much I wept, but, when awake,
He exclaimed, 'Be hopeful still!
Paris soon shall see me take
Vengeance fit for France's ill!
I have kept, and ever will,
Like gem of price, the glass—the same
From which he drank that night.'"
"Have you still the glass, grandame?
Oh give it to our sight!"

"See it here. But foemen found
Strength to lay the hero low;
He whose brows a pope had crowned,
Sleeps afar where sea-waves flow.
Long we disbelieved his loss,
Crying, 'He will re-appear!
Soon the ocean he will cross,
And our foes will find their peer!'
When the truth became too clear,
Sore, indeed, was my distress,
As heavy as the ill!"
"But, grandame, kind Heaven will bless—
Will cheer and bless you still!"

There can be no doubt that this is a true picture. The whole land of France, without the exception of one single little village within its bounds, must abound in such recollections of Napoleon. This verisimilitude has made the song extremely popular. In the following piece, we find another faithful sketch of circumstances which must have been of but too common occurrence during the late war. A dialogue takes place between mother and daughter:—

THE PRISONER OF WAR.

"See, the shepherd's star is shining!
Mary, quit thy long day's toil."
"Mother, one we love lies pining,
Captive on a foreign soil.
Seized at sea, far, far away,
He yielded—but the last, they say."

Spin, poor Mary, toil and spin,
For the captive one afar:
Spin, poor Mary, toil and spin,
For the prisoner of war!

"At your call, I light my lamp.
But, my child, why yet in tears?"
"Mother, he in dungeon damp
Wastes—the sport of foemen's jeers.
Adrian loved me from a boy:
His presence filled our home with joy."
Spin, &c.

"Child, for him I too would spin,
But I am so old and frail."
"All I toil for, all I win,
Goes to him I love and wail.
To her wedding, Rose in vain
Invites me—hark! the minstrel's strain!"
Spin, &c.

"Child, draw nigh the fire, I pray;
Chill it grows as day declines."
"Mother, Adrian, they say,
In a floating dungeon pines:
Strangers, men of cruel mood,
Repulse his hand stretched out for food."
Spin, &c.

"Cheerly, daughter! I of late
Dreamed that you were Adrian's bride,
And my dreams, like hests of fate,
In one month are ratified."
"What! before the grass be green,
Shall my dear warrior here be seen!"

Spin, poor Mary, toil and spin,
For the captive one afar!
Spin, poor Mary, toil and spin,
For the prisoner of war!

Embodied in the most beautiful and polished language—not imitable, unfortunately, in an English version—these sentiments and pictures went home to the hearts of the French people. Even the bitterest opponents of Napoleon could not deny the beauty of such pieces as "The Recollections," or refrain from expressing their general admiration of the poet's genius. Between Chateaubriand and Beranger, men, in many respects, the opposite of each other, letters have recently passed, full of reciprocal respect and kindly sympathy. These epistles were published in 1832, in the Book of the Hundred and One. Beranger's is in the form of an ode, and begins thus:

Why from thy land, Chateaubriand, dost thou fly—
Fly from her loving cares and ours afar?
Dost thou not hear thy country sadly cry,
"My bright sky mourns for one departed star!
"Where is my son?" that tender mother says.
Battered by storms God only can abate,
Poor as old Homer was in other days,
Alas! he knocketh at the stranger's gate!

This whole ode is very touching, and the generous regret which it expresses for the misfortunes of Chateaubriand, who became an exile at the political crisis of 1830, called forth a reply from the banished noble, as honourable to his character as the verses alluded to were to that of his brother-poet, but political adversary. "Pierre de Beranger (says Chateaubriand) is pleased to call himself a *song-writer*, but, like Jean de la Fontaine, who chose to name himself a *fabulist*, he has taken rank among our popular immortalities. I predict to you, sir, that your repute, great as it already is, will yet increase. Few critics at this day are capable of appreciating the perfect finish of your verses; few ears are delicate enough to taste their full harmony. The most exquisite art there lies hid under the garb of nature and ease."

In the following piece, translated by a friend, we find Beranger lamenting the dissipation of the romantic fancies, which, in his youthful mind, were coupled with the phenomena of wild-fires, or what we term in Britain Jack-a-lantern and Will-o'-the-wisp.

THE WILD-FIRES.

Oh summer eve, and village peace,
Clear skies, sweet odours, gushing streams!
Ye blest my childhood's simple dreams,
To cheer my age, oh do not cease!
World-wearied, here I love to dwell,
For ev'n these merry wild-fires tell
Of youth and sweet simplicity.
Oft did my heart with terror swell
As from their dance I wont to fly.
I've lost that blissful ignorance;
Dance, merry wild-fires, dance, dance.

On wakeful nights, the tale went round
Of Jack-a-lantern, cunning, cruel,
With watch-fires of no earthly fuel,
Guardian of treasures under ground.
They told of goblins, unblest powers,
Ghosts, sorcerers, and mysterious hours,
Of dragons huge that ever flitted
Around all dark and ancient towers:
Such tales my easy faith admitted.
Age hath dispelled my youthful trance;
Dance, pretty wild-fires, dance, dance.

Scarce ten years old, one winter night,
Bewildered on the lonely swamp,
I saw the wild-fire trim his lamp;
"It is my grandame's cheerful light—
A pretty cake she has for me,"
I said, and ran with infant glee.
A shepherd filled my soul with dread;
"Oh foolish boy, the lamp you see
Lights up the revels of the dead."
Dispelled is now my youthful trance;
Dance, merry wild-fires, dance, dance.

Love-stirred, at sixteen once I stole
By the old curate's lonely mound:
The wild-fires danced his grave around:
I paused to bless the curate's soul.
From regions of the slumbering dead,
Methought the aged curate said,
"Alas! unhappy reprobate,
So soon hath beauty turned thy head!"
That night I feared the frowns of fate.
Still let the voice my ear entrance;
Dance, merry wild-fires, dance, dance.

* * * *

Now, from such pleasing errors free,
I feel the chilling touch of time:
The visions of my early prime
Have bowed to stern reality.
But oh! I loved fair nature more,
Ere I was taught the pedant's lore.
The dear delusions of my youth,
Which bound my heart in days of yore,
Have fled before the torch of truth.
Dearest to me my youthful trance,
Dance, merry wild-fires, dance, dance.

With one other piece we shall close our notice of Beranger on this occasion. It is an address of the poet to his old coat, and exhibits that union of sententiousness with gaiety, so characteristic of the majority of his lyrics. The Lisette mentioned in it, as well as in so many other pieces, is understood to have had no existence but in the poet's fancy.

BERANGER TO HIS OLD COAT.

Be faithful still, thou poor dear coat of mine!
We, step for step, are both becoming old.
Ten years these hands have brushed that nap of thine
And Socrates did never more, I hold.
When to fresh tear and wear the time to be
Shall force thy sore-thinned texture to submit,
Be philosophic and resist like me:
Mine ancient friend, we must not sunder yet.

Full well I mind, for I forget not much,
The day that saw thee first upon me put:
My birth-day 'twas, and as a crowning touch
Unto my pride, my friends all praised thy cut.
Thy indigence, which does me no disgrace,
Has never caused these kindly friends to flit.
Each at my fête yet shows a gladsome face:
Mine ancient friend, we must not sunder yet.

A goodly darn I on thy skirts espy,
And thereby hangs a sweet remembrance still.
Feigning one eve from fond Lisette to fly,
She held by thee to baulk my seeming will.
The tug was followed by a grievous rent,
And then her side of course I could not quit;
Two days Lisette on that vast darning spent:
Mine ancient friend, we must not sunder yet.

Have e'er I made thee reek with musky steams,
Such as your self-admiring fools exhale?
Have I exposed thee, courting great men's beams,
To levee mock or antechamber rail?
A strife for ribbons all the land of France,
From side to side, well nigh asunder split:
From *thy* lapelle nothing but wild flowers glance:
Mine ancient friend, we must not sunder yet.

Fear no renewal of those courses vain,
Those madcap sports which once employed our hours—
Hours of commingled joyfulness and pain,
Of sunshine obequered here and there with showers.
I rather ought, methinks, thy faded cloth
From every future service to acquit:
But wait a while—one end will come to both
Mine ancient friend, we shall not sunder yet.

Beranger now lives at Tours, enjoying a small but comfortable independence. He is not a very old man,

and is understood to be employing his yet unimpaired faculties in writing a history of the stirring scenes amid which he passed his life. Being an intimate friend of Manuel, Gohier, David, and many others of the most distinguished men of modern France, his annals cannot fail to possess a lively and powerful interest.

BIOGRAPHIC SKETCHES.

AMBROSE PAREY.

In the roll of practical improvers of the useful sciences, few are entitled to a higher place than Ambrose Parey, or Paré, an illustrious "chirurgeon" of France in the sixteenth century, and one to whom his successors in the profession have unanimously accorded the title of Father of Modern Surgery. Parey was born at Laval, in the province of Maine, in the year 1509. He was placed under the charge of a country chaplain, in order to receive a knowledge of Latin, but the parents of the boy were too poor to be able properly to indemnify the teacher, and the latter accordingly extracted an equivalent for his fees from his pupil, by making him dig in the garden, curry the mule, and perform other such labours. From these humble beginnings, Parey rose to be medicine-compounder to a surgeon of Laval, and, while in this situation, had an opportunity of witnessing an operation for stone, which was performed by a Parisian lithotomist, brought from town on purpose. The sight inspired the youth with the determination to go to Paris, and endeavour to get into some situation where he might prosecute to good purpose the study of the surgical art. At Paris he was fortunate enough to get into the favour of Goupil, a medical professor in the college of France, and from this time forward enjoyed the best advantages for acquiring the art to which he felt so strong a vocation. In defending his character against the calumniations of an adversary, Parey at a later period gave the following account of his professional education:—"I was resident the space of three years in the hospital of Paris [the Hotel Dieu], where I had the means to use and learn divers works of surgery upon divers diseases, together with the anatomy upon a great number of dead bodies; as oftentimes I have sufficiently made trial publicly in the Physicians' School of Paris, and my good luck hath made me see much more. For, being called to the service of the king of France (four of whom I have served), I have been in company at battles, skirmishes, assaults, and besieging of cities and fortresses; as also I have been shut up in cities with those that have been besieged, having charge to dress those which were hurt." He concludes by saying, with just pride, that in the famous city of Paris, for many long years, "there was not any cure, were it ever so difficult and great," where his hand and his counsel were not required.

The four kings of France whom Ambrose Parey served, and to each of whom, in succession, he was principal surgeon-in-ordinary, were Henry II., Francis II., Charles IX., and Henry III. In the course of the eighty-one years of his long and useful existence, Parey witnessed an amazing number of military actions; for so great was the estimation in which he was held, that the princes, nobles, and officers of France, would scarcely take the field without his attendance, and even the common soldiery participated in the same feelings. When accompanied by their great surgeon, all classes went cheerfully to battle, assured that if human aid could save them, none would perish. The truth of this statement is forcibly shown by some circumstances which occurred at the siege of Metz, in which city a small but select band of the noblesse and soldiery of France was long shut up by Charles V., at the head of an army of 100,000 men. The besieged forces petitioned their sovereign to send Ambrose Parey to them, and he was with great difficulty introduced into the city. He arrived at midnight, and the governor, who was immediately awakened to receive the good news, was so deeply sensible of the value of his acquisition, that he begged Parey to go next morning and show himself upon the breach. He did so, and was received with joy and triumph by the French army. His presence inspired them with such confidence, that the Emperor Charles found his assaults fruitless, and raised the siege, after leaving beneath the city walls not less than thirty thousand of his bravest followers. All writers have concurred in the admission, that the obstinacy of the defence was mainly owing to the presence of Parey.

Ambrose Parey attained to this high eminence while yet comparatively a young man. At the age of forty he was surgeon-in-ordinary to Henry II. We derive our acquaintance with the particulars of his career, chiefly from his own defensive or "Apologetic Treatise," containing an account of the journies which he made to divers places, at the command of his sovereign, or in pursuit of professional knowledge.

The number of lives which Parey was personally instrumental in saving, during his numerous campaigns, is represented as having been beyond all calculation. His toils and his celebrity may be alike estimated from his own words. "When I entered into one lodging, soldiers attended me at the door to go and dress others at another lodging; when I went forth, there was striving who should have me; and they carried me, like a holy body, not touching the ground with my feet, in spite one of another. Nor could I satisfy so great a number of hurt people." The great secret of Parey's success as a surgeon, both in military and other cases, was his plan of securing the blood-vessels; and to comprehend the precise nature of his process, it will be necessary to describe how amputations of limbs were performed previous to his day. From an early period, it was customary, in taking off a leg, arm, or finger, to sear the raw stump with a red-hot iron, so as to shrivel up the terminations of the arteries and other vessels, and stop the discharge of blood. Scalding oil was also applied to assist in this rude and cruel operation. It is almost needless to say, that the danger attending this style of operating was very great; the least exertion or warmth caused the partially secured arteries to burst forth, and the unhappy sufferer, in too many instances, bled to death before a new cauterisation with a red-hot iron could be applied. It was common for those who had lost a leg or arm, to be found dead in bed, in consequence of the warmth of the dressings and bed-clothes having opened the mouths of the arteries afresh. Such was the state of surgery when Ambrose Parey, a man of enlarged understanding and active habits, introduced a new practice into operative surgery, which has ever since been in universal use. In the case of a leg or arm being amputated, or on any occasion where an artery was divided, whether by accident or by the knife of the surgeon, Parey gave security to the sufferer by tying the important vessel or vessels, either at their ends, if these were exposed, or at some convenient point between the divided part and the heart. The flux of blood from that organ was thus effectually stopped. This improvement, like all great improvements, seems extremely simple, and one, apparently, demanding no particular inventive powers. Yet its full value can scarcely be estimated. It has given a degree of security to all branches of operative surgery, which was altogether unknown before. The mere amputation of a finger frequently caused a fatal loss of blood in the days of preceding surgeons, but since the introduction of the ligature by Parey, the largest vessel in the body may be divided with every prospect of safety to the patient whose malady may require it. The great French surgeon, therefore, deserves ever to be held in grateful remembrance by mankind. Parey also made an accidental discovery of another kind, which was of great service in military surgery. Under the impression that wounds caused by powder had a certain "venenosity" about them, surgeons were in the habit of "cauterising the wounds with oil of elder, scalding hot." On one occasion (says Parey) "I wanted oil, and was constrained, instead of it, to apply a digestive of yolks of eggs, oil of roses, and turpentine. In the night I could not sleep in quiet, fearing some default in not cauterising, and that I should find those, to whom I had not used the burning oil, to have died impoisoned, which made me rise very early to visit them, where, beyond my expectation, I found those to whom I had applied my digestive medicine to feel little pain, and their wounds without inflammation or tumour, having rested reasonably well that night. The others, to whom was used the burning oil, I found feverish, with great pain and tumour about the edges of their wounds. And then I resolved with myself never so cruelly to burn poor men wounded by gun-shot." This discovery led to a great and beneficial change in surgical practice—a change scarcely less important than that effected by the introduction of ligatures. The forge and burning coals, and the scalding oil, were from that time needed no more.

In the "Voyage to Boulogne in 1545," Parey mentions a curious incident which took place in the skirmishes between the English and the French. "One day, going through the camp to dress my hurt people, the enemies who were in the Tower of Order shot off a piece of ordnance, thinking to kill horsemen who staid to talk with one another. It happened that the bullet passed very near one of these men, which threw him to the ground, and it was thought the said bullet had touched him, which it did not at all, but only the wind of the said bullet in the midst of his coat, which went with such a force that all the outward part of the thigh became black and blue, and he had much ado to stand. I dressed him, and made divers sacrifications to evacuate the effused blood, which the wind of the said bullet had made; and the rebounds that the ball made from the ground killed four soldiers, which remained dead in the place." The idea entertained by Parey, regarding the destructive powers of the wind of a bullet, continued current up almost till the present day, and indeed some surgeons yet hold the same belief. That men are frequently killed by the passage of cannon bullets, without presenting any trace of serious injury on their bodies, is an unquestionable fact. In some cases there are no marks even of a bruise on the skin. In these circumstances, it was not unnatural for Parey and others to suppose that the ball had never touched the body. But, it has been asked, if the wind of a ball is of such potency, how does it happen that buttons, feathers, and even noses and ears, are carried away by balls without the slightest injury to the vital parts which are thus closely passed? The opinion of the highest modern medical authorities seems to be, that a spent ball, striking the body obliquely, may cause a fatal concussion, without injuring the skin by the stroke. It would be difficult to explain how this should be so; but the wind of a ball is now generally deemed incapable of producing the effect ascribed to it.

Parey was a Protestant, and at the era of the massacre of St Bartholomew, would in all probability have perished with "the good Coligny" and other victims, had not the weak and wicked author of the catastrophe, Charles IX., expressly interfered to save the great surgeon from the fate to which others were pitilessly doomed. The king sent for Parey, and ordered him not to stir from the royal apartments till the danger was past. There was no true generosity here; Parey was a man whose services were too valuable to be lost. And, indeed, through his whole lengthened career of eighty-one years, he owed his favour at court to the same cause: he was too honest to hold it by common courtier-like servility. The other physicians hated him for his uncompromising straightforwardness, and their waspish hostility drew down on them some smart castigations from the old surgeon. Here is a sample of the style in which he treated a foe in his writings. Speaking of a gentleman whose limb he had amputated, he says, "I dressed him, and God cured him. I sent him to his house merry, with his wooden leg, and content, saying, that he had escaped cheaply, not to have been miserably burnt, as you write in your book."

Ambrose Parey's writings, consisting of tracts on military surgery, on anatomy, on the plague, &c., have been several times collected and published. An English translation of them was published in 1634, by Thomas Johnson, surgeon, and by him dedicated to Lord Herbert of Cherbury.

BLACK LABOURERS' FANCY BALL IN BRITISH GUIANA.

The following article has accidentally met our eyes in a Liverpool paper, into which it is stated to have been copied from the *Royal Gazette of British Guiana*, of the 26th December 1839. It describes a most extraordinary, and surely in some important respects highly pleasing affair—a fancy ball given by a black labourer to his friends of the same order, and the neighbouring gentlemen. As an instance and example of good feeling between the labouring and employing class in a colony lately under the influence of slavery, and as a curious picture of manners, it seems to us entitled to extensive notice:—

"On Christmas-eve, Vincent Paradise, head labourer on the estate of Vreed-en-Hoop, entertained the sable ladies and gentlemen of his acquaintance with a fancy ball. Ten or fifteen days previously to the 24th, cards of invitation, executed in the most fashionable style, were issued, not only to such as were to appear in fancy dresses, but also to numbers of white gentlemen of the first respectability in the neighbourhood. The whole day was fine, and admirably fitted for arranging the preparations of the evening. The last or five o'clock boat from the town-side of the ferry was crowded from stem to stern, and from larboard to starboard, with people of all classes and colours, from the metropolis; the deck was covered over its length and breadth with baskets, tin canisters, and band-boxes, filled with the robes of dukes and duchesses, of lords and ladies, and of peasants and country girls. Knots, epaulettes, plumes, and such ornaments as would suffer from being bruised, were laid carefully on the binnacle, on canister-lids, or carried in the hands. On arriving at the Vreed-en-Hoop Ferry Stelling, all was found to be hurry, joy, and expectation; happiness beamed on every countenance, and the greatest enemy of the colony would have sought in vain for any, even the least, symptom of the distress and oppression under which they have represented the labourers as suffering. The room in which the assembly met is a large logie among the buildings on Vreed-en-Hoop; and to it, from all directions, were seen hurrying gentlemen in great numbers, some in gigs, and others on horseback. Many of the girls and boys who were to appear in characters, drove to the place in the chaises and conveyances of their employers, in order to prevent their dresses and ornaments from being injured by walking. Proprietors, attorneys, and managers of estates up the river and down the coast, merchants, doctors, lawyers, magistrates, and private gentlemen from town and country, all assembled to participate and rejoice in the evening's amusement.

The apartment that was fitted up for the occasion is in length eighty-seven feet, and in breadth thirty-six, and its decorations were on a style in the highest degree grand and elegant. It was entered at one end, so that to a spectator going in at the door, a full view of the whole scene presented itself. A large beam runs the entire length of the room, and supports the floor above it, exactly in the middle. From this was suspended a Hogarthian line of waving drapery, richly embroidered with scarlet and gold, having arched spaces at intervals, through which persons could pass from one side to the other. It divided the apartment, through the whole length, into two equal parts, leaving a space of eighteen feet broad on each side for the dancers. From the centre of the ceiling of each side-division was hung a row of brilliant chandeliers, fantastically bedecked with variously-coloured ornaments, and at the outer extremity of both sides was suspended a similar row of lamps, the whole composing a beautiful illumination. At the upper end were executed, of evergreens and rich flowers, a device comprising the initials of Victoria Regina, and between them the crown of Great Britain. On each side of this burned a lamp of extraordinary brightness; the whole was overarched and embowered by two trees of liberty, which were planted so that their unfading and luxuriant boughs were entangled together above. A colonnade of green branches rested on the floor, close to the sides of the room; these ran the entire length of the eighty-three feet, and their foliage was trained so as to overhang the chandeliers in the middle of the side spaces. The orchestra was decorated in a tasteful and fantastic manner.

About eight o'clock the fancy guests began to assemble, and it was really difficult to know whether to admire most the costliness and elegance of the dresses, or their appropriateness to the rank and character they were

Digitized by Google

intended to represent, kings and queens, lords and ladies, dukes and duchesses, naval and military officers, chiefs and haughty dames of the olden time, pirates and highwaymen, drunken sailors, and beggars upon crutches, old men tottering and paralytic, and women of equal age and frailty attending to them with an affection and care apparently as great as if they had climbed and descended the hill of life together. Little boys with their whimsical and ludicrous trappings, and girls having their brows encircled with chaplets and garlands of flowers; in a word, every variety of character that can well be imagined was present on the occasion, and many of no character at all. Numbers of respectable ladies were irresistibly attracted to survey the scene, and gentlemen of rank and standing mixed freely among the sable group.

Previously to the ball being led off by Vincent Paradise himself, who was king, and by his lady, who was queen, Daniel Stron raised himself into an erect posture from off his crutches, on which he rested a body *apparently* wasted by age and bent by decrepitude, and addressed the assembly in a loud, clear, and distinct voice, to the following effect:—'Ladies and Gentlemen, I see that the present meeting is composed of the natives of England, Ireland, and Scotland. It is to the exertions and good-will of the British nation, and to the kindness of our good Queen Victoria, that we owe the relieving of our necks from the yoke. It shall be our constant endeavour, both as subjects of Queen Victoria, and as agricultural labourers in the colony of British Guiana, to behave ourselves as becomes free men. I hope we shall never disgrace our good queen by acting contrary to her wish. I hope always to see plenty of labour and good crops in this colony. Gentlemen, I am glad to see you all here this evening, and I hope you will enjoy yourselves well.' As soon as Mr Stron had concluded the speech, he bent himself down upon his crutches, resumed his assumed character of a mendicant, and supported it well throughout the evening.

Dancing commenced about nine o'clock. There was room sufficient for eight sets of quadrilles, and politeness and good nature prevailed in the whole assembly. About one o'clock, or rather after, supper was announced, and there was a decorum, observed in going to, while at, and in coming from, the table, that many assemblies of higher pretensions might have been proud of. Mr Matheson, a gentleman engaged in the conducting of the affairs of the Vreed-en-Hoop estate, was in the chair, and Mr Sanderson, the manager, was croupier. It was with peculiar satisfaction that we observed seated, at the same table, the labourer and his employer, together with magistrates, professional and private gentlemen. It was a rich entertainment for a benevolent eye to behold—gentlemen of rank and standing in the colony encouraging, by their presence, the infant efforts of our emancipated population to rise into respectability, independence, and into the refinements of civilised life.

When the cloth was removed, the chairman gave 'The Queen;' and after the hearty cheers and acclamations which the toast had called forth had subsided, Vincent Paradise returned thanks, and expressed himself to the following import:—'Ladies and Gentlemen, in the name of the labourers upon this estate, I will return thanks for the health of her Majesty Queen Victoria. We all feel grateful for the gift of our freedom. I have been headman on Vreed-en-Hoop, in slavery time, in 'prentice time, and since free, and have always seen good men well treated; and I do not think that good honest labourers, who were willing to work, were ever badly treated; they might be by some masters, but not many. From the goodness of Queen Victoria that gave us our freedom, we have all opportunities of making ourselves comfortable and independent; and I hope there will not be a negro found in all this colony who will prove ungrateful to the queen and to the people of England for the important gift that they have bestowed upon us. Gentlemen, I am very happy to see you all here, and much obliged to you for coming; and I sincerely trust that the pleasure and harmony of this evening may be the forerunners of future peace and good understanding between the proprietors and the labourers of the colony.' Mr Paradise concluded his speech amid loud and continued cheering.

Mr Sanderson gave 'The Governor and Court of Policy.' This was received with great enthusiasm and loud cheering.

Mr Matheson rose and said, 'In the absence of Mr Stuart, the attorney of this estate, I have one other toast to propose, and in doing so I may be allowed to say that it has been Mr Stuart's wish, as it has been my endeavour, to cultivate a good understanding between the employer and those who conducted the labour of the estates, and I trust that the good feeling which now prevails between the employer and labourers on *this* estate, may long continue to the mutual benefit and satisfaction of both parties. I will now propose health, prosperity, and happiness, to our *hosts* on this occasion, and to all the labourers of British Guiana.'

Mr Vincent Paradise said, that he felt proud for that toast, and hoped that all the labourers of British Guiana would ever be found worthy of the good opinion of the proprietors; and concluded by proposing the health of Mr Gladstone, and peace and prosperity on all the estates.

Mr Matheson—I now beg to return thanks, in the name of Mr Gladstone, for the favour just conferred on him, and I may express the pleasure I am sure he would feel were he now present here to witness the way in which his efforts to make his labourers contented and happy are appreciated.

Mr M'Clelland said, that, with the permission of the chair, he wished to propose a toast. He prefaced it by saying, that he would not detain the company by any lengthened remarks, although the subject was one of a very soft, delicate, and important nature, and well calculated to awaken all the finer feelings of the soul, inasmuch as every thing connected with the harmonies and elegances of human existence was intimately connected with it. He wished to propose 'The Ladies.' This was responded to with unbounded applause.

Mr M'Cormick proposed 'The Agricultural Interests of this Colony,' and said he challenged the Emerald Isle, the Land of the Rose, the Land of the Thistle, and the Land of the Leek, to produce a peasantry so contented, independent, and happy, as those which are in this colony. Attempts have been made to poison their inexperienced minds, and sow the seeds of discontentment among them; but he was glad to find that they were now beginning to know their friends from their foes, and hoped that they would never become the dupes of the latter.

This was suitably acknowledged. Supper over, dancing was resumed and kept up with great spirit until after daylight in the morning.

The dresses at this fancy ball, taken altogether, cost upwards of L.300 sterling, and the whole expenses of the entertainment about L.400."

CIRCUMSTANTIAL EVIDENCE.

THOMAS GEDDELY'S CASE.

Thomas Geddely lived as a waiter with Mrs Hannah Williams, who kept a public-house at York. It being a house of much business, and the mistress very assiduous therein, she was deemed in wealthy circumstances. One morning her scrutoire was found broken open and robbed, and Thomas Geddely disappearing at the same time, no doubt was entertained as to the robber. About a twelvemonth after, a man calling himself James Crow came to York, and worked a few days for a precarious subsistence, in carrying goods as a porter. Many accosted him as Thomas Geddely. He declared he did not know them, that his name was James Crow, and that he never was at York before. But this was held as merely a trick to save himself from the consequences of the robbery committed in the house of Mrs Williams, when he lived with her as waiter.

His mistress was sent for, and in the midst of many people instantly singled him out, called him by his name (Thomas Geddely), and charged him with his unfaithfulness and ingratitude in robbing her. He was directly hurried before a justice of peace, but on his examination absolutely affirmed that he was not Thomas Geddely, that he knew no such person, that he never was at York before, and that his name was James Crow. Not, however, giving a good account of himself, but rather admitting that he was a vagabond and petty rogue, and Mrs Williams and another person swearing positively to his person, he was committed to York Castle for trial at the next assizes.

On arraignment, he pleaded not guilty, still denying that he was the person he was taken for; but Mrs Williams and some others made oath that he was the identical Thomas Geddely who lived with her when she was robbed; and a servant girl deposed that she had seen him, on the very morning of the robbery, in the room where the scrutoire was broken open, with a poker in his hand. The prisoner, being unable to prove an *alibi*, was found guilty of the robbery. He was soon after executed, but persisted to his latest breath in affirming that he was not Thomas Geddely, and that his name was James Crow.

And so it proved! Some time after, the true Thomas Geddely, who on robbing his mistress had fled from York to Ireland, was taken up in Dublin for a crime of the same stamp, and then condemned and executed. Between his conviction and execution, and again at the fatal tree, he confessed himself to be the very Thomas Geddely who had committed the robbery at York, for which the unfortunate James Crow had been executed.

We must add, that a gentleman, an inhabitant of York, happening to be in Dublin at the time of Geddely's trial and execution, and who knew him when he lived with Mrs Williams, declared that the resemblance between the two men was so exceedingly great, that it was next to impossible to distinguish their persons asunder.

THE RECUSANT JURYMAN.

Two men were seen fighting together in a field. One of them was found, soon after, lying dead in that field. Near him lay a pitchfork, which had apparently been the instrument of his death. This pitchfork was known to have belonged to the person who was seen fighting with the deceased, and he was known to have taken it with him only that morning. Being apprehended and brought to trial, and these circumstances appearing in evidence, and it being also found that there had been for some time an enmity between the parties, little doubt was entertained that the prisoner would be convicted, although he strongly persisted in asserting his innocence; but, to the great surprise of the court, the jury, instead of bringing in an immediate and unanimous verdict of guilty, withdrew, and after staying out a considerable time, returned, and informed the court that eleven out of the twelve had been from the first for finding the prisoner guilty, but that one man would not concur in the verdict. Upon this the judge pointed out to the dissentient person the great strength of the evidence, and asked him "How it was possible for him, *all circumstances considered*, to have any doubt as to the guilt of the accused?" But no arguments that could be urged either by the judge or the rest of the jury, could persuade that juryman to find the prisoner guilty; so that the rest of the jury were at last obliged to agree to the verdict of acquittal.

This affair remained for some time mysterious; but at length it came out, either by the private acknowledgment of the obstinate juryman to the judge who tried the cause (and who is said to have had the curiosity to inquire into the motives of his extraordinary pertinacity), or by his confession at the point of death (for the case is related both ways), that he himself had been the murderer! The accused, indeed, as sworn on the trial, had had a scuffle with the deceased, in which he had dropped his pitchfork, which had been soon after found by the juryman, between whom and the deceased an accidental quarrel arose in the same field, where the deceased continued to work after the departure of the person with whom he was seen to have the affray. In the heat of this quarrel the juryman had unfortunately stabbed him with that very pitchfork, and had then got away totally unsuspected; but finding soon after that the other person had been apprehended on suspicion of being the murderer, and fearing, as the circumstances appeared so strong against him, that he should be convicted, although not guilty, he had contrived to get upon the jury, as the only way of saving the innocent, without endangering himself.

THE LOST MONEY.

The following remarkable case was communicated to us by the party in whose personal experience it occurred. The narrator had gone from Edinburgh to London to see a son there settled in a respectable situation. Having a week or two of unoccupied time, he resolved, before returning to the north, to visit Paris, and, being ignorant of the French language, made some inquiries for a companion who might act as his interpreter. "It so happened (continues the narrator) that I was intimate in Edinburgh with a Mr F——, a native of France, who, I understood, was going to Paris about the same period, but when I left Edinburgh I had no opportunity of making an arrangement with him. One Sunday afternoon, however, while walking in St James's Park, I met a friend of his, who informed me that he had received a letter from Mr F——, stating that he was to have sailed from Leith on the previous day, and that he would probably be in London on Monday evening, and informed me where I should find him.

I now considered that I could not do better than avail myself of Mr F——'s knowledge of France, and of the French language, and proceed with him to Paris. I accordingly went and found him at his lodgings on Tuesday. On that occasion, and at different times during the week, we conversed about the proposed jaunt to Paris, and it was finally resolved that on the next Sunday we should sail from London to Calais. It was also arranged, at my suggestion, that in order to prevent disappointment, Mr F—— should come to my inn on the Saturday afternoon, and that we should proceed together to the vessel on the following day.

My son, who had been occupying a bedroom, the entrance to which was through my own apartment, had left it the previous day to be nearer his place of business, and I suggested that Mr F—— should occupy this inner apartment, so that we might be near one another; and to this arrangement Mr F—— at once agreed.

In the course of the Saturday evening we had some conversation relative to the money each of us had in his possession; and Mr F—— showed me how he secured his cash in a concealed part of his dress, where it would not be suspected, in case we should fall in with any of the gentry disposed to peculation. Mr F—— had a parcel of Bank of England notes, to the amount of L.95, besides a considerable quantity of gold and silver. The notes he replaced in the pocket, and we soon afterwards went to bed.

Mr F——, having chanced to awake early next morning (about four o'clock, I believe), commenced counting his gold and silver, but did not meddle with his notes, as he believed them to be quite safe in the pocket of his trousers. I was awoke by the jingling of the coins, and on learning what he was about, I inquired if all was right, and he answered quite right, and in a short time he went to bed, and again we fell asleep. At six o'clock, a knock was heard at our outer bedroom door, and at last 'Boots' entered, and inquired if we were in possession of all our money, and we both assured him we were, for we recollected that we had examined it on the previous evening, when all was right, and Mr F—— had ascertained still more recently that his gold and silver were undisturbed. 'Boots,' however, insisted that we were in error, and told us that he had that morning found a parcel of bank notes to the amount of L.95 (lying in one of the outhouses, near to the place where he cleaned his boots), which he had put into the possession of his master. On hearing the sum of L.95 mentioned, Mr F—— immediately arose, much agitated, knowing that such was the very amount of his notes, but at the same time feeling almost certain that he had the money quite secure. The man, however, went and brought the money from his master, which Mr F—— immediately knew to be his own parcel of notes; but how it could have found its way to the coach-yard, was to us quite incomprehensible.

It soon occurred to me, however, how the circumstance had taken place. I recollected that just before going to bed, I had taken my own boots and Mr F——'s, and put them outside the door, and it must have happened that Mr F——, in taking off his trousers, which were rather tight, and he being old and stiff, the parcel of notes during the exertion must have fallen out of his pocket, into one of the boots which were lying near him at the time.

This circumstance at the moment afforded me a good deal of amusement, but when I began to reflect

Digitized by Google

upon what the consequences might have been, I was very seriously concerned.

If the circumstance had occurred in the way I have supposed, and I can conceive no other, the boots must have been taken away from the door, and thrown down with others, to the number perhaps of twenty or thirty pairs, in a small outhouse in the stable-yard, where the boots were taken to be cleaned, and as there were at all times of the day a number of hostlers, coachmen, and others, going about, the house being one of the greatest stage-coach establishments in London, the safe return of the money appears almost miraculous; for had the money fallen into the hands of a person less honest than 'Boots' himself, it is not improbable that the temptation would have overcome any scruples he might have had, the sum being large; and had the person kept it secret, no suspicion could possibly have attached to him.

Now, supposing, what is highly probable, that the money had not been returned, in what a situation should I have been placed! Take into consideration all the circumstances of the case. Knowing that Mr F—— was going to reside some months in France, I must have been presumed to calculate that he would have a considerable sum of money in his custody. Finding out his residence in London, arranging to go with him to France, getting him to come to my lodging and into my own bedroom, introducing the subject regarding the securing of the money, so as to ascertain where it was concealed, would all have appeared as certain proof that I had arisen during the night, and taken possession of the money. It could scarcely have availed me to deny all knowledge of the circumstance, or allege the improbability of my having committed a robbery where it could be so easily detected. Such circumstances have often occurred before, where the desire could not be resisted. Nor could Mr F—— have been blamed had he made application to the public authorities to investigate the matter. What a clear case of circumstantial evidence would any judge or jury have made out against me! At the very least, the loss of reputation for life would have been the ultimate consequence."

DANGER OF IGNORANCE.

There are few villages in the country which do not present us specimens of the uneducated; we meet him in the gin-shop and in the street; he is an idler, a drunkard, a quarreller: we hear of him in every riot, he is an aider and abettor in every outrage. His family are slovenly, reckless, debased, wretched. He is a quarreller because a drunkard; and he is a drunkard because he is idle. But why is he idle? Because he has never felt the value of labour, the pleasure of thinking, the joy of a good conscience. He has never been habituated to form judgments of these things. The powers necessary to form such judgments have been neglected. He has never been taught to examine, to inquire, to attend. He has become passive. He feels the pressure of want brought on by his own habits; but how does he try to remedy it? All his life he has been taught to spare, as much as possible, his own exertions, and to hang, beggar-like, as much as possible on those of others. He is the slave, from laziness, of authority. It is not in a sudden emergency he is likely to throw it off. All his life he has sacrificed, with the shortsighted selfishness of ignorance, the future to the present, and every interest, public and private, to his own. He is turbulent, but not independent: he talks of freedom, and is a slave to every man and thing around. But indolence is not a merely passive vice. Better to "wear out" than to "rust out" has been truly said; but he who "rusts out" "wears out" too. No greater burden than sloth; no greater consumer of the spirit and body of man than doing nothing and having nothing to do. Every day spent in inactivity renders action more difficult; every hour which does not add, steals away some instrument of virtue and happiness, and leaves the sluggard more at the mercy of those visitations of sickness or want to which even the industrious are exposed. Nor is this all. Omission of duty soon becomes commission of crime. Painful reflections now beset him. They are sought to be extinguished, but not by reform. Conscience drives him to fresh vice. This goes on for a time; but health, means, companions, must at last fail. Then it is that he sees, for the first time, how bootlessly he has squandered away the healthy morning-tide, the working hours of life. He has paid down existence, and all that makes existence a glory and a good, in advance. Body and soul are spent. He becomes sullen and sour. Disappointments thicken on him, and they are all of his own causing. His farm is covered with weeds, his shop deserted, his children profligates and rebels, his household a hell. He gradually becomes an enemy to all social ordinance, to law, justice, truth, good faith—to all that makes community to man. He envies and hates the good and happy; he looks on every check as a wrong, on every prosperous man as a foe. Whither is he to rush for rescue from these encompassing evils? The gospel he never understood, and therefore never practised. His religion is an hypocrisy or a superstition. It affords him now no direction in his errors, no consolation in his afflictions. He finds in it neither warmth nor light. The religion he learned never penetrated to the spirit: it was a tinkling cymbal, a jargon of meaningless and profitless words. But crime, which had long been ripe in thought, is at last on the point of bursting into act. He is at last ready for every desperate attempt. Education has been held up as the great principle of all modern restlessness and disorder. Is this the case? Let facts answer. Here are men uneducated enough, ignorant enough, to produce the most perfect quiet, if ignorance and absence of education could produce it. Yet is it from materials like these you are to expect the tranquillity and prosperity of a great nation? Is it in the nature of things, that out of elements so utterly evil, peace and happiness should emanate? Private vice has but to make a few steps and a few proselytes, and it becomes public corruption: individual discontent wants only time and circumstance to spread out into general disorder. Such, indeed, are the real revolutionists; men bad and blind—blind because they are bad—a huge Polyphemus, sightless and strong, waiting only some crafty guide to lead the monster on against society. Nor is such want likely to remain long unsupplied.—*Wyse on Education.*

THE GERMAN NIGHT WATCHMAN'S SONG.

FROM "SOUVENIRS OF A SUMMER IN GERMANY."

[A few nights since I heard a man's voice under the window singing a few simple notes. An hour flew away, and the song rose once more under the window. The singer proved to be the watchman of the little town, and his Nacht-lied, or night song, as it is beautifully called—a sort of hymn, each verse adapted to the hour at which it is sung. There is something delightful in this idea; it is deeply characteristic of the spirit of natural religion which seems to pervade Germany, and the custom is primitive and poetical to the greatest degree. What can be more touching than to hear the guardian of the silent village, as he walks his nightly rounds, thus drawing a simple moral from the fleeting hours; and invoking for the sleeping inhabitants the protection of that God who neither slumbers nor sleeps. The following is a translation.]

Hark, while I sing! our village clock
The hour of *eight*, good sirs, has struck.
Eight souls alone from death were kept,
When God the earth with deluge swept—
Unless the Lord to guard us deign,
Man wakes and watches all in vain.
Lord! through thine all-prevailing might
Do thou vouchsafe us a good night!

Hark, while I sing! our village clock
The hour of *nine*, good sirs, has struck.
Nine lepers cleansed returned not,
Be not thy blessings, man, forgot.
Unless the Lord to guard us deign,
Man wakes and watches all in vain.
Lord, &c.

Hark, while I sing! our village clock
The hour of *ten*, good sirs, has struck.
Ten precepts show God's holy will,
Oh! may we prove obedient still.
Unless the Lord to guard us deign,
Man wakes and watches all in vain.
Lord, &c.

Hark, while I sing! our village clock
The hour *eleven*, good sirs, has struck.
Eleven apostles remained true,
May we be like that faithful few!
Unless the Lord to guard us deign,
Man wakes and watches all in vain.
Lord, &c.

Hark, while I sing! our village clock
The hour of *twelve*, good sirs, has struck.
Twelve is of time the boundary—
Man! think upon eternity.
Unless the Lord to guard us deign,
Man wakes and watches all in vain.
Lord, &c.

Hark, while I sing! our village clock
The hour of *one*, good sirs, has struck.
One God alone reigns over all;
Nought can without his will befall.
Unless the Lord to guard us deign,
Man wakes and watches all in vain.
Lord, &c.

Hark, while I sing! our village clock
The hour of *two*, good sirs, has struck.
Two ways has man to walk been given,
Teach me the right—the path to heav'n.
Unless the Lord to guard us deign,
Man wakes and watches all in vain.
Lord, &c.

Hark, while I sing! our village clock
The hour of *three*, good sirs, has struck.
Three Gods in one—exalted most,
The Father, Son, and Holy Ghost.
Unless the Lord to guard us deign,
Man wakes and watches all in vain.
Lord, &c.

Hark, while I sing! our village clock
The hour of *four*, good sirs, has struck.
Four seasons crown the farmer's care,
Thy heart with equal toil prepare—
Up—up—awake! nor slumber on,
The morn approaches, night is gone!
Thank God, who, by his power and might,
Has watched and kept us through this night!

THE LEARNED LANGUAGES.

The learned languages are still considered by many, emphatically, education. To teach them, and to teach little else, was a portion of the wisdom of our ancestors: but though wisdom in them, it does not follow it is such in us. With them it was knowledge, not for ornament but use. It was the instrument of *action* as well as of *thought*. Law, diplomacy, medicine, religion, all was Latin: a man who was no "Latiner" was a mere "villein" in education; he was deemed unfit in civil life for any situation destined for the "ingenuous" and free. But to insist on it at present, but above all as the only thing necessary, and to the sacrifice of many other things really so, is a folly of which our ancestors could not have been guilty: they did not require Hebrew to prescribe for a patient, nor was it in Greek trochaics they negotiated loans or ratified treaties of peace. Our social existence has been multiplied and spread out by recent discovery and extensive and rapid communication to an extraordinary degree. We require means and instruments corresponding with this diversity and extent, and we are still to be limited to one little manageable, and, as we are taught to manage it, of little use. Of what advantage to a merchant, to the head of a manufactory, to a military man, or to any of the numerous classes dependent on our public offices, the most complete knowledge of the ancient languages? It is a luxury, but luxuries are but poor substitutes for necessaries. Men cannot live on cakes, neither will erudition conduct through life. If they will read the ancient authors, let them read them in translations. It is not the best, but the best is attainable at too dear a rate. We live *too fast* in the present age to spend so much time in words. Things press upon us at every step, and an education dealing with things—a *real* or reality education, as the Germans term it—is the education best fitted for the practical, the reality-men—for the active classes of the community.—*Wyse on Education.*

[If the above propositions be correct, why do men who consider Latin unnecessary in general education continue to introduce Latin words and sentences into their writings? By doing so, they only keep up the delusion which in other respects they are endeavouring to dissipate. It should be a fixed rule with all who wish to see youth instructed in a knowledge of things instead of words, never at any time or in any circumstances to use a single Latin or Greek expression.]

MACAIRE AND THE DOG.

A gentleman named Macaire, officer of the body-guard of Charles V., king of France, entertained a bitter hatred against another gentleman, named Aubry de Montdidier, his comrade in service. These two having met in the Forest of Bondis, near Paris, Macaire took an opportunity of treacherously murdering his brother officer, and buried him in a ditch. Montdidier was unaccompanied at the moment, excepting by a greyhound, with which he had probably gone out to hunt. Julius Scaliger, who tells the story, does not mention whether the dog was tied or muzzled, or in what manner the assassin got the deed accomplished without its interference. But, be this as it might, the hound lay down on the grave of its master, and there remained till hunger compelled it to rise. It then went to the kitchen of one of Aubry de Montdidier's dearest friends, where it was welcomed warmly, and fed. As soon as its hunger was appeased, the dog disappeared. For several days this coming and going was repeated, till at last the curiosity of those who saw its movements was excited, and it was resolved to follow the animal, and see if any thing could be learned in explanation of Montdidier's sudden disappearance. The dog was accordingly followed, and was seen to come to a pause on some newly-turned-up earth, where it set up the most mournful wailings and howlings. Scaliger says, that these cries were inexpressibly touching. Those who heard them dug into the ground at the spot, and found there the body of Aubry de Montdidier. It was raised and conveyed to Paris, where it was soon afterwards interred in one of the city cemeteries.

The dog attached itself, from this time forth, to the friend, already mentioned, of its late master. While attending on him, it chanced several times to get a sight of Macaire, and on every occasion it sprang upon him, and would have strangled him had it not been taken off by force. This intensity of hate on the part of the animal awakened a suspicion that Macaire had had some share in Montdidier's murder, for his body showed him to have met a violent death. Charles V., on being informed of the circumstances, wished to satisfy himself of their truth. He made Macaire and the dog be brought before him, and beheld the animal again spring upon the object of its hatred. The king interrogated Macaire closely, but the latter would not admit that he had been in any way connected with Montdidier's murder.

Being strongly impressed by a conviction that the conduct of the dog was based on some guilty act of Macaire, the king ordered a combat to take place between the officer and his dumb accuser, according to the practice, in those days, between human plaintiffs and defendants. This remarkable combat took place on the isle of Notre-Dame at Paris, in presence of the whole court. The king allowed Macaire to have a strong club, as a defensive weapon; while, on the other hand, the only self-preservative means allowed to the dog consisted of a hole or recess, into which it could retreat if hard pressed. The combatants appeared in the lists. The dog seemed perfectly aware of its situation and duty. For a short time it leapt actively around Macaire, and then, at one spring, it fastened itself upon his throat, in so firm a manner that he could not disentangle himself. He would have been strangled had he not cried for mercy, and avowed his crime. The dog was pulled from off him, but he was only liberated from its fangs to perish by the hands of the law. The fidelity of this dog has been celebrated in many a drama and poem. It is usually called the Dog of Montargis, from the combat having taken place at the Chateau of Montargis.

We again beg to state, that a paragraph which we some time ago copied from a London newspaper, purporting to describe a remarkable mode of curing deafness, has been discovered by us to have been originally put in circulation as a quackish puff. The very vile practice, of which nearly all newspaper proprietaries are guilty, of inserting paid paragraphs pretending to convey the opinions of the editor, renders it extremely difficult to know what is true from what is false in the public prints; and we deeply regret having on the above occasion been imposed upon by one of these fabricated announcements, and thereby given it a circulation which it by no means deserved.

LONDON: Published, with permission of the proprietors, by W. & R. CHAMBERS, Paternoster Row; and sold by all booksellers and newsmen.—Printed by Bradbury and Evans, Whitefriars.

Complete sets of the Journal are always to be had from the publishers or their agents; also, any odd numbers to complete sets. Persons requiring their volumes bound along with title-pages and contents, have only to give them into the hands of any bookseller, with orders to that effect.

MORAL EPIDEMICS.

THERE is a remarkable analogy between diseases of the body and diseases of the mind, and it is shown in nothing more strikingly than in the tendency of some morbid mental conditions to spread, like common bodily ailments, and take possession of great bodies of people. Some of the most puzzling things in the history of superstition may be explained upon this principle.

For example—witchcraft. It has always appeared to enlightened inquirers as a very strange peculiarity attending this superstition, that so many of the individuals accused of it were themselves, as appears from their confessions and otherwise, under the impression that they *were* witches. We could not of course expect that any individual accused of this imaginary crime would have rested a defence upon an allegation of its imaginary character, for the belief in it was then universal. But we might have expected that most of the accused would represent themselves as innocent in thought, word, and deed. The contrary of this is the case. Vast numbers readily confessed to those very impossible things in which the superstition consisted —to intercourse, for instance, with supernatural beings, including the prince of evil spirits, to midnight journeyings through the air, and to successful practisings against the health and prosperity of their neighbours. How should this be?

An extensive observation of witch cases supplies a key to the mystery. It is found that there is a remarkable sameness in them all, even those of different countries presenting in general the same leading features. Almost always we find that the culprit has received visits from Satan in a human form, and sold to him her soul and hopes of salvation. The acts of reverence paid to him, and the marks which he makes upon their bodies to distinguish them as his flock, are always the same. The description of a witch meeting in the county of Nairn, in the north of Scotland, A.D. 1662, is identical with the accounts given by Glanvil of meetings of Swedish witches in the Blocula; and always a broomstick or the stalk of any common shrub is sufficient equipage for the old ladies, if they only, on mounting, pronounce a certain sentence in the name of their grisly master. The things which witches can do are always the same, and have been so in all ages. Their power of raising storms is alluded to by the Roman poet Tibullus. Their power of destroying any one by making a waxen image of him, and melting it away before a slow fire, is adverted to by Ovid as well as Shakspeare. The very things which they use for their incantations—toads, newts, fragments of human bodies, and the ashes of the dead—have undergone no change in the course of time; and their taking the form of hares and cats, their enchantments to produce sickness, and their malicious efforts to stop mills, and drain their neighbours' cattle of milk, are all stated and ordinary parts of witch procedure, repeated over and over again, without variation, in every part of Christendom. It is, in short, quite evident that the confessions of these unfortunate persons took their form from what may be called *the code of popular doctrines on the subject of witchcraft*. And the history of this code is a very instructive one. It first took a decided shape in a bull of Pope Innocent VIII., in 1484, by which witchcraft was amply described, and powers were granted for its punishment. From this time, much was written on the subject; prosecutions were frequent; public attention was strongly attracted; and, exactly in proportion as more and more witches were burnt, so did more and more witches come into being. Before the issue of the bull, the offence was obscure and rare; but, in thirty years after, it was so common, that Geneva saw five hundred burnt in three months; Lorraine nine hundred in a few years; and in France the number burnt was described as "almost infinite." The delusion lasted in Germany, and most other countries of Europe, till the latter part of the seventeenth century, not always manifesting the same intensity, but occasionally flaming up into a greater blaze than usual. Its whole features were those of a contagious disease, which sometimes slumbers a little, and sometimes seems to revive with fresh strength. But whenever a reawakening took place, the delusion always went on for a while, increasing and spreading, and this sheerly in consequence of the strong bent of the public mind to the subject, until it seemed, as it were, to burn itself out, or something else occurred to divert attention. There can be no doubt that the whole evil arose from that unhappy bull, followed up as it was by books commenting on and explaining it. The *doctrines* were by these means extensively made known and deeply impressed. Working on minds unenlightened, unreasonable, bigoted, and barbarous, they led to prosecutions and executions, by which the excitement was further increased. Then all the persons of a certain order, namely, those of weakest and most excitable minds, brooding over what all were talking of, would work themselves up into a belief that they were guilty of the crime; and the doctrines of demonology, which had been made familiar to them, would take form in their minds as recollections of actual transactions in which they had been engaged. Hence their confessing to an impossible offence, and hence the uniformity or general resemblance of all the confessions.

We have another remarkable example of such a moral epidemic in the history of the Anointers of Milan, which has lately been placed before the British public in a translation from an Italian work.* The notion that the plague could be propagated by a deleterious ointment, applied to the person, or even upon the walls of a house, was, it seems, one of old date. In 1630, four Frenchmen fled from Madrid, under suspicion of having attempted to propagate the disease by such means in that city. The king sent circulars describing the supposed culprits to various states, and amongst the rest to Milan, where the plague was raging at the time. The intelligence produced a strong impression in the infected city, and, ere long, it was discovered that several houses had been secretly anointed during the night. People flocked to look at the houses, and to speculate on the nature of the offence and its probable authors. The excitement was much increased by a proclamation stating the fact, and offering a reward for the discovery of the delinquents. Great anxiety was felt to detect the anointers, and very soon a few persons were taken up on suspicion, and tortured to make them confess. Though scarcely any evidence could be brought against them, they were condemned and executed, generally in the most barbarous modes that could be devised; and thus the excitement was still further increased. The house of the supposed compounder of the ointment was pulled down, and a tall pillar erected on the spot, to commemorate his guilt. Meanwhile, more houses were discovered to be anointed, or supposed to be anointed, and the public appetite for victims was increased. At one time fifteen hundred persons were in prison on suspicion. Scores were broken on the wheel, or had their flesh torn with red-hot pincers from their bodies; and many only anticipated that fate by dying in prison of the pestilence. It is remarkable, that, as the punishments increased, the number of houses anointed, or supposed to be anointed, increased also, till at length it became a wonder how so much ointment was made. It may now be fairly doubted if any house really was anointed, although the historians of the time inform us without the least appearance of doubt in their own minds, that hundreds and thousands were smeared over every night. But whether anointing really took place, or was only a delusion of the senses, there can be no doubt of one important fact, that many persons at length spontaneously confessed that they had been guilty of anointing with a view to spread the pestilence. The probability is that, as in the case of witchcraft, the persons of more weak and excitable mind, after long and intense pondering on the supposed act, at length came to believe that they had been guilty of it; but it is not impossible that, under a delirious excitement, some had actually done or attempted to do that which so many were supposed to be doing. However the truth may be in this respect, we have an equally instructive illustration of what we have ventured to call moral epidemic.

History is full of similar illusions spread under the influence of great excitement. Some are of a nature requiring to be spoken of with tenderness, and which we shall therefore leave uncommented on; but in all, the rule is universal, that certain shapes of ideas are worked out into realities, and even rapture is felt in the strictest conformity to a model. The craziest minds are first affected, and then the next craziest, and so on. What one says he has felt, another soon thinks he feels; and thus the epidemic goes on, till, the materials of excitement being exhausted, it comes to a natural death.

The same law holds with regard to crime. In the autumn of 1830, some corn-stacks, barns, and other farm buildings in the county of Kent, were burnt by night, and several farmers received letters, threatening their property with the same treatment, unless the wages of farm labour were raised, and the use of machinery discontinued. In the course of the three last months of the year, these nocturnal acts of incendiarism were extended into Hampshire, Wiltshire, Buckingham, Sussex, and Surrey, and some took place so far north as Berwickshire. There is considerable reason to believe that they were, to a great extent, not, as ordinary crimes are, the result of wicked dispositions, but merely imitative acts. The newspapers had spoken of the first burnings with great alarm. Much political importance was attached to them. The popular fancy was caught by the odd term "Swing," which, from being the signature of threatening letters, came in a little time to distinguish the whole transactions. Thus much excitement was at length felt. There can be little doubt that, almost from the first, some of the burnings arose from the excitement alone; but, latterly, the most of them, if not all, had probably no other origin. One of the criminals afterwards confessed that he had set fire to his master's ricks from no motive whatever: only he had been incessantly thinking of the burnings, and even had dreamt of them, and at length he had risen from his sleep, and gone out and done the deed. We may fairly presume that much of the guilt of this dreadful time would not have been incurred, if the first outrages had not obtained so much notoriety. In an early age, *when there were no newspapers*, it is probable that, with the same popular discontent, there would not have been a twentieth part of the outrages committed.

The effect which the performance of Schiller's play of the Robbers had upon the university youth of Germany, in making them go out upon the highway, is

* Trial of the Anointers during the Plague of Milan, A. D. 1630. London, Rolandi.

Digitized by Google

well known, and may be referred to the same principle of an epidemic through the operation of the imitative faculty. The act is known to be criminal, but the fascination of example is, in such circumstances, not to be resisted. It is from the same morbid desire to imitate, that suicides sometimes take place. A young lady, throwing herself from the Monument, occasions much paragraphing; and, ere many days elapse, a boy goes up and also throws himself over. We have been assured that the peculiar mode of suicide adopted by a great political personage a few years ago, was exactly followed not long after by a private person. Hence also the *runs* that are made upon particular crimes. Poisoning became a fashion at the French court in the reign of Louis XIV.; and some years ago, three men were in prison in Edinburgh all at once, for the crime of murdering their wives; and two of them were executed together.

These are not, to the best of our judgment, unprofitable speculations on mind. It appears to us that some very important considerations may be deduced from them.

Seeing that the public mind, in its present imperfectly enlightened state, is liable to be seized with such accesses of extravagance, it is clear that the rational are under a strong call to be on their guard, and to guard as many others as possible, against all immoderate notions and dogmas that may be attempted to be impressed upon them. With many who do not want sense, the knowledge that such and such a doctrine is in great vogue, and is the subject of much discussion, is sufficient to mislead. They mistake notoriety for soundness, and join the trains of crazy enthusiasts under the impression that they are men of great authority. Thus it may happen, and does often happen, that the more extravagant an object is, it has the better chance of succeeding, its very extravagance causing a sensation and a fame which carries the multitude in its favour. If the present paper do nothing more than establish with our readers that a thing may be the theme of universal talk, and have thousands of famed apostles and martyrs, and yet be a gross delusion at bottom, it will have done good service.

Seeing that there is such a tendency to imitate and take up with whatever is very broadly brought under public notice, it becomes of serious importance to consider whether our criminal procedure is most calculated to do good or evil. A man, we shall say, commits a murder of a very shocking kind. This is an act of great wickedness, and it seems quite just that he should be put to death for it. It is also but right that the procedure against him, to the very last, should be public, for otherwise the innocent might occasionally suffer. But if it be found that the publication of the details of the murder tend, if not to lead others to commit the same offence, at least to brutalise the public mind, we may fairly doubt if more harm than good is not done by a public prosecution. If it further be found that the execution of the offender only brings the worthless together for an hour of debasing excitement, and for the purpose of committing, as far as possible, other crimes, we may reasonably fear if the vengeance of the law be a thing conducive to edification. If the following be at all a true picture, we suspect these doubts and fears must be considered as certainties:—"During the period of Greenacre's imprisonment on a charge of murder, the ginshops in all quarters of the town were every morning early crowded, and remained so till night, with drunken parties, hearing and discussing the disgusting particulars of that horrible affair. Mothers neglected their children, wives their husbands, to drink gin; and in the excitement brought on by the morbid feeling of curiosity, listening and waiting, from hour to hour, to pick up minute accounts of the manner in which the murder, mutilation, &c., were effected; at every breath uttering horrible imprecations. Those of the poorer class who were not at the ginshops, were collected in knots, reiterating what they had heard to their neighbours and children. The night before the malefactor's execution, the adjacent streets were filled with women, girls, and boys, who spent the night in riot and debauchery, up to the hour of the wretched culprit's appearance on the scaffold. The noise the rabble made during the night reached the cell, within the interior of the prison, and, it is said, awaked the doomed man out of a profound sleep. Pockets were picked under the gallows, and the remainder of the day was spent in riot and drunkenness. For weeks subsequently, boys and girls were seen enacting, under gateways situated in low neighbourhoods, the scene of the murder and mutilation in mimicry."* It is hard to say how such evils are to be avoided; but assuredly a mode of criminal treatment in which the details of the crime would be kept more private, and the criminal punished otherwise than by a public execution, is much to be desired.

Upon the same principles, a popular literature, or theatrical representations, in which the acts and characters of criminals are brought prominently forward, must have a debasing and most pernicious effect. Here the excitement is not so broadly seen—though it is scarcely possible for the life of Jack Sheppard to be read all at once by thousands, and acted night after night at once in five London theatres, without causing the idea of burglary to be dwelt upon for the time with some degree of fervour. But if less potent in degree, such reading and such sights must still act in the same manner and to the same effects. The worst of actions are perhaps presented under redeeming and alluring lights; the magic of imaginative talent is thrown over them; the victims of vice appear at least in the enjoyment of notoriety. Then they act also through the principle of imitation. They present specimens of human conduct: the conduct is bad, and, in as far as they are imitated, wickedness must be the consequence. If we only consider how the well-disposed mind is affected by the biography of a good man, how anxious we feel to imitate so bright an example, how even his affections serve to us as models for our own, we cannot for a moment doubt that every delineation of vice, with however plausible excuses and professions it may be brought forward, must have an injurious effect. We would say, then, let every effort be made to put down literature of this kind. But, before the words are out of our mouth, we are forced to recollect our own doctrine: persecution attracts notice and excites interest, and there is not any thing in the world so vicious, but to direct much open indignation against it only serves to give it greater way and head. The efforts, then, which the virtuous are to make against demoralising literature and demoralising theatrical representations, must be governed by prudence. They must chiefly work in secret, and by counteraction, making, if possible, the good more attractive than the bad, and educating those into paths of honesty and sobriety who would otherwise be misled into the walks of error.

* Metropolitan Magazine, for March 1840. To an article in this work on Public Prosecutions we are indebted for some of the ideas here presented to notice.

STORIES OF THE IRISH PEASANTRY.

BY MRS S. C. HALL.

"Mind not high things: but condescend to men of low estate."
ST PAUL.

FAMILY UNION.

It is strange how, amid all the changes and chances of life, the recollection of and affection for the scenes of childhood remain unaltered. More brilliant and beautiful prospects open upon us; we climb higher mountains, traverse more expansive seas, look over deeper and wider valleys, yet our affections are with the homes of our youth. I believe that this feeling is more intense when early days have been spent in the seclusion of the country; the eye is not then distracted by a continued varying of objects; there is leisure to number the heart's pulsations; feelings have time to take root, to spring up, to grow and strengthen; there is day by day a converse with nature, a communion with God; sounds, and sights, and miracles; nature's moving miracles by sea and land stamp their impress on the mind; and yet city memories are frequently as strong, though altogether different, inferior I had almost called them.

The love and remembrance of place of birth, form one of the strongest and most enduring of human affections, for it is associated in feeling with scenes of infancy and the recollection of early attachments and sympathies. Let me go where I will, or write upon whatever subject I may, I find my heart turning to the home of my childhood. All natural and happy thoughts are wound up with it; if I think of the ocean, the billows that laved the beach of our little bay roll before me; of trees, those that shadowed my childhood's paths seem to wave above my head; of music, the peal of the old organ that stood in the hall, and was generally played during the twilight of the summer evenings, swells upon mine ear. And when I want to illustrate a subject, what numbers of characters and topics crowd upon me—all drawn from the same source! A sea-side neighbourhood, with its fleet of fishing-boats, has abundant new incident to add to the stock always on hand in an extensive parish. Unless the heart is shut against the sympathies *of its own kind*, there *is* nothing, there *can* be nothing, approaching to dullness in a country neighbourhood. To me, it is the town that is as a "howling wilderness;" the thousands that crowd its streets, and upon whose faces you look without meeting one answering glance, tell you that you are alone in the vast universe of human beings. Oh! how bitterly I felt this when first we came to reside in London! how earnestly did I long, again and again, for the air and freedom, the freshness and the friendliness of those warm-hearted peasants, who, for the love they bore my kindred, never met me without a blessing! How sweetly does the remembrance of these wayside prayers come upon me! a remembrance which I would not exchange for the loudest public praise that ever echoed to human ears.

And does not all this prove the depth and earnestness of early associations, the strength of early affections; and ought it not to teach a lesson to parents, on the necessity of seeing that the first objects presented to the young should be well chosen with reference to the future; does it not prove how very needful it is to *know*, in the strictest sense of the term, the character of those who associate with youth, that so no impressions of an injurious kind should be communicated at a time when they are certain to be retained! But I am digressing from my subject—creeping into a topic towards which my heart and mind are always turned, when, in fact, I ought to be occupied in pourtraying the difference which existed between the bringing up of "Easy Jack Cummins" and "Hard" Tom Hartigan; two men as different as can well be imagined, and yet both deserving the epithet of "good-hearted fellows."

Easy Jack's father was also an easy Jack. His landlord could do nothing with him. Although the rage for improvement was not by any means what it is now, still the landlord wished to improve; but Easy Jack—I cannot say the *first*, for the race is coeval with Irish existence—but Easy Jack the elder had no taste that way.

"Jack, is Jack at home?" he inquired one morning.

"No, yer honour," said his wife, rubbing the dirt into her face with her dirty *praskeen*.

"Yes, daddy's down below," screamed one urchin.

"No, daddy's up above," shouted another. "He's gone to the mill," said a third. "He's asleep in the room," said a fourth. And *that* was generally the truth. Easy Jack Cummins *senior* loved his ease, and all his children pulled different ways. At last the landlord succeeded in forcing Jack to break cover; and after sundry reproofs on the score of idleness, and touching the necessity for truth, "Jack," said the landlord, "if you will unite with Andy Mullins and Roger Dacey, they will assist in draining the three acre which is divided amongst you; and instead of its being nothing but a marsh for more than half the year, it will be a most useful piece of ground."

"Maybe yer honour would be thinking of raising the rint on us, thin," said the fellow, looking shrewdly into his landlord's face.

"No," he answered; "on the contrary, I will forgive you all a year's rent."

"God bless yer honour! that's mighty good of you. Well, sir, I'll see about it, and spake to Andy and Roger."

The landlord, however, from past experience, still doubting, said all he could to urge Jack to *combine* with others in what would have been a mutual service, and to impress upon his mind that where there is not sufficient power in individual exertion, nothing aids a cause but combination. A month passed over without any thing having been done to the field, and again the landlord visited his tenant.

"Well, Jack, how *is* it that the field is in such a state?"

"The wather, *is* it, yer honour? Sure that's the way it always was. I believe Ireland bates all the counthries on the face of the earth for wather, plase yer honour."

"But you told me you were going to join Andy and Roger in draining the field."

"Well, I put it to yer honour, what call have I to their share of the land? And sure if I drain my piece, it's theirs will have the good of it."

"And if they drain theirs, yours will have the good of it."

"Well, that's thrue; but, sure, yer honour, my father left it the way it was in his time, and my mother always found it mighty convanient for rearing young ducks and blaiching flax, and I'll let it alone *till the boys grow up*, and then maybe we'll do it ourselves."

But the children grew up with the same indifference to the wisdom of mutual assistance, and the field, at least Jack's part of it, was a literal slough the last time I saw it. Easy Jack the first had hoped to make his eldest son a farming-labourer like himself—but no; he would be a shoemaker, and a shoemaker he was.

When the poor resist all plans for mutual assistance, their power weakens with each succeeding generation, and Jack Cummins the shoemaker is worse off than Jack Cummins who would not help to drain the farm. I shall revert to him again, but must now show the difference in the bringing up of "Hard Tom;" indeed, in this, also, the son was the counterpart of the father.

Old Tom was the first of his race who manifested a decided character. What he desired to do, he would do well, and it seemed marvellous what he accomplished by judicious combination, both abroad and at home. He had not even the advantage of possessing an acre of ground; but whenever others wanted help, it was sure to be given, and in the most judicious manner.

He brought up his children to help each other, both because it was necessary and because it was right; and whenever any little work for the public good, as well as his own individual benefit, was going forward, old Tom Hartigan's head, and old Tom Hartigan's hand, which were both of the strongest, were sure to be ready on the instant. Nothing could be more opposite than the theory and practice of these two men, and I must now show the fate of their descendants. "Easy Jack Cummins" the second, would, as I have said, be a shoemaker, and he had brought up his chil-

Digitized by Google

dren, or rather nature had brought them up, to run wild about the country, to the destruction of every well-built ditch, every furze fence, every tree, every bird's nest in the parish. Never were such a wild and wilful set as the young Jack Cumminses; if you heard a huge long-backed pig squealing at the top of its voice, and discovered two or three children mounted thereon, shouting and hurraing louder than the pig itself, be sure they were some of the Jack Cumminses; if the young quicks in your hedge were converted into firewood, the Jack Cumminses were truly to blame; if a riot ensued, which enticed the old and the young to take part in the "shindy," the Jack Cumminses were surely the ringleaders. At first they were merry, rosy, wild, laughing rogues; they then grew into troublesome daring boys, and wilful slatternly girls. One would *not* dig the potatoes; another would *not* bind the shoes; another would *not* be a shoemaker, but would be a wheelwright; and because there was no money to make him so, he would not do any thing required of him. Another would go to sea; another would do nothing but follow blind Beesom the fiddler, and dance jigs. The whole family pulled different ways; and the consequence was, that *Easy* Jack Cummins, and his no less *easy* wife, were obliged, as long as they were able, to pay for the assistance in their business which their children could have rendered them, if they had been, like the bundle of sticks, *united;* but as Jack's neighbour, Thomas Hartigan, said, and his good father had not only taught him to read, but placed one or two good books in his way, "Easy Jack Cummins *brought the sticks together, but had not strength to tie them up.*" This is often, particularly in Ireland, a grievous parental fault; they suffer their children to run wild; they do not consider that the strongest and best lessons can be taught in almost infancy, when the mind will receive any impression, and retain it. "Easy Jack" used to say, "Ah, thin, let the little fellow have his own way; *sure he has no sense.*" But the "little fellow," when he had sense, was so accustomed to have his own way, that he would *not* give it up. Now, this was the case with all the little fellows, and "female fellows;" all in Easy Jack's household pulled, as I have said, different ways; all but one, and that poor boy was nearly an idiot—"a natural," as he was poetically called by his neighbours, who also designated him "Black Barney" on account of the darkness of his complexion. While his brothers and sisters wearied their parents' hearts by wildness and neglect, "Black Barney's" listreless but affectionate eyes were the light of his father's house, his inarticulate voice the music which gladdened his mother's heart. He gloried in a shoemaker's apron, and would brandish an awl as if it were a sword; he would wax the ends for his father, and card tow for his mother; and though he could not speak distinctly, he could sing snatches of old ballads; and sing he would, in rain or sunshine, all the same, and dance uncouthly, but still it was dancing. He would even undertake to chastise his brothers and sisters when they would not work; and if his father seemed worn out with his endeavours to support his careless family, the poor idiot wrung his hands, and tears coursed each other down his lubber cheeks. Poor creature, he possessed just sufficient intelligence to know what is wrong, but not enough to render him useful to his fellow beings.

The misapplication of intellect incurs far greater penalty and blame than its absence; the reckless progeny of Easy Jack Cummins, which, if united by the bands of love and industry, could have scared poverty from the door, were scattered away, and two of the sons only returned to their native cottage when they wanted money or food. The old man's connections dropped off one by one; there was no *uniting* principle there; and the last time I saw the old shoemaker, he had been to Thomas Hartigan's mill to beg a little meal for his wife, who was dying. Black Barney was rolling along the road before his father, like a huge hedgehog—now singing one of his old songs, then weeping bitterly for *hunger*, and, as he said, "*Murning* that God had made his broders widout a heart."

Look now at the other picture: thank God, if there is shade, there is also sunshine in this world. Tom Hartigan, the second, is a fine specimen of the chief stick of the bundle, round which all the little sticks are tied.

Tom—and I regret to say there were not a few of his neighbours who called him *Hard* Tom, a cognomen he acquired from his prudence, a virtue which Irishmen in his day held in sovereign contempt—Hard Tom began life just in the same way that Easy Jack Cummins did, but with a far different example; Tom ground at another man's mill, while Jack worked another man's leather; but, in process of time, one achieved the dignity of his own last and cabin, and the other rented a windmill. What a picturesque old mill it was! perched on the top of the Hill of Graige, and commanding a view which is often, even now, spread out before me in my midnight dreams; the well-cultivated grounds and rich plantations of the old manor-house sloping to the edge of the brimming ocean; the house itself, with its gables and high chimneys; the bay beyond—the bay where the waters of my own blue sea were ever to me a source of serious yet unspeakable joy; the tower of Hook on its promontory, and nearer still the ruined church of Bannow; for the inland view, there was the bleak black stormy mountain of Forth, rearing its rocks into the very clouds. How fresh and invigorating was the breeze upon that mountain! How fresh that which swept our own hill! How often have I climbed to the old mill on a summer morning, and counted the ships, whose silver sails showed like petrels upon the waves, and wondered when I too should be in a vessel on my way to my mother's country, to that rich and learned England, where I was often told I must go, to study and become steady!

The old mill, if it had been tenanted by any but Tom Hartigan, would have gone to destruction long before; but Tom patched and plastered and kept together its old stones with marvellous affection; and his wife, once when a storm tore the sail to tatters, absolutely mended the rent with her red Sunday petticoat, rather than the mill should stand still, and walked to Waterford to purchase the necessary material for new sails herself. I think the mountain air Tom breathed invigorated his independent and industrious mind tenfold. Tom and Anty began by being the most united couple in the parish.

"How you do slave yourself!" observed Mrs Easy Jack Cummins to Anty one evening, when the young families of both were increasing, as she strayed up the hill from the moor. "How you do slave yourself and that *dawshy* child, keeping it winnowing!—sure it can do no good!"

"Yes," replied Anty, "it can; it *learns* to work, to divide the chaff from the *whate*—in which there is wisdom—when we work; and if poor people are not united in labour, they can't get on."

"Well," said Mrs Easy Jack, "your husband must make enough to keep you all without such slaving. *Mine* does, and any how I didn't marry to *keep* my husband."

"*I* did not marry to *keep* my husband," was the sensible reply, "but I married to *help* him; sure we are one in the sight of God and man; and though the hands don't do the work of the head, nor the feet the work of the hands, yet they can all work together for *the same purpose;* and if two heads are better than one, surely two pair of hands are better than one; even the poor can get over a *dale* of hardship, *if they are united.*"

"But where's the good of *slaving?*"

"Work is pleasure," answered Anty Hartigan, "if a body has a mind to make it so. Sure it's the greatest pleasure in life to me to help Tom, the craythur! If he works hard, wouldn't it be a sin for me to be idle?—and as to the child"——

"The idea," interrupted Mrs Easy Jack Cummins, "the idea of buying a sieve, a morsel of a sieve, for such a babby as that to winnow with! Sure *that* was throwing away a day's earning."

"But the child couldn't be at my foot all day doing nothing; and if he wasn't doing good, he'd be doing harm; *and one day's earning is well spent to lay the foundation of an industrious life, plaise God!*" replied Anty, adding, "how do you keep your young ones quiet?"

"I don't look to do it.* Sure the world will be hard enough on 'em by'n by; it's the least they may have their fling a bit now. I didn't marry to slave," she repeated.

"Where there's love," said Anty, pushing back her hair from her heated brow, "there may be labour, but no slavery; the being *united* in the work is itself a blessing."

"Setting a case, you didn't love Tom, and he didn't love you, what would you do?"

"Ah, *bathershin!*" laughed the young wife; then added, "but, in earnest, if I didn't, *that* would not put me past my marriage agreement; I should work all the same, though it would be with a heavy heart instead of a light one; and if he didn't love me, why," her voice faltered, "why, I'd try to help him twice as much, just to *get back his love;* sure that would be both right and wise, for the *comfort of doing my duty would be the only comfort I'd have left.* And now, Mrs Cummins, *acournaan*, don't take it ill of me if I tell you what my mother told me, not exactly to fret or contradict a young child, but to *turn its mind to useful employment;* to rule it by love, *but to rule;* or by'n by the little craythur that lay on your bosom may stab yer heart. Above all, keep children *employed;* it keeps them together *like the bundle of sticks*, and then they are sure to prosper." That Mrs Cummins did not heed this admirable advice, I have already shown; and the contrast between the two families, as their respective children grew up, was great indeed.

The miller's cottage was like a bees' nest; two sons helped in the mill; the girls winnowed, and made and mended; the others were always employed as best suited their age and knowledge; and though labour in that part of the country is badly paid, according to the rate of English remuneration, yet provisions were at that time, and still are, cheap. Tom Hartigan began life poor; he will die rich. To use his own words, "Single-handed, I might have struggled on like my neighbours, if my wife had not helped me. We began by being *really united*, and finding the power that it gave us, we taught the children the advantages we felt. If little Bat (that was the youngest) wanted to make a toy-boat, Nelly would stitch the sails, Jem fit the cordage, Terry splice the timbers, and *all* would help to set it afloat; and then I'd say, 'See, now, how quick that was done, because you war *united;* if Nelly refused to stitch the sails, Jem to fix the cordage, and Terry to splice the timbers, Bat, honey, how long would it be before you'd have had your ship afloat?' Though that's but a play toy, the lesson is the same through life. Thank God! the mill has never wanted grist; and now I'm a farming miller, I grind a dale of corn that my boys have thrashed and sown, and my girls have reaped and bound; and there's a warm corner for the poor natural, Black Barney, whose family are scattered like chaff before the wind." And my belief is, that if Irishmen *were united*, at home and abroad, they'd carry the world before them. So the heavens above look down, with the sunny beams of encouragement, on *United Irishmen!*

* Try to do it.

THE CAMP AND COURT OF RUNJEET SING.*

If our readers glance at a map of Hindustan, they will see that our north-western frontier is bounded by the river Sutlege, which, after a long but not very sinuous course, falls into the Indus. Between the Sutlege and the Indus he will see a country of a triangular shape, watered by three other large streams, which is thence called the Punjab, or "country of five waters," and sometimes the kingdom of Lahore, from its capital city. This is the territory of the Sikhs, who, whether viewed politically or religiously, are among the most interesting and extraordinary races of India; and it was until very recently ruled by Runjeet Sing, the most able and intelligent native prince that has appeared in the east since the days of Hyder Ali. In the present state of our eastern possessions, this kingdom is one of increasing importance; it lies between us and our new ally the king of Cabul; it covers the only side on which British India can be menaced with invasion; and were the Russians to appear on the banks of the Indus, their success would mainly depend on their having the Sikhs for enemies or for allies. We shall therefore endeavour to give our readers as brief an account of the origin and progress of the Sikhs as is consistent with perspicuity; a sketch of the career of their late sovereign; and such a view of the present state of the Punjab, as will enable them to understand the frequent references made to its condition in the newspapers, in Parliament, and in the debates at the India-House.

The Sikhs were a sect, and are now a nation. Nanac, the founder of the sect, was born in the reign of the Emperor Acbar, about the middle of the fifteenth century. He was the son of a Hindoo merchant of the Katri, or warrior caste, and was educated during his earlier years in all those scruples and prejudices so deeply rooted in the Hindoo mind. His personal beauty, his talents, and the purity of his morals, recommended him to the notice of a Mahommedan merchant, who, being childless, adopted Nanac as his son. He thus became acquainted with the most approved writers of Islamism, and learned to pay equal regard to the Koran and the Vedas. The Emperor Acbar had planned a new religion, which might unite both Hindoos and Mahommedans, and Nanac early adopted the same project. It was his custom to transcribe and literally translate the moral aphorisms which most pleased him, into the idiom of the Punjab; and when his collection of maxims became large, he ranged them in order, and put them into verse. This compilation is called the *Grunth*, and is not less highly venerated by the Sikhs, than the Koran by Mussulmans, or the Bible by Christians.

Nanac completely abolished all distinction of caste, declaring that his mission extended to men of every tribe, class, and race. During his long wanderings he preached in the principal cities of India, and even crossed the sea to diffuse his doctrines at Mecca and Medina. In his character of Guru, or spiritual director, he invariably inculcated doctrines of forbearance and good-will towards men; he professed an utter abhorrence of war and violence; and his followers for a long time were distinguished by the same peaceful characteristics as the Quakers in this country.

About the beginning of the last century, Aurengzebe commenced a fierce persecution of the Sikhs, as apostates from the Mahommedan faith. It was at first endured with patience, but at length, after the martyrdom of the fifth Guru, the Sikhs took up arms and made fearful retaliations on their persecutors. Guru Govind, a man of equal genius and ambition, enforced the wearing of steel as a religious obligation on his followers; they seized several villages in the Punjab; and as they now possessed a creed, arms, and combination, they began to rank as a nation. Govind maintained a desperate but unsuccessful war against the whole power of Aurengzebe; he died about the same time as that emperor, and was succeeded in his temporal power by Banda, the first ruler of the Sikhs who laid no claim to the title of Sut Guru or pope, which thenceforth became extinct.

In the confusion that ensued on the death of Aurengzebe, Banda devastated the northern provinces of the Mogul empire, and committed the most frightful atrocities. He was at length taken prisoner, and brought to Delhi, where he was torn to pieces by red-hot pincers, a death which fanaticism alone could inflict or endure.

The Sikhs had lost their leader, but their strength

* A work recently published, entitled "The Court and Camp of Runjeet Sing, by the Hon. C. W. Osborne (London, Colburn)," has enabled us to draw up the above paper. Mr Osborne's work, though spread over too great a space for the quantity of matter, contains a variety of information respecting the court of Runjeet, which will prove interesting to those engaged in Indian affairs.

Digitized by Google

was not broken. When Nadir Shah invaded India, and left but a mockery of royalty on the throne of Delhi, they again assembled in considerable strength, and not only occupied a considerable portion of the Punjab, but extended their conquests eastwards to the Jumna. Their success was favoured by the rising fortunes of the Mahrattas, who threatened to drive the Mussulmans from India, and were not very far from realising their boast. The Afghan chief of Candahar came to the aid of his Mahommedan brethren, and the Mahrattas were irretrievably defeated at the battle of Paniput, in the year 1761. The Sikhs, who had severely harassed the march of the conqueror, attacking his flank and rear, intercepting his baggage, and cutting off stragglers, were destined to feel the full weight of his vengeance. He razed their sacred city Umritsir to the ground, erected a pyramid of their heads, and caused the walls of the mosques they had desecrated to be washed with the blood of the slain. But when the Afghans returned home, the Sikhs recovered their strength so rapidly that they became masters of all the country between the Jumna and the Indus, which they divided into twelve *misuls*, or confederate associations, whose united forces were about 70,000 mounted warriors.

The smallest of these *misuls* was governed by the grandfather and afterwards by the father of Runjeet Sing, both of whom being men of great valour and ability, possessed a moral power which compensated for the weakness of their military force. Runjeet was born November 2, 1780, at a time when his father's influence was daily acquiring fresh strength. He was attacked by the small-pox at a very early age, was badly treated by the native physicians, and having narrowly escaped death, recovered with the loss of an eye, and a countenance terribly disfigured. He had scarcely reached his twelfth year when he lost his father; his mother, a profligate and ambitious woman, undertook the regency of the *misul*, and the guardianship of the child. She preserved Runjeet's inheritance from the rapacity of his neighbours; but in order to protract his minority, she quite neglected his education, and supplied him with every indulgence which could gratify depraved passions. He thus in early youth formed those habits of licentiousness and debauchery which to the latest hour of his existence continued to be the darkest stains on his character.

Field sports afforded him more innocent gratification, and they also gave him an opportunity of becoming acquainted with public affairs, and learning the discontent produced by the crimes of the regency. On attaining his seventeenth year, he took the reins of government into his own hands, but was forced to consent to his mother's assassination, in consequence of the universal hatred excited by her tyranny and sensuality. In after life, Runjeet frequently declared that this sacrifice was essential not merely to the stability of his throne, but to the security of his own existence.

Soon after gaining possession of his limited inheritance, he determined to carve out a more extensive kingdom, by invading and finally taking possession of the Punjab. Aided by the Mussulmans of Lahore, he expelled the rival Sikh chieftains from that city, and soon established his authority over the surrounding country. At this crisis the kingdom of the Afghans was rent asunder by civil wars; taking advantage of these disturbances, Runjeet resolved to seize all the Afghan provinces east of the Indus. In making this daring attempt, he was compelled to withdraw by the British, and he was ultimately confined to his acquired territory of the Punjab.

In 1810, Runjeet celebrated the marriage of his eldest son, then only ten years of age, and invited Colonel Ochterlony, the British resident at Loodiana, to witness the festivities. In spite of all their old disputes, the Maharaja treated the colonel as an intimate friend, and obtained from him valuable instruction for disciplining his Sikh infantry, and erecting fortifications round Lahore. From this time Runjeet bent all his efforts to forming a regular army; he organised several battalions, officered principally by deserters from the Company's service, and he began the formation of a corps of artillery.

In 1822, two French officers, Messrs Allard and Ventura, entered the service of Runjeet Sing, and by their military talents soon raised the Sikh army to a higher state of efficiency and discipline than were ever possessed by any native force in India. Their services were obtained at a time when Runjeet's power was menaced by the greatest danger to which it had been yet exposed. The hearts of the Mussulmans throughout India were grieved by the erection of an idolatrous monarchy, in a country which had been for ages the stronghold of Islamism; and they were easily induced to listen to the pretensions of Ahmed, a Syed or descendant from Mahommed, who declared that he was summoned by the Almighty to restore the empire of Islamism. He declared that it was necessary, however, that he should first visit the shrine of Mecca, and for this purpose he came down to Calcutta, where the excitement produced by his arrival gave serious alarm to the British government. On his return from Mecca in 1827, he commenced his holy war against Runjeet; but the fanaticism of his followers could not compete with the steady discipline of the Sikhs; he was routed in every engagement, and at length, in 1831, was surprised and slain in the midst of his followers. Runjeet was anxious to take revenge on the Mahommedan states, which he suspected of favouring the impostor, particularly the Ameers of Sinde, and Dost Mahommed Khan. But the English, though far from being satisfied with the Ameers, would not allow Sinde to be invaded, and proposed themselves as umpires between Runjeet and Dost Mahommed. The arrangement of these affairs led to an interview between Runjeet and Lord William Bentinck, in which the display of oriental magnificence surpassed the fictions of the Arabian Nights.

Early in 1838, the open proceedings of the Persians, and the suspected designs of the Russians, excited much anxiety in England and India. Dost Mahommed Khan, who had previously besought the establishment of an embassy in Cabul, treated our envoy with such disrespect, that he deemed it prudent to return. This was the more suspicious, as the Afghans are Soonnees, and the Persians Sheeahs, two sects of Mahommedans more fiercely opposed to each other than Protestants and Catholics ever were, even in the worst of times. Obviously, some powerful foreign influence must have been exerted to make Dost Mahommed abandon the hereditary policy of his family, and enter into negociations with the Sheeahs of Persia. It should be added, that this change gave great offence to his subjects, and that their notorious discontent appears to have suggested to Lord Auckland the policy of restoring Shah Soojah.

Runjeet's consent was necessary to this project, and it was far from certain that it would be cheerfully accorded. He was not at all satisfied at our having interfered to protect Sinde; he looked upon Afghanistan as a country that he might yet obtain for himself, and he had reason to fear that the English, in their humour for restitution, might demand the restitution of the Kah-i-noor, and the other diamonds which he had taken from the Shah when a fugitive. Lord Auckland's visit to Simla, a fashionable resort lately established in the Himalayah mountains, afforded a favourable opportunity for commencing negociations; the Maharaja sent a complimentary embassy to the Governor-General, and Lord Auckland in return dispatched the mission to Lahore, of which Mr Osborne has given a light sketchy account in the volume before us. The result was, that Runjeet, animated by personal hatred to Dost Mahommed, rather than any other feeling, freely offered every facility for the advance of our army, receiving in turn, if not a positive promise, at least an implied stipulation, that we would guarantee the succession of his son, Kurruck Sing.

Shortly after the fall of Cabul, which consummated the triumph of the English arms in Afghanistan, Runjeet Sing fell a victim to inflammatory disease. His four wives, and five of his Cashmerian Amazons, burned themselves on his funeral pile, and his prime minister was with difficulty prevented from making a similar self-sacrifice. Kurruck Sing succeeded to the throne, but he was deposed in a few weeks, and his son, a youth desitute of talent and experience, elevated to the *musnud*, which it is probable he will not long be permitted to occupy.

The future state of our Indian possessions depends mainly on the condition of the kingdom of Lahore. The Russians are now marching upon Khiva, and whether successful or defeated, they will form diplomatic relations with all the states of Mawer-en-nahar, and probably occupy the harbour and fortress of Astrabad. From this position they may, as before, push forward the Persians against Afghanistan, while they, at the same time, aided by the Turcomans, would force their way to the banks of the Indus. The Sikhs, if faithful, would no doubt beat the Cossacks and Turcomans, and perhaps prove a match for the regular forces of Russia; but if they joined the invaders, the Russians, admitted into the Punjab, would be in close contact with the Goorkas, our old enemies in Nepaul; they would also be within short reach of the Mahratta powers, who have never forgotten or forgiven their repeated overthrows; and they could thus, from the same point, menace the presidencies of Bombay and Bengal. Much depends on the character of Shah Soojah; if he becomes unpopular with any large portion of his nation, Afghanistan will be an aid instead of an impediment to the progress of Russia.

The Punjab must therefore be regarded as the key of our dominions; and it would be most desirable if possible that it should be governed by an able and energetic ruler, like its late sovereign; but of this there is no reasonable prospect. The unpopularity of Kurruck Sing no doubt extends to his son. Sher Sing, the natural son of Runjeet, is an able chief, and favourably disposed to the English alliance, and his son Pertaub is a youth of great promise; but neither has such a party in the country as would suffice to establish their claims without civil war. Heera Sing, the son of the prime minister, is ambitious, and likely to create much trouble; so that between all the Sings, or "lions," as the name signifies, the kingdom runs a fair chance of being torn to pieces. We hold that the interference of the English at no very distant date is unavoidable, and we have good reason to believe, that, while we write, the military occupation of the Punjab is under the consideration of the Indian authorities. Mr Osborne says, "that the Company, having swallowed so many camels, need not strain at this gnat," especially as the opening of the Indus to steam navigation is now an object of great commercial importance. Moreover, the people of Lahore would very gladly consent to a change of masters; they have long looked with envy on the peace and prosperity enjoyed by their brethren on the east side of the Sutlege; they would gladly exchange their miserable independence for the milder and more equitable sway of the British government, which, even in its worst form, is infinitely superior to the very best administration under the native powers. General Allard is dead; General Ventura is very anxious to get safe out of Lahore with the fortune he has acquired; and the Sikh infantry, at least, if not the cavalry, would gladly join the sepoy battalions: to use their own phrase, "Koompanee Bahadoor" (General Company) is a very good paymaster; and this is no trifling consideration with men whose pay is often two years in arrear, and whose miserable pittance, even when paid, is subject to the clippings, parings, and deductions of corrupt officials. These matters, we know, have been often and earnestly discussed between the Sikhs and our sepoys; and the whole question is one deeply affecting the position of the British in India.

SCOTTISH AND IRISH AGRICULTURE.

BY MARTIN DOYLE.*

THE deficiencies of practice in Irish husbandry have long and repeatedly constituted the basis of my remarks when I have had occasion to address my countrymen on the subject of husbandry. Personal observations have recently led me to form what is possibly a correct judgment of the principal causes of the contrast which so plainly appears both in the leading details of farm economy, and its general *condition*, in the two countries. To many there will appear *neither* originality nor novelty in what I may remark, but the great mass of those readers of agricultural subjects who are interested in the improvement of Ireland, whether landlords or tenants, are unquestionably heedless or ignorant of many important *principles* as well as practical *details* of management with which they ought to be familiar. I shall commence with the land-proprietary, who have a legitimate claim to precedence, both from the vast influence which they can exercise over the ordinary occupiers and cultivators of the soil, and from a proper sense of the respect due to their rank in the social scale. Without any minute reference to the splendid and gigantic improvements effected by some of the great landlords of Scotland, for example the late Duke of Sutherland, and the late and existing Dukes of Buccleuch, who, in the language of the present representative of the latter noble family,† seem to have *felt* that "Providence requires more than ordinary diligence at the hands of him to whom much is given, in improving the trust committed to their care, and in producing the greatest possible amount of good to the country," I shall adduce the example of a proprietor of that extent of land which is far from uncommon in the two countries under consideration, and whose judicious and enterprising conduct should serve as a model of imitation to many of the Irish landlords, who, in proportion to their means and facilities, may pursue a *similar* if not an equal system of permanent and effective improvement. I shall illustrate my subject by presenting to view the estate of Closeburn in Dumfriesshire, and showing what has been accomplished by the zeal and perseverance of an individual. This property, which comprehends fourteen thousand imperial acres within one ring-fence, was purchased by the father of Sir Charles G. Stuart Menteath, the present possessor, for L.50,000 in 1783, when it produced but L.1800 a-year. The leases did not, however, expire *until 1803*, when the proprietor commenced his spirited operations. These, as well as I have been enabled to collect them from different sources, may be thus detailed.

Sir Charles, then Mr Stuart Menteath, finding the property in every respect in a miserable condition, and not worth at that time more than the rent which it yielded, took into his hands 2000 acres as a beginning, which he ploughed, harrowed, &c., by the stipendiary labour provided by those of his tenants who possessed horses and implements; thus giving them the means of paying their rents, and acquiring some money capital, in which they had previously been deficient to a lamentable degree. These 2000 acres were then divided into fields of ten and twenty acres, principally by stone walls five feet in height, gradually diminishing in breadth from 32 inches at bottom to 15 inches at top, or, as it is provincially termed, from double to single dyke, at an average expense of a shilling per yard. So poor and light was the soil of these fields, that, after paring and burning, it produced little or no ashes, and, even with the addition of lime, was too sterile for a potato crop. It was therefore laid down with grasses for sheep pasture as fast as possible, and top-dressed with lime; Sir Charles Menteath having invariably found this to be the most efficacious mode of applying his calcareous manure on the dry hungry soil of Closeburn, which has a substratum of sand or sandstone. When lime has been incorporated with the earth in the usual manner, by harrowing it down on fallow, it has there signally failed of success, sinking into the porous land, and lying below inert and useless. That section of the estate so reclaimed has subsequently produced, on an average, from twelve to four-

* The above paper, purporting to be a comparison of agricultural management in Scotland and Ireland, is directly communicated to us by the well-known Irish writer who takes the name of Martin Doyle; it has been written in consequence of a recent visit paid by him to Scotland.

† At a dinner given at Branxholm in September last to the Duke of Buccleuch by his grace's tenantry.

Digitized by Google

teen shillings per imperial acre; and some of it on schistose subsoil, though seven hundred feet in elevation, has been rendered worth sixteen shillings per acre. By top-dressing with lime, after paring and burning, the quantity of *upland* grass land now let out every year, besides the more valuable lowland pasture, exceeds three thousand acres, and is worth eight shillings per acre.

Sir Charles retained but six hundred acres of this reclaimed land for the use of the establishment at Closeburn, and of this he frequently lets fields for the year's grazing at L.2. 10s. per acre, his practice being to break up only as much as is absolutely indispensable for the winter keep of about two hundred sheep—the produce of the Cheviot ewe and Leicester tup, and sold off without any further crossing. His turnip husbandry for this stock is limited to fifteen acres. Lime being abundant at Closeburn, the facility of reclaiming the contiguous farms is considerable, and this advantage is unquestionably the principal auxiliary in all undertakings of the kind.

But a much more difficult task than that of improving a hilly soil was commenced contemporaneously with the planting and enclosing; a swamp of red moss, thirty feet deep, consisting of sixty-five acres, and adjacent to the "hall," was dug, levelled, and covered with earth, at the cost of L.40 per acre, on the rough and uneven parts where deep holes were to be filled; and yet the outlay on this part in labour, lime, and farm-yard manure, has been highly remunerative. The profitable results have been durable, and the prospective return must be continually productive, through the means of irrigation, which, both in the bed and catch-water modes, has been effected at the average expense of L.4 an acre. By the overflowings of a rivulet conducted to this plain from the hills above, a perpetual supply of excellent meadow has been obtained. But irrigation has not been confined to this tract alone—one hundred and forty acres more are rendered perpetually productive by the same means.

The lime-kilns at Closeburn, and the mode of raising the limestone by deep and very lengthened excavations under the sandstone which rests upon the bed of limestone, and the ingenious contrivances for bringing up the quarried blocks by a railway on waggons moved by a water-wheel, are so well known in Scotland as to render superfluous any minute description of them here. I shall only observe, that the Closeburn kilns are thirty-three feet deep, varying in diameter from five feet at top and bottom to eight feet in the centre. They appear nearly perpendicular, and the draught of air within is so considerable, that two-thirds of the contents are daily burnt when required. This remarkable power of combustion is principally occasioned by the high and narrow form of the kiln, but increased by the admission of air beneath the "eye," through iron bars, and a peculiar construction of grating below, made to separate the ashes from the lime. These ashes supply about one thousand loads annually, and constitute no trifling proportion of the top-dressing used on the farm.

The planting of larch in belts, which commenced at the same time with the other operations, soon afforded shelter, and being conducted on a great scale, has produced vast profit, while it has rendered Closeburn a scene of great sylvan beauty. The timber on eight hundred acres, used for the purposes of the farms, or actually sold, has been estimated at L.35,000; and it is worth recording, that the sale of Scotch firs, fifty years old, on one lot of one hundred acres on a moor of poor sandstone—a suitable soil for this tree—produced L.8000; but it must be added, that the erection of saw-mills has aided the profits considerably, by the accommodation afforded to the farmers who take lime from the kilns, and can obtain the exact scantling of timber which they need. It may be added, that forty years' experience has proved to Sir Charles Menteath, that Scotch fir may be rendered durable by the easy and simple process of soaking the sawn wood in lime water for ten days or a fortnight; this has rendered all the roofing of his cottages, and other buildings, for the period stated, proof against the destructive ravages of the worm which, otherwise, would have entered into the white wood, and rendered it worthless.

This property being divided into farms for the tenantry, with suitable houses and cottages (which they are bound to keep in repair), at an expense of L.25,000, is now (with the exception of the six hundred acres in the proprietor's demesne, and three thousand acres of grazing land, otherwise farmed) in the occupation of tenants holding from forty to one thousand acres. The larger houses are what would be considered of a very expensive description in Ireland; but they are on a scale proportioned, as is usual in Scotland, to the rental, and may be said to have cost three times the amount of one year's rent.

On many estates the cottager's comforts are the least momentous in the landlord's consideration; not so at Closeburn: one hundred cottages, many of them with two family rooms, both warmed by a peculiar kind of grate in a central chimney, have been from time to time erected, at an average expense of L.50, though the rent charged for them, and a small kail garden, is in no instance higher than 30s., and generally less. The occupiers are all under the control of the landlord, and are numerous beyond the ordinary proportion of labourers on the same extent of farm, in consequence of the work at the kilns and quarries. These cottages are covered with sandstone flags, hung by the corners in the lozenge form. This slating is a fifth heavier than the ordinary kind; but as the supporting timber is cut to a corresponding scantling, and grown on the land, the roofing is strong enough and cheap. There is, however, an objection to this covering of sandstone flag; it is so porous as to admit moisture, and only rendered water-proof by a washing of coal tar, which for some time cost Sir Charles Menteath L.50 a-year. The expense of this flagging may be estimated, carriage and labour included, at 1s. 1d. per square yard. These cottages, like all those in the south of Scotland, have box-bedsteads, which, with a passage and door between them, form one side of the kitchen or family room, and being opposite the fireplace, are dry and warm. These recesses, with a surmounting border of coloured paper or calico, from the top to the ceiling, and their sliding doors, have much the appearance of berths in a ship, but are much more commodious. Altogether, they present a very pleasing appearance, and are a very considerable improvement upon the old cottage arrangement.

In my next paper I shall enter into some particulars of the *ordinary* practice of landlords in Ireland as regards the condition and management of their estates and tenantry.

HUMOROUS TRAITS OF AN OLD HIGHLAND GENTLEMAN.

FEW private persons have occasioned more amusement in their day and generation than Francis Macnab of Macnab, a gentleman of Perthshire, who died at an advanced age about twenty-four years ago. We propose giving a short account of this eccentric personage, in the hope of communicating to a wide circle some taste of those singular personal traits and humours which caused the living man to be never alluded to in his own immediate neighbourhood without a smile.

Francis Macnab, as far as his worldly status was concerned, would have appeared to English eyes simply as the proprietor of a small and much encumbered estate in Perthshire. In Scotland, however, he had the additional and much higher honour of being the chief man of an ancient family, forming one of the Highland clans, though not one of the most numerous. He was Macnab of that Ilk, or Macnab of Macnab, or, by a more modern and less elegant style of designation, the Laird of Macnab—the personal centre of a little district peopled chiefly by men of his own name, and all of whom, from the gentleman to the cottager, looked up to him with a kind of filial veneration. His estate was situated at the head of Loch Tay, in the neighbourhood of the beautifully placed village of Killin; but it was latterly a mere shadow of what it had been a few hundred years ago, having been, in particular, much reduced in consequence of the loyalty of the Macnab of the time of Charles I., who was a zealous ally of Montrose, and fell at the battle of Worcester. The family is believed to have drawn its descent from a member of the Macgregor family, who was Abbot of Dunkeld about the year 1130, Macnab being expressive of the words *Son of the Abbot*. The subject of this notice was for nothing more remarkable than a proud sense of his dignity as the chief of the Macnabs. His neighbours, the Campbells and Grahams, though infinitely exceeding the Macnabs in wealth and influence, he regarded as comparatively mere mushrooms; nor was he willing to own that even his sovereign was in any respect his superior.

He was a man of gigantic stature and proportions, and vast strength, and, whether seen in the Highland garb amongst his native hills, or in the habiliments of a British gentleman of the eighteenth century upon the streets of Perth or Edinburgh, he never failed to be beheld with some degree of wonder. His mental faculties were also vigorous; but a defective education, the prejudices incidental to his position in society, and perhaps some constitutional peculiarities, had given him a strong cast of eccentricity, insomuch that almost every thing he said or did was peculiar. Though possessing little book lore, he was extensively informed, and, though a humorist, he displayed on most occasions no small degree of tact and shrewdness. He had all the warmth of heart, and at the same time all the irritability and wrathfulness, of the Scottish mountaineer. It was the custom of his age to indulge much in drinking, and Macnab was eminent even in that day for his great powers as a bacchanalian. Individuals enjoying what now appears the unenviable notoriety of being able to drink three bottles, fell from the table, while Macnab appeared as fresh as if he had not tasted a glass. It was indeed wonderful how much liquor he was enabled by his great strength and generally healthy mode of life to consume. In this, and other habits, Macnab was much affected, no doubt, by the circumstance of his remaining to the end of his days unmarried. Take him for all in all, he was such a man as can scarcely ever be seen again, for he united peculiarities which are now for the most part obsolete—the flaming pride of the old Highland gentleman, the loose and rough habits of the bon-vivant of sixty years ago, and a homely mode of expression now never heard in his grade of society; all these being in addition to many whimsicalities and humours quite his own.

First, with regard to the pride of Macnab. It will doubtless surprise an English reader to be informed that any untitled man in these islands should object to having the word *Mister* prefixed to his name. Yet such is the case with the Highland chiefs, and such was particularly the case with Macnab. A Highland chief is styled by the name of his family alone: thus, the chief of the Macintoshes is MACINTOSH, the chief of the Macnabs is MACNAB, and so on. So far did our friend the laird carry this point, that, hearing a stranger ask for him one day at his door as *Mr* Macnab, he ordered him not to be admitted, but next day, when the gentleman, having in the meantime been tutored, inquired for MACNAB, he was not only shown in, but met with a most cordial reception. He would remark, "There are mony *Maister* Macnabs; but may the auld black laad hae me if there's ony but ae MACNAB." On this subject, a clever reporter of some of the laird's humours[1] has given us some curious illustrations. "It was quite enough," we are informed, "to put him in a frenzy, to dignify with the title of chieftain any one, however high in title or fortune, who he thought had no claim to that super-imperial rank. It is not to be supposed that this was ever done for the pleasure of beholding the laird in one of those passions which resembled one of his mountain storms. No; he was by no means the man to hazard such a joke upon; and could he have suspected for a moment (a supposition, indeed, almost impossible) that any person whatever attempted to play upon him, miserable would have been the fate of the unhappy wight who made the experiment. The narrator of this anecdote had a narrow escape from the overwhelming indignation of this genuine Gaelic worthy. It occurred after dinner, the good laird being a little mellow—for as to being drunk, oceans of liquor would have failed to produce that effect, at least to the length of prostration. The party on whose account the chief's bile was so powerfully excited was indeed blessed with an infinitely more lofty and sonorous cognomen than himself. If it did not indisputably stamp the owner as an ancient feudal baron, an ignorant Lowlander might well be excused for thinking so. We shall suppose it to be Macloran of Dronascandlich—a name trying enough, certes, for the utterance of any common pair of jaws. Thus commenced the unlucky querist:—'Macnab, are you acquainted with Macloran, who has lately purchased so many thousand acres in ——shire?' This was more than sufficient to set the laird off in furious tilt on his genealogical steed. 'Ken wha?—the paddock-stool of a creature they ca' Dronascandlich, wha no far bygane dawred to offer siller, sir, for an auld ancient estate, sir; an estate as auld as the flude, sir—a deal aulder, sir—siller, sir, scrapit thegither by the meeserable deevil in India, sir; not in an offisher or gentleman-like way, sir—but making cart-wheels and trams, sir, and barrows, and the like o' that wretched handywark. Ken him, sir? I ken the creature weel, and wha he comes frae, sir; and so I ken that dumb tyke, sir—a better brute by half than a score o' him! And wha was his grandfather, sir, but a puir wabster in Glasgow? That was the origin o' Dronascandlich, sir, and a bonny origin for a Highland chief—ugh!'"

Pride being a leading element in his character, it affected all his ideas. He not only was proud of his own lineage and name, but of whatever he was connected with, from his clan or his county neighbours up to his countrymen at large. When the local militia was raised in 1808, he held rank in one of the corps raised in his county, and, soon after, being in Edinburgh, he thought proper to apply to the storekeeper in the Castle for the supply of arms required by the men. Overlooking the formally correct name, which was the Fourth Perthshire Local Militia, he asked for arms for the Breadalbane Corps, to which the storekeeper answered that he did not know of such a corps. Hereupon Macnab, in high contempt, but with more coolness than might have been expected, replied, "My fine little storekeeper, that may be; but you may be assured we do not think a bit the less o' oursells for *your* not knowing us." In proportion as he thought much of his own countrymen, he thought less of some other nations; and it appears that he had in particular contracted a great contempt for the Russians. A gentleman having on one occasion spoken approvingly of Russian heroism, the laird burst forth into a frenzy. 'Haud you there, sir—haud you there, sir; ye have said a great deal mair than ye can mak amends for, were ye to live as lang as auld Methuselah. It's doonright blasphemy! What, sir, wad ye ever, in ae breath o' your unhallowed jaws, even[2] oor glorious lads o' the hill and the heather, whilk are a marvel to the haill warld, to the oily bastes o' Russians? A wheen cannibals, meeserable wretches, wha, till they cam west, had naething to cram their craving gude-for-naething kytes wi' but stinking, stranded whales, or an orra sealgh, whilk was a perfect godsend to them. Bonny *vivres*, ugh! I mind weel the time, about twenty year bygane, a cheeld ca'd Admiral Siniavin, or some other sic name, cam into the Firth wi' a squadron o' these monsters amang men. Dootless it was a vesitation for oor sins. Whatever they laid hand on, was momently turned into ulye.[3] I was ae day taking a dander alang Leith shore, when I saw ane of the loathsome brutes gang into a kanler's shop, and buy a bawbee *bap*,[4] and spying a barrel o' ulye, in he dreeps the bap, and sookit it as ye wad do a jergonel peer. Sune after, a' the lamps in Leith Walk and ither places gade out, withoot ony veesible

reason. A' the folk were bumbazed[1] about it, and auld wives thocht that Sathan was playing cantrips wi' the lichts. Some were knockit doon, and ithers got off wi' their pockets turned inside oot. And what was the cause o' a' this hobbleshow, think ye? What! but the oily bastes o' Russians. They were catched speeling[2] up the lamp-posts and taking oot the cruizes and drinking the ulye, wick and a'. What think ye noo o' your Russians, sir?—are they o' ony use on God's earth, think ye, but to burn like tar barrels in a general illumination?'"

Reared in a little district where his word was law, and where habits of violence and private warfare were scarcely yet extinct, Macnab was not disposed to be very scrupulous in the use of his powers, whether personal or otherwise. The knowledge of his immense strength, and his recklessness in using it, in general kept him free of provocation; but on one occasion a thoughtless person, who was but slightly acquainted with him, had the misfortune to incur his wrath in a dismal manner. The laird had appeared one year at Leith races on a small horse, which, oppressed by his great weight, fell down under him, and died on the spot, its back being literally broken. Observing him next year mounted on an animal not much bigger, this individual went up to him, and said, in a sarcastic manner, "Macnab, is that the same horse you rode last year?" "No, billy," replied the laird; "but it's the same *wisp*," and with that instrument felled the interrogator to the earth.

Macnab had an intense antipathy to excisemen, whom he looked on as a race of intruders, commissioned to suck the blood of his country: he never gave them any better name than *vermin*. One day, early in the last war, he was marching to Stirling at the head of a corps of fencibles, of which he was commander. To continue in the words of the writer already quoted—"The pencil might, but the pen never can, adequately portray the grand, picturesque, and magnifique appearance of the glorious Celtic chief. Goliah of Gath, Alexander, Cæsar, all heroes, ancient and modern, nay, what must be an august spectacle, the grand mogul enthroned on the back of his elephant—all dwindle into insignificance before the great Macnab. He bestrode a mighty steed of raven blackness, whose flowing mane, and long and bushy tail, had never suffered under the dilapidating operation of the ruthless shears. His ample jacket was composed of tartan, adorned with massy silver buttons. Adown his breast depended gracefully the belted plaid. On his head was the Highland bonnet, surmounted by waving lofty plumes, which added fearfully to his gigantic height. His puissant limbs were encased in no constraining habiliment: no, gentle reader, the ancient philabeg formed his sole nether covering. His warlike hand sustained an enormous claymore, flashing lightning to the sun's rays, and clearly indicating its owner's ardour for immediate conflict.

About seven miles from Stirling, a numerous band of excisemen assailed the rear of the regiment, declaring to the adjutant they had positive information that in the baggage-carts was concealed a large quantity of smuggled whisky. The adjutant, knowing it would be of little use to argue the matter with them, rode hastily up to the front, and told the commandant the scrape they were in. Without saying a word, away to the rear furiously gallops the laird, brandishing his Andrea Ferrara in a most terrific style, his visage inflamed with wrath and indignation. When he came up to the aqua vitæ, 'Hounds!' he roars out in a voice of thunder, 'what the foul fiend want ye here, ye abortions of the human *specie*, ye unwordy, pitiful vermin o' abomination! Wad ye daur to stop his majesty's offishers and men on their way to fight for their king and country, and, what's mair, e'en for the like o' sic wretches as you, ye unchristened whelps o' Belzebub.' The laird was enough to fright Belzebub himself, and no wonder he horrified such personages almost into convulsions. After a long pause, during which he regarded them with a truly diabolical aspect, one of the boldest mustered courage enough to display his badge of office, intimating, in a trembling voice, that what they did was in the line of their duty. 'Line o' your duty!' vociferated the chief. 'By a' that's gude, if I thocht ye worth my while, I ken as line wad fit ye a deal better!' Then turning to the rear-rank, he cries, 'My lads, this is like to be a critic business—*load wi' ball!*' The effect of this appalling order was electrical: the discomfited gaugers fled in all directions, leaving the victorious chief in undisturbed possession of the much coveted mountain-dew.

Like many other proprietors of large but unproductive estates, the Laird of Macnab was often under the necessity of compromising his dignity by granting bills for his various purchases. These bills for many years were always discounted at the Perth bank, and when due, he no more dreamt of putting himself in the slightest degree out of the way by honouring his scraps of paper, conformably to the established rules of trade, than of paying the national debt. In fact, it would have been a dangerous experiment to have hinted to him the propriety of what he considered a most degrading and unchieftain-like practice. The directors of the bank, knowing their money to be sure, humoured him, as being a character of no ordinary description. His acceptances were therefore never (strange to say) noted or protested; indeed, such an impertinent procedure on their part might have brought down like a torrent the furious chief and a score or two of his gillies, to sack great Perth.

Unluckily for him, one of 'thae *bits o' paper*' found its way to the Stirling bank, an establishment with which the laird had no connection. Agreably to his *auld use and wont*, he gave himself no trouble about the matter. It was in due course noted and protested, of which due intimation was sent to him. The laird treated these various notices with the most sovereign contempt. He was, however, effectually roused, by the alarming information that a writ of *horning and caption* had been taken out against him, and that, in consequence, a clerk belonging to the bank, accompanied by two messengers, would proceed on the following Friday to Achlyne House, for the special purpose of taking him into custody. Even this dire communication the laird received with unruffled composure.

On that 'portentous morn' which threatened him with 'durance vile,' he took aside an old woman who had been long attached to the family, and who was highly regarded by her master for her shrewdness as well as fidelity. 'Shanet,' said he, 'there are three land-loupers, a clerk, and two limbs o' Satan in the shape o' messengers, coming ower the hills the day frae Stirling, to tak me awa bodily, and to clap me within the compass o' four stane wa's; and for what, think ye?—a peetiful scart o' a guse's feather—deil cripple their soople shanks! It would ill become me to hae ony hobbleshow wi' siclike vermin; so I'll awa up to ma lord's* at Taymouth, and leave you, my bonny woman, to gie them *their kail through the reek*.' Having thus primed the old lady, he departed.

The transaction now recorded having occurred upwards of half a century ago, it is proper to mention, that the line of travelling between Stirling and Achlyne was of a most rugged and toilsome description, and only passable by pedestrians. The clerk and his legal myrmidons, therefore, did not reach the place where they expected their prey till it was nearly dusk. The ancient carline had been long on the outlook, and going to meet them, she invited them into the house in the most *couthy* and kindly manner. 'O, sirs,' quoth she, 'ye maun be sair forfoughen wi' your langsome travel. Our Hieland hills are no for them that hae breeks on, I reckon. Sit doon, sit doon, and pit some meat in your wames, for atweel they maun be girnin' and wamling like knots o' edders. The laird's awa to see a freend, and will be back momently. What gars ye glower at that daftlike gate, sirs? There is what ye're wantin' in that muckle kist, in bonnie yellow goud, fairly counted by his honour this blessed mornin'. Wha wad hae thocht ye wad hae been sae langsome in coming up here; chields like you, that are weel kent to be greedy gleds after the siller. But bide ye till the laird comes in, and ye will get what ye want.' So saying, she spread before them a plentiful store of mountain delicacies, not forgetting a plentiful supply of glenlivet; and, in short, she put them beyond the power of proceeding further in their business that night, and they were fain to stay in Janet's cottage till the morning. The clerk, in respect of his gentility, was bestowed in an apartment by himself; the messengers were put in another, containing a single bed for their accommodation. One of the latter worthies, feeling, towards the morning, his entrails scorched with that intolerable heat consequent on mighty over-night potations, got up in quest of some friendly liquid. To aid him in his search, he opened the window-shutter—when the first object which saluted his astonished organs of vision almost petrified him into stone. The sight indeed was rather alarming—a human figure dangling in the winds of heaven from a branch of an ancient oak in the front of the house.

As soon as the wretched minister of the law had recovered what small sense he possessed, he made a shift to stagger to the bedside, and roused his brother in tribulation, who, when he beheld the horrid spectacle, was assailed with the most dreadful agonies of terror and consternation. To add to their miseries, the door was locked. Bells there were none in the Highlands in those days, but they stamped and kicked on the floor with dreadful energy and clamour. After keeping the poor wretches in a state of unspeakable terror for a space of time which appeared to them an eternity, the old woman unlocked the door, and presented a visage in which were expressed all the united horrors of countenance attributed to the infernal furies. 'What the foul fiend gars ye mak sic a din for?' shouted the fearful beldam. Quaking in every limb, the only words their lips could give utterance to were, 'What's—what's that on the tree?' 'What's that on the tree?' cried the carline, in a dismally hollow and elritch tone of voice; 'it's the bit clerk body frae the bank o' Stirling, that cam here last night to deave the laird for siller—we've taen and hangit him, *puir elf*.' The effect of this appalling disclosure was electrifying. Fear added wings to their speed, and the terrified brace of messengers never looked behind them for the first ten miles on their road to Stirling.

Now, what almost frightened into convulsions two such exquisitely sensitive personages as messengers are in general, was a bundle of straw, artificially stuffed by Janet into some ancient garments of the laird's, which she had suspended from the tree in the manner described. The innocent clerk, during all this stramash, was quietly reposing in his bed; and if he dreamed at all of suspensions, it was that of the writ of *horning and caption*. When he got up, he was surprised at the non-appearance of his companions, nor could he extract the smallest information on the subject from trusty Janet. Being therefore deprived of his legal tools, no other resource was left for him but to 'plod homewards back his weary way.'

To conclude: so tremendous an account did the messengers give of their expedition, that no temptation could have induced twenty of them to venture on a similar errand, unless backed by a regiment of a thousand strong."

Many anecdotes could be added to these, to illustrate the character of this extraordinary man; but our limits forbid. The laird of Macnab, with all his oddities, ceased to exist on the 25th of May 1816, when he had reached the age of eighty-two.

[1] Astonished. [2] Climbing.

*The Earl of Breadalbane.

THE PRINTING-OFFICE—A VISIT TO CLOWES'S ESTABLISHMENT.

THE profession of the printer has within these few years undergone a most extraordinary revolution. From being limited in importance by the feeble efforts of the hand-press, it has, under the magical influence of steam and machinery, expanded into gigantic proportions, and promises soon to become, by the increasing appetite for its products, one of the largest branches of manufacturing industry. At no distant date, printing was on a most antediluvian scale. A dingy "office," consisting of two or three apartments on the first or second floor of some faded genteel tenement in a faded part of the town—half-a-dozen lads, and a few old men with Dutch spectacles on nose, planted at so many composing frames, and laboriously setting dark well-worn types—adjoining, a couple of wooden or partially improved iron presses, wrought with a world of toil, and wheezing and groaning as if in the pangs of dissolution as every impression was pulled. Such was the printing-office of the early ages of mankind—that is to say, about thirty or forty years ago; for since these primitive times the printer's profession has advanced in the ratio of a hundred to one as compared with most other handicrafts; and we now look back to the eighteen hundred and ones and twos, as we should do to the era of Tubal Cain, the flood of Noah, or thereabouts.

It may be a question with some, whether a taste for reading has improved printing, or improved printing has created a taste for reading. Truth is partly on both sides; but it is beyond dispute that the great movement towards a revolution in the craft was effected by the steam-press, without which any increased taste for reading could not possibly have been satisfied. We therefore rank the steam-press as by far the most wonderful engine of modern invention. England has produced nothing more splendid, as respects its moral results, in any period of its annals. Yet, not to England belongs the entire honour of the discovery. Inasmuch as we owe the art of printing to the illustrious Guttenberg, a German of the Upper Rhine, so do we ascribe the final perfection of the craft to König, also a German, who, arriving in London about 1804, laboured ten years in the endeavour to produce printing by inanimate machinery, and at length triumphed in 1814, by constructing a steam-press for working off the Times newspaper. Cowper and Applegath subsequently modified and adapted machinery for book-printing, and it is machines on their model, working by cylinders, of which we have now principally to speak.

Printing has made its greatest strides during the last ten years, in which period cylindrical steam-presses have been spread all over the country. Hardly a newspaper is now any where printed with a hand-press, and few or no periodical publications. The making of printing-machines has in itself become a great business. One maker in London lately mentioned to us that he produced a machine regularly every three weeks upon an average all the year round, each at a price of about L.400. Other manufacturers are similarly engaged; the machines being sent not only to all parts of Europe, but to America, Australia, and India. In a few years there will not be a civilised country of any consequence on the globe which does not possess these powerful distributors of human knowledge.

It is a received doctrine among the typographical gentlemen of the metropolis, "that a printing-machine always creates work for itself." You never by any chance see a machine standing idle. Its huge cylinders are either revolving and sending forth sheet after sheet to the outstretched paws of the Flibbertigibbet who sits in attendance on its operations, or it is just going to begin, or it has only the last moment finished, and something else is preparing. These we take to be pleasing traits in its character. The creature absolutely seems to relish and grow merry under its awfully Herculean labours. Though turning out every instant the work of ten or twelve men, it never expostulates or grumbles with its employers. An affair of fifty thousand copies is a mere trifle in its estimation. What next—what next—what is to be done next! is its ever ready and cheery demand. There would really be something frightful in this insatiable craving for work, if it were not for the blessed circumstance, as the London printers say, that work somehow always casts up for it, and so keeps the wheels moving without intermission. Need we tell our uninitiated friends, that the planting of such a working monster in a

Digitized by Google

printing-office knocks to pieces all the old-fashioned organisation of the establishment! The "office" is no longer an office on a second floor; it is a whole house—compositors are sextupled in number—the wooden presses disappear, being thrust as lumber into some out-of-the-way den, where they are released from all their mortal toils—boys are seen stuck about at various odds and ends of employment—there is a loud rumbling noise of machinery in the lower regions, and the whole concern wears a bustling joyous aspect, quite a different thing from what used to prevail in the dull Dutch-spectacle-on-nose days of the eighteen hundred and ones.

A visit to a modern printing establishment, as may be imagined from these few observations, opens up a new scene for thought. You have for some time been perfectly aware of the fact, that there was an immense deal of printing executed—that the world was becoming a kind of great book-shop, and all the men and women merely readers—but you never exactly formed an idea how this prodigious supply of literature was effected. Here, then, the miracle is at once explained. Printing is now a manufacture. The printing-office is a Factory. And the interior of one of these concerns usually presents a remarkable spectacle of industry, animate and inanimate, which to a stranger leaves a lasting impression on the memory. We have a distinct recollection of our feelings of wonder on seeing for the first time printing machinery in full operation; and though now accustomed to the sight, we always pause a few moments in respectful admiration of the process, and the intellect which brought it into use. To see printing on a grand scale, however, it would be necessary to visit the establishment of Messrs Clowes in London, which is much the largest in Britain, and, consequently, in the world.

A writer in a late number of the Quarterly Review records his astonishment and delight on visiting this very large concern, of which he has noted a few particulars which are worthy of the reader's notice, as giving a graphic picture of a modern printing-house.

"The printing establishment of Messrs Clowes, on the Surrey side of the Thames (for they have a branch office at Charing Cross), is situated between Blackfriars and Waterloo Bridges. Their buildings extend in length from Prince's Street to Duke Street, and in breadth about half the distance. The entrance is by rather a steep declivity into a little low court, on arriving at which, the small counting-house is close on the left; the great steam-presses, type and stereotype foundry, and paper-warehouse, on the right; and the apartments for compositors, *readers*, &c., in front. In the last-mentioned building there are five compositors' halls, the largest of which (on two levels, the upper being termed by the workmen 'the quarter-deck') is two hundred feet in length. The door is nearly in the centre, and, on entering this apartment at daybreak, the stranger sees at once before him, on his right and left, sixty compositors' frames, which, though much larger, are about the height of the music stands in an orchestra. At this early hour they are all deserted, their daily tenants not having arrived. Not a sound is to be heard save the slow ticking of a gaudy-faced wooden clock, the property of the workmen, which faithfully tells when they are entitled to refreshment, and which finally announces to them the joyful intelligence that the hour of their emancipation has arrived.

By eight o'clock the whole body have arrived. Many in their costume resemble common labourers; others are better clad; several are very well dressed; but all bear in their countenances the appearance of men of considerable intelligence and education. They have scarcely assumed their respective stations, when blue mugs, containing each a pint or half a pint of tea or coffee, and attended either by a smoking hot roll stuffed with yellow butter, or by a couple of slices of bread and butter, enter the hall. The little girls, who with well-combed hair and clean shining faces bring these refreshments, carry them to those who have not breakfasted at home. Before the empty mugs have vanished, a boy enters the hall at a fast walk with a large bundle under his arm—*of* morning newspapers: this intellectual luxury the compositors, by a friendly subscription, allow themselves to enjoy. From their connection with the different presses, they manage to obtain the very earliest copies, and thus the news of the day is known to them—the leading articles of the different papers are criticised, applauded, or condemned—an hour or two before the great statesmen of the country have received the observations, the castigation, or the intelligence they contain.

It is impossible to contemplate a team of sixty literary labourers steadily working together in one room, without immediately acknowledging the important service they are rendering to the civilised world, and the respect which, therefore, is due to them from society. The minutiæ of their art it might be deemed tedious to detail; yet with so many operators in view, it is not difficult, even for an inexperienced visitor, to distinguish the different degrees of perfection at which they have individually arrived."

Passing over the account of the process of composing, and also of correcting the proof sheets, as containing nothing new, we accompany the visitor to the ground floor, whence, on approaching the northern wing of the establishment, "he hears a deep rumbling sound, the meaning of which he is at a loss to understand, until the doors before him being opened, he is suddenly introduced to nineteen enormous steam-presses, which, in three compartments, are all working at the same time. The simultaneous revolution of so much complicated machinery, crowded together in comparatively a very small compass, coupled with a moment's reflection upon the important purpose for which it is in motion, is astounding to the mind; and as broad leather straps are rapidly revolving in all directions, the stranger pauses for a moment to consider whether or not he may not get entangled in the process, and against his inclination, as authors generally say in their prefaces, go 'to press.'

We will not weary *our* reader by attempting a minute delineation of the wonderful picture before him, or even introduce to his notice the intelligent engineer, who, in a building apart from the machinery, is in solitude regulating the clean, well-kept, noiseless steam-engine which gives it motion; we will merely describe the literary process. The lower part of each of the nineteen steam-presses we have mentioned, consists of a bed or table, near the two ends of which lie prostrate the two sets of 'forms,' containing the types we have just seen adjusted, and from which impressions are to be taken.

By the power of machinery, these types, at every throb of the engine, are made horizontally to advance and retire. At every such movement they are met half way by seven advancing black rollers, which diagonally pass over them, and thus, by a most beautiful process, impart to them ink sufficient only for a single impression. Above the table, the forms, and the rollers we have described, are, besides other wheels, two very large revolving cylinders, covered with flannel; the whole apparatus being surmounted by a boy, who has on a lofty table by his side a pile of quires of white paper. Every time the lower bed has moved, this boy places on the upper cylinder a sheet of paper, which is ingeniously confined to its station by being slipped under two strings of tape. It is, however, no sooner affixed there, than by a turn of the engine, revolving with the cylinder, it is flatly deposited on the first of the 'forms,' which, by the process we have described, has been ready inked to receive it: it is there instantaneously pressed, is then caught up by the other cylinder, and, after rapidly revolving with it, it is again left with its white side imposed upon the second 'form,' where it is again subjected to pressure, from which it is no sooner released, than it is hurried within the grasp of another boy at the bottom part of the machinery, who, illumined by a gas light, extricates it from the cylinder, and piles it on a heap by his side.

By virtue of this beautiful process, a sheet of paper, by two revolutions of the engine, with the assistance only of two boys, is imprinted on both sides, with not only, say sixteen pages of letter-press, but with the various wood-cuts which they contain. Excepting an hour's intermission, the engines, like the boys, are at regular work from eight A. M. till eight P. M., besides night-work, when it is required. Each steam-press is capable of printing one thousand sheets an hour.*

Notwithstanding the noise and novelty of this scene, it is impossible either to contemplate for a moment the machinery in motion we have described, or to calculate its produce, without being deeply impressed with the inestimable value to the human race of the art of printing—an art which, in spite of the opposition it first met with, in spite of 'the envious clouds which seemed bent to dim its glory and check its bright course,' has triumphantly risen above the miasmatical ignorance and superstition which would willingly have smothered it.

In the fifteenth century (the era of the invention of the art), the brief-men or writers who lived by their manuscripts, seeing that their occupation was about to be superseded, boldly attributed the invention to the devil, and, building on this foundation, men were warned from using diabolical books 'written by victims devoted to hell.' The monks in particular were its inveterate opposers; and the Vicar of Croydon, as if he had foreseen the Reformation which it subsequently effected, truly enough exclaimed, in a sermon preached by him at St Paul's Cross, '*We must root out printing, or printing will root out us!*"

At Messrs Clowes's, the businesses of type-founding and stereotyping are carried on in aid of the general concern, by which means there is an ever-fresh supply of material. "The number of sheets now standing in type in Messrs Clowes's establishment, each weighing on an average about 100 pounds, are above 1600. The weight of type not in forms amounts to about 100 tons!—the weight of the stereotype plates in their possession to about 2000 tons; the cost to the proprietors (without including the original composition of the types from which they were cast) about L.200,000. The number of woodcuts is about 50,000, of which stereotype casts are sent to Germany, France, &c. The stereotype plates (as we have already stated) weigh 2000 tons. They are contained in two strong rooms or cellars, which appear to the stranger to be almost a mass of metal. The smallest of these receptacles is occupied entirely with the Religious Tract Society's plates, many of which are fairly entitled to the rest they are enjoying, having already given hundreds of thousands of impressions to the world. Among the plates in this store there are to be seen reposing those of thirteen varieties of bibles and testaments, of numerous books of hymns and psalms, of fifteen different dictionaries, and of a number of other books of acknowledged sterling value; it is with feelings of pride and satisfaction that the stranger beholds before him, in a single cellar, a capital, principally devoted to religious instruction, amounting to no less than L.200,000."

Ascending to the drying and sorting rooms, where the printed sheets are gathered and packed—"the quantity of paper here amounts to about 3000 reams, each weighing about 25 pounds. The supply of white paper in store, kept in piles about 20 feet high, averages about 7000 reams; the amount of paper printed every week and delivered for publication amounts to about 1500 reams (of 500 sheets), each of which averages in size 389¾ square inches. The supply, therefore, of white paper kept on hand, would, if laid down in a path of 22½ inches broad, extend 1230 miles; the quantity printed on both sides per week would form a path of the same breadth of 263 miles in length. The ink used in the same space of time amounts to about 12,000 lbs. The cost of the paper may be about L.100,000; that of the ink exceeding L.1500."

But it is necessary to draw to a conclusion, and we may do so in the valedictory language of the reviewer:—"It is impossible for the mind to contemplate, for a single moment, the *moral* force of the British press, without reflecting, and without acknowledging, that under Providence it is the only engine that can now save the glorious institutions of the British empire from the impending ruin that awaits them," from the hand of intemperate ignorance and violence.

* [This is a little exaggerated. The steam-press for book-work turns out between 750 and 1000 sheets an hour; and as a common hand-press, wrought by two men, produces only 125 sheets or 250 sides per hour, each machine may be said to do the work of about six presses, or twelve men. Some machines employed in printing newspapers, execute 4000 impressions or sides per hour, and thus individually do the work of thirty-two men. Practically, however, the work is of that description which is altogether beyond the reach of human labour, and if not done by machinery, it could not be done at all.]

CORAL ISLANDS—HOW THEY ARE CLOTHED WITH VEGETATION.

A VALUABLE addition has lately been made to geography and natural history, by the publication of a narrative of the surveying voyages of the "Adventure and Beagle." The southern shores of South America were the parts chiefly explored, but notices are given of other quarters of the globe. Amongst a number of very interesting details in the volume devoted to natural history, the production of Mr Darwin, naturalist to the expedition, not the least so are the descriptions of some of the more recently formed coral islands in the Pacific Ocean. We give the following extract as a specimen of Mr Darwin's talents:—

"The next morning, after anchoring, I went on shore on Direction Island. The strip of dry land is only a few hundred yards wide; on the lagoon side we have a white calcareous beach, the radiation from which in such a climate is very oppressive; and on the outer coast a solid broad flat of coral rock, which serves to break the violence of the open sea. Excepting near the lagoon, where there is some sand, the land is entirely composed of rounded fragments of coral. In such a loose, dry, stony soil, the climate of the intertropical regions alone could produce a vigorous vegetation. On some of the smaller islets, nothing could be more elegant than the manner in which the young and the full-grown cocoa-nut trees, without destroying each other's symmetry, were mingled into one wood. A beach of glittering white sand formed a border to these fairy spots.

I will now give a sketch of the natural history of these islands, which, from its very paucity, possesses a peculiar interest. The cocoa-nut tree, at the first glance, seems to compose the whole wood; there are, however, five or six other kinds. One of these grows to a very large size, but, from the extreme softness of its wood, is useless; another sort affords excellent timber for ship-building. Besides the trees, the number of plants is exceedingly limited, and consists of insignificant weeds. In my collection, which includes, I believe, nearly the perfect flora, there are twenty species, without reckoning a moss, lichen and fungus. To this number two trees must be added, one of which was not in flower, and the other I only heard of. The other is a solitary tree of its kind in the whole group, and grows near the beach, where, without doubt, the *one* seed was thrown up by the waves. I do not include in the above list the sugar-cane, banana, some other vegetables, fruit-trees, and imported grasses. As these islands consist entirely of coral, and at one time probably existed as a mere water-washed reef, all the productions now living here must have been transported by the waves of the sea. In accordance to this, the flora has quite the character of a refuge for the destitute: Professor Henslow informs me, that of the twenty species, nineteen belong to different genera, and these again to no less than sixteen orders!

In Holman's Travels an account is given on the authority of Mr A. S. Keating, who resided twelve months on these islands, of the various seeds and other bodies which have been known to have been washed on shore. 'Seeds and plants from Sumatra and Java have been driven up by the surf on the windward side of the islands. Among them have been found the Kimini, native of Sumatra and the peninsula of Malacca; the cocoa-nut of Balei, known by its shape and size; the dadass, which is planted by the Malays with the pepper-vine, the latter intwining round its trunk, and supporting itself by the paicles on its stem; the soap tree, the castor-oil plant, trunks of the sago palm, and various kinds of seeds unknown to the Malays who settled on the islands. These are all supposed to have been driven on shore by the north-west monsoon to the coast of New Holland, and thence to these islands by the south-east trade-wind. Large masses of Java teak and yellow wood have also been found, besides immense trees of red and white cedar, and the blue gum-wood of New Holland, in a perfectly sound condi-

Digitized by Google

tion. All the hardy seeds, such as creepers, retain their germinating power; but the softer kinds, among which is the mangostin, are destroyed in the passage. Fishing canoes, apparently from Java, have at times been washed on shore. It is interesting thus to discover how numerous the seeds are, which, coming from several countries, are drifted over the wide ocean. Professor Henslow tells me, he believes that nearly all the plants which I brought from this island are common littoral species in the East India Archipelago. From the direction, however, of the winds and currents, it seems scarcely possible that they can have come here in a direct line. If, as suggested with much probability by Mr Keating, they have first been carried towards the coast of New Holland, and thence drifted back again, together with the productions of that country, the seeds, before germinating, must have travelled between 1800 and 2400 miles." The list of land animals is even poorer than that of plants. Some of the islets are inhabited by rats, which owe their origin to a ship here wrecked. There are no true land birds, but plenty of the web-footed species. Of reptiles, only one small lizard was found. A great many kinds of insects were, however, obtained in numbers. Spiders were very abundant, and a small species of ant swarmed under the loose dry coral. Although the productions of the land were thus scanty, the surrounding seas were found crowded with life. Whence, it may be asked, came even these few land animals? There seems to us but one answer to this query—their eggs must have been wafted hither by the winds.

THE DOG OF BRETTEN.

BY AN OFFICER OF THE FRENCH ARMY.

In the year 1811, I quitted the grand army, then in Germany, on a mission to Spain; and on my way stopped at Bretten, a little town of the Grand Duchy of Baden. I proceeded to the Rath-Haus (town hall), to apply for a billet, and there found the burgomaster conversing, or rather disputing, with one of the inhabitants, who did not spare big words, which are still more big in German than in French. The burgomaster appeared delighted at the arrival of a stranger, as it delivered him from his disagreeable tête-à-tête. He sent off his man in a very bad humour, who presently returned and said, "I have served you faithfully, and find that the proverb is verified. I am treated in the same way as the dog of Bretten. They have put his picture into the town arms, and in order that it may be complete, you should write my name under it." This language was, of course, unintelligible to me; but looking towards the wall, I saw the arms of Bretten surmounted by a dog without a tail. My brave Medor, who had made with me all the campaigns of Napoleon, was by my side; he was a good creature, but by no means handsome; his tail had been cut short off, which did not improve his appearance. "Sir," said the burgomaster to me, "your dog is exactly like that of our town arms. I hope, however, that he will not meet with the same mishap, or rather with something equivalent, for his tail has been cropped short already." "This is the second time," said I, "that I have heard the dog of the town arms mentioned. Pray tell me its history." "Willingly," replied the burgomaster; "but you are fatigued, and are in more need of a dinner than a history. Your billet is to my house, and if you will go there with this lad, who will show you the way, I will soon follow you. I have a few orders to give, and in the meantime, whilst the dinner is preparing, my wife will do her best to amuse you." Having accepted the kind offer of the burgomaster, I set off with my guide, who, as soon as we were in the street, said, "Looking at your dog, sir, one would say that you had stolen him out of the town arms." As we went along, men, women, and children, cried out, "Look! look! there's the dog of Bretten! the town dog come to life!" When we had arrived at the house of the burgomaster, I was very well received by his wife, but she cried out, "*Der Bretten's hund!*" as soon as she saw my dog; and then added, "I hope, sir, he will not be served like the dog of Bretten. But that is impossible; for his tail is cut off as short as it well could be." "Madam," said I, "I have not been in your town more than half an hour, and I have heard of nothing but the dog of Bretten. The worthy burgomaster has promised to tell me its history; but as I am curious to know it at once, perhaps you will have the goodness to relate it." The lady replied that she would not deprive her husband of that pleasure; but as to the history, it was well known to every urchin in the town. The burgomaster soon arrived; and when he had feasted me with true German hospitality, I reminded him of his promise. "It is a very old story," said he, "for the proverb which you have already heard is to be found in the oldest books. It is mentioned by Fischart, who wrote in the middle of the sixteenth century. In our country, when a man has not been rewarded for his services, we say, 'He is treated in the same way as the dog of Bretten.' There was formerly in Bretten a sportsman whose dog, which was full of sagacity, had been admirably trained. He wanted nothing but speech, and the want of this he sometimes seemed to supply by the peculiar wagging of his tail. He was alike valuable in the field and in the town. He executed all the commissions of his master, who had nothing to do but to put a basket in his mouth, with a note to the butcher, or the baker, or the grocer, in which was enclosed the money for what he wanted, and to mention the word butcher, baker, or grocer, when off trotted the dog to fetch the provisions, which he religiously respected. If his master wished to invite any friend to come and see him, he had but to utter the name, and the dog would run off, and pulling the intended guest by the coat, inform him that he was wanted. Every body was fond of the dog, and every body called it the dog of Bretten. One day the sportsman sent his dog with his basket, and a note to the butcher, who was a zealous Catholic, whereas the sportsman was a Protestant. The animal arrived at the shop, wagged his tail, and presented his note, which was for some sausages. 'Sausages on a Friday!' exclaimed the butcher, colouring with rage. 'Meat on a Friday! Well, if you must have meat,' said the ruffian, taking a hatchet, and cutting off the poor dog's tail close to the rump, and then putting it into the basket, 'there it is.' The poor dog, bleeding and in pain, returned home, laid his basket before his master, stretched himself out, and died. Judge of the fury of his master. He rushed out of his house, armed with a sword, determined to kill the butcher. Fortunately for himself, the wretch got notice of the intended visit, and escaped from the town, for men, women, and children, had sworn to avenge the cruel murder of their favourite. On the following day it was unanimously voted that as the poor dog could not be brought to life, his portrait should be embodied in the town arms."

SCRAPS FROM LORREQUER.

The following anecdote of Curran is too good to be lost, and is not generally known:—

Poor Philpot, when he dined with the guild of merchant tailors, they gave him a gold box with their arms upon it—a goose proper with needles saltier wise, or something of that kind; and they made him free of their "ancient and loyal corporation," and gave him a very grand dinner. Well, Curran was mighty pleasant and agreeable, and kept them laughing all night till the moment he rose to go away, and then he told them that he never spent so happy an evening, and all that. "But, gentlemen," said he, "business has its calls—I must tear myself away; so, wishing you now every happiness and prosperity"—there were just eighteen of them—"permit me to take my leave," and here he stole near the door—"to take my leave, and bid you *both* good night."

A very curious incident in the life of the Rev. Arthur O'Leary is humorously transferred to the Knight of Kerry. When O'Leary was a student in France, he went to see an exhibition of "The Wild Man of the Sea," and found that the show was an Irishman stitched into a bear-skin. Lorrequer has removed the exhibition to London, and substituted the knight for the friar, with what effect the reader may judge for himself.

The knight paid his money, and was admitted. At first the crowd prevented his seeing any thing—for the place was full to suffocation, and the noise awful—for, besides the exclamations and applause of the audience, there were three barrel-organs playing "Home, sweet Home," and "Cherry Ripe," and the wild man himself contributed his share to the uproar. At last the knight obtained, by dint of squeezing, a view of his person, and, to his very great horror, beheld a figure that far eclipsed the portrait without doors.

It was a man nearly naked, covered with long shaggy hair, that grew even over his nose and cheek bones. He sprang about, sometimes on his feet, sometimes all-fours, but always uttering the most fearful yells, and glaring upon the crowd in a manner that was really dangerous. The knight did not feel exactly happy at the whole proceeding, and began heartily to wish himself back in the "house," even upon a committee of privileges, when suddenly the savage gave a more frantic yell than before, and seized upon a morsel of raw beef, which a keeper extended to him upon a long fork like a tandem whip, as he was not safe, it appears, at close quarters. This he tore to pieces eagerly, and devoured in the most voracious manner, amid great clapping of hands and other evidences of satisfaction from the audience. "I'll go now," thought the knight, "for God knows whether in his hungry moods he might not fancy to conclude his dinner by a member of parliament." Just at this instant some sounds struck upon his ear, which surprised him not a little. He listened more attentively; and conceive, if you can, his amazement to find that amid his most fearful cries and wild yells the savage was talking Irish. Laugh if you like, but it's truth I'm telling you; nothing less than Irish. There he was, jumping four feet high in the air, eating his raw meat, pulling out his hair by handfuls, and amid all this, cursing the whole company to his heart's content in as good Irish as ever was heard in Tralee. Now, though the knight had heard of red Jews and white Negroes, he had never happened to hear any account of an African Irishman; so he listened very closely, and by degrees not only the words were known to him, but the very voice was familiar. At length something he heard left no further doubt on his mind, and turning to the savage, he addressed him in Irish, at the same time fixing a look of most scrutinising import upon him.

"Who are you, you scoundrel?" said the knight.

"Billy M'Cabe, your honour."

"And what do you mean by playing off your tricks here, instead of earning your bread like an honest man?"

"Whisht," said Billy, "and keep the secret. I'm earning the rent for your honour. One must do many a queer thing that pays two pound ten an acre for bad land."

This was enough: the knight wished Billy every success, and left him amid the vociferous applause of a well satisfied audience. This adventure, it seems, has made the worthy knight a great friend to the introduction of poor-laws, for, he remarks very truly, "more of Billy's countrymen might take a fancy to a savage life, if the secret was found out."

ANECDOTES OF TURENNE.

Marshal Turenne, an eminent French general, who flourished in the reign of Louis XIV., was one of the most generous and high-minded men of his age. It has been said that his generosity and benevolence had no limits. No one ever begged of him, without receiving something; and if he had nothing in his purse at the moment, he borrowed from any officer near him, desiring the lender to ask it back from his treasurer. That functionary, in reference to this practice, came to the marshal one day, and said that he suspected some persons of coming to ask sums which they had never lent. "Give them, nevertheless, all that they ask," said Turenne; "if they *have* lent money to me, they must in justice be repaid; if they have *not* lent it to me, the poor rogues must be in great distress, else they would never have thought of making such a request; and so we should assist them." He was ingenious in devising means for sparing the feelings of those to whom he gave assistance. A poor gentleman having come to the army ill furnished with necessaries, the marshal feigned an anxiety to have certain horses of his, and gave him an admirable set in exchange for very inferior animals, affecting to be the party favoured and benefited by the bargain. A large sum of money once fell to him as his own property. Pretending to have received it purposely from the court, he assembled all those officers who most required aid, and divided it betwixt them, as the bounty of the sovereign. On another occasion, when an officer *had got* his horses killed in battle, Turenne supplied *their* place at his own cost, at the same time telling the officer not to speak of the donation, as "he had not the means of so acting by every one;" thus, upon a pretext of economy, getting his generosity kept secret. His disinterestedness in money matters cannot be better displayed than by mentioning the single fact, that while all other generals of the day grew rich, he ended his campaigns poorer than when he began. One day, when he was in the enemy's country, the inhabitants of a neighbouring city sent to offer him a hundred thousand crowns if he would take *his* army by a route different from that in which their city lay. "As your city does not lie in the line in which I always intended to take my troops, I cannot accept the money you offer me." Delicacy of conscience was never carried farther. Well might the enemies of France weep, as they are said to have done, for Turenne.

The care which he took of the fortunes of his officers and soldiers, from the greatest to the least, was incessant. He made known their services to the court, and never allowed his veterans to suffer distress in their old age, or merit to go unrewarded. To his domestic servants his liberality was extreme. On one occasion a servant of his went to Colbert, the financial minister, and had the audacity to use his master's name in asking for some small place for himself. Colbert was charmed with the opportunity of serving Turenne, and brought to him in person the commission or document appointing the petitioner to the office. The marshal was surprised, but said nothing, till he called for the domestic by whom the thing had been done. The man, conscious of his fault, fell on his knees, and begged for mercy. Turenne raised him, and put the commission into his hands, saying, "If you had spoken to me, I would have done this for you; I am only sorry that any thing *should* have occurred to take you away from *my service*." The confounded domestic stammered something about his "large family," and the generous hero aided him with money to enter on his new office. Turenne had a degree of self-command and power of restraining his passions, equalled only by what we are told of some great men of antiquity. One day, while passing along the streets of Paris in his coach, the vehicle became entangled with others, on which a young gentleman grew angry with Turenne's coachman, and coming up to him, struck him with a cane. "What!" cried a bystander, "will you dare to beat the servants of Turenne?" The young gentleman believed he had ruined himself, but Turenne merely said, with a smile, "You understand how to chastise my people, sir, most admirably; they need it sometimes; and when occasion again occurs, I shall send for you." Reproof lay under this remark, but of a gentle and generous kind.

His integrity was proverbial. All the nations with whom he came in contact in war, knew this so well, that, in making treaties or entering into engagements of any kind, they always sought the guarantee of his personal word, and, having obtained this, cared for no other security. Even French diplomatists, at distant courts, gained their ends by the mere aid of his name for good faith. The modesty of this great general was an equally conspicuous trait in his character. His dispatches, even when announcing the grandest successes, were brief statements of fact, unvarnished and unexaggerated. His letters show him to have had a profound sense of religion. Many such passages as the following occur:—"We are about to open the campaign. I have prayed earnestly to God that he will enable me to pass through it in his fear, knowing no greater earthly blessing than to have a conscience at ease, as far as our weak nature will permit."

NUMBER 429. SATURDAY, APRIL 18, 1840. PRICE THREE HALFPENCE.

THE MANAGEMENT OF THE POOR.

THAT there always will be poor in all communities, is, we believe, pretty generally acknowledged. It is, however, matter of debate, by what regulations the numbers and sufferings of the poor are most likely to be kept at a low amount. The opinions on this subject are very various and opposite, and the practice is also different in different countries. It is obviously a question for which a settlement is greatly desirable, seeing that the comfort of individuals and of communities in so great a measure depends on it.

It is scarcely necessary to remind our readers that in England, since the end of the sixteenth century, the poor, both those who are so from helplessness, and those who are so from want of employment, have been supported by a tax on the more fortunate part of the community. From a period near the end of the last century, a special regulation existed, by which wages to a certain amount were guaranteed to labouring men; but as this was found to lead to abuses, it was abolished in 1834. In that year, the general arrangements respecting the poor underwent considerable changes; but the principle remains unaltered, that the poor, without the least regard to the circumstances which have brought about their poverty, are entitled to be supported out of the fruits of the industry of the rest; and supported they are accordingly, in mansions reared throughout the country for the purpose. The total sum required for the support of the poor in England and Wales in 1836, was L.6,413,119, being less by two and a third millions than was required in 1833, the last year of the abused system. The expense is calculated to be at the rate of about six shillings per annum for each individual in the whole population. In all the other European states, some provision is made for the poor; but it is only in the northern and some of the German states that there is a legal acknowledgment, as in England, of the *right* of every person to be rescued from destitution by the public; in others, namely, Holland, Belgium, France, Portugal, the Sardinian States, Austria, Greece, and Turkey, the applicant's *legal right* does not seem to be so distinctly acknowledged, though provision is nevertheless largely, and in some cases amply, made from public funds for his relief. In Ireland, till very lately, there was no sort of legal provision for the poor; and in Scotland, though a legal provision has long existed, it is on a scale far beneath that of England.

What has brought the subject at this time under our attention, is the recent publication of a pamphlet, bearing particularly upon the management of the poor in Scotland,* but in reality illustrating the whole question in a manner calculated to arrest general attention. The author is Dr W. P. Alison, professor of medicine in the Edinburgh University, and late President of the Edinburgh College of Physicians—a gentleman whose name has not been heard in connection with the agitation of any of the great questions of the day, but who has at length deemed it proper to step out of comparative privacy in a cause which must interest every philanthropic mind. We readily own that, though we have long suspected great errors on this subject, we were never fully aware of them till we perused this admirable emanation of just reasoning and genuine benevolence.

In Scotland, the whole funds raised as a systematic provision for the poor amount to only about L.140,000 per annum, or about 1s. 4d. for every individual in the country, being in proportion less than a fourth of what is raised in England. A great part of the funds arises from collections at the church-doors; for, though there is an act empowering the raising of a rate, it is acted on only in about half of the number of parishes, and there very hesitatingly and inadequately. Practically, the helpless poor get, in most parishes, some small weekly pittance, generally about a shilling, often as low as ninepence, and even sixpence (the allowance for children being proportionally less); from which they are expected to support themselves in their own homes. In many parishes there is absolutely no relief of any kind, and in none is the claim of persons possessing health and strength admitted, however destitute they may be from circumstances. There are workhouses only at two places, and there the average annual sum expended on the support of paupers is about L.6. The smallness of all these provisions is not to be rashly attributed to want of feeling on the part of the nation. There is in Scotland a strong prejudice against all but self-dependent modes of existence. It is a general opinion that all succour held out to any but the helpless poor, is productive of evil instead of good, even to the poor themselves. This succour is thought to be particularly detrimental, when it is the result of a fixed assessment or rate, for then it is supposed that the poor are led more particularly to depend on the public charity instead of their own exertions. The smallness of the sums given to the helpless can only be attributed to this general prejudice against pauper relief, for it may be presumed, that, if there were another feeling in the case, the ordinary slender funds would be augmented by a sufficient assessment. What proves very strikingly, that opinion, and not want of benevolent feeling, is the main cause of the small provision, is, that the poor have as great a disinclination to ask public charity as the wealthier classes to give it. This is, in the rural parishes particularly, always a last resource, and one which is never resorted to without a pang of the severest kind. A wish to keep up a spirit of independence in the humbler classes, is perhaps one of the main sources of that anxiety which is always manifested by the wealthy to restrict by all possible means the amount of the funds devoted to the relief of the poor.

The object of Dr Alison's pamphlet is to prove that this system of restriction is attended by evils which ought to make it a subject of shame rather than pride to the community. He contends that, in large towns more especially, it is productive of wide scenes of misery, shocking to all benevolent feeling, and positively dangerous in some respects to the rest of the inhabitants. He shows that in Edinburgh, Glasgow, Dublin, and other large cities, where there is no thorough system of relief for the poor, fever has been of late years prevalent to a degree quite unknown in any English town; a fact which must in the main be ascribed to the wretched condition of great hordes of people gathered in the meaner parts of those towns. Will it be believed that, in two late years, one-*sixteenth* of the population of Edinburgh, and one-*sixth* of the population of Glasgow, were affected by dangerous fevers? The average number of cases treated in the hospitals of Glasgow during the last seven years, has been 1842, while in Leeds, where the inhabitants are a little more than a half, the average for the same period has been 274; and in Newcastle and Gateshead, where the inhabitants are about a fourth, only 39; there being in Bath, during the same period, "only a few cases." It is true, that want of cleanliness, bad ventilation, and so forth, are among the causes of fever; but Dr Alison contends, and apparently with success, that destitution is the main and primary cause. He also shows that, as fever is more apt to carry off the adult than the young, it burdens the public with immense numbers of orphans, many of them the children of persons who, if spared, would have kept them above public charity. Thus, so far, the restrictive system seems to spread, instead of limiting, the evil of pauperism. When a fatal epidemic breaks out in one of the towns in question, subscriptions are generally raised by the wealthy classes to succour the suffering poor; and the evil is thereby perhaps alleviated in some, but only in a slight degree. The victims of the pestilence have been prepared for it by years of unrelieved suffering, and that generosity which once might have prevented disease, is now unable to arrest its calamitous progress.

The popular doctrine in Scotland is that advanced by some political economists, that systematic relief for the poor leads to habits of improvidence, and encourages marriages amongst persons unable to support their offspring, thus tending to increase, instead of diminishing, pauperism. Dr Alison, on the contrary, maintains that "poor-laws, such as exist in England, do not interfere with moral restraint, but support and strengthen it; and that moral restraint is nowhere so feeble, and population (in a long-inhabited country) nowhere makes such rapid progress, as where there is no legal provision for the destitute, and where therefore the prospect of destitution is always, clear, obvious, and immediate." He appeals in the first place to experience. "In England a poor-rate has been generally enforced for 250 years, and in some respects been carried to an injudicious height during at least fifty years. We know that the population of a country may be doubled in twenty years. There has therefore been abundance of time for the English poor-laws, if they really afford the 'direct, constant, and systematic encouragement to marriage' which has been supposed, to cause such an increase of the population there, and such an amount *not only of pauperism, but of misery*, consequent on redundant population, as would have put beyond all doubt the truth of the theory. But how stands the fact? * * * We find that the population of England has kept strictly within her proper limits, while that of Ireland has so completely outrun them, that famines in Ireland are of nearly periodical recurrence, the lives of the people are continually shortened by cold and hunger, and the overflow of her population has pauperised both England and Scotland, besides extending to America." England (in the opinion of Mr Senior) stands in the most favourable position of all the countries of Europe with regard to wages. The average annual expenditure of her labouring families is L.33, while that of Ireland is L.5, 8s. The proportion of the annual births to the whole population in England is small. The number of paupers is as one in ten, while in Ireland there are 2,300,000 people who are wholly or partially mendicants, out of an entire population of about seven millions. The difference is here too great, Dr Alison justly remarks, to allow of a supposition that the pauperism of Ireland is attributable solely to circumstances independent of pauper relief.

"It is true," he remarks, "that the lower Irish are a rude and imperfectly civilised people, but they are not so illiterate as many of the English poor, in whom the principle of moral restraint is much more powerful; and the law of nature, by which the improvidence of parents leads to the destitution of children, is, as Mr Malthus himself observes, 'intelligible to the humblest capacity.' Even if the advocates of the theory resort to the extravagant supposition that there is something in the Irish character specifically different from all others in this respect, and making them reckless and improvident where others would be pru-

* Observations on the Management of the Poor in Scotland, and of its Effects on the Health of the Great Towns. By William Pulteney Alison, M.D., F.R.S.E., Professor of the Institutes of Medicine in the University of Edinburgh. Blackwood and Sons.

Digitized by Google

dent, this will not avail them, for any one who chooses to make the observation will see, that among the educated poor of Scotland the same union of reckless improvidence with extreme destitution, is uniformly found; and we shall see afterwards that the same holds of other countries.

The truth is, that below a certain grade of poverty, the preventive check of moral restraint has no power. Twenty-five years of observation of the habits of the poor have shown me, that there are none among whom population makes so rapid progress as those who see continually around them examples of utter destitution and misery. In such circumstances, men hardly look forward to the future more than animals. It is easy for us to say, that by cutting off from a poor family any prospect of relief, in case of destitution, we can make them careful and prudent. The practical result is widely different. Another alternative is uniformly embraced. *They lower their habits;* and those who have not been accustomed to observe them, are not aware how much reduction of comfort the family of a labouring man, disabled or deprived of employment, may undergo, and not only life be preserved, but the capacity for occasional irregular and precarious employment continue. Their better clothes may be pawned, their furniture and bed-clothes may be sold, they can lie on straw or shavings of wood, sometimes on 'bare boards,' and never undress; two or more families may be crowded into a single room, and struggle to pay the rent among them. Such associations of 'lone women,' who have only occasional employment, and of unemployed and disabled men, widows and orphans, are continually formed. They gather cinders on the streets late at night and early in the morning, they beg for bread, wherever they are permitted, among the rich, and if repelled from them, they seek for sympathy among the poor. Three meals in the week will support life for many weeks. I have known instances, where I had satisfactory moral evidence that the mothers of such families have submitted, for the sake of their children, to such privations for months together. If they fall sick, as after a time they infallibly do, the medical charities come to their relief. Thus, almost without visible means of subsistence, many of the poorest families in this and other great towns manage to pass the winter, while in summer they find precarious and desultory employment in fields and gardens. Now, if you mark the conduct of people who have fallen thus low, or watch the future progress of children brought up in this state of misery and degradation, you look in vain for the principle of moral restraint, or for indications of prudential motives, counteracting the natural tendency of human passions. Many of the children die miserably in early youth, and those who survive are uniformly reckless and improvident. The daughters of families thus circumstanced receive no education which fits them even for service; they are almost uniformly mothers at the age of twenty, and the progress of population is thus rendered most rapid in that portion of society which lies nearest the verge of absolute starvation.

On the other hand, when men are preserved from this state of hopeless and abject destitution, they all (or with few and trifling exceptions) gradually fall, more or less, under the dominion of *artificial wants*, and form to themselves a *standard of comfort*, from which they will never willingly descend, and to maintain which they will keep themselves under a degree of restraint unknown to those of the poor, who are continually struggling to obtain the first necessaries of life. Such observations have been very frequently made on a small scale by many others as well as myself, and they seem to me amply to confirm and easily to explain the result of the grand experiment in which Ireland and England have been engaged during the last two centuries. Indeed, the simple fact, already mentioned, of the habitual *cleanliness* of most of the English poor, even in the most pauperised counties, as compared with those either of Ireland or Scotland, is of itself sufficient to show where the preventive check is in fullest operation."

These views are striking, and they are supported by the experience of other countries. In the Azores, where there are no laws for granting succour to the poor, unless they be sick, "poverty does not appear," we learn from authentic evidence, "to check matrimony: in general, the poor people marry at an early age." The same, we find, is the case in Sardinia, one of the countries where there is no adequate legal provision for the poor. The swarms of Neapolitan lazzaroni need only be alluded to. On the other hand, in Denmark, Holland, and Prussia, where the provision for the poor is ample, there is comparatively much prudence with regard to contracting marriage. Again, the English peasantry eat wheaten bread, and maintain a generally high standard of comfort—a circumstance quite incompatible with the theory of a debasement or a redundancy of population by means of the poor-laws; whereas the Scotch are content with plainer fare, and the Irish live on the humblest of all esculent substances.

"The whole secret of the preventive check," says Dr Alison, "appears to me to consist in the growth and support of *artificial wants* among the poor. Now, in order to understand how these are fostered by the practical application of the poor-laws, it is necessary to look chiefly to their effect on the *rising generation*. Take the common case of a labourer dying in middle life, and leaving a family of young children; or disabled by injury or disease, and unable to provide for his family. If this happens in Ireland, his widow or family has no resource but in vagrancy and casual charity; and in Scotland, the legal relief granted is often a mere pittance: the children are brought up in misery, they cannot possibly acquire any artificial wants, or look forward to the enjoyment of any comforts, and all experience (if on so large a scale as to be freed from accidental fallacies) teaches, that in these circumstances there is no moral or prudential check on their increase. But in England they fall under the protection of the law; they are fixed to their parishes, and brought up under the eye of persons more or less interested in their welfare; their habits are prevented from degenerating; they grow up under the influence of artificial wants, and would feel themselves degraded if they were voluntarily to part with such of the comforts of life as they have hitherto enjoyed, and descend to the filth and penury of the Irish cabin. They live on wheaten bread, as Mr Malthus himself tells us, and are practically content to remain in smaller numbers than they might have been, had they been satisfied with coarser fare. Experience proves that their numbers do not become redundant, and that their standard of comfort in after-life does not degenerate from that of their fathers.

That the artificial wants, which nature never fails to awaken in the minds of all young persons who are brought up in tolerable comfort, are in reality an infinitely more effectual check on early marriages and excessive population, than the mere prospect of want of food is in the minds of persons brought up in utter destitution, must, I think, appear obvious to any one who reflects on the difference in this respect between the higher and lower ranks of society in all countries. How many men are there, in the different ranks which intervene between the lowest and the highest, who purposely defer the period of marriage until they shall be able, not merely to maintain a family, but to maintain it on that precise level on which they are themselves moving, and who die childless before they can accomplish their design! How many women of these ranks pass their lives in single blessedness, not because they are afraid of starvation for themselves or their offspring, but because taste, or vanity, or sundry other considerations, forbid their forming unions with men whom they consider their inferiors! How many motives of filial affection, of duty, of self-respect, of hope, of pride, of avarice, of ambition, combine to determine the question of marriage, or celibacy, in the ranks of which we now speak! These ranks, in reality, never become redundant; many die without offspring, but few of them descend into the lowest rank, and none have their lives shortened by mere privations. The lower in society that these complex motives operate, the more effectual is the preventive check. That some of them are in full operation in the English paupers, and restrain their increase, the facts already stated sufficiently prove; but which of them finds place in the Irish cabin?"

After some quotations from another author, showing that, in the interval between the Reformation and the commencement of the poor-law, the peasantry of England were nearly in the same condition as those of Ireland, with respect to mendicancy, misery, and agrarian disturbances, Dr Alison continues: "I assert, then, with confidence, that all experience teaches, not only that unrelieved suffering is quite ineffectual to teach prudence or moral restraint to the poor, but that it has uniformly the very opposite effect; and, on the other hand, that the natural effect of well-timed and well-directed public charity is not only to relieve suffering, but to *prevent degradation*, and so to support and strengthen the only check on excessive population which either policy or humanity will allow us to contemplate. It *is not the fear of lowering, but the hope of maintaining or bettering their condition*, which really constitutes that preventive check, and that hope is continually maintained among the poor, by the certainty of assistance in distress, in circumstances where it would otherwise have been extinguished in despair. The English poor have become cautious, just as they have become cleanly, not in consequence of positive laws or direct exhortations, but by the silent operation of those feelings of human nature which always raise the standard of comfort among those who are steadily preserved from the degradation of hopeless poverty."

Dr Alison meets successfully a number of minor objections which have been taken to poor-laws, as that they diminish voluntary benevolence, that they rank up the rich and poor in hostility against each other, and that they have an injurious effect on the application of capital and the wages of labour. We are not able to follow him through these reasonings, but cannot resist adverting to one triumphant fact on the first point—that, during the famine in the west of Ireland in 1822, L.100,000 was subscribed for its relief in rate-oppressed England, while the land-proprietors of one of the Irish counties where the distress was experienced, could only raise one hundred! Our author also enters into arguments to prove the direct practical advantages of legal provision, namely, its being much more effectual for the permanent relief of misery in the lower orders, and much more just towards the higher orders; its acting much more uniformly, its amount being much more easily adapted to the real wants of the poor, and its kind being in each case more properly suited to their character and circumstances; and its securing an interest in the concerns of the poor throughout the whole community. He finally recommends the required changes in the Scottish poor-laws, the most important of which is an uniform assessment sufficient to give relief to the whole of the poor, not only those who are sick or impotent, but those who from any cause are destitute, and this relief to be of sufficient amount, instead of being, as at present, a kind of mockery of the wants to which it professes to be applied. We greatly regret that we are unable to transfer any of the excellent arguments brought forward by Dr Alison against the common but short-sighted doctrine as to moral or other merits being necessary on the part of poor applicants to constitute a claim for relief. His views on this subject exactly meet those which we have oftener than once advocated in this journal. There are few things which have more forcibly impressed us throughout life than the unreasonableness of expecting all kinds of virtues from human beings when they are unfortunate, and *only then*.

We conclude with an earnest hope that the excellent purpose which this pamphlet has directly in view will not be disappointed, but that the attention which it has already excited in the more thinking circles of our two largest cities will be felt ere long over the whole country, and that, all existing prejudices being undermined, it will be the means of introducing a system of poor-relief more agreeable to our pretensions as a Christian community.

THE MULETEER.

A STORY OF RECENT OCCURRENCE IN SPAIN.*

One evening in the autumn of the year 183–, Cirisco Martinez, the muleteer or carrier who passed regularly between Madrid and Alicant, was seated at the gate of a hostelry near the western outport of the last mentioned city. Cirisco was almost ready to set out on his stated journey, one of a rather momentous character in the existing state of the country, and he was now enjoying himself for the last time with a few of his intimates, who were seated around him, smoking, and drinking from a leathern or goatskin bottle, already somewhat flaccid with passing from hand to hand. Cirisco was in high and jovial spirits, but he still had an eye to business. Taking a long pull at the skin, he exclaimed, "Hollo! uncle Melchor! master landlord! hang me if I shall put up any more at this hostelry of yours. Your wine is as sour as vinegar, and your Babieca up there, your sign of the Cid's horse, brings me no good luck. Here have I two of my mules yet without their load; neither passenger nor burden have I got to go upon them. Hollo!" continued he, addressing the casual passers by, "who will go to Madrid? It shall never be said that Cirisco Martinez went with an idle mule from Alicant. Who will go to Pavia, Monfort, Monover, Vecla, or Albacete? Come forward; you will find me accommodating."

The latter part of this address of the jolly muleteer did not pass unnoticed. A stranger stept forward, and said to Cirisco, "When do you expect to arrive in Madrid?" "In nine days," replied the muleteer; "that is to say, friend, I am bound by my engagement to deliver my goods at that time in Madrid. But, to tell you the truth, I always make a little reservation, and say, to myself at least, 'if time and tide permit.'" "Perhaps your goods would be inconvenient to a traveller, if he were to engage one of your mules," said the stranger; "are you heavily loaded? What kind of merchandise have you?" The muleteer pointed to a shed behind him, where his packages were lying under cover, and exclaimed, "For my part, I don't know what sort of stuff I am to carry, but if you are curious to know, you may look at those bales and packs. There is something written upon them, but I only know whither they are to go. That is my part of the business; and, besides, the fact is, that my eyes are too weak to read handwriting." The light-hearted muleteer winked as he said this to his companions, who immediately set up a loud laugh, knowing that poor Cirisco, like themselves probably, was no great scholar. Meanwhile, the stranger went forward to the packs, on a number of which were written, in pretty large letters, the words,

Vasos de Plata
y Pala era
Sacadens de
hierro y otros.

The meaning of this superscription, though somewhat obscured by the mode of putting it down, might readily have been made out to be, "Vessels of silver and virgin gold, with fancy-work of iron, and other articles."

After the stranger had looked attentively at the bales, he said to Cirisco, "When do you set out for Madrid?" "To-morrow evening," was the reply. "Very well," said the stranger; "I do not know yet, whether it will be convenient for me to go with you or not, but I hope you will have company by the way in any case."

* The above story is a version, without any alteration in the important points, of one which appeared in the Spanish journals within these few years. The facts of the narrative, for the reader must understand that the whole story is true, came out on the trial of the parties concerned, before the criminal courts of Alicant.

Digitized by Google

On the evening of the following day, according to purpose, Ciriaco had his mules at the gate of the hostelry of Babieca, ready to depart. A young and high-spirited horse, the long grey tail of which swept the ground, stood saddled and bridled beside them, being a favourite animal, which Ciriaco preferred to ride while guiding his string of mules on their way. At its saddle-bow hung a goodly flask, wherewith its master might charm away the toils and weariness of the journey. With a horn slung round his shoulders, and a pistol or two at his belt, Ciriaco himself appeared, mounted his horse, bade a cheerful adieu to his host Melchor, and moved away slowly with his mules, chanting the while the old romance that tells the loves of Almansor and the fair Zoraide. For a short time the bells of his mules were heard tinkling in unison, but soon Ciriaco and his charge were both out of sight and of sound.

Towards the middle of that same night, the people of the hostelry of Babieca were roused from their quiet slumbers by a violent knocking at the outer gate. The sound was so loud, and so remarkable in its character, that every individual of the household was speedily on foot, under the impression that the gate would be knocked to pieces. On going to it, and opening it, their amazement was great to behold a riderless horse striking the door violently with its hoofs. Their surprise was still greater when they discovered it to be the horse of Ciriaco Martinez. The first thought which struck all, was, that Ciriaco had fallen asleep, and had been thrown to the ground by some false step of the animal. They opened the gate wide for the horse to enter. But although it came forward so far as to show that it was covered with foam and streaks of blood, it did not pass into its stable. Wheeling around before they could seize it, the horse set off at full speed in the direction whence it had come. The creature was wild and excited, and the blood which had been seen on its sides led the landlord Melchor to the sad conclusion that some serious evil had befallen the merry-hearted Ciriaco.

With the first dawn of morning, Melchor was out with two companions on the road which Ciriaco had followed in his journey. After travelling some leagues, they observed one part of the road to be peculiarly marked and trampled. They also saw footsteps leading aside from the place, and, pursuing them, they reached the middle of a piece of untilled ground. There, under a rudely and hastily piled heap of stones and furze, they discovered the corpse of the unfortunate Ciriaco Martinez. He had received a shot through the body, and his head, besides, was horribly mutilated. Melchor immediately went and alarmed the people of the two neighbouring villages of Monfort and Monover, and a hasty pursuit was commenced in all directions. Judging by the tracks of the missing mules, it was believed that the robbers and murderers had not continued the route to Madrid, but had taken some other course. Other travellers had been on the road, however, and this point was not easily determined. It is possible that the pursuit was not carried far enough; but however this may have been, certain it is, that the authors of poor Ciriaco's murder were not discovered by Melchor and his assistants.

Two or three days after this event, Juan de la Rosa, carrier between Madrid and Cadiz, chanced to be at the village of Caracuel, near Ciudad Real, where the news of the murder had not yet arrived. Juan de la Rosa was accustomed to lodge at the same inn in Madrid with Ciriaco Martinez, and knew him intimately. Great, therefore, was the amazement of Juan to see in the village of Caracuel the mules of his friend under the charge and in the possession of a stranger. He was sure about the mules, and in particular one of them, for he himself had long possessed the animal, and had only sold it to Ciriaco about two months previously. Of the identity of this mule he was perfectly certain. Taking an opportunity to ask the new owner how long he had possessed the mules, Juan received for reply that the other had owned them more than a year. This answer rendered Juan assured that something was amiss, and he informed a magistrate of his suspicions. This functionary went to the inn to examine the stranger, and look at his bales. On being asked to whom the bales belongod, the stranger first said that they belonged to himself, and then, on its being hinted as very unlikely that he should be possessed of what seemed to be valuable treasure, he stated that the bales had only been entrusted to him to be conveyed from Jaer to Bedajar.

These contradictions, and the suspicions of Juan de la Rosa, would perhaps have been insufficient to justify the detention of the man, but circumstances occurred which soon removed this difficulty. A crowd had assembled about the inn of Carscuel, where the magistrate had gone to examine the stranger, and some persons had noticed "Vasos de P.lata," &c. on the bales. One individual, more sharp-sighted than his neighbours, immediately suggested that the owner of the mules might be an emissary of Gomez, the lieutenant of Don Carlos, and that he was doubtless conveying treasure to some place or other, to serve the lieutenant's treasonable purposes. As, in the hurried shiftings of the Spanish civil war, treasure had often been buried for a time, and afterwards lifted, the opinion of the individual mentioned at once found believing auditors. "He is an emissary of Gomez," cried the mob, and the magistrate was compelled by their clamours to take the stranger into custody. At the same time, the bales were left untouched, and carefully locked up.

Putting faith in the statement of Juan de la Rosa, rather than in the suspicions of the mob, the magistrates of Caracuel did not neglect to send a messenger to Alicant, to inquire respecting Ciriaco Martinez. The answer was immediate and startling—"Ciriaco Martinez is murdered." The messenger also brought an order for the transmission of the stranger, who called himself Don Manuel de Basabru of Catalonia, to Alicant. This order was immediately obeyed, his guilt seeming beyond all doubt.

At Alicant, Don Manuel de Basabru was soon brought to trial. Besides the identification of Ciriaco's mules, and other criminatory circumstances, one man came forward in evidence, who had actually seen the murder. This witness was Juan Pacheco, a peasant of Monfort, the village adjoining the spot where Ciriaco was found. Juan de Pacheco deposed as follows:—

"At the end of last month, our *Barilla* plants were approaching maturity; and as the foxes are so fond of some parts of these plants that they sometimes destroy whole plantations in a night, it is necessary to watch them, and all the neighbours take the watch by turns. On the night on which it was my turn to watch, I lay down among some tufts of rosemary, in such a position that I could see, with the help of the moon, a large extent of country, without being myself perceived. I had not lain long, till I saw, very near me, a man whom I did not know, but who resembled the prisoner in form and stature. He was armed with a fusil, like myself, and it was my belief that he was one who had come out, like myself, to watch the foxes. In this impression I was confirmed when I saw him squat down behind some broom-bushes not far from me, and I was less heedful than I might have been in keeping myself awake. In short, sleep came over me, and I know not how long I continued under its influence. The sound of mule-bells awoke me, and the report of a gun followed immediately after. I raised my head, and distinctly beheld on the road, which ran close by the spot, a string of loaded mules, near which lay a man upon the ground, with another—the person I had before seen—standing over him, and apparently robbing his person."

Here the witness was interrupted by his examinators, who asked him why he did not run to the succour of the fallen man. The witness answered that "he was afraid of bringing danger upon himself," and was allowed to continue his narrative.

"The man upon the ground struggled, and I heard him cry to the other, 'Wretch! you will pay for this!' to which the robber answered, 'Yes, with the *demon's money*;' and as he spoke, he threw a large stone forcibly upon the head of the prostrate man, which appeared to kill him.* The assassin then threw the body over the back of a horse standing by, and took it into the middle of the adjoining field. On returning to the road, the murderer tried to mount the horse, but it escaped his grasp and galloped off. He followed it for some distance, and then returned to the mules, one of which he mounted, and then went off hastily with the whole. These circumstances (said the witness in conclusion) I related to others on hearing of the murder of Ciriaco Martinez."

When these and other circumstances had been brought out, Don Manuel de Basabru still stoutly denied all participation in the murder of Ciriaco. Regarding the bales of goods, he returned to his first assertion that they were his own property. The judges confronted him with the merchant from whom Ciriaco had received them in charge, yet Don Manuel, as he called himself, persisted in his daring denial.

"Then what do these bales contain?" said the judge, pointing to them; "it is visible that they have never been opened since first packed up, but you can inform us what they contain?"

"That is not difficult to tell, indeed," replied the prisoner boldly. "Any one who can read may tell their contents from the superscription which I put upon them, '*Vasos de plata y pala ora, acadenarios de hierro y otros.*'" (Vessels of silver and virgin gold, fancy articles of iron, and others.)

The merchant who claimed the property, when he heard Don Manuel make this interpretation of the superscription, was seized with a fit of laughter, so violent that neither the seriousness of the case, nor the gravity of the court, could check him. "Ah!" cried he, when he had partly recovered his composure, "I should kill myself with laughing at this, had that poor Ciriaco Martinez but been alive." Then turning to the prisoner, he exclaimed, "*Vessels of silver*, indeed! say rather vessels of *white iron: vasos de lata*, white iron."

The accused stared. "But the P.; the words are vasos de P.lata?"

The merchant could not help laughing again at the confounded look of the accused, and the confession which his question conveyed. "The P. is an abbreviation of *Pulita*, meaning *fine*, polished white iron."

The prisoner stared still more wildly, but, heedless of the consequences, he proceeded to satisfy himself. "But the *pala ora*, the native gold?" said he. "Oh," replied the merchant, "the words have been disjoined by my stupid apprentice boy in writing the superscription. The last words are *pala orasa, cadenas de hierro y otros*; meaning altogether, 'coarse shovels, chains of iron, and other articles.'"

The confounded prisoner, who, by thus misinterpreting the superscription, had been led to take away a human life, in the hope of acquiring valuable treasures, had nothing further to say for himself. The bales were opened in court, and he there saw the paltry utensils for which he had plunged into deadly crime. Though scarcely required, their testimony was conclusive against him. He was condemned to death.

The priest who attended him in prison, and on the scaffold, endeavoured to induce him to invoke the mercy of heaven. But he was never heard to utter a sentence excepting one, and that he repeated several times. "White iron!—it was but white iron! With the demon's money I killed him, and I have sold myself for the demon's money!"

* The "demon's (or devil's) money" is a phrase common in the kingdom of Valentia, and had its origin in the following traditionary story:—Two Moors, of the tribe of the Almoravides, were renowned in the eleventh century for their intimacy, and for their joint pursuit of the occult sciences. They were avaricious, and finally acquired so much power over the Evil Spirit, that he gave them as much gold as they desired, but only on condition that they retained their mutual friendship. However, the one killed the other, and fled towards Africa with the chests of gold which he had so won. But the fiend made holes in the chests, and the money dropt out. The coins grew into stones of various sizes, which retained something of their circular shape. They are common on the Valentian coasts, and are yet called the Demon's Money.

THE SALMON.

DETERMINATION OF THE QUESTION RESPECTING ITS FRY.

THE history of the salmon in the earlier stages of its existence has hitherto, as is well known, been involved in great obscurity, although the elucidation of it was desirable not only for the satisfaction of men of science, but for the protection of the fish itself, as a valuable article of commerce. The subject has at length been cleared up, and in a way and under circumstances which, in our estimation, give its elucidation additional interest.

The individual to whom the public is indebted for this good service is Mr John Shaw, resident at Drumlanrig in Dumfriesshire, and who holds, we believe, the situation of head game-keeper to the Duke of Buccleuch, on his grace's estates in that county. Directed solely by his own intelligence, Mr Shaw commenced some years ago a series of experiments for determining the early history of the salmon. He in the first place constructed three ponds on the bank of the Nith, one of them, which we shall call No. 1, being twenty-five feet long and eighteen broad, another (No. 2), twenty-two feet long and of the same breadth, and a third (No. 3), fifty feet long and thirty in breadth. A rill of spring water, descending from the neighbouring hill side, and abounding with larvæ and insects fit to be food for fishes, was parted into two streams, one of which fell into pond No. 3, while the other ran into No. 1, and thence passed on through a grated aperture into No. 2; the waste water from both being allowed to fall out through closely wired apertures, and find its way to the Nith. The arrangements were such as to make it impossible that there could be any communication between the river and the ponds, the bottoms of which were thickly bedded with gravel.

In January 1837, Mr Shaw caught a male and female salmon in the Nith, while they were engaged in spawning; and having pressed a quantity of roe or ova from the female, which he mixed with milt from the male, he deposited the ova, thus prepared, in one of the ponds. Fifty days after, namely, on the 23d of February, he "found the embryo fish distinctly visible to the naked eye, and even exhibiting some signs of vitality by feebly moving in the egg." On the 28th of April, they were excluded from the egg, when they measured about five-eighths or nearly half an inch in length, and had a small red transparent bag, like a currant, depending from the anterior part of their bodies. The temperature of the stream, at first 39°, was latterly 44°. To ascertain if a higher temperature was favourable to the developement of the young fry, Mr Shaw, on the 20th of April, placed some of the ova in a tumbler in his bedroom, allowing a stream of fresh water to fall into and out of it; and the result was, that in thirty-six hours the fish in this situation were disengaged from the ova, while the others, as already mentioned, did not appear till seven days later. An accidental irruption of mud destroyed the fish produced in the pond about a month after their birth.

Some ova, prepared in exactly the same manner on the 27th of January, and placed in pond No. 1, became fish on the 7th of May. Of this family, Mr Shaw had drawings made at ten days, forty-eight days, two months, four months, and six months old, which are to be found in Jameson's Edinburgh New Philosophical Journal for January 1838. They show the creature in its growth from a shape in which the fish lineaments are scarcely to be discerned, up to the condition of the *parr of our rivers*. Between the family in the pond, and parr of the same size taken from the Nith, no difference could be discerned, excepting in depth of colour, the pond family being lighter, probably from the comparative purity of the water in which they were produced and reared. This difference, it may be remarked, is one which anglers are accustomed to observe in trout of various streams, the depth of colour being in every case determined by the comparative clearness of the waters. On this point Mr Shaw made a curious observation, which we shall give in his own words:—"In the course of my visits to the experi-

Digitized by Google

mental pond, which were as frequent as other duties would permit, I had often observed, that while the little fish remained stationary in any particular part of the pond, they were always found to be of a colour corresponding to the colour of the bottom, and when they removed to any other part of a different colour, that, after resting on it for a few minutes, they gradually assumed a corresponding hue. Wishing, therefore, to prove the fact of this assimilation by actual experiment, I procured two large earthenware basins, one nearly white inside, the other nearly black. I then placed a living fish in each, while at the same time I kept up a constant supply of fresh water in them. The fishes were of their natural colour when first placed in the basins; but they had not remained there more than four minutes till each had gradually assumed a colour nearly approaching to that of the respective basins in which they were placed. I next took the fish out of the white basin and placed it in the black one, and the fish which was in the black basin I placed in the white, and the results were uniformly the same—the fishes changing according to the colour of the surface over which they were placed. I next placed both fishes in one basin, when the contrast for a short time was exceedingly striking. With the view of ascertaining what effect the light had in producing this extraordinary change, I next allowed the fish to remain in the white basin so long as effectually to acquire the light tint, when I excluded the light from them altogether by covering the basin with a thick mat, and on removing it a few minutes afterwards, I found the fish were again changed to a dark colour, which gradually disappeared on exposure to the light. The change of colour is produced alike under a bright or cloudy sky. This singular phenomenon, with which I have only now become acquainted, adds another to the many beautiful provisions nature has made for the safety and protection of her creatures. The cause, however, is a problem I make no pretensions to solve."

At twelve months old, Mr Shaw found the parr of his pond family to be about three inches and three quarters in length, and exhibiting the ordinary summer aspect of the parr of the rivers. In January 1839, when they were twenty months old, he found them six inches in length, and still displaying all the appearances of ordinary parr. But such as were allowed to survive till the 24th of May, when they were two years old, although they had then gained only half an inch in length, "*cast off the livery of the parr, and assumed that of the salmon*—this change consisting chiefly in the following particulars:—the black opercular spots disappeared, the almost colourless pectoral fins became suffused with an inky hue at their extremities, the broad perpendicular bars or blotches on the sides were effaced, and the prevailing hues of dusky brown and yellowish white were converted into deep bluish black above, and into silvery white below." The family had now, indeed, reached the salmon state, and were ready to migrate like their contemporaries in the river.

These experiments, conducted under circumstances giving strong assurance against fallacy, were in themselves very satisfactory; but Mr Shaw conducted another of a still more decisive nature. Having observed the male parr in the river attending on the female salmon when she was engaged in spawning, he took some roe from a fish of the latter kind, and mixing with it some milt from a parr, placed the spawn in one of his ponds. The hatching and subsequent growth of the young fish thus produced resembled in all respects that of the other family; and the fish themselves were evidently the same. Naturalists, who have been accustomed to regard the parr as a distinct fish, might suspect this to be a mixed or hybrid progeny; but the supposition has been shown to be untenable. The males of the family reared in pond No. 1 were found, in November 1838, when eighteen months old, to be possessed of milt, while the females as yet exhibited no trace of roe, the one sex evidently attaining maturity in this respect before the other. This was so far a proof of the identity of the pond-bred young salmon with the parr of the rivers; but it was more clearly tested still, by the result of an impregnation of roe from adult river salmon by the so-called parr of the pond, when it was found that the hatching and growth and appearances of the progeny were exactly the same as above described. Mr Shaw also kept in one of his ponds the male parrs he had taken from the river for his experiment, and found that, at the proper age, they assumed the migratory dress, and had become young salmon. A curious characteristic of the salmon family has thus been ascertained, namely, that the males are mature in one important respect while as yet very young and very small, and take a part in spawning before they leave the river of their birth. The disproportion of the number of males to that of females engaged in spawning, must be enormous; and the circumstance may be regarded as analogous to some similar eccentricities in the insect tribes; for example, the one female and infinite number of males in the bee-hive. No doubt, the arrangement is one rendered necessary by the circumstances in which the spawning takes place, and which has been *looked forward to and provided for* accordingly.

It may now, therefore, be considered as settled, that the young of the salmon, instead of migrating soon after birth, as heretofore supposed, remains *two years* in the rivers, and is the fish hitherto called parr, and erroneously supposed to be a different species. From these facts most important consequences arise. "The belief that the salmon migrates the same year it is hatched, has created an indiscriminate slaughter of that fish, at an age when it especially requires the protection of the legislature. There is no fish in our rivers that takes the fly more readily; and every little tyro who can cast his angle on the stream, can reckon pretty confidently on killing eight or ten dozen per day. Where a salmon river, therefore, runs through a populous country, the destruction of the fry from this cause alone is incalculably great. It is true the legislature has made provision for protecting the young salmon for one month, namely, during the brief period it remains in the river after assuming the migratory dress, but for the two first years of its existence it is at present entirely unprotected."

The experiments made by Mr Shaw were overlooked at various times by some of our most distinguished naturalists, who have heartily given him the credit of conducting them in a philosophical and correct manner. His observations have been presented, on three different occasions, to the Edinburgh Royal Society, the last time in December 1839. They were accompanied by preserved specimens of the various fishes, adult and young, so that the conviction produced by them might be said to be complete. It was a pleasing sight to see a body of learned and cautious investigators, all of them of elevated station in life, according the praise of successful scientific experiment to a rural and untrained philosopher like Mr Shaw. The Royal Society has more recently done themselves credit by presenting to him, as a mark of their approbation, the Keith Medal of this year.

SOUTH-AUSTRALIAN EMIGRATION.

FURTHER COMMUNICATIONS FROM EMIGRANTS.

OUR readers will recollect the extracts which we some time ago* presented from the letter of Mr B——, a South Australian emigrant settled in Adelaide, and our promise to add extracts from any subsequent communication from him that might appear interesting to intending emigrants to that colony. By the kindness of a friend, we are now able to offer the following, which we gather from a letter written about a month later than the preceding. In this, as in the former communication, and also as in a private communication to ourselves (dated in September last), Mr B—— writes in no flattering terms of South Australia and its prospects, and even expresses a doubt whether he shall remain permanently in the colony, to which, it is quite evident, he regrets having proceeded. But we let the extracts speak for themselves:—

"I think that the colony cannot by any means be said to be well watered. There have been few streams or rivers discovered which afford sufficient inducement to take special surveys on their banks—marking the acknowledged deficiency of water in general. Sheep-runs for the most part are watered by a string of pools collected from the winter rains. To save speaking so much as to water in general, which affords at best unsatisfactory information, I shall give you a few particulars which you will better understand. At the Port there is no water fit for use, and till within a week or two it was all carried from a well at Hindmarsh Town, upwards of three miles distant. It is now supplied, I believe, from a well about one and a half or two miles distant. While the Germans were at the Port, I have passed a boy and girl with their small barrel of water, carrying it along in the broiling sun. S—— passed a week or two at the Port, on first landing, and had to carry his water himself; an exertion which he almost sank under. At Adelaide it costs two shillings a porter hogshead for water, from the stagnant pools in the burn Torrens; and those who have wells, have been obliged to go down sixty and eighty feet for water. On the Holdfast Bay, or Glenelg Road, there is a half-way house, at which a well has been sunk, and good water found at twenty-five feet down. At Glenelg, itself, there is a pool upon the surface which supplies a small quantity of water. This will give you some idea of the difficulty of obtaining water, where you will see the greatest possible need exists for it. We pay the above-mentioned sum for water from the Torrens, and *have to boil every drop of it*, ere it be fit for drinking—a great privation to such water-drinkers as both of us are. In a few years, I doubt not that all this discomfort will have passed away, and that Adelaide, by the *art of man*, may be as well watered as Edinburgh.† But I am speaking as to what *Nature* has done, and am bound to say, that she has almost forgotten the water, however well she may have supplied the land and climate. Settlers in the country will not experience so much difficulty in this respect, as their location will mainly depend upon the supply of water; but in Adelaide, the want of a sufficient supply of good water is a grievous want indeed, and probably is the cause of much of the disease that prevails; dysentery being traced to this source as well as to cold, as already mentioned. *As for showers*, the colony has not been in existence long enough to enable any one to say what rain may be expected in the course of a season; it is stated that there is almost no rain during summer, and that it comes in torrents (during the night chiefly) for a month or two in winter. We arrived towards the end of summer, and have seen also a few weeks of what is called winter; but so mild is it, that it will pass very well for summer at home. We have been in all above four months in the colony, and I think it has *rained* only twice or thrice heavy enough to leave any trace of it the next day—in short, what you would call a very heavy rain; and there have been, probably, other five or six light showers. My limited experience, therefore, inclines me to think that there is a decided want of occasional refreshing showers. That there may fall, in a few weeks, during winter, rain sufficient to send forth a luxuriant vegetation, I have every reason to believe, both from the accounts of persons, as well as from the appearance of the native grass; but I very much doubt that getting showers during any other part of the year will have much effect upon cultivation. Irrigation, I am afraid, is what we must look to for supplying such a requisite."

As to servants: "Contracts made in Britain with servants, I understand, are strictly enforced *here*, and that by a pretty rigorous law—fining a person *L.50* who knowingly employs a servant under contract with another. Although such be the law, I think that a person would stand very much in his own light (not to mention the want of honesty) to engage any servant much under the current rate of wages given in the colony. The servant in such a case would not fail to think himself taken the advantage of, and would, of course, not perform his duty faithfully and willingly, without which it were better surely not to have him. Instead of attempting to screw him down to the lowest scale of remuneration, I think it would be for the interest of every master first to find out servants properly qualified for his purpose, and firmly to take hold of them, by giving them a stated interest in the success of their labours. This is the surest and best law that could have been devised for keeping servants to their engagements.

I do not think that it would pay to send grain or grass seeds here at present; ploughs are in abundance, having been brought by every farmer who comes here; and as none of them have been employed yet, you can get them, as you may suppose, at or even under the British prices. Mills for grinding and cleaning corn we have more than plenty of, until we have corn to grind, which as yet there is no appearance of having soon."

Next, with regard to wages, prices, &c.: "The wages at present given in the following branches of industry I have obtained from a source on which I think I can rely; but these rates must, you will easily see, be liable to much fluctuation, as such numbers of labourers in almost every department are constantly pouring in, and as yet few outlets for their labour in the country are to be found. I should expect for one thing, that the rate of wages in the different trades will bear a pretty close approximation, on account of the facility in the present state of the colony afforded for turning from one profession to another. For example, printers' wages are 15s. a-day just now; but suppose twenty additional hands to arrive to-morrow, it might be expected that the former rate of wages could not be maintained, as the new comers would offer to work for less wages. But they would not. They would turn bricklayers or shepherds, or almost any thing in fact, and would obtain their 15s. a-day also. According to the best information which I can obtain, there is only a *demand* at present for additional hands as sawyers and blacksmiths; but this of itself need not discourage any who otherwise wish to come, as the wages cannot soon be much reduced at the worst. At present, the expense of living is very great; indeed there is almost a famine. The four-pound loaf is 3s. 6d.; butcher meat, 1s. per pound; butter (salt), 2s. 6d.; fresh, 3s. to 3s. 6d. per pound; eggs, 6d. to 8d. each; oatmeal, 6d. per pound; potatoes, 6d. per pound, and other things in the same *Malthusian* proportion. But this state of things cannot last, I hope, above a month or two; indeed, a vessel or two have been sent to America for flour, and when the Americans find their way to us, we shall not want for food. A Hamburg vessel is at present in with a considerable part of her cargo stores, which will be sold by auction, and the result of the sale will no doubt bring us many more ships from the same place. Wages are—for brickmakers, 15s. per day; bricklayers, 10s. to 13s.; blacksmiths, 10s.; chair-makers, 13s.; house-carpenters, 10s. to 13s.; coopers, 10s.; compositors, 15s.; cabinet-makers, 15s.; dairy-women, L.25 to L.30 a-year and rations; fencers and field-labourers, 5s. a-day; glaziers, 8s. to 10s.; harness-makers, 12s.; joiners, 13s. to 15s.; house-painters, 8s. to 10s.; plasterers, 12s.; ploughmen, L.40 per annum and rations; printers' pressmen, 10s. to 15s.; saddlers, 12s.; shoemakers, 8s. to 10s.; sawyers, 20s.; stone-masons, 15s.; quarrymen, 10s.; tailors, 8s. to 9s.; wheel-wrights, 11s. The above are all stated as so much *per day*, of course, unless otherwise mentioned.

Your next inquiry as to 'the general character of

* No. 406.

† [There seems no reason to infer that this ever can be the case. B—— must well know that Edinburgh is perhaps the best supplied town with water in the world; and water, too, of the finest quality.]

Digitized by Google

the settlers, and if they appear contented and happy,' is perhaps nearly as difficult to answer as the former one. Permit me, however, to add, that if you have a definite idea of the question, you may also make something of my answer, which is in the negative. There are a few, no doubt, who are contented and happy, because they would be so any where; a number more may be in the like enviable state of mind because they are acquiring wealth beyond their most avaricious expectations; but I think the general character of the settlers is by no means contented and happy, arising, perhaps, in the first instance, from a feverish anxiety for making money; second, from a thousand different and opposite ways of making it; each one of these holding out a higher per centage than another, and thus fairly bewildering a person as to which he ought to choose, ending in general in doing almost nothing, or not doing the best; altogether destructive of mental peace and quiet; and that such is wanting in the general case, I can have no doubt; and I think the above-mentioned sources of discontent are sufficient to produce the effect. I need not add, that these operate upon all; but there are, besides these, thousands of other grounds of discontent applicable to individuals alone.

Your final question, as to 'the expediency of emigration, and the augmentation of capital likely to be thereby derived,' is one which every person must and can only answer for himself. The latter part of the question I have already answered to the best of my ability. On the first part, I would merely remark, that, to the best of my judgment, a person's motives for coming here (in the present state of the colony, at all events) should be for the exclusive purpose of making money. If he come with any other object, he is likely to be grievously disappointed. The class of people who are best fitted to succeed here, and least likely to entertain regret for leaving their 'ain countrie,' are those who have been brought up to a country life, and those in towns who have had their minds entirely engrossed with their own affairs, and the making of their fortunes, and who, providing they accomplish this end, let the world without and all its concerns go as it will. The letters from people here, which appear in the '* ** ** **,' give, I *still* think, a one-sided view of things. These letters, you will find, emanate from *mere labourers*, or from people of *large* capital, both of which classes are no doubt decidedly better here; but those with *small means*—the small farmers so strongly invited to come here—will find themselves grievously disappointed. I do not say that their *limited means* and their labour will not produce much more here than at home; but the success held out to them is not to be obtained so easily as they are led to imagine, nor without sacrifices which rarely would be voluntarily made, if known before-hand. The small capitalists, *as yet*, I believe, have sunk to mere labourers in the first instance—they may rise again. This you can easily understand, as there is no *cultivation yet*; and the small farmer did not know what to make of his means; and after looking about him for a short time perhaps, and spending the most of what he had, was then obliged to work to keep himself alive.

Emigrants of all classes continue to come in great numbers, but I should not be at all surprised although a temporary check was interposed in the shape of a commercial crisis, to which I think we are rapidly hastening. We shall very soon have no specie here; it is all going out of the colony for provisions, &c.; and for a considerable time to come, we can have no exports to an extent capable of relieving us. Gold at the banks is at a premium of two and a half per cent. This is the effect of the universal land-jobbing, to the neglect of every kind of cultivation."

Such are the passages which we have thought worthy of quotation from the letter of Mr B——, who, though he may not be a comprehensive theoriser, is, we feel perfectly assured, honest in intention, and trust-worthy in his facts. Of the correctness of these we have no doubt, and are in some measure able to corroborate them by the following extract from a letter, dated Adelaide, August 25, 1839, written by a gentleman who emigrated from England, to follow the profession of a teacher in South Australia. It has been handed to us by a correspondent in Liverpool, who gives us his address.

"Five months elapsed from the period of our leaving the Downs, till we arrived at this place. We anchored in 'the Creek' on the 16th of May, but the difficulties and delays we met with were such, that it was not till the 22d July that I could open school. I have only seven boys; I am to open an evening school, and my wife a girls' school, to-morrow. This is the *first* letter that I have sent from this colony. I have always hoped the house would be ready at such a time, and the school the same; but if I were to wait till I can say whether we are likely to succeed or not, I may delay three months more.

I bought a four-roomed, weather-boarded house, from Manning, London, the price of which on board was L.45; freight, L.10; cartage from Port Adelaide (seven miles), L.5; foundation, L.4, 10s.; setting up, L.15; chimney, L.14; land, 150 square yards (including title-deed), L.47, 5s. 6d.; shingles (wooden slates), and putting on, L.16; pisé (crammed earth, pronounced *pee-zay*) walls for kitchen and school, L.13, 10s.; roofing do., L.18; painting and glazing, L.16, besides school door and windows not put in yet; earthen and lime floor for kitchen, 18 feet by 6 feet, and school, nearly 18 feet square, L.4; whitewashing outside and in, L.2; besides nails for house floor, and L.2 for a deal and post, short sent by Manning.

It was five weeks before all the materials for the house could be got, as they were mixed up with forty or fifty other houses.

The captain was very kind to us during the passage, and also on coming to anchor. Finding provisions so high, he pressed us to become his guests in the cabin, for three weeks, hoping in that time our house would be ready for us; but we had to pay L.1 a-week for two rooms for four weeks, and 8s. a-week for a shed as a kitchen for seven weeks; water, 3s. to 4s. a-week; wood for fuel, 4s. to 7s.; eatables, 18s. to 19s. a-day.

I have a promise of some more boys at the end of the quarter, and of four young men to begin evening school, at 3s. per week, including candles (2s. per lb.), ink (3s. per wine bottle), and pens. Boys and girls, L.2, 2s. per quarter.

Most people are very much disappointed in this place; many who came out as cabin passengers have been very much at a loss what to do to exist; some have become carters (on their own account); some that had a talent for it, have undertaken jobs as carpenters, painters, &c. Several have laid out their few hundred pounds in building pisé cottages to let. So many ships are still arriving with hundreds of passengers, that both rent and provisions are extremely high. This colony has not produced grain sufficient for *one day's consumption*. In fact, there is next to a famine both here and in Van Dieman's Land; which we have been draining, as well as Sydney. Flour has not been under 8d. per lb. these four months past, and generally 9d. to 1s.; barley, 5d. to 7d. per lb.; meat, 11d. to 14d.; milk, now 8d. per quart, till last week 10d. to 1s.; potatoes, last week 6d. to 7d., now 4d. per lb.; turnips and carrots, 4d. per lb.; all other vegetables equally dear. Cheese, 2s. to 3s. per lb.; salt butter, 2s. 4d.; fresh, 3s. 6d. to 4s., now down to 3s. during the rainy season; salt, 3d. per lb. No fruit in general; now and then small apples from Van Dieman's Land, 2d. per *mouthful*; eggs, 4d. each; fowls, 6s. to 8s. each.

Now, at the best season for it, there is scarcely any grass within six or seven miles of Adelaide. I believe there is none in the colony with the blades close together. The surface of all the ground that I have seen, is either sand with a tuft of coarse grass, a yard or two asunder, or else it has the appearance of land that the sod has been pared off. Farming is out of the question with any but very large capitalists, as enclosing even in the cheapest manner is 1s. per lineal foot. Wages, 6s. to 10s. per day; and from the great heat and long drought, the crop is uncertain. The town has the appearance of a race-ground, with booths and huts for temporary accommodation in all directions, and here and there a brick or stone house, and in one place a considerable village. In May and June the ground seemed all bare red or brown earth, or sand, with a few blades of scorched grass here and there. The river (as it is called), now towards the end of the rainy season, would require some caution to wade through it; but for two months after we arrived, it was in some places only two feet wide and three inches deep.

The population of this town is about 8000, and more are arriving every week. Land in town is L.300 to L.1800 per acre. Seamstresses get only 1s. per day and victuals, and many cannot find employment. Mechanics, &c., cannot always find full employment, and many have more difficulty here than in England."

It is impossible to read these letters without feeling assured that South Australia is a very different thing from what it has been usually represented. How far it may be suitable in the interior for sheep-farming, we possess no means of judging, and therefore on that point have nothing at present to say. We would fear, however, that the natural character of the country has been misjudged by those who first recommended it as the seat of a colony. Its prevalent want of water for the most simple domestic purposes, let alone vegetable irrigation, is a fact quite incontestible. At Adelaide, we are told, stagnant pool water sells for 2s. per barrel, and in most other places this indispensable article appears to be equally bad and scarce. Who, in their sober senses, we ask, would voluntarily proceed to a country so utterly deficient in one of the prime necessaries of existence? But whatever be this natural misfortune of the colony, it is not less distressing to learn that there is a universal dearth of every species of rural produce. It may be alleged that highness in the price of commodities, and highness of wages, are an evidence of a flourishing state of affairs; but this is a gross delusion as respects South Australia. No country can be said to be prosperous which does not produce within itself either the articles consumed by the population, or other fruits of industry by which these may be purchased from without; and we see no proof of such productiveness in the colony. It is true there is a system of money-making in Adelaide and its neighbourhood, but so was there in Paris from the Mississippi scheme, so was there in London from the South-Sea bubble, so is there at Crockford's and at every gambling table. The factitious run upon lots of land, purely for the purpose of selling them over again at a premium, may be a winning game to some, but in the end the losses must be great, and distressing in their effects. The "universal land-jobbing" now carried on so briskly, does not add one penny of capital to the colony. The colony is in fact living upon England. Every mouthful of food has to be imported, and paid for in money taken from this country. Highness of price! Why, there is the same kind of highness of price in towns in a state of siege, when a pound of horse's flesh sells for a guinea, and a jug of water for a dollar. Such prosperity may be very agreeable to those who possess an ample supply of the horse's flesh and the water, but it is the very reverse to those who are condemned to be the purchasers. South Australia seems to be enjoying this species of prosperity. It is producing little for exportation in comparison to what it is compelled to import; its settlers, instead of pushing off into the country and commencing agricultural operations, or any other kind of industrial occupation, are employing themselves in gambling with each other in the article of town-lots; and its only apparent means of existence is the debarcation of fresh emigrants with money, which is immediately embarked in these wild speculations, and forms the principal fund out of which payment is to be made for the productions of foreign countries. This is surely a wrong state of things, which cannot last. It is not to be supposed that Englishmen will long continue to proceed to an unproductive region on the coast of Australia, for the mere pleasure of there spending their money, and living in an encampment of hovels. Cabin passengers, with small capital, we are informed, are glad to become carters, carpenters, or to engage in any kind of rude employment to keep themselves from starving; in other words, those who have not sufficient cash to game in town-lots become the servants of those who can. A more deplorable state of affairs is hardly to be imagined. Let us hope, however, that something will speedily be done to dissipate the pernicious spirit of land-jobbing which absorbs the attention of the settlers, and that they will have dispersed themselves abroad in pursuit of those means of profitable industry which the colony may chance to afford.

WILDE'S NARRATIVE OF HIS VOYAGES AND TRAVELS.*

Mr Wilde is a young and accomplished Irishman, belonging to the medical profession, who in the autumn of 1837 accompanied his friend Mr R. Meiklam in a voyage in search of health and amusement to Madeira, the Canary Islands, and a number of places of note and interest on the shores of the Mediterranean and Levant. To perform the excursion agreeably, Mr Meiklam employed a handsome and commodious yacht, of 130 tons, "the Crusader;" and the party being quite at their ease as to time, means the most advantageous were afforded for gathering an ample store of the most interesting materials for the work now before us. The result proves that the author made the best possible use of his time during his visit to foreign lands. The work is full of glowing and apparently faithful descriptions of what came under the writer's observation at the different places he visited in his excursion, mingled with a liberal share of information on matters of natural history and sanatory statistics. In a production so abounding in amusing narration, it is difficult to make a selection of any part more worthy of notice than another; we, however, venture on the following extracts in reference to Madeira and one of the Canaries.

MADEIRA.

Arriving at Funchal, the capital of Madeira, in the month of November, when we in this country are beginning to shiver with cold, he is delighted with the prospect which presents itself. "I had often heard and read of the beauty of this place, but it far surpassed all idea I had ever formed of it from description. The town runs along the edge of an open roadstead, forming but a shallow indentation in the line of coast, embosomed in limes and orange groves, coffee plantations, wide-spreading bananas, and thousands of the rarest plants and exotics. The hills rise in terraces, almost from the town, clothed with vines and the most luxuriant vegetation; these are studded with the lovely quintas of the inhabitants to a height of several hundred feet. A striking object catches the eye of the traveller, the Mount Church; a large white building, that stands surrounded by some of the finest venaticos and chestnut trees, at an immense height above the town. Behind this the mountains rise still higher, clothed with verdure, beautified by cascades and waterfalls, and their sides torn into ravines, which vary the landscape by their deep black shades, alternating with the brightness of the surrounding foliage. Above all, the bald tops of the Turhenias rise to a height of several thousand feet from the borders of the Coural.

* Curry and Company, Dublin. 2 vols. 8vo. 1840.

Our friend Mr Shortridge kindly offered us the use of his house, which we accepted; it is one of the best in the town, and is a good specimen of an English Funchal merchant's residence. The under part contains cellars, offices, and counting-house—above that are parlours looking towards the street, the windows shaded by cool verandahs; over these are drawing-rooms, opening upon platforms that command a view of the lovely sides of the mountain; these, if one may so speak, are green-houses in the open air; the *hoya carnosa* clothes the walls; the *passiflora quadrangularis* hangs its glowing blossoms from the trellised roof; the *cobœa scandens* and other creepers twist round every cornice, and the *heliotrope* and *olea fragrans* perfume the adjoining rooms. Above are the dormitories, and the whole is crowned by a high turret, which commands the sea-view. The house of every merchant has a turret, with a good telescope, to sweep the sea, and catch the first view of any vessel bound for their port, or in which they may have an interest. It is, generally, the coolest and one of the best rooms in the house: for, being raised above the neighbouring buildings, it catches whatever sea-breeze may blow. Below are extensive yards, surrounded by offices, where the wine is stored, and the different processes of fermentation are conducted. Besides these, the merchants have, generally, country houses situated in the hills, at higher or lower elevations, so that the climate can be had of any temperature in those delightful retreats.

The town of Funchal is clean and well paved, with an air of bustle and business, and has a fine cathedral, and handsome public walks. Never was a spot more formed to cheer the sufferings of an invalid, to heal the wounded spirit, or reanimate the sinking frame. The dry and balmy air which produces this never-ending spring, makes the step buoyant, and raises the hopes of the sufferer, who a few days before left the choking fogs, the rains and chilly damps, of the Thames or the Medway. Here all is sunshine; the green bananas, with their beautiful feathery tops, tell him he has bid farewell to Europe; the orange-trees hold out to him their branches laden with golden fruit—

> 'Green all the year, and fruits and blossoms blush
> In social sweetness on the selfsame bough.'

Plantations of coffee-trees fill the spaces between the houses; the splendid coral-tree hangs over his head; and the snowy bells of the tulip-tree mingle with the scarlet hibiscus. If he wishes for exercise, he has the most inviting walks, and the most tempting shades to shelter him; wide-spreading plane-trees, and willows of gigantic growth, bend their slender arms over the streams that murmur from the hills. If he leave the town, and begin to ascend, the beauty increases, and the sea-view opens to his sight. The roads though steep are well paved, and the horses trained to an easy pace. On one side of the road, and sometimes both, is a little channel a foot broad; the Levada, by which the water is conducted to the different plantations from the hills, murmuring gently as it ripples by his side. He rides through a perfect vineyard, where in many places the vines are carried on trellises over the road, and the large bunches of grapes hang within his reach. Hedges of geraniums, fuschias, and heliotropes, border those narrow paths, and shade him from the sun; myriads of insects with golden wings sip the nectar from these delicate flowers, and add the music of their tiny wings to the melody of the surrounding woodlands. The *ficus indicus* clothes the cottages, which are shaded by the most magnificent chestnuts and venaticos; the *salvia fulgens* and the Guernsey lily sprinkle the vineyards; the beautiful *capillus veneris* creeps through the walls, and the *camellia Japonica*, now in full blow, adorns every quinta.

As he rises, the scene becomes still more varied, and expands beneath his eye. The valleys are covered with the luxuriant light green foliage of the yam (the *arum peregrinum* of Persoon.) The aloe and the agave border the enclosures of sweet potato; and the *phormium tenax*, or New Zealand flax, grows to a great size; rows of enormous hydranges flourish at this height, but, instead of their natural pink colour, are blue, owing to the ferruginous soil, or to their elevation. Small dragon-trees and cedars appear among the quintas; and heaths and pines rise to the highest elevations. Huge prickly pears (*cactus opuntia*) grow along the cliffs and lower parts of the island; and so inherent is the vitality in this singular plant, that it is only necessary to lay a single leaf, with a few stones over it, on a wall, and it will commence growing. The fruit is much eaten by the inhabitants. The large zebra spider, peculiar to this plant, weaves its immense thick ropes from thorn to thorn; its cocoon is hung in the centre of this suspension-bridge; it is somewhat in the shape of a kettle-drum, and the insect incubates at night, sitting on the flat side of it; the cord of which its web is composed is so thick as to procure for it the name of *epiera fasciata*.

The fruit-market is magnificent, and is beautifully situated in a grove of noble plane-trees. Here, besides the usual fruits of Europe, the orange, lemon, grape, green figs, and pomegranates, we have bunches of the most delicious bananas, piles of guavas, custard apples, and alligator pears. This latter is the fruit of the *laurus persea*; it grows to a great size, and, when eaten with pepper and salt, is most delicious. The water and Valencia melons, with gourds and pumpkins of enormous growth, and the numerous tribes of cucurbitæ, which costs hardly any trouble in cultivation, give the market a singularly rich appearance."

Setting out on an excursion, he meets parties of peasantry in a different mood from that in which we behold persons of that class in Britain. "The morning was delightful, and the groups of peasantry, coming into the market, which we met along the roads, made it quite enchanting. Companies of eight or ten, in some places, sat under the umbrageous shadow of a pine, eating their morning's meal, or completing their toilette, before entering the town; others hastened along, loaded with the various produce of their gardens, consisting of bunches of yellow bananas, strings of crimson pomegranates, &c.; others carrying fowl, firewood, or fish, to Funchal. Each little party was preceded by its guitar player. The instrument is small, with wire strings, and much in use among the natives. At times the performer accompanied it with his voice, and the whole group joined in the chorus. The men were well dressed, somewhat in the costume of English sailors, with a little cap, not unlike a funnel, on the top of their heads; this is worn more for ornament than use, as it could not be the least protection against the weather. It crowns the head-dress of the women also, being placed over the white muslin handkerchief which covers the head, and hangs down over the shoulders; their gay chintz gowns, and scarlet pelerine, gave them an air of lightness, and added much to the picturesque appearance of the groups. The Madeiranese, both men and women, are a very fine race, much more so than those of the mother country."

With respect to Madeira as a place of resort for invalids, Mr Wilde observes—"Far be it from me to say that the climate of Madeira *can cure consumption*; but this I will say, that, independent of its acknowledged efficacy in chronic affections, it is one that will do more to ward off threatened diseases of the chest, or even to arrest them in their incipient stages, than any I am acquainted with. A dry, warm climate, with a healthy and equable state of the atmosphere, are no doubt the most powerful remedial agents we are acquainted with, more especially for parts where only such agents can be brought in contact. It is a remedy for which, in many cases, we have no adequate substitute, and the discredit into which its sanative efficacy has been brought, 'is to be sought for, not in the remedy, but in the manner in which it has been prescribed.'*

After the most accurate investigation for several years, the annual mean temperature is found to be 65 degrees, and the daily temperature is now (November) from 70 degrees to 72 degrees, and seldom falls more than 3 degrees or 4 degrees during the night; and so slight are the dews falling in the town, that clothes are frequently hung out to dry during the night; the lowest degree to which the glass was ever known to fall, even just before sunrise, was to 50 degrees. With so little rain or dew, it may naturally be asked how vegetation appears so luxuriant? Outside the town, and in other parts more elevated on the island, very heavy dews fall, and, in addition, vegetation is amply provided for by the quantity of water coming from the hills, which irrigates even the lowest parts of the island. Its insular position possesses many advantages over that of a continent, and this is here increased by the height of the mountains that rise in the centre. As the equability and comparative mildness of temperature experienced at sea, are greater than that on land, so is an island such as this, in these respects superior to a continent. I said before, that the temperature can be varied by ascending the hills, but this will seldom be required during the winter months, and few invalids remain in the summer when the siroc prevails for a few days.

It moreover holds out a hope, that no other country can fulfil to the same extent, of LIFE to those remaining members of families, many of whom have been carried off one after another by hereditary phthisis. Cases of severe and protracted rheumatism may find the West Indies a preferable climate; and speaking from personal experience, I should say that asthmatic sufferers will not be totally free from attacks; but I must at the same time state, that mine were generally brought on by fatigues encountered among the hills, often at a very great elevation. No doubt many have been deceived by the promises held out of Madeira, and now rest beneath the cypress and orange grove. But who were they? Patients whose cases were so utterly *hopeless* that not a chance remained for them; and, besides the domestic inconveniences, the effects of their removal have been such that some have died upon the voyage, and others immediately after landing. I am happy to say, professional men do not now yield to the importunities of patients whose cases they look upon as irremediable, by sanctioning their removal to Madeira—an advice as cruel as it was useless.

That Madeira can *prolong life*, even under the most unfavourable circumstances, the case of the late lamented Dr Heineken is a proof. This gentleman came to the island when his case was pronounced, by some of the most acute physicians in Britain, as rapidly approaching to a fatal termination—yet, under those circumstances, he lived *nine* years in Madeira, certainly with the greatest watchfulness, until going one day to collect some fossils on the neighbouring island of Porto Santo, a storm overtook him, and he suffered all its hardships in an open boat; he returned next day to Madeira, and died that night. He requested a professional friend to examine his lungs after death, and Dr Renton, who performed the autopsy, informed me that his astonishment was, how he could have sustained life with so small a portion of respiratory apparatus; hardly a vestige of one of his lungs remaining, and the other in a condition such as could not exist in this climate. The death of this gentleman is the more to be regretted, as he had done much to investigate the climate of the island. His life was spent in the furtherance of science—he died in her cause, and bequeathed to her the most interesting legacy he or any mortal can bestow, the tenement of his immortal spirit, that his fellow men might be enlightened and benefited by a knowledge of that fatal malady which had hastened him to an early death, as it has but too many of his countrymen.

Of the salubrity of this volcanic island, Sir James Clark has well said, 'When we take into consideration the high temperature of the winter, and the mildness of the summer, together with the remarkable equality of the temperature during the day and night, as well as throughout the year, we may safely conclude that the climate of Madeira is the *finest* in the northern hemisphere.'"

For a further account of Madeira and its capital, we must refer to the work itself, and proceed to the author's account of his journey to the top of the Peak of Teneriffe, which is in one of the Canary Islands, a day or two's sail from Madeira.

EXCURSION TO THE PEAK OF TENERIFFE.

Leaving Oratava, a small sea-port in the neighbourhood of the Peak, he proceeded with his friend Mr Meiklam on horseback, with two sumpter-horses to carry provisions, and a body of guides. The departure was at 10 o'clock in the evening. After some trouble, and encountering a great depression of temperature, the cavalcade reached the "pumice-stone plain," which lies at the foot of the actual Peak. And here it was that the novelty and sublimity of the scene made an impression on the party. "There was a peculiar wildness in the hour and the scene; the night was truly propitious—not a cloud to be seen throughout the intense azure of the starry vault above us; not a breath of air stirred around us; the full moon shone forth with a splendour the most dazzling, as she sailed majestically through the broad expanse of blue, barely allowing the stars to appear as they twinkled in her path, whilst an occasional plant would now and then start up as if to challenge her borrowed radiance. Before us lay the clear and boldly defined outline of the Peak, frowning in all the grandeur of monarchy, and the great rarity of the atmosphere showed every break and unevenness that bounded our horizon; all was wrapped in the most solemn stillness; the deep silence seemed to impress each of us, not a little increased by our momentarily decreasing temperature, which had now completely silenced our melodious muleteers. The tread of the horses made not the slightest noise, as we wound our way across that weary plain, where for the first time I felt sleep come heavily upon me; indeed, I did dose for a few moments, and it was on awaking that I so forcibly perceived our loneliness.

At the end of the plain our horses were forced up a steep and rugged ascent, for about half an hour, when we arrived at the Estanza des Inglises, 'the resting-place of the English,' at half-past five o'clock, and although so closely muffled, our sufferings from cold were extreme, and our hands perfectly benumbed. This was the highest point where horses can possibly get up, and we only wondered they ascended so far. We expected to have found some sort of a resting-place here, but it was only a small enclosure, made by the fragments of some enormous rocks which nature has piled around it—and one of the most dreary spots that can be well conceived. The men set about kindling a fire with some bits of retama which they had carried up with them. The mercury in the thermometer was 36 degrees, and falling rapidly. We now had recourse to our blankets, in which we enveloped ourselves, and reclined against one of the sloping rocks on the outside of the cavern, our faces anxiously turned towards the east to watch the scene that momentarily opened upon us. In our then almost petrified condition, we looked as like as could be to a pair of Egyptian mummies laid against the rock.

Sunrise.—As soon as we had taken our place, we perceived a thin vapoury rose-coloured tint to stretch along the eastern horizon; the moon was still full up, but she had thrown the shadow of the Peak over where we stood. As we continued to gaze steadfastly on this first blush of morning, it every second increased, especially towards the centre, extending likewise in length along the horizon. This hue soon deepened to a pink, and then followed such a glorious halo of colours, in which the flower and the metal lent their most dazzling lustre, as to baffle all attempt at description; and the hasy undefined light that ushers in the day, began to chase the moonlight shadows from the plain beneath. At six o'clock, the thermometer stood at 18 degrees, the light increasing, the cold intense, and the heavens presented a scene such as we read of in the arctic regions, being formed by the resplendant glories of the aurora, but with this difference, the most brilliant colours gathered here as it were into a focus. All the east presented a lustrous semicircle, which, if you took your eyes off for a moment, seemed to increase tenfold. Between the horizon and the spot on which

* Clark.

Digitized by Google

we stood, floated a confused sea, which we at first took for the ruffled bosom of the ocean, but it turned out to be nothing more than a thin white mist. At a quarter past six, the temperature fell as low as 15 degrees, and sunrise took place a minute after; he rose very suddenly, and his whole disc was almost immediately clear of the horizon. It was a glorious sight, and cheering, after all the cold and suffering of the preceding night, to see the great centre of light and heat come up to speed us on our way. I have often tried to form to myself a comparison of sunrise and sunset, and on this occasion have settled the question in favour of the former. Our guides reminded us it was time to recommence the ascent; and to fortify ourselves on the way, we breakfasted. Every thing we had carried up with us was frozen; the eggs were perfect balls of ice; we had also brought with us a bottle of coffee, which, having contrived to heat, proved the most grateful of all our refreshments.

We left the old man to guard the horses, and again set forward. Large masses of pumice, lava, and scoriæ, continue some way farther up to the small platform of Buona Vista, where there is a plant or two of stunted retama, and here the domain of vegetation ends. From this we climbed up a steep ascent, composed of detached masses of sharp rock basalt and obsidian, some loose, and others with a coating of scoriæ; it reminded me of a magnified rough cast. Our halts, as might be expected, were frequent. At half-past seven o'clock, during one of these stoppages, I found the glass had risen to 33 degrees. From the moment the sun rose, the heat began to increase, making us throw off our extra garments, and leaving them in the ascent. With a good deal of difficulty we at last reached the *base* of the cone, which crowns the summit; the effects of the last irruption.

It is much smaller and more perpendicular than Vesuvius; it stands upon a level platform, somewhat broader than its base, and rises like the great circular chimney of a glass-house to the height of sixty feet. Here our extreme difficulties commenced, for the fatigue we had already gone through left us but little strength commensurate with the ceaseless efforts which were to be put forth, and the exertion the task demanded. The external coating is composed of loose stones, lava, pumice, and ashes, in which we sank ankle-deep, and obliged us to rest every few minutes; we had each to strike a separate line in our ascent, as the composition is so loose, that if once set in motion, large quantities would come *powdering* on the heads of the persons who have the misfortune to be beneath. Here and there a few reddish volcanic rocks jut out, and afford a resting-place; but there are other whitish looking stones that seem equally inviting, but which are nevertheless far from being hospitably inclined, as a young friend of mine wofully experienced.

We reached the summit at half-past eight o'clock, and my first impulse was to crawl to the highest pinnacle upon the wall of the crater, on the south-east point, whence it slopes on both sides towards the west. This solfatara (or half-extinguished volcano) was more active than usual this morning; large wreaths of smoke proceeding from numerous cavities and cracks in the bowl of the crater. This was smaller than we expected, not being more than a hundred feet in the widest part; shallow, and the edge very irregular, of an oval shape, having a margin of dense whitish lava.

The view that awaited us on the summit amply repaid us for all the toils of the ascent. The morning was beautifully clear, and without a cloud; the finest that had occurred since our arrival. The whole island of Teneriffe lay in the most vivid manner like a map at our feet, with its white towers, its vine-clad valleys, and pine-crowned hills.

Immediately around the Peak, the mountains form a number of concentric circles, each rising in successive heights, and having it as a centre. It is this appearance that has not inaptly gained for it the simile of a town with its fosses and bastions. These are evidently the walls of former craters, on the ruins of which the present has been reared. What a fire must have come from the first of these, which enclosed a space of so many leagues! Or, again, how grand the illumination that once burst forth from the place whereon we stood, a height of nearly 13,000 feet, and which it is calculated would serve as a beacon at a distance of 200 miles at sea on every side. The crater or circle next below us appears to rise to the height of the Estanza des Inglises, 10,000 feet.

There are a number of smaller cones scattered irregularly over the island; their red blistered summits glance in the sun like so many mole-hills; the largest is towards the west; it rises to a great height, and is the most elevated point on the island next to the Peak itself. Towards Santa Cruz, the marks of recent volcanic action become less, the stratification more perfect. There is less appearance of lava or pumice, and the basalt assumes more of the columnar form. We could perfectly distinguish the few vessels that lay opposite the port of Oratava, a direct distance of thirteen miles, while the ascent is calculated at about thirty. So clear was the atmosphere, that our friends at the port could distinguish us distinctly with the glass. They had been anxiously looking out for us, and hoped, more than expected, our accomplishing the ascent. The Archipelago of the Canaries seemed as if stretched at our feet; Grand Canary was particularly plain, being immediately beneath the sun. Palma and Gomera seemed so near that you could almost grasp them in your hand: and far away in the distance, Heiras seemed to mingle with the horizon."

The descent from this elevated spot was rapid in the extreme, and was fortunately attended with no accident to any of the party.

SKETCHES OF SUPERSTITIONS.

THE FAIRIES OF BRITISH SUPERSTITION.

Among the various supernatural beings to whom the ignorance and credulity of mankind have given an imaginary existence, the Fairies occupy a prominent place, and are especially worthy of notice. The characters of different classes of spirits have become so mingled and confounded together in the lapse of time, that it is difficult to define individual species with correctness and precision; but there is one characteristic which appears to distinguish the fairy from every other being of a similar order. Most spirits could contract and diminish their bulk at will, but the fairy alone seems to have been regarded as essentially small in size. The majority of other spirits, also, such as dwarfs, brownies, and the like, are represented as deformed creatures, whereas the fairy has almost uniformly been described as a beautiful miniature of the human being, perfect in face and form. These points of distinction, with a dress of pure green, are the principal ones which mark the personal individuality of the fairies as a supernatural race.

The origin of the fairy superstition is ascribed by most writers to the Celtic people, but the blending of the Gothic tribes with the Celts led to the admixture of many attributes of the northern spirits with those proper to the fairies. Thus, the latter race, which appears to have been intrinsically good and benevolent, has been gifted with attributes of the very opposite kind, borrowed from the Trolls and Elves of the north. In Scotland, and other countries where the Celtic traditions predominated, the fairies retained, in part, the original and better features of their character, and were usually called the Good Neighbours, or the Men of Peace; but even there, their character was deteriorated by a considerable leaven of elfin or dwarfish malignancy. This evil part of their nature caused much annoyance to mankind, and, more especially, their propensity to the kidnapping of human beings. Unchristened infants were chiefly liable to this calamity, but sometimes adult men and women were also carried off. The reason for these abductions is to be found, according to the authorities on this subject, in the necessity which the fairies lay under of paying "kane," as it was called, to the master-fiend, or, in other words, of yielding up one of their number septennially into his hands by way of tribute. They greatly preferred on such occasions to make a scapegoat of some member of the human family. They also carried off young married women to be nurses to their infants; and in Ireland, at this day, when a young woman falls a victim to puerperal disease, the country people firmly assert that she has been removed for this purpose.*

The necessity for the latter kind of kidnapping shows the fairies to have been *family* people. They are always represented as living, like mankind, in large societies, and under a monarchical form of government. The Salique law seems to have had no countenance among them, for we more often hear of fairy queens than of fairy kings, though both are frequently spoken of. The Land of Faerie was situated somewhere under ground, and there the royal fairies held their court. In their palaces all was beauty and splendour. Their pageants and processions were far more magnificent than any that eastern sovereigns could get up, or poets devise. They rode upon milk-white steeds. Their dresses, of brilliant green, were rich beyond conception; and when they mingled in the dance, or moved in procession among the shady groves, or over the verdant lawns of earth, they were entertained with delicious music, such as mortal lips or hands never could emit or produce. At the same time, most of the legendary tales on the subject represent these splendours as shadowy and unsubstantial. When the eye of a seer, or any one gifted with supernatural powers, was turned upon the fairy pageantries or banquets, the illusion vanished. Their seeming treasures of gold and silver became slate-stones, their stately halls became damp caverns, and they themselves, from being miniature models of human beauty, became personifications of fantastic ugliness. In short, the Fairy Eden was a dream—a thing of shew without substance.

This is the general account given of the fairy state, but few of the legends on the subject agree on all points. From a very early period, however, every fairy annalist concurred in giving to the king and queen of the fairies the names of Oberon and Titania. Oberon is the Elberich or Rich Elf of the Germans, and was endowed with his modern name, as well as with new attributes, by the old French romancers, who represented him as a tiny creature of surpassing loveliness, with a crown of jewels on his head, and a horn in his hand that set all who heard it to the dancing. Titania was his wife, and resembled him in general qualities. She figures, though not under this name, in the tale of Thomas the Rhymer, one of the very earliest traditions relative to the fairy people. As the details of this story have formed the basis for almost all the subsequent fairy legends of Scotland, it may be worth while to give an abstract of True Thomas's adventure. It is scarcely necessary to tell British readers that this personage was a distinguished poet and prophet, who flourished in Scotland at the latter end of the thirteenth century. He is by Sir Walter Scott supposed to have been the author of the romance of Tristrem, remarkable as the earliest specimen of English verse known to exist. It is more certain that he was proprietor of Erceldoune, in Lauderdale. His predictions long excited interest in his native country. The following adventure, which we shall give partly in prose and partly in the words of an ancient ballad, befell this famous individual. The scene is the Eildon Hills in Roxburghshire.

True Thomas lay on Huntly bank;
A ferlie spied he with his ee;
For there he saw a ladye bright,
Come riding down by the Eildon tree.
Her shirt was o' the grass-green silk,
Her mantle o' the velvet fyne;
At ilka tett o' her horse's mane
Hung fifty siller bells and nine.

The saddle of this visionary beauty's steed was of ivory inlaid with gold, and she had a quiver of arrows at her back, while one hand held her bow, and the other led three beautiful hounds in a leash.

True Thomas he pulled off his cap,
And louted low down to his knee,
"All hail, thou mighty queen of heaven,
For thy peer on earth I ne'er did see!"
"O no, O no, Thomas," she said,
"That name does not belang to me:
I am but the queen of fair Elfland,
That am hither come to visit thee."

True Thomas became bold on learning that his visitant had not the awful character of divinity, but she gave him a candid warning, that, if he kissed her lips, he became her slave. Thomas was not deterred, and the consequence was, that though the lady was immediately changed into a hideous hag, he was necessitated to follow her. They entered a cavern, and after wading through pools of blood, and amid darkness and horrors, for three days, they reached a beautiful orchard, on breathing the air of which the lady became more lovely than before. She here showed him various sights, and finally took him to a gorgeous castle, the palace of herself and her husband. She at the same time commanded True Thomas to be silent during his stay in the castle,

"For if you speak word in Elfin land,
Ye'll ne'er get back to your ain countrie."

In the castle Thomas found knights and ladies dancing unintermittingly, except when they sat down to feast on venison. The favoured mortal joined in the revelry, till, at the end of a period that seemed to him amazingly short, the queen took him aside, and told him that he had now been in the castle seven years, and that it was time for him to return home. "Know that our *kane* is paid to the fiend to-morrow," continued she; "so handsome a man as you would attract his eye, and I would not for all the world suffer you to be betrayed to such a fate." These words overcame the scruples of Thomas, and the queen soon conveyed him back to Huntly bank again. On parting, she gifted him with the "tongue that could not lie." To this he would have objected, and upon judicious grounds—

"My tongue is mine ain," True Thomas said,
"A gudely gift ye wad gie to me!
I neither dought to buy nor sell,
At fair or tryst where I may be.
I dought neither speak to prince or peer,
Nor ask of grace from fair ladye."
"Now hold thy peace," the lady said,
"For, as I say, so must it be."

The "tongue that never lied" gained Thomas, hence called *True* Thomas, great celebrity during his subsequent stay among men. According to the legend, he finally disappeared from earth, not in the way common to mortality, but in consequence of some remaining tie between him and the fairy queen. While feasting the Earl of March in his tower of Erceldoune, it was announced to Thomas that a *hart* and *hind* were seen moving slowly towards the tower, heedless of the people who looked upon them in wonderment. "This sign regardeth me," said the prophet; and, with the words, he arose from the board, joined the hart and hind, entered the woods with them, and was seen on earth no more.

The ballad of Young Tamlane, of which a perfect copy is given in the Border Minstrelsy, shows the manner in which, according to the popular belief, it was possible to restore to earth any individual who had been carried away by the fairies. Tamlane tells the lady who loved him, and to whom he appeared in the shape imposed on him by his fairy-kidnappers, that, in order

to recover him from their power, she must present herself at a certain spot on Halloween night, and that she would then and there see an unearthly band of riders pass by. He directs her to seize the rider whom she would behold mounted on a certain milk-white steed, and to pull him to the ground.

"They'll turn me in your arms, Janet,
An adder and a snake:
But haud me fast, let me not pass,
Gin ye wad be my maik.*

They'll turn me in your arms, Janet,
An adder and an ask,
They'll turn me in your arms, Janet,
A bale that burns fast.

They'll turn me in your arms, Janet,
A red-hot gad of airn;
But haud me fast, let me not pass,
For I'll do you no harm."

Janet is represented as having done her lover's bidding, and bravely endured these and other trials, for which she was rewarded by the recovery of Young Tamlane. By dipping him "first in a staund of milk, and then in a staund of water," she secured him from a repetition of his former danger. When such a trial as that of fair Janet is made, the heart must not fail, else is the kidnapped person lost for ever. "A farmer in Lothian (says Dr Leyden), who had lost his wife, set out on Halloween, and, in the midst of a plot of furze, waited impatiently for the procession of the fairies. At the ringing of the fairy bridles, however, and the wild unearthly sound which accompanied the cavalcade, his heart failed him, and he suffered the ghostly train to pass by without interruption. When the last had rode past, the whole troop vanished, with loud shouts of laughter and exultation, among which he plainly discovered the voice of his wife, lamenting that he had lost her for ever." The same writer mentions a similar but *real* incident which took place at North Berwick within the memory of the last generation. A woman died in convulsion fits, when alone in her husband's house. The distortion of her features, though only a consequence of her disease, led the ignorant neighbours to believe that she had been spirited away by the fairies. The widowed husband soon afterwards found it necessary, for the comfort of his family, that he should marry again, and had fixed upon his new partner, when, one night, his late wife appeared to him in a dream, and commanded him, if he loved her, to cause her body to be dug up, and certain prayers to be said over it; after which, she assured him, her corpse would start up, and, if pursued by a swift runner, might be caught and restored to his arms. [This was the approved formula for recovering a buried person from the fairies.] Harassed by his dream, the widower went to the clergyman of the parish, and applied for counsel. Being a man of sense, the minister advised the widower to have the banns immediately proclaimed for his second marriage. But ere this matter was completed, the widower had a second dream, in which his late spouse again appeared, and loaded him with reproaches for disobeying her. Again he went to the pastor, who "fell upon an admirable expedient to console him. This was nothing less than dispensing with the further solemnities of banns, and marrying him, without an hour's delay, to the young woman to whom he was affianced, after which no spectre again disturbed his repose."

Unchristened children, it has been mentioned, were peculiarly liable to be carried off by the fairies, who sometimes left little changelings, of their own blood, in place of the infants of mortal kind. Ben Jonson, in his Sad Shepherd, makes the tending and nurture of human changelings to be one of the favourite elfin employments.

"There, in the stocks of trees, white fays do dwell,
And span-long elves, that dance about a pool,
With each a little changeling in their arms."

Various charms were used in Scotland for the restoration of stolen children. The most efficacious was believed to be the *roasting* of the supposititious child upon live embers, when it was understood that the false infant would disappear, and the true one be left in its place. It is to be hoped, that this cruel and monstrous practice was seldom followed. The possession of what are called *toadstones* was also held to be an efficient preservative against the abduction of children by the fairies. In Waldron's Account of the Isle of Man, we find various stories of children kidnapped by the fairies. In one case, where a woman had given birth to a child, her attendants were enticed from the house by a cry of "Fire!" and while they were out, the child was taken from the helpless mother by an invisible hand; but the sudden re-entry of some of the gossips compelled the fairies to drop the child, and it was found sprawling on the threshold. The fairies, who seemed to have taken a particular liking to this woman's offspring, tried to carry off her second child in the same way, but failed again. On a third trial, they succeeded, and left behind them a changeling, a withered and deformed creature, which neither spoke nor walked during an existence of nine years, and ate nothing but a few herbs. It is to be feared that this changeling-superstition must have been the cause of much deplorable cruelty. That very member of a family, who from natural misfortunes and defects required the kindliest tending, would but too often be neglected and wretchedly misused, on the plea of its being an alien. We may smile at many of the credulous fancies respecting the fairies, but there are in this order of superstitions, as in almost all others, some points which strongly exhibit to us the baleful effects inevitably attendant upon ignorance of every kind.

To sleep on a fairy ring, as certain well-known circles of green grass are called, was sure to excite the anger of the elfin race, or at least to expose the slumberer to their malicious trickeries. In the last century, it is said, a poor man, having fallen asleep on a fairy ring on Peatlaw, a hill in Selkirkshire, was amazed to find himself, on awakening, in the midst of a populous city. His coat was left on Peatlaw; and his bonnet, which had dropped off in the course of his mysterious transportation through the air, was found on the steeple of the church of Lanark. The poor man was totally bewildered by his situation, and would have been in a serious dilemma, had he not met with a carrier from his native place, who told him that he was in Glasgow, and who conveyed him homewards in a much less expeditious way than that by which he had left Peatlaw. Dr Leyden remarks very meaningly, that his abduction was "ascribed to the fairies by all who did not reflect that a man may have private reasons for leaving his own country, and for disguising his having intentionally done so."

A tradition, akin to the preceding one, existed in the seventeenth century, concerning an ancestor of the baronial family of Duffus, who, while walking in the fields, was carried away, and was found next day at Paris, in the wine-cellar of the French king, with a silver cup in his hand. Being seized and brought into the royal presence, he told the monarch, that, when in the fields in his native country, he had heard a whirlwind-like noise above him, with many cries of "Horse and Hattock," and that he also cried "Horse and Hattock," when immediately he was caught up into the air by fairies, and soon found himself in a wine-cellar, where he drank heartily, and fell asleep. It is said that the king gave him the cup and dismissed him. If there be any foundation for this story, one cannot but admire the cleverness of the rascal (possibly an English resident in Paris), who thus got rid of the consequences of what was probably only a drunken frolic.

As fairies lived underground, of course the operations of the mortals above sometimes interfered with the comforts of the subterranean residents. A Gallovidian gentleman, Sir Godfrey M'Culloch by name, was once accosted, near his own house, by a little old man dressed in green, and mounted on a white palfrey, who told the knight that he came to complain of a drain or sewer which had been so formed as to "empty itself directly into his *chamber of dais*." Sir Godfrey was much amazed, but, suspecting the true character of his visitor, told him that the evil should be remedied. The knight kept his word. Many years afterwards, Sir Godfrey killed a man in a duel. He was tried, and would have been executed, had not the old man on the white palfrey appeared on the scaffold and carried him off. The Gallovidian knight was never seen again.

Numberless stories of a similar kind have been told relative to the intercourse of the fairies with mankind. Some of the poor creatures arraigned in Scotland in past times for witchcraft, admitted having had correspondence with the fairies. There can be little doubt that these wretched beings, whom the *torture* forced into the confession of *some* kind or other of supernatural traffic, were induced to admit an association with fairies, in the hope that this would be looked upon as less sinful than a league with the enemy of mankind. The trials of Bessie Dunlop and Alison Pearson, in the years 1576 and 1588, illustrate this statement. Bessie Dunlop avowed that her familiar was one Thome Reid, the ghost of a soldier slain at Pinkie in 1547, and who after his death seems to have become an inmate of Elfland. She related that this Thome Reid, who appeared frequently to her in the likeness of an elderly man, grey-coated and grey-bearded, wished her to go with him to the fairy country, and gave her herbs to cure various diseases. He even once brought to her the queen of the fairies, who, to the confusion of poetry, was a fat woman, fond of ale, and, in short, most unlike the Titania of romance. Alison Pearson also admitted her familiarity with the fairies, from whom she frequently received herbs for the cure of disease. It is remarkable that Patrick Adamson, an able scholar and divine, who was created archbishop of St Andrews by James VI., actually took the medicines prescribed by this poor woman, in the hope that they would transfer an illness with which he was seized to the body of one of his horses. This feat, it was believed, was accomplished by the prescription. The unfortunate women who confessed these things were deceived in the expectation which led to the act. They could not so save themselves. They were both convicted, and perished at the stake.

It would be improper to conclude this paper without an allusion to the fancies of the poets on the subject of the fairies. Shakspeare stands pre-eminent in this department. His Midsummer Night's Dream is a poem of exquisite beauty, and one corresponding in every respect with the delicately fanciful nature of the subject. In Romeo and Juliet, he has also described an important fairy, Queen Mab, who has almost dethroned Titania of late years. Mr Tennant's Anster Fair has been of great avail to the fame of Mab. Whoever chooses to consult Drayton and the poets mentioned, will have the pleasure of observing and enjoying the exercise of poetical fancy of the highest order on the subject of the fairies. We must content ourselves with this reference.

The superstitions now described are not yet extinct in the British islands. In Ireland, the Scottish Highlands, and Wales, in particular, the fairies are yet objects of general belief. Education has not yet shed its enlightening influence there, and by education alone can the darkness of superstition be dispelled. This is almost a truism, for superstition and ignorance are nothing else than equivalent terms. The spirit is abroad, however, which will extinguish this remnant of barbarism, and it is consoling to think so, for the ills that have flowed from this source are numberless.

* Maik—match, partner.

THE SONG OF NIGHT.

I come to thee, O Earth!
With all my gifts:—for every flower sweet dew,
In bell, and urn, and chalice, to renew
The glory of its birth.

Not one which glimmering lies
Far amidst folding hills or forest leaves,
But, through its veins of beauty, so receives
A spirit of fresh dyes.

I come with every star:
Making thy streams, that on their noon-day track
Gave but the moss, the reed, the lily back,
Mirrors of Worlds afar.

I come with peace; I shed
Sleep through thy wood-walks o'er the honey-bee,
The lark's triumphant voice, the fawn's young glee,
The hyacinth's meek head.

On my own heart I lay
The weary babe, and, sealing with a breath
Its eyes of love, send fairy dreams, beneath
The shadowing lids to play.

I come with mightier things!
Who calls me silent? I have many tones—
The dark skies thrill with low mysterious moans
Borne on my sweeping wings.

I waft them not alone
From the deep organ of the forest shades,
Or buried streams, unheard amidst their glades,
Till the bright day is done.

But in the human breast
A thousand still small voices I awake,
Strong in their sweetness from the soul to shake
The mantle of its rest.

I bring them from the past:
From true hearts broken, gentle spirits torn,
From crushed affections, which, though long o'erborne,
Make their tone heard at last.

I bring them from the tomb:
O'er the sad couch of late repentant love,
They pass—though low as murmurs of a dove
Like trumpets through the gloom.

I come with all my train:
Who calls me lonely?—Hosts around me tread.
The intensely Bright, the Beautiful, the Dread—
Phantoms of heart and brain!

Looks from departed eyes,
These are my lightnings!—filled with anguish vain
Or tenderness too piercing to sustain,
They smite with agonies.

I, that with soft control,
Shut the dim violet, hush the woodland song,
I am the Avenging One!—the Armed, the Strong,
The Searcher of the soul!

I, that shower dewy light
Through slumbering leaves, bring storms!—the tempest-birth
Of Memory, Thought, Remorse:—be holy, Earth!—
I am the solemn Night!

—*Mrs Hemans's Poems.*

ANECDOTE OF A DOG.

There is a Scotchwoman who travels about our neighbourhood with a basket, of the name of Jane Stirzaker, or Jenny Tysick, as she is commonly called. She owns a small dog that generally accompanies her. A few years ago, she had a young child which the dog was very fond of, being in the habit of lying with it in the cradle. But it so happened that the child took an illness and died. Jenny was at that time living at Hawkshead, but her infant was buried at Staveley. From the mother's distress of mind at the time, little notice was taken of the dog; but soon after the funeral it was found to be missing, nor could any tidings be heard of it for a fortnight. But the poor mother passing through Staveley, thought she would visit the churchyard where the infant was interred; when, behold! there was the little dog lying in a deep hole, which it had scratched over the child's grave! It was in a most emaciated state from hunger and privation. It had been seen occasionally for some days in the streets of that village.—*Kendal Mercury.*

Scarcely a post arrives which does not bring us a number of letters from unknown individuals, craving information or putting questions on subjects affecting their own peculiar interests and prospects. Although very desirous to be as useful as we can in our humble sphere, it is utterly impossible for us to attend to the requests of these numerous epistolary correspondents. To do so in a satisfactory manner, would occupy a large portion of every day, and therefore greatly impede us in the performance of duties which are absolutely essential to the well-being of the present sheet. Some writers, more considerate than others, request us to answer their queries in the JOURNAL; but this is a thing which it would be highly imprudent in us to do. The pages of the JOURNAL belong to the entire body of readers—they contain matter *designed for all*; and we should consider it a dereliction of our duty as editors, to occupy the space of a single line with information applicable to only *one* out of the large mass of individuals whom we have the pleasure weekly to address. We make this general announcement, therefore, of our inability to comply with the requests of our numerous correspondents, and express a hope that the above reasons will be accepted as an explanation of our silence.

NUMBER 430. SATURDAY, APRIL 25, 1840. PRICE THREE HALFPENCE.

VISIT TO AN ESTABLISHMENT FOR PRESERVING FRESH MEAT.

We lately had an opportunity of visiting an establishment of this nature—one of the very few which as yet exist in these islands—and were so much struck by what we saw, and by a consideration of all the connected circumstances, that we have thought it might be worth while to submit the whole to the public.

The establishment visited by us was that of John Gillon and Company in Leith, which stands almost alone in Scotland; there being only three on a limited scale in the provinces; while in England there are, to the best of our knowledge, only two, and in Ireland two or three. The Messrs Gillon and Company's establishment was set on foot so lately as August 1838, and already it is, in mercantile language, a great concern, the individuals employed being upwards of a hundred, while the capital must be many thousand pounds. It is distinguished by several improvements, which make it worthy of particular notice.

It is perhaps necessary for the sake of most readers to explain that the object is to preserve fresh food, animal and vegetable, in air-tight tin cases, so that it may be sent to any part of the world, and used at any distance of time from that when it was prepared. Those who have been accustomed to think of only the ordinary and well-known ways of preserving meat, by salt (or some corresponding foreign body), or by extreme drying, will be taken somewhat by surprise when we advert to a method which dispenses with those expedients, so sure to be injurious to the meat; and proceeds upon the simple expedient of a complete seclusion of the substances from contact with the atmospheric air. This was a principle totally unknown till some French chemists, amidst the exigencies of the Revolution, discovered it; since which time, the means for effecting it have been greatly improved, so that the trade of preserving cooked food, and sending it abroad, is now pursued to an immense extent in France. It is a scientific discovery worthy of a nation which, more than any other, seems to aim at rendering science directly subservient to the increase of human happiness.

A large irregular pile of building, situated in a court entered from Mitchell Street in Leith, is the scene of Messrs Gillon and Company's operations. Certain apartments serve for stores of meat, fowls, and other articles of provision; and there is one devoted solely to the business of cleaning neats' feet, of which many hundred sets are used weekly. The whole of the uppermost floor of a large portion of the building is used as a place of cookery, the steam and fumes flying off through ventilators in the roof. Along one side are ranged nine boilers upon furnaces, of 100 gallons contents each, in some of which neats' feet are boiled for the purpose of obtaining the gelatinous product, a large element in soups of various kinds; while in others are boiled knuckles of beef, and those other inferior parts of meat from which cooks extract what they call *stock*, the basis of all soups. Each of the boilers is fitted with an inside case, pierced like a cullender, and in this the meat is boiled, so that it never can adhere or burn during its preparation. The liquor from the feet and the liquor from the meat are received into troughs, where they are cooled. There is in both cases an oily scum from the boilers. From the neats' feet comes a whitish oil, which is sold for greasing the machinery used in silk factories. From the inferior parts of meat is derived an oil of superior quality, resembling butter, which is very useful as an element for the preparation of barley broth and other messes. The last is sold at fivepence a pound, and is at that price cheap and economical. The poor people are so sensible of its value, that much more is called for than can be supplied, and sometimes they will come for it from a great distance. The soups, of which nearly twenty kinds are exported by Messrs Gillon and Company, from real turtle and mulligatawny down to ox-tail, are prepared in the usual way from the stock and other proper materials, but on such a scale of concentration, that, when used, it is necessary to add water equal to half the quantity. They are poured into round canisters, in pints, quarts, and larger quantities, and then sealed up in a manner which will afterwards be described. Several peculiar Scottish soups are prepared at Messrs Gillon and Company's establishment, chiefly for the sake of Scotchmen resident abroad, particularly those in the East Indies. Amongst these are sheep's-head broth, hotch-potch and cocky-leeky; the last a strong soup prepared from a cock, which is spoken of by King James in "Nigel" as an excellent article. The haggis, "great chieftain of the pudding race," is another peculiar dish prepared by the Company. It is, as is generally known, composed of minced tripe and liver mixed with suet, oat-meal, and spice, and boiled in the stomach of a sheep. One of these savoury messes, which are only too good for those who affect to loathe or despise them, was in January last eaten at the celebration of Burns's birth-day in Dumfries, after having made a voyage to India and back. Burns's own haggis, if, instead of being eaten fifty years ago, it had been subjected to the same process, would have been in a state equally fit to regale the company.

In the same upper floor which contains the boilers, we saw a host of women engaged in preparing various dishes, fish, flesh, and fowl. Many were busied in cleaning and cutting vegetables, as parsnips, beet-root, turnips, and carrots, the two last being amongst the largest articles of export to the East Indies, where, it seems, they do not grow. Two women, whose fate we could not help pitying, though perhaps without just cause, had a whole day's work before them in the peeling and cutting of onions—sage and onions with gravy being much in demand at sea and abroad, for sauce to ducks and pork. Four men were busy cutting away flesh from the bones of mutton and beef, to be arranged in roasts, of from two to six pounds, a whole cloud of which we saw spitted upon a novel-looking jack, of ingenious construction, before a large fire. These little roasts are put into the ordinary cases, which are then filled up to near the top with gravy. We may vainly attempt to imagine what a treat such a thing must be to a little cabin company dining in the middle of the Pacific, or to an officers' mess posted in Affghanistan, in whose ears, perhaps, the "Glorious Roast Beef of Old England" is at the same time sounding. In another part of the room we saw great quantities of minced collops in preparation. Such, if we recollect rightly, were all the objects engaging attention for that day. If we had returned on another, we should of course have found the people at work on other dishes, there being about ninety in all prepared in the establishment. It would be tedious to enumerate these; but we may mention, that, amongst the number, are corned and seasoned beef, veal in seven different forms, roasted and jugged hare, cow-heel and potted head, turbot, haddocks, salmon, and other native fish, together with oysters and lobsters, both for separate eating, and to be used as sauce. We may add, that we have tasted some of the oyster soup, as well as the separate oysters, after they had been to Calcutta and back, and found them both excellent. The king of Prussia is a regular customer of Messrs Gillon and Company for these two articles and turtle soup. We must not omit cream, by which tea might be sweetened in China itself, and a certain kind of concentrated gravy in very small packages, designed to furnish an invalid in any part of the world with the soothing and nourishing dish styled amongst us beef-tea. Neither perhaps ought we to overlook a special article entitled *Meg Merrilies Soup*, a composition from game of all conceivable kinds, designed to imitate that with which the gipsy of Derncleuch regaled the terror-chilled soul of Dominie Sampson.

We were next conducted to the workshops where the cases are made, a part of the establishment by no means the least important, for it employs thirty tin-plate workers, every three of whom have a boy under them; that is, forty persons in all. Some cases are made in a square trough-like form, with a lid closing the top, being designed to hold herrings laid at length. But the shape mostly used is that of a round canister, and of this shape there are cases of all sizes, from that of an ordinary snuff-box to a boy's hat. Lids are prepared for these cases, with a hole of an inch or half inch diameter in the centre, and these lids are soldered on after the viands have been put in. There then remains the hole in the centre, upon which, at an after stage of the process, a suitable piece of tin like a button is soldered on, thus closing up the whole, but still leaving a vacancy within filled with common atmospheric air, which, if suffered to remain, would taint the food, and defeat the whole aim of the persons concerned. With respect to the subsequent process for extracting the air, we are not at liberty to enter into particulars, a mercantile interest being concerned in it. When the cases have been exhausted of air and finally closed, they are japanned, for their preservation from damp, labelled, and tested as to their soundness, the ultimate proof of which is their exhibiting, if quite tight, a dimple or slight collapse in some part of their surface, generally in the bottom. Being now finished, they are stored in binns along the sides of a great wareroom, exactly like bottled wine in a merchant's cellar; and are thence taken by the warehousemen, and packed up in barrels for exportation. It may be added, that, when the meat is to be used, the case can be cut up with a seaman's knife, or, more conveniently, with what is called a *lever knife*, an implement invented by Mr Gillon, and of which specimens are sent abroad with almost every package of goods. This knife consists of a handle, no more than sufficient to fill a single hand, with a small but firm hook projecting from it, somewhat in the form of the blade of a reaper's hook, and with the same degree of sharpness, but with a close instead of a sweeping curve, the whole being of such a size that it might be carried in a waistcoat pocket. The point being inserted through the tin, the operator is enabled to cut up the case with ease, by using the fore end of the handle as a fulcrum, on which to rest the instrument, while the handle is alternately and quickly raised and depressed.

The prices of the food thus prepared are not high, considering that bones and all other refuse are excluded, that it is cooked, often in a concentrated fashion, and that there is in every instance a case varying in cost to the preparer from twopence to a shilling. We have been informed, that, in older establishments, higher prices have hitherto been exacted, and the general use of prepared fresh meat at sea and in distant countries thereby prevented. This is short-sighted policy, for moderate prices would secure a greater amount of business, and yield in the long-run greater profits. Messrs Gillon and Company have proceeded upon the more enlightened principle, and, while taking the utmost care with regard to the quality of their goods, have contented themselves with moderate profits.

Digitized by Google

The consequence is, that, while the use of preserved meat is not now necessarily confined to invalids and persons of luxurious habits, as in a great measure it was formerly, they have already obtained an amount of business much exceeding that of several concerns which have been a good many years in operation. On the day when we were there, an order had arrived from Liverpool for nearly five thousand cases of different kinds of animal and vegetable food, the aggregate price of which would probably be from four to five hundred pounds. Messrs Gillon and Company usually prepare from 800 to 1000 cases per day; and as yet they have never been able to accumulate a considerable stock of any one article. Not long ago they had a contract for no less than eight tons weight of meat and vegetables (including eight thousand little cases of concentrated gravy) with the Lords of the Admiralty; the whole being for Captain Ross's antarctic expedition, and every article warranted to keep sound for three years. It may be added, that, in the mercantile service, soup and bouilli and some other antiscorbutic soups are now given by many owners to their crews, under the conviction that they are cheaper, as well as more wholesome, than prime mess beef.

Our visit was upon the whole a most gratifying one, though many of the sights presented were not of the kind which in ordinary circumstances are beheld with pleasure. We regarded the establishment as in itself a remarkable result of enterprise and ingenuity, seeing that Mr Gillon might almost be said to have struck out the trade for himself, had bethought him of many signal improvements in it, and had found business and prosperity where many men in his circumstances would have languished in comparative indolence and obscurity. But the establishment appeared in a far more interesting light when we considered it as a practical result of science, holding forth an augury of great reductions in the existing amount of human discomfort and misery. At present, excepting in the small extent to which this mode of preserving meat has as yet operated, the fate of all who sojourn on the face of the deep, and of many other individuals placed in peculiar circumstances, is to diet upon salted meat alone, a form in which it is much less agreeable to taste, much less digestible, and apt to be productive of disease, as was signally shown in the condition of the British navy fifty years ago. Of what great importance must it be to such persons that they should be able, in the longest voyages, to feed more or less upon fresh provisions! Looking only to the feelings which must possess the many wanderers in remote climes when they eat what they have been accustomed to partake of amongst their friends at home, and what therefore cannot come before them without awakening the most tender memories and associations, we must see a great importance in the preparation of preserved fresh food. Other utilities in the discovery might be pointed out, as, for instance, its enabling nations to send to each other, in a fresh and sound state, the various animal and vegetable products of their respective countries. It is obvious that, if the cases only be made thoroughly exclusive of the atmosphere, we might have the turtle of Cuba fresh, instead of their being starved by a long voyage, and might, in exchange, send out the mutton of the Scottish Highlands and the salmon of our rivers, in all their original delicacy of flavour. At present, the price of an oyster in the market of St Petersburg is exactly a ruble, or tenpence, there being no such creature in the seas of that part of the world. Not long ago, while as yet Edinburgh could boast that she *had* oysters, the same money bought a *long hundred*, or 120. There can of course be no need for the Russians paying so exorbitant a price for the article, if it can be readily sent to them from a country where it is to be had at such a low rate. The absolute certainty of preservation by exclusion of the air, is the one little point on which such results depend; and that this is easily practicable, and that the food will accordingly be preserved in all climates, and for an indefinite length of time, has been satisfactorily proved. Last year, some turtle was eaten in Dublin, which had been kept in a similar way for *twenty years!* It would have been not less eatable in the thirtieth century, if the case could have held good so long; for with the great principles of nature it may well be said that a day is as a thousand years, and a thousand years as one day. Perhaps the principle might be carried out to even more wonderful results. It is well known that fishes and reptiles, if congelated, or frozen up in a mass of ice, may be revived at any distance of time by merely thawing them. Our readers will further remember some speculations which appeared in a former number of the present work, respecting the instances of such creatures found alive in masses of solid rock, our theory being that they must have been embedded while in a frozen state, and, the air being excluded, had been thereby prevented from reviving when the temperature was altered. If these views be sound, the salmon of the Tay might quite well be packed up alive, but frozen, and sent in air-exhausted cases to Hindustan, where, on the cases being opened, we venture to predict that the animals would be found as hearty as when they made their first visit to the ocean.

A TALE OF TAHITI.

In the island of Tahiti, one of the loveliest of the many gems that stud the mighty Pacific, the earliest messengers of the Christian faith found themselves altogether unable to accomplish the objects for which they had left their homes, and sacrificed all the ties of friendship and comforts of civilisation. They could not uproot the idolatrous delusions, watered by the blood of countless human sacrifices, which time had so firmly planted in this oasis of the ocean, nor break the hold which designing priests had gained over the minds of their countrymen—a race of people naturally quick in intellect, and well disposed, but simple, ignorant, and credulous. The first Tahitian missionaries were compelled to leave the island, partly from despair of doing good, and partly to ensure the safety of their lives. But their labours had not been utterly thrown away. After their departure for neighbouring islands of better promise, Tahiti fell into a state of strife and disorder, and several chiefs, who had paid particular attention to the missionaries, were led to think with regret of their peaceful and virtuous lessons. An old chief named Utami, above all others, became impressed with such feelings, and longed for the return of the teachers of the new and mild religion. His wishes were ultimately gratified.

During the civil broils alluded to, the Tahitian king had been banished to the neighbouring island of Moorea. Adversity made him, like Utami, regret the loss of the men of peace, and he got several of them recalled to Moorea. With them came M. de Freron, a French Protestant, whom early misfortunes had deprived of every social tie, but whose benevolent nature, far from being thereby rendered morose, had only become imbued with a double portion of philanthropy. His saddened spirit sought relief in visiting climes far remote from the scenes of his former happiness; and having himself found consolation in religion, he devoted himself to the task of pointing out that great source of comfort to others who knew it not. For this purpose he had visited Tahiti with the South Sea missionaries, and with them he had been forced to leave it, but not until he had formed various friendships there, and particularly with Utami and his family, the latter consisting of a daughter, two sons, and an adopted nephew of the old chief. On being recalled to Moorea, M. de Freron took the earliest opportunity of crossing to Tahiti, to see these dear friends, to whom he had been a cherished counsellor and guide.

M. de Freron was landed at the beautiful village of Matavia, whence, in the evening, he walked alone towards the inland dwelling of Utami. Around him, on his route, lay a most lovely landscape, in which the cocoa-tree, with its graceful head, the bread-fruit and plum-trees, with their respective garbs of dark and light green, and the plantain, conspicuous for its gigantic leaves, held a prominent place. At length, the abode of the chief, composed of upright pillars of wood, and thatched with pandanus leaves, like other native huts, came within the traveller's sight; and he recognised the creepers upon the walls, and the hedges of prickly pear, which he had instructed and helped the family to plant, making the place far more beautiful than common native dwellings. All was silence as M. de Freron approached, and he entered, with his wonted salutation of "Peace be to my friends who dwell here!" Looking forward to the upper end of the long apartment, he then saw his old friend sitting on the ground, with his daughter, and his adopted son. As M. de Freron advanced a few steps farther, he comprehended, at one glance, by the listless folding of their hands, their bent heads, and eyes fixed on the ground with looks of profound grief, that they were deploring some heavy misfortune. But he had barely time to make this observation, when the girl started from the mat on which she was sitting at the feet of her father, and came forward to meet him. The form of Amaita was of the most graceful and symmetrical proportions, and her garments of snow-white native cloth floated round her in light drapery, while, contrary to her usual custom, her long black tresses were hanging round her shoulders, instead of being gathered and fastened on the top of her head. The paleness of her clear and slightly olive complexion, the mournful expression of her features, and the tears that were dimming her bright black eyes, showed M. de Freron, as she came towards him under the light of the candlenuts, that he had not been mistaken, and that some recent calamity was pressing heavily on her heart.

"Our good friend has returned," she exclaimed in eager accents; "a messenger from the true God has come to console my father."

"Welcome, welcome to the wisher of peace!" cried the old chief, "but peace can dwell no longer here, for I no longer behold the light of the sun, and a darkness yet greater than the want of sight hath fallen upon me. He who was to me brighter than the morning sky, my son—my Fetia-ura (red star)—hath set in blood, and *my race is doomed.*" Full well did their auditor know the horrible meaning of these latter words, which seemed to curdle his blood as they were pronounced.

"Trust in the God of the Christians, my father," said Amaita, as she pressed the old man's withered hands to her forehead, to her cheeks, and to her lips, while her bright tears fell rapidly upon them.

"Yes, my father," said Paitia, his adopted child, "this good teacher will instruct you how to pray, and the great God will listen, for he is merciful, and unlike our gods, whose cruel priests take delight in our blood and our tears." But the old man's grief was too strongly mingled with a thirst for vengeance so natural to the heart of a savage, to admit of his reaping any consolation from the mild doctrines of meekness and resignation which he knew would be inculcated by his visitor, who, foreseeing that it would require some time to calm his wounded and exasperated spirit, sought for the present merely an explanation of what had happened. The tale was soon told by Paitia, who beckoning to M. de Freron to leave the hut with him, was no sooner out of the old chief's hearing than he commenced his short narrative.

The respect, it appears, in which the old chief held many of the truths which emanated from the religion brought by the missionaries, though they had not shed on his darkened path the steady light of the sun, had like bright meteors served partially to illumine his way, and in their light he had renounced many of *his* former errors. Among those, was his habitual regard for a singular society of men called Areois, whose pretensions to the respect of their countrymen arose from the alleged divinity of their origin, and their close connection with the priests. These Areois were a multitudinous set of idle and privileged profligates, whose lives were spent in journeying from place to place, and in performing pantomimes and dances, and in encouraging the most degrading vices, which they represented as being religious rites particularly pleasing to the gods. Whenever these people appeared in a district, it was the duty of the chiefs belonging to it to provide them with sumptuous entertainments, and for this purpose to lay such heavy contributions on the people around them, that famine and misery were the inevitable consequences of their visit. The Areois had come near to the dwelling of Utami, and had demanded the usual boons. The old chief repulsed them, and the consequence was an outcry of so violent a nature as alarmed the whole neighbourhood. Still Utami persisted in his contempt of their mad and wicked claims, and the Areois and the priests, in a state of savage irritation, came to his house to punish him. One of them fired off a gun close to his face, and, though loaded only with powder, it destroyed the poor old man's sight. Nor did the vengeance of the Areois rest here. A few days afterwards Utami's eldest son disappeared, and as the Areois were known to have offered up a human sacrifice at the time, no doubt existed as to the victim. This was a catastrophe the more terrible, as it was the well-known custom of this fanatical band to consider a family, from which they thus took *one* victim, as "doomed," and to go on with their revenge until they had cut off *every male* of the house. Fully aware of this, Utami wished his family to fly from Tahiti, but this they could not and would not do, because he would not go with them. "I am blind—I am useless—I am *doomed*," *said he*; "I will stay." The noble Amaita offered to stay with her father, and entreated that her younger brother, and her father's adopted son Paitia, should fly, but the boy alone was prevailed upon to go. He escaped by night, and in secret, to Moorea. Paitia, to whom Amaita was far dearer than any object of mere relationship, would not leave Utami and his daughter. Such was the account given to M. de Freron of the condition of the chief and his family.

When M. de Freron re-entered the house, he found that Amaita had spread out for him, on plantain leaves, a repast of fruit at once delicious and refreshing. This finished, the good stranger entered into converse with the unhappy family, who hourly looked for the second coming of the Areois to take off the old man as their next victim. That night, and many successive days, M. de Freron passed in the house of Utami, being only absent occasionally at Matavia, engaged in the task of teaching all who would listen to him. But it was when beside the old chief, his adopted son and his daughter, that M. de Freron felt most deeply interested. The two latter persons loved each other with a love simple and pure as their own hearts. They had no need of lovers' vows; they understood what passed in the minds of one another as if by intuition. The tears of the one had never fallen without those of the other; the smile came at one moment to the lips of each. Paitia had but one wish—to give pleasure to Amaita. For this he had climbed the loftiest rocks, and had often travelled many leagues alone in his frail canoe, to bring up pearls for her from the bottom of the deep. These gems Amaita prised, not because of their intrinsic value, but because they had been sought by him for her, and won at the price of toil and danger. The sight of this pair's affection was delightful to M. de Freron, as it broke out and revealed itself even amid agonising suspense and distress. He had the pleasure, too, of noticing, that at each succeeding visit, his arguments appeared to impress the old man more strongly, and to render him less and less averse to the idea of personal flight from Tahiti.

Digitized by Google

Encouraged by this change, M. de Freron went back, on one occasion, to Matavia, with the purpose of craving the help of some young men who were favourable to Christianity, and whom he could trust, to procure a canoe, in which with their assistance he hoped to convey the old man, with Amaita and her lover, to Moorea, and determined, if Utami still persisted in his obstinate refusal to accompany them, to brave his anger, and by overpowering him and forcing him into it, to save him and his family from destruction.

In this plan he was hastened by a visit which he received late in the day from one of the priests of Oro or Orene, the principal deity of the natives, who had become a secret convert, and who informed him that a human sacrifice was to be offered on that very night, and that either the old chief or his adopted son was to be the victim. Meantime, we shall return to Amaita, who on the evening of the same day received the like information from a young man usually employed about the principal marae or temple. This lad had been saved from the jaws of a shark by her deceased brother, and a strong sense of gratitude caused him to seek Amaita, and promise that, by means he dared not divulge, he would make himself acquainted with the time of the next sacrifice, and inform her of it. This promise his vigilance had enabled him to perform, but too late to be of material service. No sooner, however, did Amaita become acquainted with this astounding intelligence, than she prepared to execute a desperate resolution previously formed in dread and in silence. M. de Freron, who had made known his schemes to Amaita respecting her father, had not been deceived in believing that a change had passed over the mind of Utami, and the latter now granted to her vehement entreaties and touching persuasions a promise that he would no longer oppose their plan for his escape. This promise she caused him to repeat in the most solemn manner; and, satisfied that he would keep it under whatever circumstances, she left him to seek her lover. Him she urged to set off without delay for Matavia, to inform M. de Freron of her having prevailed on her father to depart, and to aid in bringing round the canoe in which they were to make their voyage, that he might direct in mooring it at the mouth of a small river, in a situation where it could be effectually concealed till her father reached it.

But though Paitia agreed with her that M. de Freron should be immediately made acquainted with her father's change of purpose, he refused to be himself the messenger, and proposed sending a person he could trust, violently opposing the idea of leaving her. "No, no!" he said, "I cannot go from you; something will happen to frighten or to hurt you in my absence—tell me not to leave you—I will not go!" Much perplexed by this opposition to her wishes, and dreading every moment that he might penetrate her purpose, though profoundly ignorant of the information she had just received, she used every entreaty to persuade him; and finding them inadequate, she at length reproached him with want of true regard to her, while each word she uttered smote upon her own conscience and upon the tenderest sensibilities of her nature. These reproaches he could not bear from her who was infinitely dearer than all besides; and with a foreboding which foretold some dire misfortune to her he loved, he rapidly set off for Matavia, when the evening was far spent. Again did she ply her father with tears and caresses, till his reiterated assurances of keeping his promise to leave Tahiti rendered her completely easy on that subject. Thus, having satisfied herself that all had so far been managed to her wish, she addressed herself to the task of preparing for that fearful fate which she had long contemplated, as the only means by which it might be in her power to serve her father and her lover. The escape of her youngest brother was kept a secret, and she had still some of his clothes. The complexion of the males of Tahiti, even in youth, is much darker than that of the females. She had provided herself with the juice of a plant which dyed her skin of the masculine hue. She was one year older than her absent brother; and when she had put on his clothes and added the tipirta, or upper garment, having an aperture through which the head is passed, and which covered the shoulders, breast, and back, she could scarcely have been distinguished from him even by the searching light of day, and therefore felt secure in the deception, for she knew that her murderers would not arrive till midnight.

And this dreadful hour had nearly come, when, thus equipped, she turned on her old blind father one long last look of eternal farewell, and walked forth, under the overspreading trees, to the opposite verge of the open meadow, now illumined by the splendour of a full moon, and near to that valley through which it was necessary that the expected emissaries of the priest should pass. And here she waited, that she might be ready to present herself when they appeared; and while she there leaned her back against a tree, and stood in all the majesty of true heroism and self-devotion of woman's love, whether she sent upwards her earnest gaze towards the starry worlds rolling above her in the clear vault of heaven, or clasped her hands upon her breast, and bent her head in the act of fervent prayer to the God of the Christians, the fearful and overawing thoughts of death mingled strangely and appallingly with those of tenderness and triumph. "They may kill my body," she said, "but they cannot touch my spirit; that will rejoice for ever in having saved my father, and my more than brother, who will soon know how Amaita loved them!" At length she bent her ear towards the ground, and distinctly heard the approach of footsteps, while a sickness of soul came over her, which seemed to suspend all vital motion. Again she stood erect, and presently four men emerged from the wood. She darted forwards with frantic haste, and stood with her figure conspicuously revealed in the bright moonlight.

At that instant a yell issued from the cruel wretches, who immediately perceived and ran towards her. Two of them began to ascend a cocoa-nut tree, to gather the leaves with which it was their practice to construct a long basket, into which they put the body of the victim, while bearing it to the temple. The other two approached the trembling girl, while their eyes glared fearfully upon her, and their whole features were distorted by an expression terrific, revolting, and unnatural. They seized their silent and unresisting victim, and drew her towards the edge of the darksome wood. Already was the arm of her assassin raised high above her head, while his hand grasped the fatal club which was to prostrate her on the earth, when, hark! a voice close at his ear—wild, loud, and threatening—called to him to desist, and Paitia, clearing some intervening brushwood, with the bound of a tiger springing on his prey, and with his eyes flashing fire, his whole frame violently trembling, and the big drops of cold perspiration standing on his pale forehead, seized the man's arm, and exclaimed—"Touch her not—it is a woman—it is Amaita—no disguise can hide her from me. Ah, cruel that she is, she wears her brother's clothes, who hath escaped far beyond your reach. If you doubt," he said, "behold how she has deceived you;" and he tore from her shoulders the upper garment which concealed them, and exposed to view the contrast between the dyed part of her skin, and that which lay under the tapirta. It was enough; they were satisfied of the deception; but all the rage of their hearts burst forth at being thus foiled. "Come," they said with imprecations, "this Paitia is the adopted one; he is knit to the old man's heart as his own son; it shall suffice to lop off this branch till we return to hew down the withered tree;" and they attempted to seize him, but he slid through their hands like an eel. He was fleet of foot, and, darting from them, had gained the skirts of the forest in an opposite direction, when one of the men who carried a musket fired, and he fell. The frantic shrieks of Amaita were prolonged amid the woods and the rocks, as she flew towards the spot, while the men, feeling now sure of their victim, and calling to their comrades to join them, approached it more slowly. Vain, however, was their search; Paitia was nowhere to be seen; while Amaita, who had followed them for a time, now returned to the open meadow, in the fond hope of his having found a place of concealment, from her knowledge of the spot towards which he had bent his flight, and lest, by her approaching it too nearly, she should excite suspicion.

Meanwhile, M. de Freron had arrived along with the trusty friends who were to convey the old chief and his daughter to the boat; and having seen him safe on his way towards it, he had set out in search of Amaita and Paitia. The latter had left him at Matavia, and, fearful of the least delay, after learning what the priest had communicated to M. de Freron, had flown by all those shorter paths which he alone knew, and thus gained the time which saved Amaita. M. de Freron found her, and had no sooner heard what had just passed, than he urged her to join her father, and offered himself to remain and seek Paitia. To this she would not listen, but fearing for his safety should the murderers return disappointed, she advised that they should hide themselves till their departure; and having crept into the underwood, they lay there till the men returned, and passed so near that they distinctly heard their conversation. From this they learned that they had not found Paitia, and that having been equally unsuccessful in their search after the old chief, they were then hurrying on to select some other victim for the approaching sacrifice. Scarcely were their figures lost in the gloom of the valley, when Amaita flew with the speed of lightning to the spot where Paitia had fallen. Her friend, though unable to keep pace with her, followed the sound of her footsteps as fast as he could, till he reached a small open space amid the trees. While he stood here, Amaita came to his side. She appeared to emerge as by enchantment out of its solid mass, followed by Paitia, while she cried out in accents of the wildest joy, "He lives! he lives!" He had been wounded, but not dangerously. The musket ball had struck and glanced off from the joint of his left shoulder, and his two friends having bound up the wound with a sleeve torn from M. de Freron's shirt, he was able to accompany them. The cavern where he found refuge had been pointed out to him some time before by Amaita, and he had, as she conjectured, made for it when escaping from death. Feeling still unassured till they should reach the canoe, they now hurried on their way towards it. But their path lying in the direction of Amaita's habitation, they perceived as they approached it, that a red lurid smoke obscured it from their sight, and presently saw the red embers of the few trees that had immediately surrounded the hut, and the building itself prostrate on the ground.

Amaita had loved her dwelling and the beautiful plants she had long so fondly trained around it, and she left the desolated spot as one turns from the grave of a buried friend. But her friends were still safe; she had lost no riches; and this feeling quickly gave place to joy when she entered the boat, and once more embraced her father, and saw Paitia at her side. The canoe had escaped the search of the murderers, though they had approached so near that their voices were heard by those who were in it. Their safety arose from the boat being moored in a dark alcove formed by the branches of the aoa or banian of the east—that most magnificent of the vegetable tribe. As the light canoe left the shore and breasted the waves, all was for some hours silent in the lovely scene around, save the dash of the waves which rolled deeply and grandly on, till they struck the outward ledge of the coral reef. But when the glorious sun arose, and all, save the blind old chief, beheld the lovely tints of earth and sky, and the calm ocean lying around like one immense sapphire, so brightly smooth and so deeply blue, and they began to near the beautiful island of Moorea, every pulse beat with delight, and a new stream of life seemed poured into the veins of Amaita.

Few days had elapsed after reaching a place of safety, when the lovers were baptised by one of the missionaries; and after another short space, the benevolent M. de Freron had the pleasure of seeing these young people, whom he loved with a father's affection, united for life. And when some time after the king and his adherents were recalled from banishment by the people of Tahiti, and profound peace and brotherly love reigned among the natives, who became Christians almost to a man, and her father was resigned to his fate, and grateful for the blessings still left him in a promising son, and the heroic Amaita, she was completely happy. M. de Freron, whose kind and guileless heart had known nothing but misery amid artificial life, determined to set up his staff of rest in the elysium of Tahiti; and by doing all in his power to advance the temporal and eternal interests of its inhabitants, ensure to himself that affection without which the world is a desert.

SCOTTISH AND IRISH AGRICULTURE.

BY MARTIN DOYLE.—SECOND ARTICLE.

Having described the progressive improvements on a Scotch estate, and the enterprise of the gentleman by whom these improvements were effected, I shall now, for the sake of contrast, offer an account of a supposed tract of land in Munster or Connaught, of the same area and quality with that in Dumfriesshire. Admitting that such tract had fallen under the absolute control of the owner subsequently to the extinction of the forty-shilling freeholds, and granting, for illustration sake, that the impediments of excessive population on petty subdivisions of land had been surmounted, by dragging the wretched occupants out of their homes "by hook or crook" on the expiration of their leases, by their voluntary emigration on receiving reasonable gratuities, or, as has been far more usual, by a humane and gradual consolidation of little holdings, I am justified in asserting, that the Irish landlord (with such rare exceptions as confirm the general hypothesis) would not have set his shoulders to the work of improvement in the same way, on the same scale, and with the same skill and perseverance, marked out and pursued by Sir Charles Stuart Menteath.

The Irish landlord would probably have planted trees extensively, and formed fences round his plantations; he would have formed and executed roads, but at the expense of the country, through his estate; he would have endeavoured to let his lands in the largest lots which the circumstances of the country in general, or of the estate in question in particular, would have permitted, but he would never have dreamed of forming hedges or wall-fences for the accommodation of tenants or the embellishment of the estate, far less would he have expended three years' rental from his own pocket, according to Scotch practice, on the erection of substantial houses and offices for a respectable class of yeomanry. No: he would have let his farms at the highest rates, and left every description of improvement, and the building of their houses, to the tenants themselves, who by this system too frequently find that their capital is prematurely exhausted on unremunerating though necessary labours: nay, if there were limestone on the property, the landlord too often would have left the expense of forming limekilns to the tenantry, and made no exertion to facilitate the conveyance of fuel to them, or of actively developing any of the resources of his property, though his own interests and those of his successors were so deeply involved.

Since the abolition of the "forties" as a *desirable* class of tenantry, and their consequent disappearance from the soil in a great degree, and the introduction of a somewhat higher class of occupants, with a general improvement in rural economy, there has been no doubt an increasing attention to many of those principles which long experience in Great Britain has

Digitized by Google

proved to be sound and beneficial as regards the enlargement of farms, the *encouragement* of draining, and building and manuring; but still these improvements are not in the first instance executed by the Irish landlord as a matter of rule and necessity. It is true he often contributes a portion of the materials, such as slates and timber, for farm buildings, if the tenant engages to raise the walls with stone and mortar in a permanent manner, but in the great majority of instances, even this aid is withheld.

It is not easy to account for all the contradictions of practice between the Irish and Scotch landlords (for it is these only who are here compared); and the difficulty of solution is increased by the consideration that some landlords have estates in both countries, and yet pursue diametrically opposite modes of management in each; they do not or can not assimilate their practice in each.

There are, I think, two very obvious causes for the difference to which I have alluded in these modes—the difference of tenure, and the remarkable disparity in the number of rural occupiers of all classes.

First—A lease in Scotland expires at the termination of nineteen years. In Ireland the lease continues very frequently for thirty-one years, with three concurrent lives, and rarely for less than twenty-one years, with three lives concurrent. Practically, these leases may last for sixty or seventy years; and at one time it was not unusual to grant leases which endured for nearly a century.

These long leases in Ireland are most pernicious in their effects. They indispose the landlord from doing any thing for his property, and render the tenant indifferent as to his mode of general management, for he views the grounds very much as if they were his own property, or an inalienable inheritance in his family. Experience proves that leases for farms should neither be too short nor too long, but be of a fair duration, say for nineteen or twenty years at the utmost, and drawn up in such terms as will give both landlord and tenant a deep interest in the well-being of the farm. There can be no question, as far as the interests of agriculture are concerned, that it is beneficial to infuse occasionally new energy, new modes of practice, as well as speculative experiment, into farm management; and it is clear that, according to the plan of long leases, nothing of the kind can be done in Ireland, except the farmer possess the rare qualification of being both a capitalist and an enthusiast in his profession.

Second—The remarkable disparity in the number of rural occupiers of all classes.

The number of those who have any just pretensions to the appellation of farmers, is not a fifteenth in the agricultural counties of Scotland that it is in any of the well-cultivated parts of Ireland. And this, among other causes, is attributable to the prevailing practice on the part of the Scotch heritor, of providing houses for the tenantry. This policy leads him to build as few as possible, and he therefore consolidates his farms to the utmost.

In the pastoral districts of the southern parts of Scotland, there is also the same contrast as to population, when compared with that of the hills and mountains of Ireland. The Irish traveller is in truth amazed as he perceives the manifestations of very extended tillage, without the numerous cottages or cabins on which his eye has been used to rest, either in frequent villages or isolated cottages. "Where are the labourers?" he says to himself; "where can they live?" When he sees some half dozen solid and unpicturesque little habitations in a single row near a great stack-yard, he thinks it impossible that these can contain one-fourth of the work-people necessary to cultivate some hundreds of acres in the perfect way which he beholds, perhaps for the first time in his life.

When told that on a farm of six hundred acres, under a four or five shift rotation (one-fourth or two-fifths being in pasture), seven ploughmen only are employed; that one hedger, one shepherd, one steward, with nine or ten women in winter and fifteen in summer, execute the entire *ordinary* work of the farm, his surprise is unqualified:

> The man exclaims with lifted eyes,
> "Can *these* till farms of such a size?"

They can, and do, with some extra hands in harvest. And this unvaried system of employment provides most comfortably for the families which are located on the respective farms. Every occupier of a farm cottage being bound to furnish one workwoman or grown-up boy, there is no necessity for looking beyond the regular occupiers of the limited number of hinds and cottars for extraneous labour, unless draining or other extraordinary operations should be required. We thus see that in Scotland farming is conducted according to the strictly correct rules of economical science; the plan is to obtain the largest possible amount of produce, and at the same time not deteriorate the ground, at the lowest possible outlay, and this is accomplished in a manner the most interesting and surprising.

On six hundred acres of fully cropped land in Ireland, there would be five times as many labouring families; of these, many of the males would be irregularly employed, and the women only in the spring and harvest periods; and there would be continual applications for "leave to toil" from the wretched inhabitants of the hamlets and small towns adjacent to such farms, presenting, as Burns has remarked, that most mortifying picture of human life, "a man seeking work and finding none." But besides the disparity of numbers, the traveller is struck with the great difference, in the means of subsistence, or in the wages of labour. I shall place the wages in juxtaposition, and, as regards the Scotsman, on a *much* lower rate than that given in a published work by Mr Sellar of Sutherland, who supposes the labourer to earn, with his wife and *children*, L.51, 9s. 4d. per year; but this appears to me excessive.

SCOTCH LOWLAND HIND.

5 bolls of oatmeal at 35s.	L.8 15 0
2½ bolls of barley at 30s.	3 15 0
1 boll of peas	1 10 0
*1000 yards of potato drills, at least	2 0 0
Carriage† of six carts of coals	1 10 0
Keep of a cow	7 0 0
Liberty to keep 6 hens and 1 cock, or money instead	0 10 0
Cash	2 0 0
Lint (flax) ground, or 500 additional drills of potatoes	1 0 0
Workwoman's labour	6 10 0
	L.34 10 0

If the hind has a son employed on the same farm in the same capacity, he has the same allowance, except a cow, in lieu of which he receives L.5 in cash, so that one family may earn about L.60.

IRISH LABOURER.

By wages, at 10d. per working day, about	L.13 0 0
Spring and harvest work by wife or children	1 10 0
Fowls and eggs sold	1 10 0
Profit on a pig (fed, however, entirely by himself)	2 10 0
	L.18 10 0

This is a lamentable contrast for the Irishman, who could not subsist at all, were it not that he usually takes potato land manured, for which he pays about L.6, 10s., and by the produce of this he may be said to support his family altogether. He has, however, very frequently an acre of rented land himself, in which case he is much better off; and if he has a grown-up son or two to earn wages also, the unfavourableness of this account is considerably diminished. I have not in either case estimated the value of a house and little garden, though this is greatly in favour of the Scotch cottar or hind, who pays for a good habitation, *kept in repair* for him, only one month's harvest work by his workman, who is fed by the farmer during that period. The Irish cottar has either built his own cabin, paying a rack-rent for the land connected with it, or pays in cash or labour from L.1, 10s. to L.2 for the use of it; and if it should fall upon his head without crushing his brains, he has no assistance from his employer in most cases for rebuilding or repairing it. Not so in Scotland. In the comparison of wages I have placed to the account of the Irish cottar L.2, 10s. as the profit upon his pig, and L.1, 10s. for his poultry, because it is necessary to show his entire means of subsistence; but for these items he is not indebted to his employer in the slightest degree; they constitute no part of his *wages* in any shape, so that he really earns, in general, but L.12, 10s. per year! Compared with the hind of any common farmer even in the pastoral districts of Yarrow or Ettrick, he is miserably paid.

These have in money wages *at least*	L.10 0 0
5 carts of potatoes	6 0 0
Keep of a cow	5 0 0

Besides the wages of a female occasionally, and liberty to cut peat, which is led home for them.‡

If the difference in the *number* of cottages on Scotch and Irish farms respectively be great, so also is there a wide distinction in the external appearance and internal condition of them. Many of the Irish cottages may be gaily whitewashed in the exterior, and in this respect they seem superior to the houses of the Scotch peasantry. But look within! In the comforts of the interior, the neat bedsteads, clean bedding, well-formed floor, general furniture, and cleanliness, the Scotch cottages of all classes, even in those pastoral districts to which my observations have just now referred, have a manifest and decided superiority. The clothing, also, of the inhabitants is incomparably better, as may be expected where there is no surplus supply of labourers, and where the rates of labour are so ample.

And as to *food*; who sees hams and flitches of bacon suspended over the fireplace of the Irish peasant, or the ample supply of meal which the Scotch hind possesses? Alas! my country! would that many of the distinctions which now prevail, and to some of which I have adverted, were removed altogether! But among these I do not include the great disparity in the size of farms. The consolidation of these to any thing like the degree attained in Scotland, would be totally unsuited to the existing circumstances of Ireland, as they regard population and capital. Farms of from thirty to fifty acres are better suited to the pecuniary means and the general condition of the people of Ireland, than those of much greater extent; and any violent effort to increase this average limit would be both cruel and impolitic.

* The hind finds seed only, and hand-hoeing.

† He pays for the coals at the colliery.

‡ [The writer of this being a stranger in the country, presents, we think, rather too favourable a view of the condition of the Scottish hind. He is evidently not aware of the fact that these hinds, or farm-labourers, are liable to dismissal at pleasure at the end of yearly terms, and, upon the whole, lead a drudging and body-killing life. When they get old or enfeebled, they are frequently turned adrift, to make room for others more young and vigorous, and thus the provincial and large towns have become receptacles for aged paupers from the landward districts. This is unquestionably a serious evil, and has been often made the subject of complaint by town authorities.—*Ed. C. J.*]

[From this comparison between Scotch and Irish agricultural arrangements, the result seems to be, that in Scotland rural affairs are conducted in a spirited and energetic manner, and with the employment of considerable capital, so as in effect to reduce farming to a profitable and precise course of business, while in Ireland, which lies within sight of its shores, all kinds of agricultural operations are conducted in a rude and far from profitable manner, whether the interests of the farmer, the landlord, or the public, are concerned. Whatever be the advantages of the Scotch system, they are clearly traceable in the first instance to the exertions of the landed gentry, of whom Sir Charles Stewart Menteath is an honourable example. The Scotch landlord rarely scruples to sink capital on his farms for the purpose of improving them and of reaping the benefit at the distance of a few years. This, it seems, is done by only a very few Irish land-proprietors, who, generally speaking, leave their poor tenants to struggle on without professional skill, capital, or enterprise; and the consequence is that meagre, disorderly, and unprofitable husbandry, which one sees in nearly all quarters of Ireland, and which is often a burlesque on the name of agriculture.—ED.]

WILDE'S NARRATIVE OF HIS VOYAGES AND TRAVELS.*

SECOND NOTICE.

MR WILDE, in the course of his voyage southwards, touched at Corunna, on the coast of Spain, where the yacht remained with the party for a few days. In the course of his stay he visited the memorable field of Corunna, accompanied by a remarkable personage, George Daboish, otherwise "Old Russian George," as guide. The history of this man presents a striking example of the instability of human affairs. We give it in Mr Wilde's own words.

OLD RUSSIAN GEORGE.

"His history is remarkable—by birth a Russian—an Italian by descent—married to a Spaniard—and, although naturalised in Spain, claiming England for his country. Few men in his condition have seen more of what is termed *life*. He has with truth 'braved many a rough sea's storm' in his day—the very sport of the element he made his home. At an early age he was bound to the master of an English merchantman trading to the Black Sea, out of which he was, shortly after, pressed on board a British man-of-war. From this he took *French leave* at Cork, and having travelled across the country for some days, alone and penniless, he found himself at what he not inaptly calls the *mutiny* of Vinegar Hill. He re-entered the merchant service, and some years afterwards was wrecked returning from the West Indies as mate—having suffered unspeakable hardships in an open boat for three weeks, during which time they were reduced to the horrible alternative of

> 'Who should die to be his fellow's food.'

From this state of misery and privation they were providentially rescued by one of our Kinsale hookers, for the inhabitants of which place he still retains feelings of the utmost gratitude. He again entered the navy, and immediately after served at the Nile; was wounded at Trafalgar, on board the Bellerophon; boasts the honour of an acquaintanceship with Nelson; and was present when Parker suffered at the yard-arm, after the mutiny at the Nore. He served in one of the transports in this bay, at the time of the retreat, and seems perfectly acquainted with all the transactions concerning it. After this he betook himself to the merchant service; soon rose to be a master, and had acquired some wealth, but was again shipwrecked, and he alone of all his crew saved. He was thrown ashore, and beside him lay his ship's compass, the sole remnant of all his earthly possessions. He still preserves it with the greatest veneration, and exhibits it with delight to strangers.

The ocean's greedy wave had robbed him of his home; the rocks and sands had spoliated his wealth; the drenching spray had damped, but could not quench, the fire of his enthusiasm, so characteristic of his calling, till love, all-powerful, induced him to resign the ocean for one of the dark-eyed maids of Corunna. He married; and here, by years of industry and perseverance, he rose to comfort, if not to wealth.

Short-lived was his day of happiness. In the year 1823, when the French bombarded this town, his house, which stands outside the walls, was struck by a random ball, and in the very spot where he had concealed all his treasure (some thousands of dollars), which the French soldiers soon pounced upon; and fearing their vengeance for concealing his *own* property he had actually to swim to one of the Spanish vessels in the harbour. Still he has weathered the storm, and supports himself in some comfort by the proceeds of a small posada sacrata, or lodging-house. He is now a stout old man of seventy-six—a fine honest tar of the olden days of long queues and wide trousers. He has seen much of the world, and, what is rare in his profession, profited by it; to use his own expression, 'a man who travels much seldom dies a fool.' He is master of most of the European languages, and speaks English well. His long yarns of the days of Nelson, and the various scenes he had been partaker in, were highly amusing. He is universally known in Corunna as 'old Russian George.'"

LOPEZ THE CARLIST.

Corunna, whose population belongs to the Queen's or Christino party, has been fortunately exempted from the effects of civil war; yet circumstances have occasionally occurred to remind the people of this desolating contest. Carlist brigands frequently intercept the mails, and render travelling exceedingly dangerous. An event occurred in connection with one of these robberies, a few years ago, so characteristic of Spanish law and injustice, that Mr Wilde cannot help recording it.

"Towards the latter end of October 1835, the insurgents of Gallicia posted a notice, that all persons found conveying the mail of her majesty the Queen of Spain should be shot. The government courier proceeding from Corunna to Madrid, soon after this notice, was murdered, the bags cut open, and the letters destroyed, it was supposed, by a Carlist named Lopez.

Count Pablo Morillo, then captain-general of that province, enraged at such conduct, declared, that if they shot *another* courier, he would shoot the brother of Lopez. These brothers had been previously tried for an offence in no way connected with political affairs; were both acquitted; but the unhappy victim to injustice was detained in prison on suspicion, while his brother joined the insurgents as their chief.

The captain-general would not listen to the advice offered him by many, and amongst these several of the consuls of the place, to issue a proclamation of his intention to shoot the brother of Lopez if they committed a similar act. In a few nights after, on a Saturday, a courier, with both his horses, was shot two leagues from Corunna.

The count, a most violent man, would hear no remonstrance, and instantly ordered this unfortunate man for execution, and would not even allow him time to prepare for the other world, but hurried him off, desiring the confessor to do so on his way to the spot where the courier was shot the night previous.

At two o'clock on a Sunday, this man was led out, accompanied by a prisoner named Ramos—the one to be shot, the other to witness the fate he next was to suffer, should another courier fall by rebel hands.

When they arrived at the place of execution, and Lopez was told by the provost-marshal his excellency's order, he replied, 'What do I know of all this!—I have been in prison a year, and know nothing of my brother's crimes; why should I suffer for him! But I have long thought I should—I am ready,' and sat down on the chair. * * * *

The company of Urbanos returned, after this sad scene, with Ramos riding on an ass, sunk and unmanned. Both prisoners were in the queen's uniform as officers.

It were but to be expected that the brigand Lopez would commence a fearful retaliation. He still haunts the mountain passes in this neighbourhood, the terror of those who have wealth to lose—the *Rob Roy* of Gallicia. Although the thirsty soil may have drunk up the stream of life that flowed from the wounds of this innocent man—the hot vapour rising from off that purple tide has ascended on high, an evidence against this guilty land."

EGYPTIAN COFFEE.

In voyaging up the Mediterranean, the yacht touched at Gibraltar, Algiers, and Alexandria, and from the latter place the party proceeded inland by the Nile to Cairo. So much has been written lately of Egypt and Mohammed Ali, that we spare the reader any extracts on the subject, and confine ourselves to the author's account of the Egyptian mode of preparing coffee, and a curious fact in natural history.

"We generally dined early; and as there were at Cairo several visitors of various countries, who like ourselves could not obtain accommodation in the other inn, we were not at a loss for society, both agreeable and instructive, as we enjoyed our pipes and coffee. I was anxious to see and become acquainted with the manufacture of coffee, which far surpasses ours in flavour and aroma. The preparation of this is another royal monopoly. I visited the factory, a large oblong room, containing a series of roasters over stoves running down the centre. Here the fresh beans are placed, attended with the greatest care, and watched with such nicety that a single minute is not allowed to elapse after they have acquired the desired state of torrification until they are removed. They are then placed in large stone mortars, set in a raised bench of stone-work, which surrounds the whole apartment, and opposite each of these is placed a man who pounds the contents with an immense metal pestle, worked with both hands, to a state of the finest comminution. The coffee is then sifted, the coarser grains separated, and again submitted to the pounding process, which is continued till it is reduced to an almost impalpable powder; so fine, indeed, that it not only imparts its flavour and essence to, but absolutely mixes with, the water. All the men engaged at the work were black slaves, nearly naked, as the heat is very great; and in producing the finest description, some spend a whole day at a few pounds of berries. It is not ground in a mill, but is always reduced by pounding to a state of the finest powder. When the coffee is about to be prepared for use, the water is boiled in the coffee-pot, the coffee put in at the point of boiling, suffered to simmer some time, the vessel shaken, and allowed to stand a few minutes in order to settle, and then poured off; and it has this peculiarity over every other, that so fine is the powder that both with what is dissolved and suspended in the fluid, it is *thick*, and at the same time perfectly *clear*. This is its state of perfection; a state not always got in the kahwehs or coffee-shops, where it is often muddy, and always too thick for the taste of Europeans."

THE SCARABŒUS.

In travelling over the desert—"Another animal that particularly called my attention, and excited my admiration, was the Scarabœus, or sacred beetle; these were running about in all directions in the warm sunshine, engaged in rolling their balls over the desert with such industry, and in so curious a manner, that I cannot refrain, although on the path to the Pyramids, from stopping to notice the little animal so famed in Egyptian story, and that formed so conspicuous a part in the symbolic language and the mythology of this ancient people. The more I consider the habits and manners of animals, the more am I convinced that it was an accurate observation of their natural history and instinct that arrested the attention of the ancients, and on which was formed much of their hieroglyphic system. This was not peculiar to the Egyptians, for we find the car of Bacchus drawn by tigers, evidently alluding to his conquest of a country to which those animals were peculiar; and in like manner are represented the conquests of Alexander, not expressed in words or any written character, but shown forth by the representations of the animals peculiar to each region, as depicted in the mosaic pavement at Præneste.

These little creatures, which are possessed of amazing strength and perseverance, form balls of clay and camel's dung, which they mix up into a kind of mortar, very like that used by swallows to construct their nests; in these they deposit their eggs, and thus it forms a crust or shell to the larvæ within; they then roll these balls, when sufficiently dried, over the sand in a truly remarkable manner. The male is provided with two projections in the form of horns on the head, and uses them as a lever to raise and push the ball forward from behind, while the female mounting before keeps it revolving onwards by drawing it down with her fore feet. Sometimes three or four will get about one ball, either for the mere sake of work, or to get it over any impediment. Others, again, propel them with their hind legs, and will sometimes assume the most grotesque attitudes, literally standing on their heads and pushing at them with their hind feet.

So far as I am able to judge, they keep rolling these balls about over the sand for the whole day, and do not merely place them in holes, like other coleopterous insects. I have watched them at evening; and as soon as the sun had set, they invariably deserted their charge, and returned to their holes; and what is more remarkable, if the day became suddenly clouded, off they waddled, and left the ball till a gleam of returning sunshine again called them to work with renewed vigour. It appears to me, from the manner they rolled these balls, they intended that the sun should act equally on all sides of them, and thus secure the heat in the process of incubation. It may, however, be but for the purpose of drying the surface.

Scarabæi, in every shape and attitude, and of all sizes, are figured on the Egyptian monuments, are used in the hieroglyphics, and models of them are generally found on the breasts of mummies; besides, many of a smaller size form part of the necklaces worn by such. In these two latter positions they may have been used as amulets. Others are carved in different stones and gems, as signets having the names of the Ptolemies, &c., cut in hieroglyphics on the face. It was the emblem of creative power, of the earth, and of the sun, in which latter case the ball alone is often used."

STEAM-BOAT DISASTERS IN AMERICA.

In the North American Review for January last, there appears an article of some interest on the steam-boat disasters which so frequently occur on the Mississippi and other western waters. The causes of these disasters, as we are informed, are very various, but are mostly traceable to a reckless carelessness and selfishness on the part of the owners and captains. Some vessels are pierced and instantaneously sunk by *snags*, or logs of drifted timber adhering to the bottom of the stream; others come in tremendous collision with each other at night, on making sudden bends in the river, and on these occasions one is usually sunk; a fully greater number of boats are burnt by the falling of ignited sparks of wood from the flues upon the piles of dry wood, cotton, and other inflammable articles on the upper decks, and to avert which casualties no care whatever is taken; but the principal disasters are explosions of the boilers, the causes of which we shall shortly explain, condensing our information from the article before us.

The greater proportion of the steam-vessels on the western waters, and also on some of the eastern, are built on the leading principle of *excessive speed*. They are built lightly and fragilely, and carry boilers and high-pressure engines, which are urged to exert a power perfectly appalling to think of. The pressure on the sides of the boiler is never less than one hundred pounds to the square inch, and the boiler is in no case submitted to previous trial. This strain, however, though much greater than it should be, is trifling in comparison to what is very generally employed to urge the engine to the top of its speed. Instances are not uncommon of pressure to the extent of two hundred and fifty and even three hundred pounds being employed. Strange to say, the knowledge that excessive and undue pressure is used on board any particular boat, does not prevent passengers from crowding to it in preference to proceeding by boats under more prudent management. Such is the universal desire to "get on" with the greatest possible speed, that steady boats of moderate power are invariably deserted, if boats of the more speedy but more dangerous class are at hand. Of course, boats are generally constructed to suit this prevailing mania. The reviewer presents the following incident as an illustration of the recklessness of captains and imprudent indifference of passengers:—

"In the spring of 1838, it was our lot to embark at St Louis in a new and very splendid steam-boat bound for Pittsburg. Her captain was a young man of some experience on the river, and of a very ambitious and energetic character. The boat was evidently built with a view of embracing all the accommodations and improvements then known; and our party were congratulating themselves upon the comfort and cleanliness of the cabin, and the order and neatness apparent throughout. Before casting off her fasts from the shore, steam was got up beyond the limits of safety, and the boat shot up the strong current of the Mississippi, and, turning above the town, dashed by the wharves with a velocity frightful to behold, but which seemed peculiarly exhilarating to both crew and passengers. As this, however, was no more than the usual practice for *crack* boats on leaving port, we thought nothing of it; but the haste with which her necessary landings for wood and other purposes were managed, and the excited condition of her crew, soon made manifest (what was afterwards confirmed by the express declaration of the captain) that it was intended to make a *brag trip*. Now, there were no doubt some few among the passengers, whom a knowledge of this really alarming fact rendered uneasy and apprehensive; but upon a large majority it produced no other feelings than those of pleasing excitement; and the watching of her rapid progress, and estimating from time to time her rate of speed, seemed to form an agreeable relief from the usual monotony of a steam-boat voyage. No boat was for some time encountered whose speed was equal to our own, and one after another was easily passed, till, between Louisville and Cincinnati, a vessel was discovered in our wake, whose two escape pipes and double engine showed her to be one of the mail-boats that ply between the two places, and reputed to be one of the fastest boats on the western waters. As each bend of the river occasionally disclosed her to view, it was evident that she was gaining on us. The excitement on board of our boat now became tremendous. Captain and passengers vied with each other in stimulating the exertions of the firemen. Rosin was freely thrown into the furnaces, and the thundering of her paddles, and the quivering of the boat, told of the increased action of the steam upon her engine, while no warning voice was heard from the passengers, those who felt alarm contenting themselves with keeping astern, as far as possible from the scene of danger. These efforts, as it proved, were unavailing. The power and speed of the mail-boat carried her by us, while our captain concealed his mortification as best he could, swearing a deep oath, that the next time he encountered this rival, he would pass her, or blow his own boat out of the water. Fearfully was the pledge redeemed. His time, however, had not yet come. We landed in safety, and all tongues were loud in applause of our captain and his fast boat. The newspapers recorded the trip just accomplished as the quickest ever performed, and the challenge was thus in effect thrown out to all other captains to emulate this dispatch.

A few days afterwards, in Philadelphia, a friend, aghast with horror, informed us that news had just arrived, of the most frightful explosion which had ever signalised the western waters. The question rose instinctively to our lips—Was it the Moselle? It was but too true. The rashness of the captain had most fearfully recoiled upon his own head, hurling with him to destruction more than a hecatomb of innocent victims, and this, too, the result of an effort to pass the very boat which had outstripped him on his previous trip.

This disastrous explosion, the most terrific, we believe, recorded in the history of steam, awakened for a time the public from their apathy. In Cincinnati, the scene of the disaster, a public meeting of the citizens was called, where, among other resolutions having for their object principally the relief of the surviving sufferers, one was passed, raising a committee of five, to inquire into the causes of this calamity, and 'to report such preventive measures as may be best calculated hereafter to guard against like occurrences.' The result of the investigations proved that the explosion on board of the Moselle, which utterly demolished the boat and destroyed the lives of one hundred and fifty people, took place while there was a sufficient supply of water in the boilers, and was the natural and inevitable consequence of the increased expansive force of the steam, confined by an overloaded safety-valve, while she lay for fifteen or twenty minutes with boilers closed, and a furnace as hot as dry wood would make it. Satisfactory evidence was procured to show that the valve was loaded with a weight which would have required a pressure of two hundred and thirty-seven pounds to the square inch to raise it."

Digitized by Google

An act was passed by Congress in 1838, to prevent steam-boat disasters, such as have been above enumerated; but the act is exceedingly defective, and, so far as it goes, its provisions are nearly inoperative, because, as we are told, it would be imprudent for magistrates, constables, or other functionaries, to risk their popularity at elections by putting the law in execution. This very strange state of things is alluded to in a work quoted by the reviewer.

"In our peculiar form of government, where almost all officers are elective, even to the constable, no officer is willing to risk his own popularity by the enforcement of an unpopular law. Thereby it is that our laws are so little enforced; that hundreds of our most valuable citizens are deprived of life against all law, because it would be against the *interests of trade* for an inquest to examine too closely into the causes of such fatal consequences, or to institute legal proceedings to bring the perpetrators to justice. If half the citizens of this country should get blown up, and if it should be likely to affect injuriously the trade and commerce of the other half, by bringing to justice the guilty, no elective officer would risk his popularity by executing the law, without some alternative which should weigh stronger on his mind than the loss of office; and perhaps an appointed officer would find it a rather dangerous business to execute an unpopular law during an excitement, unaided by numbers, which he seldom has at command."

THE LITTLE FRENCHMAN AND HIS TOWN LOTS.

[By G. P. Morris.—From the New York Mirror.]

How much real comfort every one might enjoy, if he would be contented with the lot in which heaven has cast him, and how much trouble would be avoided if people would only "let well alone!" A moderate independence, quietly and honestly procured, is certainly every way preferable even to immense possessions achieved by the wear and tear of mind and body so necessary to procure them. Yet there are very few individuals, let them be doing ever so well in the world, who are not always straining every nerve to do better, and this is one of the many causes why failures in business so frequently occur among us. The present generation seem unwilling to "realise" by slow and sure degrees, but choose rather to set their whole hopes upon a single cast, which either makes or mars them for ever!

Gentle reader, do you remember Monsieur Poopoo? He used to keep a small toy-store in Chatham, near the corner of Pearl Street. You must recollect him, of course. He lived there for many years, and was one of the most polite and accommodating of shopkeepers. When a juvenile, you have bought tops and marbles of him a thousand times. To be sure you have; and seen his vinegar-visage lighted up with a smile as you paid him the coppers; and you have laughed at his little straight queue and his dimity breeches, and all the other oddities that made up the every-day apparel of my little Frenchman. Ah, I perceive you recollect him now.

Well, then, there lived Monsieur Poopoo ever since he came from "dear, delightful Paris," as he used to call the city of his nativity—there he took in the pennies for his kickshaws—there he laid aside five thousand dollars against a rainy day—there he was as happy as a lark—and there, in all human probability, he would have been to this very day, a respected and substantial citizen, had he been willing to "let well alone." But Monsieur Poopoo had heard strange stories about the prodigious rise in real estate, and having understood that most of his neighbours had become suddenly rich by speculating in lots, he instantly became dissatisfied with his own lot, forthwith determined to shut up shop, turn every thing into cash, and set about making money in earnest. No sooner said than done; and our quondam storekeeper a few days afterwards attended a most extensive sale of real estate, at the Merchants' Exchange.

There was the auctioneer, with his beautiful and inviting lithographic maps—all the lots as smooth, and square, and enticingly laid out as possible—and there were the speculators—and there, in the midst of them, stood Monsieur Poopoo.

"Here they are, gentlemen," said he of the hammer; "the most valuable lots ever offered for sale. Give me a bid for them!"

"One hundred each," said a bystander.

"One hundred!" said the auctioneer; "scarcely enough to pay for the maps. One hundred—going—fifty—gone! Mr H., they are yours. A noble purchase. You'll sell those same lots in less than a fortnight for fifty thousand dollars' profit!"

Monsieur Poopoo pricked up his ears at this, and was lost in astonishment. This was a much easier way of accumulating riches than selling toys in Chatham Street, and he determined to buy, and mend his fortune without delay.

The auctioneer proceeded in his sale. Other parcels were offered and disposed of, and all the purchasers were promised immense advantages for their enterprise. At last came a more valuable parcel than all the rest. The company pressed around the stand, and Monsieur Poopoo did the same.

"I now offer you, gentlemen, these magnificent lots, delightfully situated on Long Island, with valuable water privileges. Property in fee—title unexceptionable—terms of sale, cash—deeds ready for delivery immediately after the sale. How much for them? Give them a start at something. How much?" The auctioneer looked around; there were no bidders. At last he caught the eye of Monsieur Poopoo. "Did you say one hundred, sir? Beautiful lots—valuable water privileges—shall I say one hundred for you?"

"*Oui, monsieur;* I will give you von hundred dollar a-piece, for de lot vid de valuable vatare privalege; *c'est ca.*"

"Only one hundred a-piece for these sixty valuable lots—only one hundred—going—going—going—gone!"

Monsieur Poopoo was the fortunate possessor. The auctioneer congratulated him—the sale closed—and the company dispersed.

"*Pardonnez moi, monsieur,*" said Poopoo, as the auctioneer descended his pedestal, "you shall *excuse moi* if I shall go to *votre bureau*, your counting-house, ver quick to make every ting sure wid respec to de lot vid de valuable vatare privalege. Von leetle bird in de hand be vorth two in de tree, *c'est vrai*—eh?"

"Certainly, sir."

"Vell, den, *allons.*"

And the gentlemen repaired to the counting-house, where the six thousand dollars were paid, and the deeds of the property delivered. Monsieur Poopoo put these carefully in his pocket, and as he was about taking his leave, the auctioneer made him a present of the lithographic outline of the lots, which was a very liberal thing on his part, considering the map was a beautiful specimen of that glorious art. Poopoo could not admire it sufficiently. There were his sixty lots as uniform as possible, and his little grey eyes sparkled like diamonds as they wandered from one end of the spacious sheet to the other.

Poopoo's heart was as light as a feather, and he snapped his fingers in the very wantonness of joy as he repaired to Delmonico's, and ordered the first good French dinner that had gladdened his senses since his arrival in America.

After having discussed his repast, and washed it down with a bottle of choice old claret, he resolved upon a visit to Long Island to view his purchase. He consequently immediately hired a horse and gig, crossed the Brooklyn ferry, and drove along the margin of the river to the Wallabout, the location in question.

Our friend, however, was not a little perplexed to find his property. Every thing on the map was as fair and even as possible, while all the grounds about him were as undulated as they could well be imagined, and there was an arm of the East-river running quite into the land, which seemed to have no business there. This puzzled the Frenchman exceedingly; and, being a stranger in those parts, he called to a farmer in an adjacent field,

"*Mon ami*, are you acquaint vid dis part of de country—eh?"

"Yes, I was born here, and know every inch of it."

"Ah, *c'est bien*, dat vill do," and the Frenchman got out of the gig, tied the horse, and produced his lithographic map.

"Den maybe you vill have de kindness to show me de sixty lot vich I have bought, vid de valuable vatare privalege?"

The farmer glanced his eye over the paper.

"Yes, sir, with pleasure; if you will be good enough to *get into my boat, I will row you out to them!*"

"Vat you say, sare?"

"My friend," said the farmer, "this section of Long Island has recently been bought up by the speculators of New York, and laid out for a great city; but the principal street is only visible *at low tide*. When this part of the East-river is filled up, it will be just there. Your lots, as you will perceive, are beyond it, *and are now all under water.*"

At first the Frenchman was incredulous. He could not believe his senses. As the facts, however, gradually broke upon him, he looked at the sky—the river—the farmer—and then he turned away and gazed at them all over again. There was his ground, sure enough; but then it could not be perceived, for there was a river flowing over it! He drew a box from his waistcoat pocket, opened it, with an emphatic knock upon the lid, took a pinch of snuff, and restored it to his waistcoat pocket as before. Poopoo was evidently in trouble, having "thoughts which often lie too deep for tears;" and as his grief was also too big for words, he untied his horse, jumped into the gig, and returned to the auctioneer in all possible haste.

It was near night when he arrived at the auction room—his horse in a foam and himself in a fury. The auctioneer was leaning back in his chair, with his legs stuck out of a low window, quietly smoking a cigar after the labours of the day, and humming the music from the last new opera.

"Monsieur, I have much plaisir to fin you *chez vous*, at home."

"Ah, Poopoo! glad to see you. Take a seat, old boy."

"But I shall not take de seat, sare."

"No—why, what's the matter!"

"Oh, *beaucoup* de matter. I have been to see de gran lot dat you sell me to-day."

"Well, sir, I hope you like your purchase?"

"No, monsieur, but I do not like it at all."

"I'm sorry for it; but there is no ground for your complaint."

"No, sare; dere is no *ground* at all—de ground is all vatare."

"You joke."

"I do not joke. I nevare joke; *je n'entends pas raillerie.* Sare, *voulez vous* have de kindness to give me back de money dat I pay!"

"Certainly not."

"Den vill you be so good as to take de East-river off de top of my lot!"

"That's your business, sir, not mine.

"Den I make von *mauvaise affaire*—von gran mistake!"

"I hope not. I don't think you have thrown away your money in the *land.*"

"No, sare; but I have trew it away in de *rivare!*"

"That's not my fault."

"Yes, sare, but it is your fault. You're von ver gran rascal to swindle me out of *de l'argent.*"

"Hello, old Poopoo, you grow personal; and if you can't keep a civil tongue in your head, you must go out of my office."

"Vare shall I go to, eh?"

"To the devil, for aught I care, you foolish old Frenchman!" said the auctioneer, waxing warm.

"But, sare, I vill not go to de devil to oblige you!" replied the Frenchman, waxing warmer. "You cheat me out of all de dollar dat I make in Chatham Street; but I vill not go to de devil for all dat. I vill go and drown myself, *tout de suite*, right away."

"You couldn't make a better use of your water privileges, old boy!"

"Ah, *miséricorde! je suis abimé.* I am ruin! I am done up! I am break all into ten tousan leetle pieces! I am von lame duck, and I shall vaddle across de gran ocean for Paris, vish is de only valuable vatare *privalege* dat is left me *à present!*"

Poor Poopoo was as good as his word. He sailed in the next packet, and arrived in Paris almost as penniless as the day he left it.

Should any one feel disposed to doubt the veritable circumstances here recorded, let *him* cross the East-river to the Wallabout, and farmer J—— will *row him out* to the very place where the poor Frenchman's lots still remain *under water!*

BOODHISM.

HITHERTO we have possessed little or no knowledge of any religion prevalent in the East, except that of Brahminism in Hindustan; and Christian missionaries being consequently ignorant of what they had to contend with in their respective fields of enterprise, a very serious obstacle was placed in the way of their success. There need, however, be no longer any ignorance on the subject. Boodhism, or the religion of Boodh, which prevails over an extensive region in Asia, and numbers more adherents than any other religion in the world, has been lately described in a most luminous manner by Mr Howard Malcom, in his Travels in the Burman Empire,* and from this credible authority we make the following abridged statement:—

"Boodhism is probably at this time, and has been for many centuries, the most prevalent form of religion upon earth. Half of the population of China, Lao, Cochin-China, and Ceylon; all of Camboja, Siam, Burmah, Thibet, Tartary, and Loo-Choo; and a great part of Japan, and most of the other islands of the southern seas, are of this faith.

Boodh is a general term for divinity, and not the name of any particular god. There have been innumerable Boodhs, in different ages, among *different* worlds, but in no world more than five, and in some not any. In this world there have been four Boodhs, namely, Kan-ka-than, Gau-na-gong, Ka-tha-pa, and Gaudama. One is yet to come, namely, Aree-ma-day-eh.

It has often been supposed that Boodhism resembles Brahminism or Hinduism, which is a great mistake. No two systems can be more opposite, or bear less evidence of being derived from each other. Brahminism has incarnations, but Boodhism admits of none, for it has no permanent god. That has a host of idols; this only one. That enjoins bloody sacrifices; this forbids all killing. That requires atrocious self-tortures; this inculcates fewer austerities than even Popery. That makes lying, theft, and other vices, sometimes commendable, and describes the gods as excelling in these enormities; this never confounds right and wrong, and never excuses any sin. That makes absorption into deity the supreme good; this annihilation. In fine, I know of no important resemblance.

Boodhism inculcates no principle of caste, which is a striking difference from what prevails among the Hindus, and from this and other causes it is believed to be much more ancient as a religious faith than Brahminism. The probability seems to be, that Brahminism grew out of Boodhism, and gained power and numbers in Hindustan till the close of the first century of the Christian era, when the Brahmins were able to commence that persecution of which their own records speak, and which drove out the teachers of Boodhism into Farther India, whence it extended into China.

The most extraordinary peculiarity of Boodhism is the want of any existing God. Adoration or respect is merely paid to the image of Gaudama, who was a god at a former period, but is now annihilated, or entered into annihilation. Gaudama was the son of a king,

* People's Editions: published by W. and R. Chambers.

Digitized by Google

and born about 626 years before the commencement of our era. He had previously lived in four hundred millions of worlds, and passed through innumerable conditions in each. In *this* world he had been almost every sort of worm, fly, fowl, fish, or animal, and in almost every grade and condition of human life. Having in the course of these transitions attained immense merit, he at length was born son of the above-named king. The moment he was born, he jumped upon his feet, and, spreading out his arms, exclaimed, "Now am I the noblest of men! This is the last time I shall ever be born!" His height, when grown up, was nine cubits. His ears were so beautifully long, as to hang upon his shoulders; his hands reached to his knees; his fingers were of equal length; and with his tongue he could touch the end of his nose! All which are considered irrefragable proofs of his divinity.

When in this state his mind was enlarged, so that he remembered his former conditions and existences. Of these he rehearsed many to his followers. Five hundred and fifty of these narratives have been preserved, one relating his life and adventures as a deer, another as a monkey, elephant, fowl, &c. &c. The collection is called *Dzat*, and forms a very considerable part of the sacred books. These legends are a fruitful source of designs for Burman paintings. Of these I purchased several, which do but bring out into visible absurdity the system they would illustrate.

He became Boodh in the thirty-fifth year of his age, and remained so forty-five years, at the end of which time, having performed all sorts of meritorious deeds, and promulgated excellent laws, far and wide, he obtained "nic-ban," that is, entered into annihilation, together with five hundred priests, by whom he had been long attended. This occurred in Hindustan, about 2380 years ago, or B. C. 546. At his death he advised that, besides obeying his laws, his relics and image should be worshipped, and pagodas built to his memory, till the developement of the next Boodh. He is invariably represented in the same manner, except that sometimes he is made to wear a crown, necklace, ornaments on his arms, &c. I have seen them of all sizes, from half an inch long to seventy-five feet—of wood, stone, brass, brick, clay, and ivory.

The next Boodh is to appear in about seven or eight thousand years from the present time. His height will be eighty cubits; his mouth will be five cubits wide, and the length of the hairs of his eyebrows five cubits. The precise time of his arrival is not predicted. No laws or sayings of the first three Boodhs are extant. Those of Gaudama were transmitted by tradition, till four hundred and fifty years after his decease, when they were reduced to writing in Ceylon, that is, A. D. 94. These are the only sacred books of the Burmans, and are all in the Pali language. They are comprised in three divisions, each of which is divided into distinct books, or sections. The whole is called *the Bedagat*.

According to the Bedagat, the universe consists of an infinite number of systems; each system consists of a great central mountain surrounded by seas, and four great islands, each surrounded by five hundred smaller ones. This earth is the southern cluster of islands, and we are living on the larger one. It is a convex plane, not a sphere; and is divided by mountains and navigable seas. Below its upper crust, on which we live, is water twice as deep as the earth is thick. The whole is supported on a stratum of air twice as deep as the water. Beneath is a vacuum. The celestial regions consist of twenty-six principal heavens, one above another; and the infernal regions of eight principal places of punishment, each surrounded by sixteen smaller ones. In one of the heavens, there are pleasant habitations for mortals after death; and at the king's principal residence there is an elephant of stupendous size. This animal is of immense height, and has seven heads; each head has seven tusks, and each tusk seven tanks. In each of these tanks grow seven lilies; each lily has seven blossoms; each blossom has seven petals; each petal bears up seven palaces, and in each palace are seven nymphs, or wives of the king, each surrounded by 500 attendants. Another elephant has one great head, thirty uzenas long, on which the king occasionally rides; and thirty-two smaller heads, for the thirty-two royal princes. Of the principal hells, four inflict punishment by heat, and the other four by cold.

Not only has the universe and all its systems existed from eternity, but also the souls of all the inhabitants, whether animals, men, or celestials. These souls have from eternity been transmigrating from one body to another, rising or falling in the scale of existence and enjoyment, according to the degree of merit at each birth. This rise or fall is not ordered by any intelligent judge, but is decided by immutable fate. In passing through these various forms of existence, the amount of sorrow endured by each soul is incalculable. The Bedagat declares that the tears shed by any one soul, in its various changes from eternity, are so numerous, that the ocean is but a drop in comparison! Existence and sorrow are declared to be necessary concomitants, and therefore "the chief end of man" is to finish this eternal round of changes, and be annihilated.

The great doctrines of this faith are five, namely, 1. The eternal existence of the universe, and all beings. 2. Metempsychosis. 3. Nic-ban, or annihilation. 4. The appearance, at distant periods, of beings who obtain deification and subsequent annihilation. 5. The obtaining of merit. Of the first four of these, enough has been already said. The last is more deserving of notice, embracing, as it does, the whole system of morals.

Merit consists in avoiding sins, and performing virtues, and the degree of it is the sole hope of the Boodhist. The sins which are to be avoided are described in a moral code, consisting of five principal and positive laws:—1. Thou shalt not kill. 2. Thou shalt not steal. 3. Thou shalt not commit adultery. 4. Thou shalt not lie. 5. Thou shalt not drink any intoxicating liquor. These are explained and branched out, so as to include all sins of the same kind, under each head. The first of these laws is extended to all killing, even that of animals for food. The very religious will not kill vermin. War and capital punishments are considered forbidden by the first law.

Sins are divided into three classes:—1. Those of the body; such as killing, theft, &c. 2. Those of the tongue; as falsehood, discord, harsh language, idle talk, &c. 3. Those of the mind; as pride, covetousness, envy, heretical thoughts, adoring false gods, &c. The sacred books pourtray strongly the evils of pride, anger, covetousness, and inordinate appetites. Men are urged to avoid excessive perfumes, ornaments, laughter, vain joy, strong drink, smoking opium, wandering about the streets in the night, excessive fondness for amusements, frequenting bad company, and idleness. Those who aspire to nic-ban are cautioned to abhor sorcery, not to credit dreams, nor be angry when abused, nor elated when approved, not to flatter benefactors, nor to indulge in scorn or biting jests, and most carefully to avoid enkindling strife.

The states of the mind are resolved into three classes—1. When we are pleased in the possession of agreeable things. 2. When we are grieved and distressed by evil things. 3. When neither do good things gratify us, nor evil things distress. The last is the best state, and in it a man is rapidly preparing for nic-ban. In this there is no small resemblance to the doctrine of the Stoics, and some approach to the Christian doctrine of weanedness from the world. Some of their books abound in good comparisons, such as, that he who runs into sinful enjoyments is like a butterfly who flutters round a candle till it falls in; or one who, by licking honey from a knife, cuts his tongue with the edge. There is scarcely a prohibition of the Bedagat which is not sanctioned by our Holy Scriptures, and the arguments appended to them are often just and forcible.

Merit is of three kinds:—1. *Theela*, or the observance of all the prohibitions and precepts, and all duties fairly deducible from them; such as beneficence, gentleness, integrity, lenity, forbearance, condescension, veneration for parents, love to mankind, &c. &c. 2. *Dana*, or giving alms and offerings. This includes feeding priests, building kyoungs, pagodas, and zayats, placing bells at pagodas, making public roads, tanks, and wells, planting trees for shade or fruit, keeping pots of cool water by the way-side for the use of travellers, feeding criminals, birds, animals, &c. 3. *Bawana*, or repeating prayers, and reading religious books.

Alms-deeds are meritorious according to the objects on which they are bestowed, according to the following general scale:—1. Animals. 2. Common labourers, fishermen, &c. 3. Merchants and the upper classes, when in necessity. 4. Priests. For alms of the first class, the rewards are long life, beauty, strength, knowledge, and prosperity, during a hundred transmigrations; for those of the second class, the same during a thousand transmigrations; for the third, the same during ten thousand; for the fourth, a vastly greater number, but indefinite, being graduated according to the degree of sanctity the particular priests may possess.

Many discourses said to have been delivered by Gaudama are given in the Bedagat. In these, the duties of parents, children, husbands, wives, teachers, scholars, masters, slaves, &c., are drawn out and urged in a manner which would do honour to any casuist.

The following is part of one of these, addressed to a distinguished personage, who sought his instruction how to avoid evil:—

'Know thou, that to keep from the company of the ignorant, and choose that of learned men, to give honour to whom it is due, to choose a residence proper to our station, and adapted for procuring the common wants of life, and to maintain a prudent carriage, are means to preserve a man from evil doings. The comprehension of all things that are not evil, the exact knowledge of the duties of our station, and the observance of modesty and piety in our speech, are four excellent modes of renouncing wickedness.

By ministering a proper support to parents, wife, and family, by purity and honesty in every action, by alms-deeds, by observing the divine precepts, and by succouring relations, we may be preserved from evil. By such a freedom from faults, that not even the inferior part of our nature manifests any affection for them, by abstinence from all intoxicating drink, by the continual practice of works of piety, by showing respectfulness, humility, and sobriety before all, and gratitude to our benefactors; and, finally, by listening often to the preaching of the word of God, we overcome evil inclinations, and keep ourselves far from sin. Docility in receiving the admonitions of good men, frequent visits to priests, spiritual conferences on the divine laws, patience, frugality, modesty, the literal observance of the law, keeping before our eyes the four states into which living creatures pass after death, and meditation on the happy repose of nic-ban—these are distinguished rules for preserving man from wickedness.'

Pagodas are innumerable. In the inhabited parts there is scarcely a mountain peak, bluff bank, or swelling hill, without one of these structures upon it. Those of Pegu and Siam are all formed upon one model, though the cornices and decorations are according to the builder's taste. In general they are entirely solid, having neither door nor window, and contain a deposit of money, or some supposed relic of Gaudama. From the base they narrow rapidly to about mid-way, and then rise with a long spire surmounted with the sacred tee. Some of those around Ava, and especially those at Paghan, are less tapering, and more resembling temples.

Zayats are not exclusively religious buildings. Some are intended to contain idols, and some are for the accommodation of worshippers and travellers, and for town-halls. The majority contain no idols, and are intended only to afford shelter for worshippers and travellers. Some of these are mere sheds, open on all sides; but in almost all cases they are built in a far more durable and costly manner than dwelling-houses.

Every village has a zayat, where the stranger may repose or stay for many days, if he please; and many a time I found them a comfortable lodging-place. Like the chultries of Hindustan, they are of unspeakable utility in a country destitute of inns, and where every house has its full complement of inmates. Many zayats, especially near great cities, are truly beautiful, and very costly. The ceilings and pillars are not only elaborately carved, but completely gilded, and the stucco floors rival marble in hardness and polish.

Worship is not performed collectively, though crowds assemble at the same time on set days. Each one makes his offerings and recites his prayers alone. No priests officiate; no union of voice is attempted. On arriving at the pagoda, or image, the worshipper walks reverently to within a convenient distance, and laying his offering on the ground, sits down behind it, on his knees and heels, and placing the palms of his hands together, raises them to his forehead, and perhaps leans forward till his head touches the ground. This is called the *shecko*. He then utters his prayers in a low tone, occasionally bowing as before, and having finished, rises and carries forward his gift, laying it somewhere near the idol or pagoda. Some proceed first to one of the great bells which hang near, and strike several times with one of the deers' horns which always lie beneath. When one goes alone, this is seldom omitted. There are four set days in every lunar month on which the people assemble in greater numbers at the pagodas to offer their individual prayers. These days are at the new and full moon, and seven days after each; so that sometimes their Sabbath occurs after seven days, and sometimes after eight.

Boodhist priests are not a caste or hereditary race. Any one may become a priest, and any priest may return to a secular life at pleasure. Thousands, in fact, return every year, without the least reproach. On becoming a priest, a yellow robe is assumed, and celibacy, with numerous mortifications, is enjoined. Their office may be called a sinecure, as they seldom preach or perform any service, except teaching and giving special religious advice. They are of different degrees of rank, and subsist entirely on the contributions of the people. Their number is very great. Ava, with a population of 200,000, has 20,000 priests.

No false religion, ancient or modern, is comparable to this. Its philosophy is, indeed, not exceeded in folly by any other, but its doctrines and practical piety bear a strong resemblance to those of the Holy Scripture. There is scarcely a principle or precept in the Bedagat which is not found in the Bible. Did the people but act up to its principles of peace and love, oppression and injury would be known no more within their borders. Its deeds of merit are in all cases either really beneficial to mankind, or harmless. It has no mythology of obscene and ferocious deities, no sanguinary or impure observances, no self-inflicting tortures, no tyrannising priesthood, no confounding of right and wrong, by making certain iniquities laudable in worship. In its moral code, its descriptions of the purity and peace of the first ages, of the shortening of man's life because of his sins, &c., it seems to have followed genuine traditions. In almost every respect it seems to be the best religion which man has ever invented.

At the same time we must regard Boodhism with unmeasured reprobation, if we compare it, not with other false religions, but with truth. Its entire base is false. It is built, not on love to God, nor even love to man, but on personal merit. It is a system of religion without a God. It is literally atheism. Instead of a Heavenly Father forgiving sin, and filial service from a pure heart, as the effect of love, it presents nothing to love, for its Deity is dead; nothing as the ultimate object of action but self; and nothing for man's highest and holiest ambition but annihilation.

The system of merit corrupts and perverts to evil the very precepts whose prototypes are found in the Bible, and causes an injurious effect on the heart, from the very duties which have a salutary effect on society. Thus, to say nothing of its doctrines of eternal transmigration and of uncontrollable fate, we may see, in this single doctrine of merit, the utter destruction of all excellence. It leaves no place for holiness, for every thing is done for the single purpose of obtaining advantage. Sympathy, tenderness, and all

Digitized by Google

benevolence, would become extinct under such a system, had not Jehovah planted their rudiments in the human constitution. If his neighbour's boat be upset, or his house on fire, why should the Boodhist assist? He supposes such events to be the unavoidable consequences of demerit in a former existence; and if this suffering be averted, there must be another of equal magnitude. He even fears, that by his interfering to prevent or assuage his neighbour's calamity, he is resisting established fate, and bringing evil on his own head.

The same doctrine of merit destroys gratitude, either to God or man. If he is well off, it is because he deserves to be so. If you do him a kindness, he cannot be persuaded that you have any other object or reason than to get merit, and feels that he compensates your generosity by furnishing the occasion. If the kindness be uncommon, he always suspects you of sinister designs. In asking a favour, at least of an equal, he does it peremptorily, and often haughtily, on the presumption that you will embrace the opportunity of getting merit; and when his request is granted, retires without the slightest expression of gratitude.

Boodhism allows evil to be balanced with good, by a scale which reduces sin to the shadow of a trifle. To sheeko to a pagoda, or offer a flower to the idol, or feed the priests, or set a pot of cool water by the wayside, is supposed to cancel a multitude of sins. The building of a kyoung or pagoda will outweigh enormous crimes, and secure prosperity for ages to come. Vice is thus robbed of its terrors, for it can be overbalanced by easy virtues.

May the favoured ones of our happy land be induced to discharge their duty to these benighted millions!"

GEOGRAPHICAL CIRCUMSTANCES AFFECTING THE DISTRIBUTION OF RACES.

[This is a brief extract from the Messrs Blacks' new and comprehensive geographical work, founded on the systems of Malte Brun and Balbi, of which the first *part* only has as yet appeared. As far as we can judge from the specimen before us, we are inclined to think that this work will be one of the most faithful, and, in proportion to price, most ample works of the kind as yet presented to the British public.]

In casting a rapid glance over the globe, we perceive at once that the parts that enjoy the mildest and most equal temperature, that most abound in rivers, and present the longest line of sea-coast thus possessing the easy means of communicating with other places, are or have been formerly also the most numerously peopled, and the most anciently civilised. In all countries, whatever may be their condition as to civilisation, it is along the gulfs, at the mouths, or on the banks of rivers, that we find the densest population. Mankind, in their migrations and their increase, are subjected to laws as invariable as those that guide and control the lower animals. They spread themselves in all the places that offer them the means of subsistence, and stop where they find these no longer; and if we inquire, what is the order which they follow in their migrations, we find they are distributed by families, in the same manner as the waters are divided. If, for example, in any country, we ascend from the mouth of a river to the sources of both the main stream and its tributaries or affluents, we generally find, upon both banks, people belonging to the same family, speaking the same language, or dialects of the same language, and having similar manners and customs. This fact, which seems to exist in all countries, is most easily observed in those of Europe. Several large rivers rise in the Alps, near each other, but run to the sea in different directions. If we ascend the Po and its affluents, we find on all their banks people of the Italian race; if we ascend the Rhine and its affluents, we find on both banks people of the Teutonic, Dutch, or German race; if we ascend the Rhone and its affluents, we find people who speak the French language; but in the mountains, where all these river basins meet, there is found a confederation of different people, consisting of French, Italians, and Germans. These divisions are independent of political combinations, and of the kinds of government to which the people are subjected. Thus, those who dwell in the basin of the Rhone all speak the same language, although they are distributed among five independent governments, namely, France, Sardinia, Valais, Vaud, and Geneva. The people of the Rhine are all of the Dutch race, although divided among the governments of France, Switzerland, Prussia, Holland, and many others. The people of the basin of the Po belong all to the Italian race, although some of them live under the Swiss confederation, some under Italian governments, and others are subjects of Austria. Diplomatic arrangements and political violence often disturb the natural divisions of people, but this order, though often shaken, can hardly ever be effaced. Unity of government will be found equally powerless in uniting people who are divided by natural arrangements. Piedmont and Savoy have been for centuries subjected to the same government, and yet the manners, language, and interests of the inhabitants of these two countries, are as distinct at this day as before they were politically united. In like manner, in Switzerland, Dutch, Italians, and French, are united under the same federal government, yet each race preserves its distinctive characteristics. In France, successive governments have employed every possible means to give unity to the diverse races subject to their authority. The territory has been cut up into shreds; uniform legislation, administration, and systems of education, have been introduced into that country, and yet the desired object has not been attained. In France there are almost every where two idioms, that of the country and that of the seat of government; the former spoken by the mass of the population, and having for its natural limits the crests of the mountain ridges; the latter spoken out of its native country only by the agents of government and by the educated classes. Nor are the interests of these divided races less distinct than their languages. The same phenomenon is exhibited on a still greater scale in China. That country is divided into many natural provinces by the water-sheds of its river-basins; each of these provinces has its own dialect and separate interests; and the agents of government, and the literary class, are obliged to communicate with the people in the vernacular tongue of the latter; but every where carry on their intercourse with one another by means of the language of Kiangnan, the seat of the Imperial court under the last native dynasty. India, under the dominion of the Moguls and the British, is another instance; and almost every other country exhibits something of the same kind, varying, of course, with different modifying circumstances.

LINES ON A DEAD SOLDIER.

Wreck of a warrior pass'd away,
Thou form without a name!
Which thought and felt but yesterday,
And dreamt of future fame.
Stripped of thy garments, who shall guess
Thy rank, thy lineage, and race?
If haughty chieftain holding sway,
Or lowlier destined to obey!

The light of that fixed eye is set,
And all is moveless now,
But passion's traces linger yet,
And lower upon that brow:
Expression has not yet wax'd weak,
The lips seem e'en in act to speak,
And clenched the cold and lifeless hand,
As if it grasped the battle brand.

Though from that head, late towering high,
The waving plume is torn,
And low in dust that form doth lie,
Dishonour'd and forlorn,
Yet death's dark shadow cannot hide
The graven characters of pride,
That on the lip and brow reveal
The impress of the spirit's seal.

Lives there a mother to deplore
The son she ne'er shall see?
Or maiden, on some distant shore,
To break her heart for thee?
Perchance to roam a maniac there,
With wild-flower wreaths to deck her hair,
And through the weary night to wait
Thy footstops at the lonely gate.

Long shall she linger there, in vain
The evening fire shall trim,
And gazing on the darkening main,
Shall often call on him
Who hears her not—who cannot hear:
Oh! deaf for ever is the ear
That once in listening rapture hung
Upon the music of her tongue!

Long may she dream—to wake is woe!
Ne'er may remembrance tell
Its tale to bid her sorrows flow,
And hope to sigh farewell;
The heart, bereaving of its stay,
Quenching the beam that cheers her way
Along the waste of life—till she
Shall lay her down and sleep like thee!

—*Poems of John Malcolm.*

HIGHLAND DEER.

Donald M'Kay, a farmer, who lived in a remote glen on the estate of Reay, in Sutherland, received so much injury from the depredations of the forest deer, which made continual inroads upon his crops, invading him from the west and from the north, that he at length marched off to Tongue, the residence of his landlord and chief, to endeavour to obtain some redress. Having obtained an audience, Lord Reay, who probably gave little credit to his tale, told him to go back and pound the deer whenever they trespassed in future. Donald did not presume to say aught against his reception, though he was bitterly vexed at having walked forty miles for nothing. On his arrival at his little farm, he set his wits to work to devise some place for making use of the permission which had been conceded to him. Donald was a shrewd fellow; but it was not particularly easy to pound the denizens of the mountains. He was pretty secure for the present, as he had built a large barn, and kept his crop on rafters, out of the reach of all depredators. When the winter came on, he put part of this crop very carefully into one end of this barn, and barred it in with sticks and fir roots in such a manner that no beast or person could get at it. About the end of November, a very heavy fall of snow came on, and the ground was wholly covered with it. The second or third night after the storm fell, the wind was from the west, and Donald spread the sheaves on the rafters, the barn door giving eastward: he then threw the door wide open, and tied a long rope of hair to it, the end of which he took in at the only window that was behind the dwelling-house. He took his station within the window, with the end of the tether in his hand. He had not been long in this situation before he saw the gaunt and starving animals approaching. They came forward slowly and cautiously, stopping at intervals, and examining every object: at length the cravings of hunger prevailed, and two hinds walked into the barn, and began eating the corn. The stags soon followed, and some of them had great difficulty in getting their antlers through the narrow door. As soon as ten had entered, Donald pulled the tether, and made the door secure. More blythe than before, he set off a second time for Tongue, travelling as fast as his legs could carry him. On his arrival, he craved an audience of Lord Reay, and told in Gaelic that he had followed his advice, and pounded ten of his deer. "I might," said he, "as well have had a hundred as ten; but I could not afford to give them straw, whilst I come to report the affair to your lordship." Not a little incredulous, Lord Reay dispatched two men to ascertain the truth of the matter. The deer were found imprisoned, and were liberated. M'Kay then came to terms with his chief, who very handsomely gave his farm rent free for his life, on condition that he did not pound any more deer.—*Scrope's Deer-Stalking.*

MATHEWS AND THE IRISH BEGGAR.

Mr Mathews had a great dislike to carry money about him, and this often exposed him to trifling annoyances. On one occasion, while in Wales, on arriving at Briton Ferry on horseback, having ridden on in advance of his friends, he was obliged to wait their arrival, not having a single shilling to pay the ferryman:—"Just at this moment an Irish beggar, in the most miserable plight, came up, and poured forth all that lamentable cant of alleged destitution which it is their vocation to impress upon the *tinder*-hearted, and which seldom fails to draw forth sparks of compassion. My husband, however, assured the applicant (who declared he was 'making his way back to ould Ireland without bit or sip for days together, and that a halfpenny itself would be a treasure to him') that he had not even a farthing to offer him. It was in vain; the wretched, almost naked creature, still importuned him. At last he was told by him he supplicated, with some impatience at the tiresome and senseless perseverance, after this explanation, that so far from being able to bestow alms, he was himself, at that moment, in a situation to require assistance; actually, cold and damp as it was (November), compelled to remain at the water's edge till some friend came up who would frank him across the ferry. The man's quick bright eye surveyed the speaker with some doubt for a second; but upon a reiteration of Mr Mathews's assurance that he was detained against his will for want of a shilling, adding, that he was lame and unable to walk home from the other side of the ferry, or otherwise, he might leave his horse behind him as security, the beggar's face brightened up, and he exclaimed, 'Then, your honour, I'll lend you the money! It's all true,' eagerly interrupted the man; 'it's all true; I'm as poor as I said I was—divil the lie's in it. I'm begging my way back to my country, where I've friends; and there's a vessel ready, I'm tould, that sails from Swansea to-night. I've got some money, but I want more to pay my passage before I go, and I'm starving myself for that raison; but is it for me to see another worse off than myself, and deny him relafe? Your honour's lame; now, I've got my legs anyhow, and that's a comfort, sure!' Then, taking a dirty rag out of his pocket, and showing about two shillings' worth of coppers, he counted out twelvepence, and proffered them to Mr Mathews, who, willing to *put the* man's sincerity of intention to the proof, held *out his hand* for the money, at the same time inquiring, 'How, if I borrow this, shall I be able to return it? My house is some miles on the other side of the ferry, and you say you are in haste to proceed. I shall not be able to send a messenger back here for several hours, and you will then have sailed?' 'Oh, thin, may be, when your honour meets another of my poor distrist countrymen, you'll pay *him* the twelvepenny; sure, it's the same in the end.' Mr Mathews was affected at the poor fellow's evident sincerity; but, desirous to put the matter to the fullest test, he thanked his ragged benefactor, and wished him a safe journey back to his country. The man took his leave with, 'Long life to your honour,' trudged off, and was soon out of sight. Mathews waited till his friends arrived, then rode after and repaid the borrowed money with interest; but it was only on producing good evidence of his prosperous condition, that the poor fellow could be prevailed on to take it."—*Memoirs of Charles Mathews.*

ANECDOTE OF MADAME MALIBRAN.

One evening she felt rather annoyed at the general prejudice, expressed by the company then present, against all English vocal compositions, the opinion being altogether in favour of foreign music; some even going so far as to assert that nothing could be good of which the air was entirely and originally of English extraction. Malibran in vain endeavoured to maintain *that all countries* possess, though perhaps in a less equal degree, many ancient melodies, peculiarly their own; that nothing could exceed the beauty of the Scottish, Irish, Welsh, and even some of the old English airs. She then named many compositions of our best modern composers, Bishop, Barnett, Lee, Horn, &c.; declaring her belief, that if she were to produce one of Bishop's or Horn's ballads as the works of a Signor Vescovo, or Cuerno, thus Italianising and Espagnolising their names, they would *faire furore.* In the midst of this discussion she volunteered a new Spanish song, composed, as she said, by a Don Chocarreria. She commenced—the greatest attention prevailed; she touched the notes lightly, introducing variations on repeating the symphony, and with a serious feeling, though a slight smile might be traced on her lips, began:—

Maria trayga un caldero
De aqua, Llama levante
Maria pon tu caldero
Ayamos nuestro te.

She finished—the plaudits resounded, and the air was quoted as a further example how far superior foreign talent was to English. Malibran assented to the justice of their remarks, and agreed to yield still more to their argument, if the same air sung adagio should be found equally beautiful when played presto. The parties were agreed; when, to the positive consternation of all present, and very much to the diversion of Malibran herself, the Spanish melody, which she had so divinely sung, was, on being played quick, instantly recognised as a popular English nursery song, by no means of the highest class. Shall we shock our readers when we remind them that

Maria trayga un caldero,

means literally, "Molly, put the kettle on!"—*Memoirs of Madame Malibran.*

LONDON: Published, with permission of the proprietors, by W. S. ORR, Paternoster Row; and sold by all booksellers and newsmen.—Printed by Bradbury and Evans, Whitefriars.

Complete sets of the Journal are always to be had from the publishers or their agents; also, any odd numbers to complete sets. Persons requiring their volumes bound along with title-pages and contents, have only to give them into the hands of any bookseller, with orders to that effect.

NUMBER 431. SATURDAY, MAY 2, 1840. PRICE THREE HALFPENCE.

MALAGROWTHERING.

MALAGROWTHERING is a branch of a very important art—the art of ingeniously tormenting. It derives its name from Sir Mungo Malagrowther, an ancient Scottish gentleman described, in a certain veracious history entitled "the Fortunes of Nigel," as attending the court of James I. of England, where an uncouth visage, joined to lameness in one leg, and the want of three fingers of the right hand, made him a somewhat conspicuous figure. Sir Mungo had been brought up in the school of suffering, for, the king and he having been educated together, it was his duty to receive all the whippings due to his majesty for slovenly tasks and positive misdeeds, in addition to all those chastisements incurred by his own proper demerits; and he had thus contracted an irritability of spirit which clung to him through life, and caused him to feel pleasure only in the misfortunes and failings of his fellow-creatures. It was Sir Mungo's custom to go about amongst his friends for the purpose of gratifying this propensity of his nature, his personal deficiencies and the pity due to his poverty protecting him in most instances from the resentment which he rarely failed to inspire in every one with whom he conversed. An amusing scene will be remembered, in which he contrived, while walking arm in arm in the most friendly way with Lord Glenvarloch, to fill the heart of that youth with bitterness by allusions to certain rumours which were flying about respecting his lordship, as that he had become a gamester, that he was one who gamed safely and meanly for the sake of money, and much more to the like purpose. This was a remarkably fair specimen of the powers of Sir Mungo in inflicting a little torture in a friendly way.

Malagrowthering, however, was by no means invented by this venerable gentleman, but is an art of the remotest antiquity, albeit neither Goguet nor Beckmann makes any reference to it. We hold it likely that the population of the world was no sooner sufficient to maintain a dialogue, than Malagrowthering took its rise, seeing that it has a foundation in human nature itself, and only requires the requisite number of persons, a Malagrowtherer and a Malagrowtheree, to be called into exercise. Nor is this likelihood in the least diminished by the consideration that the first two who lived on earth were a married pair, but quite the contrary, a civil mode of mutual tormenting being extremely suitable to that condition in life. Ever since then, Malagrowthering has been a well-known and much bepractised art, although not recognised under any definite name till a comparatively recent period. We shall now proceed to consider the various rules and modes of the art, as exemplified in the practice of its greatest masters—and mistresses.

Tastes differ, notoriously, in all things, and in this amongst the rest; but it cannot be denied that it is a large and most respectable section of the ancient order of St Mungo who generally prefer, in their practice, the comparatively candid mode of torment called touching on the sore heel. We need scarcely explain that by this is meant making allusions to painful circumstances in the past lives or present situation of one's friends, always, of course, in a polite manner. Suppose, for instance, that your friend has committed some notedly imprudent or rash act in the course of his life, or at any time from any cause made himself a public laughing-stock, or is now suffering under some wound inflicted on his vanity or his fortune, all you have to do is to bring the conversation to that point, whatever it is, and enjoy the affected tranquillity with which he talks of it, all the time that you know his heart is burning within him. There is one great advantage attending this mode of Malagrowthering, that it can be performed with an appearance of frankness extremely honourable to one's self. You may appear to fall in a good-humoured blundering way upon the subject, and keep up a good laugh all the time you converse about it. Then it looks downright, and maintains a character for openness, under favour of which you may in time become what is called a privileged person, and so be able to say all kinds of disagreeable things at all times to any body. This mode was the favourite one of Sir Mungo himself; a fact which should in itself go far to recommend it to all who rank themselves under his banner.

Less direct natures will generally prefer the next mode, which chiefly consists in acquainting one's friends with depreciatory opinions which are, or may be supposed to be, entertained of them by others. This mode may want some of the advantages of the candid plan, but it is safe and pleasant, and quite as effective. It calls, it is true, for a slight exercise of dissimulation, and occasionally even a little positive lying; there are also people who may think it shabby to report things said by others, and worse than shabby to invent them and lay them in the name of persons who never so much as dreamt of them. But all these are matters between one's self and one's conscience; and if the operator chooses to disregard them, we cannot well see what title any one else has to interfere. Besides, it is an acknowledged maxim amongst the honourable body of tormentors, that the end sanctions the means; and as their purpose is generally the laudable one of taking down pride, or the equally laudable one of letting the wind out of vanity, or perhaps the still more useful one of inspiring a little prudence into the brains of folly, why, we should suppose that, instead of blame, they deserve some public mark of approbation. We recollect, for instance, being ourselves much indebted to a lady Malagrowtherer, at a time when youthful vanity had persuaded us that we possessed a gift for the sacred art of poesy. This lady had the great kindness to inform us, that a certain gentleman of her acquaintance had spoken of our verses as things which, at a maturer age, we should be ashamed to have written. It was a staggerer at the time, but we have since acknowledged that it did us good. So also do we remember this same lady effecting some considerable reformation in the external aspect of her friend Mrs Gayflower, by informing her of a remark which a certain gentleman had made upon her, to the effect that she was a handsome woman, but always greatly overdressed. If this simple remark did not cause Mrs Gayflower to lay aside a set of ostrich feathers, and put off some dozen yards of pink ribbons for three whole weeks, may we never again take pen in hand! Certain other persons were supposed to have been much obliged to our friend for the hints she gave them of what was generally said by the public respecting their style of life. This was a point on which she was apt to give herself rather more than the usual scope, for, not being in flourishing circumstances herself, she thought it unjust that the children of affluence should enjoy themselves immoderately. It is supposed that Mrs Girdwood, the rich brewer's wife, did not give any kind of party for a whole month, and that champagne was banished from her husband's dinner-table for the better part of a winter, in consequence of our friend having informed them one day, that there were some people in the world spiteful enough to say that they were straining to imitate the county gentlefolk, and that all their fine entertainments were only laughed at by those who attended them. So also it was generally believed that Mr and Mrs Dashwood laid down their britzka and two dun ponies, for no other cause than her reporting the remark of a neighbour (whom she pretended in common with Mrs D. to hate very much), that it was really wonderful how the colonel's half-pay was made to go so far. A woman who exercised the gift in this way might rather be considered as an useful monitor or reformer than any thing else. Her object was to gratify the wish of the poet—

> Oh wad some power the giftie gie us,
> To see oursels as others see us!

Startled by the images reflected in her mirror, people trembled and were corrected. Undoubtedly it would be for the good of mankind, if there were more persons, possessed of the same moral courage, and the disposition to exercise it in the same way, going about amongst them.

Genuine Malagrowtherers, particularly of the gentler sex, know another mode of using third parties with effect. Whenever they hear of any friend you have got, whether that friend be the faithful and kind associate of long bygone years, or only the acquaintance picked up at random a few weeks ago, they immediately set themselves to learn all they can to his disadvantage, which they take the first opportunity of reporting to you. This is a still safer mode than any of the preceding, for it is not so likely to excite sudden and high resentment as the attack upon one's self. It is, however, equally tormenting in its general effect. A man may have sufficient candour to listen quietly to a discourse calculated to set his friends in a low light—he may listen, and even assent; but in the long-run he feels himself degraded by his presumed connection with such persons. If he is a man of nice honour, he writhes to hear that one whom he has invited to his house, and allowed to dance with his daughters, is thought by many to be a black-leg. If he is simply aristocratic in his feelings, he loathes the day on which he was prevailed upon by easy good nature to dine with one whom he now finds to be reputed as the son of a retired ship-chandler. If he be a generous and affectionate man, he is shocked to hear such sad stories of one whom he had long allowed himself to regard as a friend. A mercantile person will, on the other hand, be annoyed to be reminded of one of his most endeared associates who has lately become a bankrupt under unpleasant circumstances. One way or another, a Malagrowtherer of any tact may easily manage, by this mode, to give a considerable amount of pain. The treat is greatly heightened when the poor wretch makes a miserable attempt to deny the friends so much undervalued, or speaks of them as persons whom he has only met once or twice. To know that a real intimacy has subsisted, and to hear it thus explained away, while the twinged countenance betrays that the truth is not disguised within, must be a joy which only Malagrowtherers can fully appreciate.

Malagrowthering is an art, it may be said, of nice gradations. The touch on the sore heel is candid, but coarse. The reporting of what a third party has said is more refined, while equally efficacious and more safe. Then come the insinuations against friends, more refined still. Last, and finest policy of all, though perhaps too fine for all occasions, is that form of the art which consists in holding up a person's real or supposed faults to his own inspection, by frequent reference to these faults, either abstractly, or as exemplified in some third person, that person being real or imaginary as may suit the pleasure of the artist. If, for instance, a lady has a young friend whom she wishes to torment, but very covertly, so that there shall be no chance of the patient defending herself in an offensive way, all she has to do is to take up one of the young lady's faults, or some fault at least at-

Digitized by Google

tributed to her, and harp upon that form of human error, with illustrative examples, for half an hour at a time, once in the morning, a second time in the middle of the day, and a third time in the evening, or perhaps oftener if there be opportunity, always taking care to keep upon hypothetical grounds, and never making the least approach to a direct charge. Where the patient chances to be a person of fine feelings, and considerable love of approbation, the pain inflicted is generally very great, for not only has she the sense of being held guilty of the fault, but she is deprived of all power to vindicate herself by denying or extenuating, seeing that to assume the lecture as intended for her own correction would at once be to acknowledge the assumed guilt, besides implying that her counsellor was guilty of Malagrowtherng. Here, also, the Malagrowtherer usually has a great additional enjoyment in witnessing the conduct of the patient under her knife. Her propositions are usually so very much in accordance with established maxims, as that pride is bad, and vanity much to be despised, that they cannot be denied. A whole lecture will be so sound in its morality, that the victim must assent to every word of it. The examples of the vice drawn from imagination or from real life will be so frightful, that every dash of the pencil must elicit a new exclamation of horror from the sufferer. Thus she is made, as it were, to sign and seal her own condemnation, and this she usually does with so many ill-concealed twistings and writhings, that even the Malagrowtherer herself, one would think, must sometimes be disposed, though only for a moment, to relent. Relenting, however, is a failing of which no true follower of Sir Mungo is ever guilty. Patients often run under their guns to ask quarter—that is, take the occult satire in good part, in the hope of being held free of the imputed error; but there is, to the best of our knowledge, no well-authenticated case of one of them being spared a single pang for all their submissiveness and good nature.

There is a variety of the first plan, which may be most properly introduced at this place. If your friend, for example, has met a severe loss through simplicity or imprudence, tell him how sorry you were to hear of it, how severe it must be upon him, and so forth. Do not forget, however, in the first place, to express incredulity as to the report, and then you will have the additional satisfaction of making him confess his error, and go over the whole recital of what evidently lowers him to the dust in his own esteem. Be sure not to be sparing in your expressions of pity, for pity humiliates its object, all the time that it looks so proper and even creditable in him who professes it. There is one variety of this department of the art which never fails of success. Every body has poor relations, and many have depraved ones. Nobody likes to hear of such persons in his own case. At the same time, it is held discreditable to disown or speak otherwise than kindly of them. Calculating these things, the same mistress of the art who has been above alluded to, made it her business to learn all about the humble kinsfolk of all her friends, before whom on proper occasions she would bring forward references to the unfortunate people in all sorts of plausible ways; stating that she had been applied to by one for a situation, and wishing to know her character; or that she had met another one day, a very old, infirm, and poor person, who had given her a tale of personal woes quite distressing to listen to; or perhaps it would be, that she lamented to see that wild young cousin of yours come back once more from America, to be a torment to his parents, and a vexation to the police, particularly after so much money had been spent on his last outfit. All this she used to manage under cover of such an earnestly friendly manner, that no one could shake her off or express positive offence, while a stranger hearing her for the first time would have been inclined to think her a woman who took an uncommon interest in the poor, and looked with eyes of Christian leniency on the wicked. Such, indeed, was the blandness of her style, that even the patient did not at the time (in most cases) feel his wounds. Usually, it was not till left to his own solitary reflections, that he discovered how severely he had been lacerated, and became aware how tremendous a power is that of the Malagrowtherer.

The only serious drawback from the pleasures and advantages of Malagrowthering, is, that it does not in the long-run conduce to the popularity of the adept. It is sure, sooner or later, to be seen through, more especially when practised frequently or systematically; and some degree of resentment is the unavoidable consequence. This sentiment may not show itself in the sufferers at the time, either from their not then being conscious of it, or because there is no opportunity of expressing it. And the Malagrowtherer is apt, accordingly, to suppose that no more will be said or thought about the matter. But this is in most cases a great mistake. If there be a secretive mode of inflicting pain, there may also be a secretive mode of retribution. Covert sarcasm may be met by covert sarcasm. One corny toe may pay for the treading upon another. Or the Malagrowtherer may be simply disliked and avoided, which is the more likely and general consequence. But one consolation then remains, and we seriously recommend it to the attention of all regular performers, that such has been the fate of all who have endeavoured to chastise the follies and correct the morals of mankind since the beginning of the world.

PHYSICAL AGENTS AFFECTING MAN.

SECOND ARTICLE.

In a recent number, some attention was devoted to the consideration of those physical agencies which exert an injurious influence on the well-being of the poorer classes of society in large cities, and which exist and operate independently in a great measure of their social condition and moral habits. The want or imperfection of sewers, the existence of stagnant pools and ditches, accumulations of vegetable and animal refuse, the improper state and position of slaughter-houses and burial-grounds, and the crowding together of buildings in courts and alleys, were pointed out as the chief causes, falling under the head just mentioned, which impair the health of those living in situations exposed to their influence. An attempt was also made to show in what manner and to what extent these evils were remediable. But there are other causes affecting to a greater extent the health and well-being of the same orders of society, and, consequently, still more deserving of attention. This second class of detrimental agencies is connected with the circumstances, habits, and modes of life of the poor in large communities. A pretty clear line of distinction is thus drawn between that branch of the subject formerly considered, and the one to which we propose to devote the remainder of the present paper.

In the Report of Drs Arnott and Kay upon the causes of Fever in the British Metropolis, the following sources of disease, springing more or less from the habits of the poor, are enumerated:—1. The state of the lodging-houses of mendicants and vagrants, and of a certain class of the Irish poor. 2. The crowded state of the dwelling-houses, which, in certain districts, contain several families under one roof. 3. The gross want of cleanliness of the person, dress, and habitations among certain classes of the poor. 4. The prevalence of intemperance. 5. The habit of dwelling in previously deserted houses, cellars, &c. 6. Keeping pigs, &c. in dwelling-houses. 7. Indisposition to be removed to the hospitals when infected with contagious disease. 8. The neglect of vaccination.

That this is an accurate and well-founded statement of the causes that more immediately operate in producing disease among the lower orders of large communities, can scarcely be denied. Yet, assuredly, these are but the proximate or secondary causes. To what is the crowded state of the lodging-houses, as well as of the private dwellings of the lower orders, fundamentally owing? To the *destitute state* of those who frequent and inhabit them—to their inability to pay for and maintain better places of abode. Again, destitution, if it does not directly and entirely take away from those subjected to it the power and means of being cleanly in person, dress, and dwelling, takes away at least the spirit and anxiety to be so; they have not the heart to bestir themselves for the preservation of this minor source of comfort and health, while suffering under the heavier inflictions of indigence and want. A starving family cannot whitewash walls, or brush the dirt from rags. As to intemperance, it is scarcely possible for human beings, in a state of destitution, to resist the temptation to drown care in intoxication, whenever an opportunity occurs. The habit of dwelling in deserted houses, and of keeping pigs, &c., in human habitations, is plainly referable, in a great measure, to the same primary cause; and there can be little doubt, moreover, that the unwillingness to enter hospitals, and to have children vaccinated, is attributable, to a considerable extent, and in the majority of cases, to that spirit of reckless negligence which is generated by the constant pressure of the actual evils of indigence, and which cannot but lead those exposed to them to care but little for evils that are only possible and prospective.

All this is so clear, so obvious, that it may be said we are merely stating truisms. What then? If it be admitted that destitution is a primary cause and source of those habits and circumstances from which spring contagion and disease, does it not follow, that in considering the ways and means of preventing or remedying these evils, we ought to keep in view, first and foremost, their radical fount and spring—Poverty? It may be said that this is an irremediable evil; and, certainly, to extirpate it altogether from society, may be impossible; but it can scarcely be questioned that its extent and severity may be modified and moderated, by a proper system of social polity. If so, the establishment of such a system should ever form a leading object with all who study to improve the sanatory condition of their country.

These latter remarks were in some measure anticipated in a recent article, in this periodical, on the subject of the general Management of the Poor, which had it in view to consider the propriety of making stated provision for that class, wherever they had it not already. As one argument for the establishment of such provision, it was there mentioned that Dr Alison, in his late able pamphlet upon the state of the poor in Scotland, traces the fevers and diseases of the lower orders, in Edinburgh and Glasgow, mainly to destitution. The evidence which he brings forward in support of his views is strong and conclusive. We shall only allude to two impressive points in his statements, by way of convincing our readers of the justice of the opinions already expressed here. In the first place, it is found by Dr Alison, from an extensive observation of the history of epidemics, that they almost universally prevail with the greatest virulence after the occurrence of some catastrophe, spreading pecuniary and mental distress through the community in which they appear. Several great epidemics have raged in Ireland since 1700, each of them of nearly two years' duration. In 1740, a long and severe frost occurred, and was followed by a fearful epidemic. In 1799 and 1800, a scarcity (besides the insurrection) afflicted the land, and a two years' epidemic was the consequence. In 1816, another scarcity occurred, and this, along with the distresses attendant on the "transition from the war to peace," caused another terrible epidemic. In 1708, 1720, and 1731, similar events took place, with similar consequences. Now, it is natural that a frost or a scarcity, accompanied by agricultural or commercial distress, should cut off many victims; but unless destitution promoted contagious diseases to a striking extent, why these regular, successive, and long-continued *epidemics*? In Edinburgh, while commerce flourished on the deceptive basis of the war-prices, the number of fever cases admitted annually to the Royal Infirmary, for twenty years, never exceeded 130. In the three years following 1816, when the war-bubble burst, they averaged 905 annually. Commerce regained its balance, and up to 1825, the admissions were fewer, but during the three years following the great failures of 1825, they rose to 1173 in the twelve months. After another interval of decrease, the admissions were raised by the new crisis of 1835, to 3270, on an average, in the years 1836, 1837, 1838. The increase of the population must be allowed for here, but, taking this fully into account, can any thing more strikingly exhibit the great influence of depression of circumstances, or destitution among the poor, in producing disease?

The first and second sources of disease, mentioned in the Report, are the "state of the lodging-houses of mendicants and vagrants," and the "crowded state of the private dwelling-houses of the poor in certain districts." The third cause mentioned, is the "uncleanliness of the poor in dress, person, and domicile." Without supposing any great change in the circumstances of the parties concerned, certainly these evils are capable of very considerable diminution. That they really exist, and in a deplorable degree, is placed by the Report beyond doubt, as regards London, and we fear that London is at least no worse than Glasgow, Edinburgh, and some other large cities, in these points. Small lodging-houses of two floors frequently contain from thirty to forty people each night, and these people, all of the lowest description, are taken in for their wretched pittance, whether sick or healthy, clean or dirty. Four or five beds are ranged around each small close room, and three or more persons usually sleep in each of these beds, all perhaps strangers to one another. What a scene such a house must present by night! And yet it is a common one in the low lodging-houses of London. The consequence is, that "during the whole year, disease, or fever, never leaves these places." In a small cluster of such lodging-houses, called Mill's Lane, the attending surgeon visited, according to his own statement, "*eighty-two cases* of fever in the year ending March last." The private dwellings of many of the poor are scarcely less crowded.

As to want of cleanliness in point of dress, person, and habitation, the Report gives us a melancholy picture of the poor in London. Other places are even worse in this respect. The evil of uncleanliness is a more serious one than is commonly imagined. It was formerly mentioned, upon Dr Southwood Smith's authority, that when a portion of atmospheric air, loaded with putrescent exhalations, was analytically examined, a poison was found mixed with it, of so deadly a nature, that, when injected into the veins of animals, it produced fever and death. Now, what do uncleanly houses contain, or what do individuals uncleanly in person and dress bear about with them, but the refuse of animal and vegetable matter? From the walls of their habitations, and from their own bodies, their lungs must be perpetually inhaling that vitiated effluvium which actual experiment has shown to be a baneful poison, capable of producing, according to its degree of intensity, all varieties of fever, from the slightest species of it to the fatal yellow fever of the tropics. The cleanliness of individual persons, and more especially of individual houses, is obviously of nearly as much consequence to a large community, as the general cleanliness of a district, its courts, streets, and lanes.

The Report on the Fevers of London suggests the following steps for securing the cleanliness of lodging-houses, and the dwellings of the poor generally. A Sanatory Board of Guardians exists in that city, and the Report proposes to give to the Board sufficient powers to accomplish the following ends, at the public expense:—1. "To direct the removal of accumulations of filth from houses, the yards of dwelling-houses, &c., whenever two medical officers certified in writing that the state of such places was likely to prove injurious to the health of the neighbourhood. 2. To cause from time to time an inspection of the lodging-houses at

Digitized by Google

which paupers, vagrants, and mendicants, are reported by their officers to lodge. 3. To cause the whitewashing of the rooms of such houses at least twice every year, and if, after notice to that effect from the clerk of the Board, dated ten days previously, the inspector shall find that the occupier has neglected to comply with such direction, to authorise the Board to cause the house to be whitewashed by such persons as they may appoint for that purpose, and to recover the cost of such whitewashing and cleansing by application to the occupier or owner of such property, or by a summary mode, upon refusal, of either of them. 4. When the inspector shall report that three or more families live under the same roof, to authorise the Board to cause such house to be whitewashed and cleansed in a similar manner at least twice a-year, at the expense of the owner."

These are the principal suggestions of the Report which bear on the point under consideration. As, in spite of the pauper night-houses, and other similar establishments which may be erected, and which it is highly advisable to establish, many of the indigent poor will always flock to lodging-houses of the kind now existing, these suggestions may be attended to with advantage in every great city. But, in addition to whitewashing and cleansing, the necessity of ventilation, or the admission of free currents of air into human dwellings, ought ever to be kept in view. With constant renewals of fresh air, even a lodging-house, or a crowded workhouse, may be healthy. Dr Southwood Smith mentions a striking case in point. In the Whitechapel workhouse, 89 out of 104 girls were recently attacked with fever; and this has been but a too common occurrence there. In the Jews' Hospital, again, situated nearly in the same locality, and exposed to the same general influences, fever has never once occurred as an epidemic among the children for these eight years. Dr Southwood Smith was much struck by this circumstance, but, on inquiring into the matter, his wonder ceased. He saw clearly that it was owing to the different mode in which the dormitories of the two houses were ventilated. He found that 104 girls slept in close-placed beds in the Whitechapel workhouse, in one long room, only seven feet high, with sloping roof, and most imperfect ventilation. The children of the other house had dormitories with lofty walls, well separated beds, and ten large ventilators in the roof. Dr Southwood Smith calculated that the Jews' Hospital dormitories had a supply of air four times greater than that admitted into the other one. As if to place the matter beyond doubt, it proved on inquiry that the Jews' Hospital children had scarcely ever been without fever at one time, but the evil had entirely ceased when their dormitories were altered and more fully ventilated. Thus, nearly at one and the same time, 89 out of 104 poor girls in the Whitechapel establishment have had fever, through want of ventilation. A strong case like this is preferable to a thousand arguments.

It is true that the possibility of effectually ventilating single houses depends greatly on the state of the air in the locality where they are placed. But we are supposing that, where changes are made at all, steps shall be taken for the improvement at once of districts, and of particular spots, courts, lanes, and houses, in these districts. The mode in which a house is built, also, materially affects its capabilities for ventilation; but, generally speaking, in any tolerably open and clean locality, houses may receive a pretty free supply of air, if the inhabitants fully appreciate its value, and take care to promote it. The Report already quoted proposes that the Board of Guardians of London be empowered to prevent the formation of any street less than a certain number of feet in width, of courts with covered entries, &c. Roominess is the great desideratum, whether in street, court, or dwelling. Were it merely for the sake of admitting *light*, the residences of human beings should be open and unconfined. Plants die in the total absence of light, and a similar effect, to a certain extent, is produced by it on the animal frame. Through the agency of light, man is supplied with no inconsiderable part of the oxygen upon which his life depends.

As to the "habit of dwelling in previously deserted houses, cellars, &c., and the keeping of animals in dwelling-houses," the risk of contracting disease in the one case, and, in the other, of generating putrescent effluvia of a noxious kind, is so obvious that the safety of the community demands the extinction of these practices wherever they may be found to exist.

On another cause of disease among the poor of large communities, namely, intemperance, we do not consider it necessary to dwell here. The evil has already been often adverted to in this Journal, and indeed is treated of at some length in another part of the present number. Besides, the subject is at this day undergoing ample discussion in this and every other civilised land; and in the numerous publications devoted especially to the question, the injurious influence of the practice upon health may be seen stated at length. That this is an evil of the first magnitude, is undeniable.

The poor have a very general dislike to be removed to hospitals when attacked by illness, or to permit any member of their families to be taken thither in the like circumstances. How injurious such prejudices are in their practical effect, will appear from the following case, one of many that might be adduced. The surgeons of the workhouse at Bermondsey state that a family came under their care, consisting of "three branches, one residing in Upper Russell Street, one in Raven and Sun-yard, the other in Ebenezer Row. Of the former, the whole family, five in number, have recovered; of the other family, eight in number have been attacked, and all got well except the mother, who died shortly after her admittance into the workhouse; the children recovered, and, after being some time in the house, were removed to an adjoining parish, and from thence sent back to Ebenezer Row, though we gave a certificate that it was dangerous and improper to do so. One child admitted on Monday last, was the *fourteenth* of this family which has been received into the workhouse attacked with fever, so that no sooner has one been cured than another has come in; whereas, if we could have insisted upon their earlier removal, the parish would in all probability have been saved the expense of maintaining them during so long a period." It would be superfluous to multiply examples of the same thing. There can be little doubt that it is the interest and indeed the duty of poor people who have large families, and are not possessed of the means to ensure the proper tending and treatment at home of such of them as may fall ill, to send them to these establishments erected for them by the generous charity of their country, where they may have a fair chance of recovery, and where they will be out of the way of involving relatives and neighbours in the same mishap with themselves.

The neglect of vaccination by the poorer orders in almost all large towns, is very general, and at the same time very inexcusable. There are in all considerable cities, either establishments for the purpose of vaccinating the children of the poor, or medical men who are ready to perform that duty gratuitously in their several districts. Sheer indolence and carelessness lead the lower classes to leave their children unvaccinated, or to have it done by improper persons; and the consequence is, as we see from the reports of medical men in London, that small-pox, often of a malignant kind, is of very common occurrence in the densely populated districts. Medical men, we repeat, invite the poor to adopt the remedy for this evil, and give their services for nothing. It is inexcusable, therefore, to hold back; but some means should be adopted, if possible, to make vaccination obligatory upon the poor. As in the case of other contagious diseases, they not only injure themselves by their neglect, but endanger the health and comfort of the whole community amid which they are placed.

The arguments in this paper, and the one which preceded it, will not be altogether, we hope, without their effect. Their object has been to show the prevailing causes of disease, and, above all, contagious disease, among the poor of large communities; or, in other words, to point out the physical agencies chiefly affecting man in civilised society. The vitiated state of the atmosphere in particular localities or districts from general causes, the destitution of the lower orders, and a train of causes, such as uncleanliness and intemperance, mainly dependent on that destitution, have been indicated and adverted to in detail, as the influences chiefly injurious to the well-being of man in society. Whether or not any immediate or direct good flows from such an inquiry as this, a reflecting mind may at least draw from it consolatory hopes of future good; for every thing that has been now said, we think, will support the satisfactory position laid down at the commencement of our former article, that, by the wise and benevolent arrangement of the Divine Being, all or nearly all of the physical evils to which man is subjected in this world, are to a great extent remediable by his own exertions, and that by a close observation of the laws of nature, he may secure a large measure of health and happiness in the present scene of existence.

A STORY OF SWEDEN.*

CHRISTINA of Sweden, only child and successor to Gustavus Adolphus, the Lion of the North, and right arm, as he was called, of the Protestant faith, ascended the throne of her ancestors at a very early age. She was a woman of considerable talents, but more remarkable for energy of character, and an indomitable will; qualities which she inherited from her father, and which her position, as the uncontrolled head of an almost absolute monarchy, nursed into more than masculine strength. Her wilfulness always displayed itself in a rash, though sometimes in a generous way; and in one of her fits of the latter kind, ere she had advanced far in life, she formally resigned her crown, for the good, as she imagined, of her people. The sacrifice was soon repented of, but too late for retrieval, and she spent her latter days in retirement. It was this extraordinary woman's leading wish, when on the throne, to be compared to Elizabeth of England, and she imitated that princess even in her cold-hearted and unworthy coquetries. Hereby hangs the tale we have now to tell.

The young Queen of Sweden gave a magnificent fête or masquerade in her palace at Stockholm. This fête had a peculiar character, and one which doubled its splendour and attractions, while exhibiting, at the same time, the ruling foible of the heroine of the north. Christina wished, for one night, to have the pleasure of openly and expressly bearing the character of the English princess, and to reassemble around her all that was brilliant and distinguished at the court of her model. For this purpose she had given orders that her own courtiers should assume for the time the characters of the various men of note in Elizabeth's reign, and, in particular cases, she conferred on individuals the honour of assigning to them the parts they were to play. This was rather a delicate point, it must be remembered; for such parts as those of Essex and Leicester had a significance attached to them, which could not escape remark. Any old statesman might play Burleigh, as easily as is done in Mr Puff's famous drama; but no common man durst assume the character of either of the two noblemen before mentioned. A modest aspirant for royal favour, however, might venture on the garb of a Raleigh, and more than one young courtier did appear in the guise of Sir Walter, on this brilliant evening. The Swedish queen was delighted with the result of her project. A strict etiquette had been established for the regulation of costume, and in order to give a better rule of guidance in this particular, Christina had been at the pains to send for portraits of all the principal personages to be represented. Thus, the verisimilitude of the scene was rendered perfect.

Among the individuals who attracted most interest on this occasion, by their appearance and manners, were a young cavalier and an elegant woman, who kept much beside one another during the evening. They were both distinguished for the high-bred ease and grace of their movements, and this circumstance alone, independently of the language in which they spoke to each other, might have served to mark them as foreigners. They were both, indeed, from France. They seemed to be on the most confidential terms; but there was one notable point of discrepancy apparent between them. The lady seemed willing and even desirous to show herself openly in the crowd, whereas her companion evidently sought to keep himself as much as possible out of the common eye, and, in particular, to avoid the notice of the queen, as she moved from place to place in the splendid assembly. Ultimately, the young cavalier appeared to succeed in bending his companion to his wishes on this subject, and the pair retired to the recess of one of the lofty windows, where they commenced an animated conversation, though in low tones. Young and light-hearted, and possessing the spirited temperament of their common country, with a full share of its turn for raillery, they scanned, from their secluded nook, the whole of the vast assembly, and subjected every one who caught their eyes to a witty but good-humoured review.

"Ah," said the lady, "look at that little Leicester; what think you of him?"

"Poor fellow! he does not see that the queen wished to make a caricature of him, by putting him into such a garb!" said the gentleman in return.

"Lord Burleigh's representative," continued the lady, "has got the *wig*, at least—but nothing more."

"And see," rejoined her companion, "how Sir Christopher Hatton bears himself! The English chevalier, it is said, could dance well, but his personator is pleased to make himself a walking minuet."

In such a style did the cavalier and the lady chat for one another's amusement in the window recess. At last, the lady, with an appearance of nonchalance, but with a tone of voice that betrayed some deeper interest in the matter, said to her companion, "Apropos—the queen herself—how do you like her?"

"The queen!" replied the cavalier in a low voice, casting around him a troubled glance.

"Yes," continued the lady; "do you think she resembles Elizabeth of England?"

"Between *us*—just as much as *Madame Laura resembles Maria Theresa of France!*" was the youth's answer. As the last words left his lips, he grew deadly pale. His companion alone seemed to enjoy the remark. "Admirable!" cried she, and signalised her sense of the joke which was conveyed to her by the words, by a hearty laugh. But her mirth received a sudden check, as her eye fell on the personage who now stood in front of her and her companion.

"Who is this *Madame Laura?*" said the Queen Christina; for it was she herself who now appeared before the cavalier and the lady, having overheard all that had passed.

At this question, the cavalier, previously much agitated, was compelled to lean on the window. But he recovered himself sufficiently to reply, though with an altered and faltering voice, to the queen's interrogatory, "Madame Laura, please your majesty, is a Parisian lady, who has the honour to resemble the Queen of France—both in dignity of manners and beauty."

Christina looked on the speaker with an air of doubt and indecision. "Count d'Harcourt," said she after a pause, biting her lips at the same time, "this is a trait of French gallantry for which the Queen of Sweden may thank you at some future period." Nodding slightly and haughtily to the count's fair companion, Christina then turned away, and with majestic step moved to the spot where a band of courtiers were engaged at the card-table. Meanwhile the whisper passed from tongue to tongue, "The queen has spoken *particularly* to the young Frenchman; his fortune is made." The object of their remarks, on the other hand, was at that moment muttering to himself, "I am ruined—lost!" And taking leave of his former companion, almost without a word on either side, the Count d'Harcourt left the assembly.

Christina, after speaking as has been related, went

* Translated from the French.

Digitized by Google

directly to the ambassador of France, whom she drew aside from the crowd. "I have a favour to ask of your excellency," said she, "under the seal of secrecy." "Your majesty has but to speak," said the diplomatist gravely, "and I shall be proud to obey you to the utmost of my power." "I assure you," returned the queen, "your power will not be severely taxed at present. It is but a trifle—a bagatelle—that I am interested about just now; but I think you are the only person who can gratify my wish. I desire but to know who and what a certain Parisian lady is, who bears the name of *Madame Laura*?"

"Madame Laura—Madame Laura!" rejoined the ambassador, turning his eyes on the ground.

"Yes, Madame Laura," said the queen impatiently; "does your excellency know her?"

Upon the diplomatist avouching that he never in his life had heard of such a lady, Christina tapped the ground restlessly with her foot, and appeared annoyed. "Then your excellency," said she at length, with an imperious voice, "will have the goodness to favour me by finding out the lady. Let an express set out for Paris this night, and return without a moment's delay with full details respecting the position and character of this Madame Laura." The ambassador bowed respectfully, and retired to give immediate orders to a courier to proceed on this extraordinary mission.

It has been said that the Queen of Sweden imitated or at least resembled Elizabeth in her fashion of coquetting with some favoured noble of her court. The personage on whom, at the date of our story, the favour of Christina seemed to have fallen, was that young Frenchman, who, exiled for political reasons from his own country, had come to Sweden in the hope of obtaining military service. The queen received him with peculiar marks of distinction, gave him a commission in her life-guards, and conducted herself towards him, altogether, in such a manner as would have given even a very modest man reason to believe himself an object of marked regard. To a young man of twenty-five, bold and ambitious, such a conviction was likely to be flattering and seductive. We cannot say that it was not so in the case of Count d'Harcourt, but whatever might be his dreams of ambition, his affections had lighted on another object than the sovereign of Sweden. This was the Baroness Helena of Steinberg, a young and beautiful countrywoman of his own, and the widow of a deceased Swedish noble. The baroness returned d'Harcourt's passion warmly, and the jealous eye of love soon advised her of the potent rival with whom she had to combat for his affection. On the occasion of the masked ball, Christina had herself deigned to suggest the character of Essex to the young Count d'Harcourt. The baroness, when informed of the circumstance, saw its full significance, and was bold enough to venture on answering the hint of the queen by a covert allusion of the same practical kind. Finding a portrait of Lady Sidney, widow of Sir Philip, whom Essex had privately made his countess, the baroness had assumed the character of that lady at the risk of giving offence. Hence the unwillingness of d'Harcourt to attract attention at the masquerade, the baroness being then his companion. Well would it have been for the young noble had he been equally cautious with regard to his speech! But, in reality, the costume of Christina, which had called from him the mysterious remark about Madame Laura, was somewhat ridiculous. The numberless frills of Elizabeth's usual dress, with all its other stiff and stately points, were very much out of place on the restless, careless, and petulant Queen of Sweden. Perhaps she was partly suspicious of this on reflection, and the more galling was the idea of being an object of ridicule to the man she favoured, and, above all, to her rival in his regard.

The impatient queen received an answer from Paris in eight days, so actively did the courier fulfil the orders given. "Madame Laura," said the document which he brought, "is a court lady who has become *mad*. Her mania consists in a belief that she is queen of France, and in her endeavour to rival the real sovereign, Maria Theresa, in all her dresses and decorations. The poor woman passes her life in this sole occupation. The queen never assumes a habit, which is not seen immediately afterwards on Madame Laura. As she is as inoffensive as ridiculous, nobody meddles with her, and she is every where known in Paris by the name of the *queen's caricature*." This dispatch had additional details of the same kind, and concluded by exhibiting a portraiture of poor Madame Laura, dressed as Maria Theresa, and looking inexpressibly ridiculous.

The rage of the Queen of Sweden knew no bounds. She had conceived that there was some little point about d'Harcourt's comparison somewhat unfavourable, but to find that she had been compared altogether to a vain and ridiculous madwoman—she, the heroine and pride of the north—she, who had almost allowed the author of this gross insult to know that she loved him—she, to be an object of contempt to this strange youth and his Lady Sidney, the woman for whom he seemed to reject herself—such a thought was torturing to the heart of the proud and wilful princess. "Wretches!" she exclaimed, "this is the comparison you would have had me to believe a compliment!" Filled with such emotions, the queen again chanced to look at the detailed account of Madame Laura. "Innocent as the madness of the lady really is," said one part of the paper, "she is an austere sovereign, and by no means inclined to admit clemency among the royal virtues. She speaks ever of executing justice." The passage tallied with the state of the queen's mind. "Yes," cried she, "if I am ridiculous, like her, I will be similar to her in all things." Then she set herself to discover a fit chastisement for d'Harcourt. None appeared to her sufficiently heavy, sharp, or sudden. In this temper, passed the day on which she received this galling document from Paris.

Sleep, or the calm of night, brought a change over her feelings. She arose with an altered mind from her couch, and in place of an order for his confinement in a dungeon, she sent to d'Harcourt, on that morning, the brevet of the additional rank of lieutenant-colonel.

The count, who had been preparing himself for leaving Stockholm, was surprised and confounded on receiving this intelligence. He was the more so, as he had not the least doubt but that the queen must have discovered the secret of his allusion to Madame Laura, from some of the Frenchmen about the court. The conduct of Christina thus appeared to him in a most magnanimous light, and a light very dangerous to his fidelity to the Baroness de Steinberg. Still more was this the case, when after the lapse of but a few months, he was raised to the rank of colonel, and, subsequently, on the occasion of his performance of a gallant action, was honoured with the rank of general, and the key of chamberlain of the household. He was induced also to become a naturalised Swede, as a step to further greatness.

All eyes were now turned upon the rising young Frenchman, and it was thought that the premiership, if not a higher honour, was within his grasp. He was in a trying position. He was charmed with the queen's generosity of heart, and believed that she must love him, though nothing but her kindly actions, and, it may be, her looks, had indicated it hitherto; and he had never dared to enter upon such a subject. Indeed, dazzled as he was by the prospect of personal favour from a young, powerful, and not unlovely princess, d'Harcourt still felt his heart to be with the Baroness de Steinberg. His fidelity to the latter, and his ambition, came at length to a direct trial—a struggle for superiority. The Baroness de Steinberg had seen, with mingled feelings of pain and pleasure, the elevation of her lover, but the sense of pain predominated. She saw that ambition was estranging him from her. One day, accordingly, she wrote to him, announcing her intention to leave Stockholm that evening, but plainly indicating that if he yet loved her enough to retain her, she would not go. At the same moment, almost, the count received a letter from the queen, desiring his immediate presence at a private consultation with her council. This was equivalent to an announcement of a new honour awaiting him. The count was deeply agitated by this dilemma, but ambition, or what he would fain have called *duty*, gained the day. He neglected the invitation of the baroness, and went to the palace, seals and portfolios dancing before his mind's eye by the way.

The queen was seated in council when he was announced. All smiled upon the favourite; but Christina signified her wish for the whole to retire, and d'Harcourt was left alone with her. She was pale, and he also was agitated. It seemed to him as if the moment was come when a crown was to fall on his head. After a pause, the queen lifted a portfolio, stamped with the royal arms, the symbol of supreme if not royal power, and holding it out, said, "Do you desire it?"

The smile of the queen made the intoxicated young noble interpret this into, "Do you love me?" and he fell on his knees, exclaiming in answer, "Yes, I love you, as much as I reverence and admire you!" He continued in this strain for a short time, when the queen interrupted him—and what an interruption!

"Enough!" cried she, in a tone that froze the blood in the count's heart, a tone resembling that of a player who casts aside a mask he has worn for a time. The dismayed count would have risen, but she imperiously signed to him to remain. "At length," continued she, in a tone of concentrated bitterness, "at length I see you *there*—and the hour of my revenge is come!" D'Harcourt fell back, with his head upon a fauteuil, dumb, and motionless. "Yes!" resumed Christina, "I knew that you *loved* me, but I wished to hear you declare it, as I can now say, as a *woman*, what I might long since have said as a *queen*, that I—scorn and despise you!"

A groan was all the reply of the undeceived and unfortunate count.

"Yes, I have raised you," continued the queen, "only for the enjoyment of this hour. *Elizabeth* raised the *Earl of Essex* step by step to place and honour. So have I done by you. But there is a further step. If I cannot be Elizabeth, as *Madame Laura*, whom I resemble so much, and who is equally cruel as mad, I may fairly finish the similitude. You remember the end of Essex!"

"Death!" exclaimed the agitated count involuntarily.

"Yes! death on the scaffold," said the queen. "I have taken care to naturalise you in Sweden, and you are at my discretion. But I will conclude this affair in a manner more worthy of Madame Laura, and consequently of *me*," added Christina bitterly. As she spoke, she summoned the councillors to re-enter.

"This man," said she to them, "is insane. Let him be conveyed to the *madhouse*!" Dumb with horror, the Count d'Harcourt was taken from the royal presence.

Insanity really attacked the unhappy man. But, from the tenderness of one woman, he found a partial remedy for the cruelty of another. On hearing of his doom, which was mitigated in time, the Baroness de Steinberg, forgetful of all her wrongs, flew back to Stockholm. Her future days were dedicated to the solacement of the broken-spirited Count d'Harcourt.

OCCASIONAL NOTES.

CURIOUS FEATURE OF THE BOOKSELLING BUSINESS IN AMERICA.

The present Journal is regularly reprinted by Mr Jackson, bookseller, New York, and has been so since January 1838, several previous American republications of the work having failed. We have been informed that Mr Jackson sells 2500 copies, and hopes to sell more hereafter. It is sold in weekly numbers and monthly parts, but to subscribers only; that is, to persons who undertake to receive the work regularly for a year, and to them the annual charge is two dollars and a quarter, or about ten shillings, being about one-half more than the British price. We only introduce these circumstances to notice, as connected with a remarkable feature in the business of the publisher and bookseller in America, which we have never seen noticed. It is, that in America no single number of a periodical work can be had, either from the publisher, or from any retail bookseller. *It is necessary* to subscribe for them for the year, or not at all. There is no recognised price for a single number: the only price known is the *price per annum*, and this whether the work be weekly, monthly, or quarterly. Thus, the North American Review, the Knickerbocker (a monthly magazine), and the New York Mirror (a weekly sheet), are respectively five dollars per annum. No number of these works bears its own price upon its cover, as with us, for no single number is ever sold. Neither is any work to be had any where in the town where it is published, but at the office of the publisher, or in other towns but at the shop of the single agent for the work. It is easy to see how these practices *must* affect any periodical work, whether originated or reprinted in America, in which an effort should be made to proceed upon the principle of making an extensive sale compensate for a low price—in short, what is called in this country a cheap periodical. Trammelled by such a mode of publication and sale, there can be no such thing as a cheap periodical in America. A combination of the first intellects of the country to establish such an organ of popular instruction and amusement, would probably fail in its object, merely on account of its not being a custom of the bookselling trade to deal in single numbers of any periodical work. The vast class below a certain grade who could afford to buy the work weekly, or occasionally, but who could not become subscribers for a year, and pay the amount beforehand, or at least in one sum, would be excluded, and the work therefore would require to be calculated, in price, for only a moderate sale amongst the middle classes. This is surely a state of things not creditable to America. The custom is clearly a bad one, and ought to be altered immediately. In Britain, not only is there no difficulty in obtaining a single number of a periodical work from any ordinary bookseller, but there is now, in most towns of considerable magnitude, especially those containing a manufacturing *population*, a class of booksellers planted in neat *small* shops, generally in the suburbs, who make a decent livelihood almost exclusively by the sale of periodical publications, chiefly those of the cheap kind, and who may be considered as amongst the most useful of our trading citizens. Unless there should be local obstacles of which we are not at present aware, we should expect that a business of the same kind might flourish in the cities of America, and the more so that the higher booksellers would probably be the last to give into the new practice.

MEN SURVIVED BY THEIR FIRMS.

It is very common when any individual or copartnery has been successful in business, and when the business survives its originators, to make no change in the *firm*, or business designation, in order that the new man or men may have the benefit of a respected name to second their own efforts and deserts. In the eye of a strict morality, this can in no instance be quite right, for it certainly involves a modification of the crime of obtaining money under false pretences. Sanctioned, however, by custom, and practically not productive of any evil consequences, it may be overlooked in all ordinary mercantile concerns, where one honest and active man of business may be fairly presumed to be as good as another. Clearly, however, it is not so excusable in business concerns in which special personal qualities are called into exercise. Say, for instance, that an ingenious man has become famous for his skill in making musical instruments, and that instruments of his making bring a higher price or meet a quicker sale than those of other makers, it would obviously be an act of deception for any person or persons, after his death, under the pretence of keeping alive his business, to make and sell similar instruments marked with his name. Here the business is not simply mercantile: there must have been some peculiar ingenuity, skill, or shrewdness in the original man, which it is in the highest degree unlikely that his successors possess; and therefore they are not entitled to keep up his name. So, also, if an engraver of maps has acquired celebrity in his particular art, it is plainly

Digitized by Google

wrong to keep alive his name in a business concern after his death, seeing that the art of engraving maps involves a degree of geographical knowledge, or at least of conscientiousness and industry in consulting authorities, as well as of skill and taste in engraving, which another man may not have. His successors may say, the late man did not in his latter days engrave maps with his own hand, but employed clever subalterns, all of whom we still have about us, so that in reality the work issued from our office is now as good as ever it was. All this may be true, but it is far from being satisfactory. If the late man did not latterly do any thing with his own hand, he probably exercised a general superintendence which was useful. At least, he gave the guarantee of his name that the work was properly executed—that name being generally recognised as that of a man of credit and renown in the construction of maps, and who might be supposed to be on his guard lest it should suffer by appearing in connection with inferior work. But, now that he has been dead and gone for many years, the superintendence may be of a very different character, the maps may be engraved under circumstances much less advantageous for neatness and accuracy, and the guarantee given is not that of the persons concerned, but that of a man past all human accountability. Neither will it do to say that the death of the original man is well known, and that the phrase "engraved by —— ——" can deceive nobody. His death must be unknown to a great number of persons, who, in trusting to the above phrase as a recommendation, must unquestionably be deceived. It may even chance that individuals, ignorant of the reputation of the man, may purchase the productions of his successors, merely from seeing his name paraded in a way meant to convey the idea of recommendation. Can this be called *so deceiving?* Take the case, however, in any way we will, it must appear as a kind of imposture. The phrase itself, "engraved by —— ——," the person meant having been dead for years, is a downright statement of what is not true. It is a false statement, obviously designed for a purpose, and that purpose must be the benefit of those who use the phrase. If not, why do they not at once use their own names, or adopt the phrase "successors f" in either of which cases there could be no dubiety. Obliquities of this sort are, we humbly conceive, unworthy of men engaged in honourable callings. Solomon's Balm of Gilead may be sold after Mr Solomon himself is dead, and no one, who swallows the balm itself, will strain at the matter of the name. But when we find any thing partaking of the nature of imposture in connection with intellectual pursuits or operations, we unavoidably feel shocked, because it is in such pursuits and operations that we naturally expect to find the purest integrity and candour.

TAIT'S MAGAZINE FOR APRIL.

THE TOTAL ABSTINENCE MOVEMENT IN MUNSTER.

Mr Tait's Magazine has the great merit of being much cheaper than others of the same class. Laying aside its politics, which, after all, occupy but a small portion of the work, its literary matter, especially in the department of tales, is generally of a high character. In the number before us, the leading article is one descriptive of the late abstinence movement in the south of Ireland. We have seen this movement alluded to by snatches in many newspapers, but have not before met with any thing like a historical summary of the affair, and we therefore consider the present paper as one of considerable interest and importance. It will probably for the first time afford a just idea, on this side of the water, of Father Matthew's operations, which, though exemplifying, we believe, all the features of the moral epidemic, and therefore resting, we fear, on not the soundest basis, are certainly in the mean time of a most beneficial character, and may even be supposed to promise some measure of permanent good.

Mr Matthew is, as is generally known, a Catholic clergyman in Cork. Early in 1838 he established in that city a Total Abstinence Society, which on the 20th of January 1840, numbered 500,000 members. "This rapid increase," says the author of the article before us, "is sufficiently remarkable in itself, but it calls for our deepest attention if it can be shown to proceed from a great national movement; a voluntary effort on the part of the people, which developes some of the most peculiar features of Irish character." He has watched and witnessed the progress of the business, and he has come to the conclusion, "that a great majority of those who have received the temperance pledge from Mr Matthew, took the step in consequence of observing the improvement visible in the health and circumstances of friends and neighbours who had joined the society, and that in comparatively few instances was any persuasive attempted by superiors, either lay or clerical." We shall now quote the account given by our author of the history of the society.

"The first attempt to establish a total abstinence society in the south of Ireland, was made in Cork by some members of the Society of Friends. This was attended with little or no success, and they solicited Mr Matthew to commence one on similar principles, rightly judging that twenty years' zealous performance of the duties of his office, which had gained for him the enviable reputation of being the poor man's friend, was the best of qualifications for an apostle of temperance. The reverend gentleman was not sanguine of the success of his undertaking. We have it on his own authority, that at the commencement he would have thought himself fortunate in obtaining five hundred members. A public meeting, however, was held, and on the 10th of April 1838 the society was formed on the widest possible basis, the only form requisite on admission being a repetition of the following pledge: —'I promise, so long as I shall continue a member of the Tee-Total Temperance Society, to abstain from all intoxicating liquors, unless recommended for medical purposes, and to discourage, by all means in my power, the practice of intoxication in others;' Mr Matthew adding, 'May God bless you, and enable you to keep your promise.' At first, but few converts were made, and those chiefly due to Mr Matthew's influence with the lower orders, whose confidence he had previously gained; but a great improvement taking place in the health of those who had discontinued the use of spirits, it was immediately supposed that some healing power was possessed by the reverend gentleman, of which the tee-totaller received the benefit. This gave a great impetus to the society; and the halt, the maimed, and the blind, crowded to Cork to take the pledge and be healed. Mr Matthew at once set his face against this delusion, and the society was left to rest on its own merits; but there remains a strong impression that the pledge administered by Mr Matthew is superior in efficacy to that administered by others. We have questioned many tee-totallers on this subject, and their answer has uniformly been, 'We have seen notorious drunkards reclaimed by going to Cork, men who had resisted the most serious appeals from their own clergy, and broken the most solemn vows, taken voluntarily, against drinking; and, therefore, we should prefer walking a hundred miles to take it from him, to staying at home and taking it from any one else.' We are told that this is rank superstition, but we confess our inability to discover why a man is not equally free to select a physician for his moral imperfections as for his bodily ailments; why, to bring it nearer home, the poor Irishman should not sling his shoes across his shilelah, and walk to Cork, just as reasonably as the rich Englishman should put four horses to his chariot and drive to Leamington.

The rapid increase of the Tee-Total Temperance Society soon began to attract public attention, and several applications were made to Mr Matthew to visit various towns for the sake of making converts. These he uniformly refused, alleging that all who were in earnest would come to him, and that the fatigue and privations incident to a long journey, especially if made on foot, would be likely to impress the occasion of it deeply on their minds. The first exception to this rule occurred when he visited Limerick to preach a charity sermon, on which occasion troops were obliged to be called out to prevent loss of life, from the mere pressure of the thousands who crowded to take the pledge. Mr Matthew was subsequently requested, by his ecclesiastical superiors, to visit Waterford and Clonmel, as the numbers of country people who flocked into Cork were in many instances overreached and plundered by designing individuals, who professed to accommodate strangers. It thus appears that, after the first establishment of the society, no further measures were required on the part of Mr Matthew than the enrolment of the crowds who daily presented themselves for admission. To make this clear, we will allow the tee-totallers to speak for themselves, merely premising that, in all the cases we shall bring forward, the witnesses were examined by ourselves; some casually when in our employ as guides, boatmen, &c.; others when in their shops, or engaged in their trade or business, as tailors, shoemakers, &c.; and that the drift of our questions has always been to discover the immediate cause of their taking the pledge, and its effects upon their health and circumstances:—

1. John Fleming, aged forty, guide and bugleman at Killarney, took the pledge in June 1839. After receiving money, he never could rest till he had spent it; and when he could not drink it all himself, used to treat others. Joined the Tee-Total Society in consequence of having sold his bugle, and enlisted when very drunk. Was imprisoned for taking money on false pretences, he having taken the money to enlist when too old to enter the service. When released, was persuaded by his sister-in-law, who keeps a whisky shop, to go to Cork. Walked there, and drank two glasses of whisky and two pints of ale on the road; walked back next day, drank milk, and found the road shorter. Used, after drinking, to sleep badly, and eat no breakfast; now, sleeps uniformly well, and can eat any thing. Has, in the course of the summer, paid many pounds of debt previously incurred, besides living on a superior diet. At first the publicans offered to treat him to whisky, punch, &c.; now, no one thinks of proposing it to him. Is much better in health, and never feels the want of spirits either when wet or cold.

2. John Collins, turned seventy, boot and shoe maker at Killarney. Went to Cork, August 7, 1839. From his childhood was in the habit of drinking whenever he could get the price of a glass of whisky. Used to take the money for his children's breakfast, and buy whisky, leaving them and himself without food. Had four sons, whom he taught to drink as well as himself; and when they came home at night drunk, used to fight his sons, and kick and beat his wife. [By the solicitations of his son, he went to Cork, and took the pledge from Father Matthew.] The next day he tried to walk from Cork (fifty-eight miles), taking nothing but a little sour milk; thought he should have died, but felt quite content, though sure that a glass of whisky would cure him. Felt faint and weak for three weeks; since that, has never found the want of drink; is better in health, lives well, and on the best terms with his family. Used to have potatoes, perhaps dry bread, very often nothing; now, has meat once a-day, and tea or coffee for breakfast; the same again before going to bed.

3. Francis Donnoghue, aged forty-one, druggist, Killarney, a freeholder for the county of Kerry, took pledge July 8, 1839. Drank hard; was committed to Bridewell for a street row twice. The second time, was supplied with liquor by his friends; got drunk, and set the Bridewell on fire; drank himself mad, and was in the lunatic asylum for some time, but recovered, and drank again. When a patient came to him to have a tooth drawn, or to be bled, he would offer them a glass of whisky, as he always had a large bottle before him. Drank himself into difficulties, and pawned every thing he had. In the first week of abstinence, felt the want of a glass; after that, has never missed it. His circumstances are improving, and his family bless the day on which he went to Cork. Is apothecary to the Killarney Society; nearly 500. Only four have been ill, for six months; none of them have suffered from leaving off spirits.

4. Denis MacCarthy, aged fifty-seven, boatman at Killarney, took the pledge 2d September 1839. Began to drink as a waiter. Used sometimes to drink as much as a quart of whisky in the morning. Put money in his shoes at night, when going to bed, lest his wife should find it. Lost his appetite latterly, so that, perhaps, he would not eat more than once in forty-eight hours; but lived on whisky. His face became as red as a rose, and he found that two glasses in a morning would make him stupid and drunk. This told him his constitution was going; and he went to Cork, with six others of the greatest drinkers of the neighbourhood. Could now eat, three or four times a-day, any thing set before him. Is convinced he was as great a drinker as any man in the country, but has never felt the want of it since he spoke the words.

5. Timothy MacCarthy, aged thirty, carpenter at Killarney, took the pledge 11th July 1839. Began to drink at nine years old; stole a note from his mother, to spend in drink, when not more than ten. Drank so hard that he frequently couldn't taste food for six days in the week. When he first heard of the tee-totallers, he was very glad; but thought it could not apply to confirmed drunkards like himself. Used to be mad when drunk; knocking down every body he met in the street; sometimes tried to kill himself. Taken up by the police for a drunken row, and whilst on his way to prison, kicked a man who passed; broke the watch in his fob; caught up live ashes in the Bridewell, with his naked hands, and threw them into the bed, and nearly suffocated himself. When he saw that old drunkards had been to Cork, and were reclaimed, he set off, spent fifteen shillings all but fourpence on the road, chiefly in drink, and went to Father Matthew more than half drunk. Mr Matthew recommended him to wait till next day, but he refused, and declares that from that moment he never has felt the slightest wish to drink. Has recovered his appetite, and is in constant work, at high wages.

6. John Brien, aged thirty-nine, bellhanger at Killarney, took the pledge 8th June 1839. Before he took the pledge, was drunk, more or less, every day. Wonders, now, how he could have got through his business: lost many of his employers, and got involved, so that no one would credit him; generally had some of his clothes in pawn. Thinks no one drank from such pure love of whisky as himself. Lost Lord Kenmare's employment, and then determined to go to Cork. When his neighbours heard of his going, they shook their heads, and said, 'If Brien gives up drinking, we'll think something of Father Matthew's new system. He'll never get back from Cork without getting drunk.' When he came back sober, they said, 'He can't hold out a fortnight.' At the end of a fortnight they gave him six weeks; and seeing him still sober, they went themselves."

Other nine cases, much resembling these, are given; after which the writer proceeds to consider the question which must naturally arise in every mind, "Will this last?" He is inclined to augur that it will, with many at least, and this for various reasons—first, that improved health, wealth, and comfort, are found to flow from temperance; and, second, because, being so universal, surrounding example and precept are favourable to its continuance. We now follow him into an interesting part of the subject.

"It will readily be supposed that the abstraction of half a million of drunkards from the population must exercise a very decided influence on the statistics of the province; and, accordingly, we find a considerable falling off in the duties on spirits during the past year, and an increase in those upon tea and other excisable articles. We could also refer, with the greatest satisfaction, to police reports, and addresses of magistrates at petty sessions. But we are aware that the great diminution in crime observable in the south of Ireland, for the last twelve months, is, by many, attributed to the absence of all political excitement; and we therefore prefer to confine ourselves to those facts which

cannot possibly be attributed to any other cause than tee-totalism. Of this kind are the following details, communicated to us by Dr Bullen, surgeon to the North Infirmary in Cork, one of the largest hospitals in Ireland; an hospital which, during the last eleven months, has received 1258 in-door, and 14,500 out-door, patients. Dr Bullen states, that cases of casualties, consisting of personal assaults consequent upon drinking, after payment of wages on Saturday night, have within the last nine months been reduced to one-third of their former average amount. That the cases of wives brought to the hospital in consequence of brutal beating or kicking by their husbands, which formerly averaged two a-week, have within the same period nearly ceased. That the casualties arising from falls from scaffolding, injuries by machinery, &c., have been reduced fifty per cent. He also states that, in the course of his extensive practice, although frequently meeting with *delirium tremens*, and other dreadful complaints brought on by excessive drinking, he has not met with one case of disease referable to the sudden and total disuse of spirits. At the last renewal of licences, in the city of Limerick, eighty publicans and venders of spirits abstained from applying for a renewal. In the small town of Killarney, fourteen have given up dealing in spirits; and we are happy to find that in most cases they have established soup and coffee shops, bake-houses, and other similar accommodations for the poorer classes, which will materially assist in diminishing the temptation to a relapse. At Cork, in addition to a great diminution in the applications for spirit licences, sixteen publicans have been declared insolvent, all of whom attributed their failure to Mr Matthew's success. Similar details might be collected from almost every town south of Dublin; but as the progress of the society was, for the first year, comparatively slow (at the end of twelve months about 7000 members had been enrolled), the effect of so good a change in the morals and habits of the people will not be fully apparent in the statistics of the country for at least twelve months to come."

The writer concludes with some speculations on the probable effects of sobriety in Munster upon the cultivation of the soil, and in admitting English capital and enterprise to come into the province. That it will, if lasting, work great good in these respects, will scarcely, we suppose, be doubted.

MRS HALL'S MARIAN.*

MARIAN is a young lady befriended by an affectionate Irish nurse, named Katty Macane. In the first of the two following extracts, Katty gives her views respecting a well-known employment for young ladies—severely true in the main, though perhaps a little exaggerated. In the second, Marian is represented as actually in a *situation*, but of a somewhat different kind.

GOING A-GOVERNESSING.

"I will be a governess," said Marian, triumphantly; "great women have been teachers, I have heard Miss Kitty say—great and good women. Kings must have teachers; queens must have governesses."

Katty Macane compressed her lips and elevated her brows.

"To go a-governessing is looking at the world through the back windows. I never heard such folly! To be, as a body may say, between hawk and buzzard; too low for the drawing-room, too high for the kitchen; belonging neither to the earth beneath nor the heavens above; slighted by the mistress; insulted by the servants; winked at by the gentlemen visitors, and shook off by the lady ones; blamed for the faults of the children; barked at by the dogs, scratched by the cats; a thing without a place; a free woman, treated as a born slave. Listen to me, avourneen. I have known at home and abroad, big and little, thirteen governesses in my time; twelve were born miserable, and were always kept so; the thirteenth was lucky, *for she died in her first place*. Och, alanna! God break hard fortune before any woman's child—I'd raythor, or as soon, see you in yer grave, as going a-governessing."

"Better than living a dependent," said Marian, still more proudly; "any thing better than that."

"Now listen to me. Ye're too young yet to dream of such a thing, for if ye war a rock o' sense, and a tree o' wisdom, which I never knew gentle or simple to be at your age, my precious darling, stately as ye're looking—setting a case you war all I say, did you ever know a governess, who, if she worked the brain out of her head, let alone her fingers to the bone, wasn't considered a dependent?"

"She earns her income," persisted Marian; "she gives her talents for her employer's money; one could not do without the other."

"Och, good-morrow to ye, my lady!" exclaimed Katty, with the bitterness of a woman who knows the world; "ye've read *that* in some romance. Look in the newspapers—though, indeed, it's better ye didn't. I, that have been a camp follower for many a year—served under the duke (God keep him in health, and strength, and happiness, and glory, which he can't fail to be in, to the end of his days, and longer, seeing he's taken the shine out of Bonyparte and Marlboro', whose fine place is close to where the big boys goes to school—Oxford they call it)—well, I never looks at a paper on account of the wakeness in my eyes, and the pot-boy not lending me the loan of one, barrin' on Sundays, on account of the small drop of beer I take; and then I see so much badness in it, that I'm glad it's a Sunday I see it, for it can't be so bad that day as any other; and, indeed, there's nothing in a paper much worse than advertisements for teachers, where they are expected to be the most edicated and wonderful of God's craytures—with every quality of angels—French, and Latin, and algebra, and music, and to have the charge of only five or six children, and needlework, and hard-work, and wardrobe-work, and the devil knows what—and then, at the heel of the hunt comes in, *that as it's a comfortable situation, no salary the first year*."

Marian laughed at her nurse's picture; but she had built her own castle, and resolved, poor girl, to inhabit it the first opportunity.

MARIAN AS A COMPANION TO A LADY.

One night Marian had exhausted all her arts of pleasing (those who are constrained to please ever feel as if they lacked the means to do so); she had quilled her patroness a *new tour de tête*, invented expressly for the purpose of concealing the junction between the real and false hair; she had gauffred a frill; she had oiled her curls; she had played her favourite waltzes, and practised a new quadrille; she had gone to the fruiterer's to select some raisins; she had been called stupid and idle and ill-tempered before the grinning servants, and had bitten her lips to enforce silence to insults she dared not reply to; she had made some blanc-mange, attempted to clear obstinate opaque jelly, and been called from it to attend to some trifling alteration in the pinning of a riband or the trimming of a shoe, by which means the blanc-mange was spoiled, and the jelly left to run cold—for servants always make common cause against an humble companion, particularly if she be honest and independent. Finally, she undressed Mrs Trufit; and then, while she tried on various nightcaps, and wailed and moaned and egotised, was obliged to half-dress her again, as she declared her bed was ill made, and Marian must remake it; then she ordered her to sing her asleep. Marian commenced with a lullaby; but no, *that* would not do. How could Marian suppose she could be sung to sleep like common people, particularly common stage-people, who always go to sleep to a lullaby? No, she could go to sleep to nothing that was not light and animating; and the poor girl was forced to suffocate her feelings and sing the song of mirth in the region of misery. When her tormentor was fairly asleep, instead of going, as a servant could, to her regular repose, poor Marian was obliged to return to the narrow precincts of what the fantastic lady called her "boudoir"—a back-room within a back-room—and there write various letters and orders which she had been directed to dispatch "the first thing in the morning." Her young eyes ached, her cheek was blanched, yet, long after the clock struck one, she commenced her task. All the servants, except the footman, had gone to bed, and he waited for his master. She had known that her only real friend—her poor Irish nurse—had watched the entire day to see her, and she had cried more than once at the impossibility of meeting her faithful friend.

Her fingers performed their almost mechanical operation, while tear after tear dropped upon her hand. "I would not bear it!" she exclaimed, as a torrent of painful recollections crowded on her remembrance; "I would not bear it, but that she has no other to serve her faithfully in the whole world but me; and she was kind to me in my childhood—she *was* kind to me in my childhood." And then she continued her task until the loud knocking of Mr Trufit and a continuation of louder talking in the hall assured her that "the master" had returned; presently she heard the sound of several footsteps ascend to the front drawing-room, and then Mr Trufit say to the servant, "All gone to bed!—cook gone to bed! Call her up, and let her hunt out the larder, bring the tray up here! What! no candles—no fire!"

"I will fetch candles, sir, and I suppose there is a fire in my mistress's boudoir, as Miss Marian is there."

Mr Trufit took the candle from the footman's hand, and, having done so, half reeled, half walked, followed by his companions, into the room where Marian, trembling she knew not why, was occupied with her pen.

"Have you got the keys?" he inquired, in the thick inarticulate tone of drunkenness. "No, sir."

"Then go and get them."

"Yes, sir, but"—— replied Marian, rising.

"What but—what do you mean?"

"Mrs Trufit has been very unwell, sir, all day, and she is only now gone to sleep—must I disturb her?"

Marian lit a taper, and proceeded slowly up stairs.

AN OLD GENERAL.

The sun was shining brightly on the Thames—the trees were glittering in their draperies of frosted silver—a fire had been kindled before daylight in the sacred drawing-room, and sparkled brightly within polished bars of the purest steel. The apartment was solitary as usual. The general was at his breakfast table in the library—the urn and necessary appendages were of plain gold—the chair he sat in was covered with Genoa velvet of the deepest crimson.

The old officer's appearance was as singular as his dwelling. No one could have mistaken him for an ordinary person. He was exceedingly small of stature, and of delicate proportions; his feet and hands as minute as those of a beautiful woman—and there is no perfection of beauty where they are not exquisitely moulded. His features were prominent, though not large; his nose high and arched; his lips thin and compressed; his eye black as jet, and only seen distinctly when he elevated his thick shaggy brows, which were of snowy whiteness, and hung completely over his eyes; his forehead was high and wrinkled, surmounted by an abundance of white hair, which, instead of lying straight and smooth, as it generally does in old age, curled and bushed about his head, in a way that showed it was much cared for by his valet.

A stayed respectable-looking woman sat opposite to her master, and prepared his tea, which she handed him as he sat, or rather sank, in his cushioned chair. His dress was in keeping with his house. His stockings were of white-ribbed silk; his shoes brightly polished; his waistcoat was of white embroidered silk; and the skirts of his brocaded dressing-gown were spread upon his knees, while the ermine collar appeared as if never disturbed from its position round his throat. His cravat was trimmed with lace, and fell upon his bosom; and the loose sleeves of his dressing-gown, as they fell back nearly to his elbows, showed that his shirt was of the finest linen, and his sleeve-buttons composed of superb brilliants. A beautiful Persian greyhound had laid its head upon its master's knee, and looked wistfully up to the face which, severe as was its ordinary expression, smiled kindly, if not sweetly, upon Hafiz.

"Has this paper been wiped and dried?" inquired the old gentleman, as he looked at the Morning Post. "Yes, Sir Henry, it is perfectly dry and clean, I assure you." "It is very odd, Mrs Upton, that you never remember to put the paper on the right-hand side of the muffineer." "I beg your pardon, Sir Henry; I did place it at the right hand, but Mullins displaced it; I should have seen to it." "Thank you, Mrs Upton. You are sure it is not damp? Very good—very good."

And he forthwith commenced reading a paragraph, and then taking his tea, toast, muffins, and cold pie, in rotation, and in a manner which proved him an adept in the art of good living. When the general had finished his repast, Mrs Upton poured some cream into a cup of water, and presented it to Hafiz, and then the old general smiled, and, folding the paper, handed it, with a courtly inclination of his head, to Mrs Upton, saying, as great newsmongers generally do, after reading from the title to the printer's name, "There is nothing in it." The housekeeper curtseyed her thanks—the breakfast things were removed—the gentleman's chair wheeled round to the fire, and his reading-table placed by his side.

"Please, Sir Henry," said the urbane Mrs Upton, "would you be so good as to tell me if you expect any one to-day, and what you would desire for dinner?"

"I dare say," replied the general, "I shall see my grandson this morning. When I was his age, I would have been a-field before this hour; but times are changed—times are changed!"

"Master Peronett's a fine youth, though, Sir Henry—a very fine youth; so much handsomer than Master Godfrey, his cousin!—I suppose the soup, sole, haunch of mutton, with some light things, will be enough?"

"Quite, thank you—quite enough, Mrs Upton. You think Henry better looking than Godfrey? Well, I can't say I do, Mrs Upton. Godfrey has the Peronett eye—the Peronett eye; very peculiar that—I never saw any person, not a Peronett, have the eye, and few Peronetts without it. Now, *Henry* has not *the* eye."

"But the *nose*, Sir Henry! Master Peronett *has* a nose!"

"God bless my soul, Mrs Upton, to be sure he has!—a nose very like his poor father's. But a nose is of little consequence—the eye—the eye is the thing!"

"Undoubtedly, Sir Henry—the eye is the distinguishing feature."

"In noble families," said the little man, crossing his legs with evident self-complacency, "the eye always *is* the distinguishing feature; in the Peronett family, as you have heard me before observe, it is peculiarly so. The eye is the window of the soul. No; Master Peronett's eyes are not like Godfrey's: I am sorry for it, for I should have liked the property and the eyes to go together, as they have always done heretofore—but it can't be helped. I wish Mrs Gibbs would take back these bantams—they are not of a size; now, I like to see five or six of those white bantams exactly of a size—will you have the goodness to get them weighed to ascertain? Good morning, Mrs Upton. By the way, I forgot to tell you that I fear the housemaid is incorrigible; I assure you the towels in my dressing-room were again folded in three."

"I will see to it myself, Sir Henry," said the housekeeper.

"Thank you, Mrs Upton; but that is not what I desire; it would never do to set a drill-serjeant to do privates' work—you understand me?"

Mrs Upton curtseyed again, and had got as far as the door, when she was called back.

"Mrs Upton, pray do not suffer Master Peronett to imagine that I am at all disappointed at his wanting the Peronett eye—it might make him unhappy—dissatisfied with his eyes; and then, Mrs Upton, there is no knowing what the young man might do."

"Very true, Sir Henry—he might even think of spectacles!"

General Sir Henry Peronett cast a most indignant look at the housekeeper, who, seeing that she had erred, endeavoured to remedy her error.

"I saw young Lord Roebuck in spectacles yesterday, Sir Henry; and I thought—that is, I *heard*—that, being short-sighted, he wore glasses."

"Very likely, madam; but I do not see what Lord Roebuck's eyes have to do with the eyes of the Peronetts. Perhaps you will inform me?—I wait for information, Mrs Upton," added the testy old gentleman.

"Oh, Sir Henry, of course there can be no comparison; I ventured on the remark without any object ——"

"Which, let me tell you, Mrs Upton, was like stepping out of the ranks—very unsoldierly conduct for the wife of a gallant officer."

"I will be more careful, sir," replied the widow, curtseying, and now thinking herself fairly off. But she was mistaken.

"Has the gardener trimmed those geraniums, and seen to the fire in the green-house?"

"Yes, Sir Henry."

"Very sorry to trouble you, my good lady, but the catalogue of plants?"

"Is quite ready, Sir Henry."

"Thank you, Mrs Upton; you deserved, madam—you deserved to be a soldier's wife!"

ODD LONDON CHARACTERS OF FORMER TIMES.

GEORGE ALEXANDER STEVENS.

THIS was the first man who ever succeeded in entertaining an audience for a whole evening by his own unassisted powers of amusement. He was a native of London, of obscure birth, and originally designed for some mechanical employment, but in early youth became an actor. The beginning of his career in life was marked by vice and folly, until disease and penury brought on repentant feelings. Such is his own statement in a poem entitled "Religion, or the Libertine Repentant," which he published in 1751. After a provincial career, he came to London in 1752, and obtained an engagement at Covent-Garden Theatre, but did not succeed in making himself a favourite. He prosecuted the profession for several years with no marked success, and also from time to time published novels and prepared short dramatic pieces, but was after all chiefly noted as a witty and amusing companion, and a prime figure at several convivial clubs. It is to be feared that, after he recovered from the sickness in which his first poem was written, his early habits were resumed, and that for some years his life was far from reputable. There is extant a letter which he wrote from Yarmouth jail, while imprisoned there for debt: it is so characteristic of the man, that it may here be reprinted.

"Dear Sir,

When I parted from you at Doncaster, I imagined, long before this, to have met with some oddities worth acquainting you with. It is grown a fashion of late to write lives—I have now, and for a long time have had, leisure enough to write mine, but want materials for the latter part of it; for my existence cannot properly be called living, but what the painters term still-life; having, since February 13th, been confined in this town jail for a London debt. As a hunted deer is always shunned by the happier herd, so am I deserted by the company, my share taken off, and no support left, save what my wife can spare me out of hers.

'Deserted, in my utmost need,
By those my former bounty fed.'

With an economy which till now I was a stranger to, I have made shift hitherto to victual my little garrison; but then it has been with the aid of good friends and allies—my clothes. This week's eating finishes my last waistcoat; and next I must atone for my errors on bread and water.

Themistocles had so many towns to furnish his table, and a whole city bore the charge of his meals. In some respects I am like him, for I am furnished by the labours of a multitude. A wig has fed me two days—the trimmings of a waistcoat as long—a pair of velvet breeches paid my washerwoman—and a ruffled shirt has found me in shaving. My coats I swallowed by degrees: the sleeves I breakfasted upon for weeks—the body, skirts, &c., served me for dinner two months. My silk stockings have paid my lodgings, and two pair of new pumps enabled me to smoke several pipes. It is incredible how my appetite (barometer-like) rises in proportion as my necessities make their terrible advances. I here could say something droll about a stomach; but it is ill jesting with edge-tools, and I am sure that is the sharpest thing about me.

You may think I can have no sense of my condition, that, while I am thus wretched, I should offer at ridicule: but, sir, people constituted like me, with a disproportionate levity of spirits, are always most merry when they are most miserable, and quicken like the eyes of the consumptive, which are always brightest the nearer a patient approaches to dissolution. However, sir, to show that I am not entirely lost to all reflection, I think myself poor enough to want a favour, and humble enough to ask it. Here, sir, I might make an encomium on your good nature, humanity, &c.; but I shall not pay so bad a compliment to your understanding as to endeavour, by a parade of phrases, to win it over to my interest. If you could, any night at a concert, make a small collection for me, it might be a means of obtaining my liberty; and you know, sir, the first people of rank abroad will perform the most friendly offices for the sick: be not, therefore, offended at the request of a poor (though a deservedly punished) debtor.

G. A. STEVENS."

A lucky accident at length opened a way by which this poor son of Thespis attained wealth and some share of distinction. While acting as manager in a country town, his attention was attracted by the happy way in which a mechanic employed in the theatre sketched off the characters of the members of the corporation. The idea germinated in his mind, which naturally was one possessed of considerable powers of delineating whimsical character; and he soon after wrote the first draught of his celebrated lecture on heads, which was delivered by Shuter the actor. Here the object was to exhibit a head, either carved in wood, or drawn on pasteboard, and to make a few sprightly remarks upon it; after which another was brought forward and remarked upon, and so on; the persons represented being mostly of a character open to ridicule, such as an old starched bachelor, a *blood*, a fine lady, and so forth. The mechanic who gave the first idea helped Stevens to make the heads, little thinking what a reception they were ultimately to meet with from the public. Much effect was also produced by a judicious use of wigs, head-dresses, and other *properties*. At first, in Shuter's hands, the exhibition did not meet with success, perhaps in some degree for want of a sufficiency of the required apparatus; but Stevens soon after expanded the lecture considerably, and, procuring a proper head and dress for each character, went himself to try its fortune in the country. This was about the year 1764. In a country town, where regular theatricals are unknown or of poor character, any one who can furnish an evening's tolerable amusement at a moderate price, has a good chance. The Lecture on Heads proved to be quite of the character suited to such places, besides that it was in itself a complete novelty. It *took* amazingly, and the author, returning with some reputation to London, exhibited it with great applause in the Haymarket Theatre. Thence he proceeded on an extensive tour of England and Scotland, every where meeting the same success. In 1766, by way of varying the entertainment, with a view to re-appearing on the same ground, he brought out a new Lecture, but it did not succeed so well as the first. He afterwards visited America, where the lecture was so much relished, that he was detained in the country two years. At Boston he was apprehensive that the austere spirit of the place would be against him; but even there he met with a flattering reception, and had crowded audiences for six weeks. Quaker Philadelphia was equally gracious to him. The profits of these exhibitions were very great, for he had no associates to pay; and in a few years it was estimated that he had made ten thousand pounds by the adventure—a vast sum to have been realised by a player in those days. It has been said that he did not husband his little fortune with the care which it deserved. Towards the end of his days, he sank into that paralytic state in which the animal powers survive, while the mind is totally gone, and thus was a most pitiable spectacle to all connected with him. Previous to this period, he had sold his lecture and apparatus to Mr Charles Lee Lewis, who consequently delivered it to the best of his ability; but there must have been some comic relish peculiar to Stevens's performance, for Lewis failed exactly as Shuter had done, and the Lecture became an entertainment dead to the public. The author himself paid the debt of nature at Biggleswade in Bedfordshire, September 6, 1784, when probably aged little above sixty.

The Lecture was till a recent period kept constantly in print, with wood engravings representing the heads; and we must own that, in our young days, we were amongst those who found amusement in it. On perusing it lately, we discovered that most of the characters were of a temporary kind—representatives of manners fully as much as of forms of natural character—and that much of the wit was also the wit of a passing mode. Nevertheless, there are some passages which may yet excite a laugh, and which deserve to be rescued from the oblivion into which the volume seems to have fallen. Those in ridicule of lawyers are perhaps the best—always, of course, reserving the point as to the justice of the satire. The following are extracts:—

"We shall now consider the law, as our laws are very considerable, both in bulk and number, according as the statutes declare; *considerandi, considerando, considerandum*; and are not to be meddled with by those that don't understand 'em. Law always expressing itself with true grammatical precision, never confounding moods, cases, or genders, except indeed when a *woman* happens accidentally to be slain; then the verdict is always brought in *man*-slaughter. The essence of the law is altercation; for the law can altercate, fulminate, deprecate, irritate, and go on at any rate. Now, the quintessence of the law has, according to its name, five parts. The first is the *beginning*, or *incipiendum*; the second, the *uncertainty*, or *dubitandum*; the third, *delay*, or *puzziendum*; fourthly, *replication* without *endum*; and, fifthly, *monstrum et horrendum*.

All which are exemplified in the following case, Daniel against Dishclout. Daniel was groom in the same family wherein Dishclout was cookmaid; and Daniel returning home one day fuddled, he stooped down to take a sop out of the dripping-pan, which spoiled his clothes, and he was advised to bring his action against the cookmaid; the pleadings of which were as follow. The first person who spoke was Mr Serjeant Snuffle; he began, saying, 'Since I have the honour to be pitched upon to open this cause to your lordship, I shall not impertinently presume to take up any of your lordship's time by a roundabout circumlocutory manner of speaking or talking, quite foreign to the purpose, and not any ways relating to the matter in hand. I shall, I will, I design to show what damages my client has sustained hereupon, whereupon, and thereupon. Now, my lord, my client being a servant in the same family with Dishclout, and not being at board wages, imagined he had a right to the fee-simple of the dripping-pan; therefore he made an attachment on the sop with his right hand, which the defendant replevied with her left, tripped us up, and tumbled us into the dripping-pan. Now, in Broughton's Reports, Slack *versus* Smallwood, it is said that *primus stroous sine joous, absolutus at provokus*. Now, who gave the *primus stroous*? who gave the first offence? Why, the cook; she brought the dripping-pan there; for, my lord, though we will allow, if we had not been there, we could not have been thrown down there; yet, my lord, if the dripping-pan had not been there, for us to have tumbled down into, we could not have tumbled into the dripping-pan.' The next counsel on the same side began with, 'My lord, he who makes use of many words to no purpose has not much to say for himself, therefore I shall come to the point at once; at once and immediately I shall come to the point. My client was in liquor: the liquor in him having served an ejectment upon his understanding, common sense was nonsuited, and he was a man beside himself, as Dr Biblibus declares, in his Dissertation upon Bumpers, in the 139th folio volume of the Abridgement of the Statutes, page 1286, where he says, that a drunken man is *homo duplicans*, or a double man; not only because he sees things double, but also because he is not as he should be, *profecto ipse* he; but is as he should not be, *defecto tipse* he.'

The counsel on the other side rose up gracefully, playing with his ruffles prettily, and tossing the ties of his wig about emphatically. He began with, 'My lord, and you, gentlemen of the jury, I humbly do conceive I have the authority to declare that I am counsel in this case for the defendant; therefore, my lord, I shall not flourish away in words; words are no more than filligree work. Some people may think them an embellishment; but to me it is a matter of astonishment how any one can be so impertinent to the detriment of all rudiment. But, my lord, this is not to be looked at through the medium of right and wrong; for the law knows no medium, and right and wrong are but its shadows. Now, in the first place, they have called a kitchen my client's premises. Now, a kitchen is nobody's premises; a kitchen is not a warehouse, nor a washhouse, a brewhouse, nor a bakehouse, an inn-house, nor an out-house, nor a dwelling-house; no, my lord, 'tis absolutely and *bona fide* neither more nor less than a kitchen, or, as the law more classically expresses, a kitchen is, *camera necessaria pro usus cookare; cum saucepannis, stewpannis, scullero, dressero, coalholo, stovis, smoke-jacko, pro roast-andum, boilandum, fryandum, et plum-pudding mixandum, pro turtle soupos, calve's-head-hashibus, cum calipee et calipashibus.*

But we shall not avail ourselves of an *alibi*, but admit of the existence of a cook-maid. Now, my lord, we shall take it upon a new ground, and beg a new trial; for, as they have curtailed our name from plain Mary into Moll, I hope the court will not allow of this; for if they were to allow of mistakes, what would the law do? for when the law don't find mistakes, it is the business of the law to make them." Therefore the court allowed them the liberty of a new trial; for the law is our liberty, and it is happy for us we have the liberty to go to law.' * * *

We shall now return to the law, for our laws are full of returns, and we shall show a compendium of law [*takes the wig*]; parts of practice in the twist of the tail. The depth of a full bottom denotes the length of a chancery suit, and the black coif behind, like a blistering plaster, seems to show us that law is a great irritator, and only to be used in cases of necessity.

We shall now beg leave to change the fashion of the head-dress, for, like a poor periwig-maker, I am obliged to mount several patterns on the same block. [*Puts on the wig, and takes the nosegay.*]

Law is law, law is law, and as in such and so forth, and hereby, and aforesaid, provided always, nevertheless, notwithstanding. Law is like a country dance; people are led up and down in it till they are tired. Law is like a book of surgery; there are a great many terrible cases in it. It is also like physic; they that take least of it are best off. Law is like a homely gentlewoman, very well to follow. Law is like a scolding wife, very bad when it follows us. Law is like a new fashion, people are bewitched to get into it; it is also like bad weather, most people are glad when they get out of it.

We shall now mention a cause, called 'Bullum *versus* Boatum:' it was a cause that came before me. The cause was as follows:—

There were two farmers; farmer A and farmer B. Farmer A was seised or possessed of a bull: farmer B was possessed of a ferry-boat. Now, the owner of

Digitized by Google

the ferry-boat had made his boat fast to a post on shore, with a piece of hay, twisted rope-fashion, or, as we say, *vulgo vocato*, a hayband. After he had made his boat fast to a post on shore, as it was very natural for a hungry man to do, he went up town to dinner; farmer A's bull, as it was very natural for a hungry bull to do, came down town to look for a dinner; and observing, discovering, seeing, and spying out, some turnips in the bottom of the ferry-boat, the bull scrambled into the ferry-boat: he ate up the turnips, and, to make an end of his meal, fell to work upon the hayband: the boat being eaten from its moorings, floated down the river, with the bull in it: it struck against a rock, beat a hole in the bottom of the boat, and tossed the bull overboard; whereupon the owner of the bull brought his action against the boat, for running away with the bull. The owner of the boat brought his action against the bull for running away with the boat. And thus notice of trial was given, Bullum *versus* Boatum, Boatum *versus* Bullum.

Now, the counsel for the bull began with saying, 'My lord, and you, gentlemen of the jury, we are counsel in this cause for the bull. We are indicted for running away with the boat. Now, my lord, we have heard of running horses, but never of running bulls before. Now, my lord, the bull could no more run away with the boat, than a man in a coach may be said to run away with the horses; therefore, my lord, how can we punish what is not punishable? How can we eat what is not eatable? Or how can we drink what is not drinkable? Or, as the law says, how can we think on what is not thinkable? Therefore, my lord, as we are counsel in this cause for the bull, if the jury should bring the bull in guilty, the jury would be guilty of a bull.'

The counsel for the boat observed that the bull should be nonsuited, because, in his declaration, he had not specified what colour he was of; for thus wisely, and thus learnedly, spoke the counsel:—'My lord, if the bull was of no colour, he must be of some colour; and if he was not of any colour, what colour could the bull be of?' I overruled this motion myself, by observing the bull was a white bull, and that white is no colour; besides, as I told my brethren, they should not trouble their heads to talk of colour in the law, for the law can colour any thing. This cause being afterwards left to a reference, upon the award both bull and boat were acquitted, it being proved that the tide of the river carried them both away; upon which I gave it as my opinion, that, as the tide of the river carried both bull and boat away, both bull and boat had a good action against the water-bailiff.

My opinion being taken, an action was issued, and, upon the traverse, this point of law arose. How, wherefore, and whether, why, when, and what, whatsoever, whereas, and whereby, as the boat was not a *compos mentis* evidence, how could an oath be administered? That point was soon settled by Boatum's attorney declaring that, for his client, he would swear any thing.

The water-bailiff's charter was then read, taken out of the original record in true law Latin; which set forth, in their declaration, that they were carried away either by the tide of flood or the tide of ebb. The charter of the water-bailiff was as follows:—'*Aquæ bailiffi est magistratus in choisi, super omnibus fishibus qui habuerunt finnos et scalos, clavis, shells, et talos, qui swimmare in freshibus, vel saltibus reveris lakis, pondis, canalibus et well-boats, sive oysteri, prawni, whitini, shrimpi, turbutus, solus;*' that is, not turbots alone, but turbots and soles both together. But now comes the nicety of the law; the law is as nice as a new-laid egg, and not to be understood by addle-headed people. Bullum and Boatum mentioned both ebb and flood to avoid quibbling; but, it being proved that they were carried away neither by the tide of flood, nor by the tide of ebb, but exactly on the top of high water, they were nonsuited; but, such was the lenity of the court, upon their paying all costs, they were allowed to begin again, *de novo*."

VISIT TO THE RECEPTACLE FOR THE INSANE IN CAIRO.

Mr Wilde, whose travels have already been alluded to, gives the following account of his visit to the receptacle for the insane in Cairo:—

"On reaching the door we were stopt by our conductor, to purchase a few cakes of coarse bread, a supply of which is always kept in the adjoining porch for supplying the visitors, who thus become a principal though precarious means of supporting its wretched inmates. We were led through a narrow passage, where all was still and silent as the tomb; a few steps farther, and we were introduced into a large oblong room, when a yell arose of the most unearthly kind my ears were ever assailed by—so startling, that some of our party involuntarily drew back with horror. Our sight—our smell—our hearing—were overwhelmed with a combination of disgusting realities, such as I believe no other place can exhibit. Around this apartment were arranged a number of dens, about four feet square, closed in front with massive iron gratings. In each of these gloomy filthy cells was a human being, perfectly naked, or with the remnant of the tattered rag he may have worn on his entrance years before, fantastically tied about some part of his person. His hair and beard long and matted; his nails grown into talons; emaciated; covered with vermin, and coated with unutterable filth; an iron collar riveted about his neck, binding him by a massive chain either to a ring in the wall, or connecting him through a circular aperture with his fellow maniac in the adjoining cell.

Upon our entrance, each, like a ravenous animal in a menagerie, when the keeper arrives with food, roused from his lair or his lethargy, and rushed with savage wildness to the grating, extending a withered hand for the expected morsel. The foam of frenzied agony was on every lip; the fire of maniac fury was in every eye; and the poor madman's yell softened into the jabber of satisfaction as each in turn snatched his morsel, and devoured it with a growl I can only liken to a tiger's.

I will not disgust my readers with a recital of the sickening scene I witnessed in the female department, where the frown and the whip of the savage keeper rendered unnecessary the chain, the collar, or the grating.

Even with the care and attention shown to those unfortunates in our own country, the sight of madness is one of the most humiliating and pitiable we can witness; but here, where no pains are taken to improve their condition, no care for their wants, and no medical skill to inquire into the causes of their malady, or the possibility of their cure, it is a truly awful spectacle. I need hardly say, that recovery is rare. Indeed, it would be a miracle, as the first glimmerings of returning reason must be instantly and completely destroyed on the patient finding himself immured in a dungeon, replete with such horrors."

GEMS FROM THE OLD ENGLISH POETS.

DESCRIPTION OF STONEHENGE.

Daniel (1563-1619.)

And whereto serves that wondrous trophy now
That on the goodly plain near Walton stands?
That huge dumb heap, that cannot tell us how,
Nor what, nor whence it is; nor with whose hands,
Nor for whose glory—it was set to show,
How much our pride mocks that of other lands.

Whereon, when as the gazing passenger
Had greedy look'd with admiration;
And fain would know his birth, and what he were;
How there erected; and how long agon;
Inquires and asks his fellow traveller
What he had heard, and his opinion.

And he knows nothing. Then he turns again,
And looks and sighs; and then admires afresh,
And in himself with sorrow doth complain
The misery of dark forgetfulness:
Angry with time that nothing should remain,
Our greatest wonders' wonder to express.

Then ignorance, with fabulous discourse,
Robbing fair art and cunning of their right,
Tells how those stones were by the devil's force
From Afric brought to Ireland in a night;
And thence to Brittany, by magic course,
From giants' hands redeem'd by Merlin's sleight.

And then near Ambri plac'd, in memory
Of all those noble Britons murder'd there,
By Hengist and his Saxon treachery,
Coming to parley, in peace at unaware.
With this old legend then credulity
Holds her content, and closes up her care.

But is antiquity so great a liar?
Or do her younger sons her age abuse;
Seeing after-comers still so apt t' admire
The grave authority that she doth use,
That rev'rence and respect dares not require
Proof of her deeds, or once her words refuse?

Yet wrong they did us, to presume so far
Upon our early credit and delight;
For once found false, they straight became to mar
Our faith, and their own reputation quite;
That now her truths hardly believed are;
And though she avouch the right, she scarce hath right.

And as for thee, thou huge and mighty frame,
That stand'st corrupted so with time's despite,
And giv'st false evidence against their fame
That set thee there to testify their right;
And art become a traitor to their name,
That trusted thee with all the best they might;

Thou shall stand still bely'd and slandered,
The only gazing-stock of ignorance,
And by thy guile the wise admonished,
Shall never more desire such hopes t' advance,
Nor trust their living glory with the dead
That cannot speak, but leave their fame to chance.

Consid'ring in how small a room do lie,
And yet lie safe (as fresh as if alive)
All those great worthies of antiquity,
Which long fore-liv'd thee, and shall long survive;
Who stronger tombs found for eternity,
Than could the pow'rs of all the earth contrive.

Where they remain these trifles to upbraid,
Out of the reach of spoil, and way of rage;
Though time with all his pow'r of years hath laid
Long batt'ry, back'd with undermining age;
Yet they make head only with their own aid,
And war with his all-conqu'ring forces wage;
Pleading the heaven's prescription to be free,
And t' have a grant t' endure as long as he.

THE KING OF THE FRENCH.

The following account of the mode of life of Louis Philippe is given by one of the French journals:—"He is called very early, and is no sooner up than he begins to read the diplomatic dispatches and the secret and confidential communications of the ambassadors. He works until eleven o'clock, and then breakfasts upon plain bread and a pitcher of beer. He rarely, indeed, indulges in the luxury of butter. After his breakfast he transacts business with his ministers, and prefers receiving them individually; and, these interviews over, receives other visitors, with whom he converses familiarly on trade, manufactures, buildings, mechanical inventions, &c., all which subjects he understands thoroughly. At three o'clock he shuts himself up in his cabinet, reads the journals and the reports from the police, on which he makes notes, and gives audience to intimate and devoted friends. At five o'clock, when he is at Neuilly, he goes out; and when he is at the Tuilleries, walks in the balcony which overlooks the garden. At six o'clock he dresses himself for dinner, but seldom arrives until it is nearly over; for he will not allow his family to wait for him. He is his own barber, and dresses with the greatest simplicity. When at dinner, he sits between the queen and his daughter, the Princess Clementine—helps himself to soup—cuts up a *poulet au riz*, nearly the whole of which he eats—takes a cup of tea—and jumps up from the table with some dried fruit in his hand, which he eats whilst conversing, after dinner, with architects and builders. He returns to pass a part of the evening with his family, and examines his sons as to their scientific studies. The visitors who arrive are received *en famille*, and politics are generally avoided. At ten o'clock he retires to his cabinet, and then, except on very important occasions, he does not allow himself to be disturbed. At midnight he closes his books, and commences his correspondence. He frequently remains in his cabinet till day-light, and then goes to bed, but is invariably called at seven, and sometimes six, in the morning. Sometimes he sleeps for an hour or two in the day, and, when on his journey to and from Neuilly, sleeps soundly in his carriage. When in the country, if he does not go out after dinner to look at his masons or his gardeners, he stretches himself out on a sofa, and sleeps for an hour."

[The person who wrote this paragraph must have been imposed upon. He perhaps describes correctly enough one particular day of the king's life, or such a day as occasionally happens; but it is not in nature that any man could lead a life of such labour and excitement, with so little sleep, *habitually*. Probably many other such statements respecting remarkable men have had the like origin—one or a few days of extraordinary exertion taken as examples of the whole.]

SHARK-KILLING.

On the coasts of Sumatra, sharks are sought for and killed as a sporting exercise. A traveller thus speaks of this dangerous pastime:—"I was walking on the bank of the river at the time when some up-country boats were delivering their cargoes. A considerable number of coolies were employed on shore in the work, all of whom I observed running away in apparent trepidation from the edge of the water—returning again, as if eager, yet afraid, to approach some object, and again returning as before. I found on inquiry that the cause of all this perturbation was the appearance of a large and strange-looking fish, swimming close to the bank, and almost in the midst of the boats. I hastened to the spot to ascertain the matter, when I perceived a huge monster of a shark sailing along—now near the surface of the water, and now sinking down, apparently in pursuit of his prey. At this moment, a native on the choppah roofs of one of the boats, with a rope in his hand, which he was slowly coiling up, surveyed the shark's motions with a look that evidently indicated he had a serious intention of encountering him in his own element. Holding the rope, on which he had made a sort of running knot, in one hand, and stretching out the other arm, as if already in the act of swimming, he stood in an attitude truly picturesque, waiting the reappearance of the shark. At about six or eight yards from the boat, the animal rose near the surface, when the native instantly plunged into the water, a short distance from the very jaws of the monster. The shark immediately turned round, and swam slowly towards the man, who in his turn, nothing daunted, struck out the arm that was at liberty, and approached his foe. When within a foot or two of the shark, the native dived beneath him, the animal going down almost at the same instant. The bold assailant in this most frightful contest soon reappeared on the opposite side of the shark, swimming fearlessly with the hand he had at liberty, and holding the rope behind his back with the other. The shark, which had also by this time made his appearance, again immediately swam towards him; and while the animal was apparently in the act of lifting himself over the lower part of the native's body, that he might seize upon his prey, the man, making a strong effort, threw himself up perpendicularly, and went down with his feet foremost, the shark following him so simultaneously that I was fully impressed with the idea that they had gone down grappling together. As far as I could judge, they remained nearly twenty seconds out of sight, while I stood in breathless anxiety, and, I may add, horror, waiting the result of this fearful encounter. Suddenly the native made his appearance, holding up both his hands over his head, and calling out with a voice that proclaimed the victory he had won while underneath the wave, *Tan, tan!* The people in the boat were all prepared; the rope was instantly drawn tight; and the struggling victim, lashing the water in his wrath, was dragged to the shore and dispatched. When measured, his length was found to be six feet nine inches, his girth, at the greatest, three feet seven inches. The native who achieved this intrepid and dexterous exploit bore no other marks of his finny enemy than a cut on his left arm, evidently received from coming in contact with the tail, or some one of the fins of the animal."—*Egan's Book of Sports.*

HOW TO KEEP TAILORS HONEST.

The tailors of Inverness are an ingenious race of men, and fully as good craftsmen as their brethren in the south. We find, however, that their predecessors, a hundred years since, were somewhat suspected. In the letters of Captain Burt, written from this place about 1730, it is mentioned as a "notable precaution against the tailors' purloining," that the following plan was adopted by the inhabitants:—"This is to buy every thing that goes to the making of a suit of clothes, even to the stay-tape and thread; and when they are delivered out, they are altogether weighed before the tailor's face. And when he brings home the suit, it is again put into the scale, with the shreds of every sort, and it is expected the whole shall answer the original weight."—*Inverness Courier.*

London: Published, with permission of the proprietors, by W. S. Orr, Paternoster Row; and sold by all booksellers and newsmen.—Printed by Bradbury and Evans, Whitefriars.

Complete sets of the Journal are always to be had from the publishers or their agents; also, any odd numbers to complete sets. Persons requiring their volumes bound along with title-pages and contents, have only to give them into the hands of any bookseller, with orders to that effect.

NUMBER 432. SATURDAY, MAY 9, 1840. PRICE THREE HALFPENCE.

DISAPPOINTMENTS IN LOVE.

In Albums, Annuals, and other such works in light literature, disappointments in love are always treated in one way—that is to say, according to the formula established with them upon this subject: the heroines never recover the shock, but are sure to fall into consumption at the very least, and be carried off within the year. This may be very useful as a means of winding up a story; and it may even occasionally have a moral effect, showing to young ladies the danger of precipitate passion, and to young gentlemen the impropriety of asking hearts where they do not intend to seek hands. But it strikes us as a sad waste of human life, and also as apt to be attended with some positive harm. Were a physician to look upon every doubtful case as past cure, and tell the patient so, he would probably find himself in many instances right, merely through the despair he had inflicted; just so must it be hurtful to a young lady disappointed in love, to have it dinned into her ears from all quarters, that hers is an invariably mortal wound. It might be better, we think, in this, as in most other cases, if the downright truth were told.

Let us review the various kinds of disappointments under the head of Love.

We would touch with reverence on that occasioned by death. Sad as it is, it is not perhaps the worst to bear. The affection over which the grave has closed has indeed a feeling of eternity, but it has none of pain or infirmity. Time (present time) does its work even here, and most perfectly with the young. In other words, a changing succession of new feelings to new objects must flow on and fill the mind for ever. New impressions must arise, and old ones grow faint. Thus are our sharpest sorrows brought to a pleasing sadness. Affliction rightly dealt with, may, nay, must turn to blessing. It raises us above the petty vanities and discomforts of life. It enables us better to understand, and, therefore, to console, the unhappiness of others. It deepens a sense of religion, the reward at once and consolation of a tender and elevated mind. We shall avoid a foolish superstition and a gloomy fanaticism, if we can test our aspirations after a better world by their practical influence on our conduct in this one.

To turn to a less dismal disappointment. A young lady has fallen (a fall rightly expressing the precipitancy of the movement) in love with a young gentleman, who simultaneously falls (or, to save female delicacy, we shall say previously has fallen) in love with her. The symptoms are many and various. They have met at a ball, and he has danced with her a whole evening in spite of etiquette and chaperons—has talked most agreeably between the dances—has attended her in a morning walk, and offered his arm preparatory as it were to offering his hand—has intrigued successfully to get himself invited wherever she is to be—has escorted her home of an evening in all weather. What shall we say more? Has looked all sorts of unutterable things, and has uttered a few of the same sort of things, poetical prose as it were; but if he should happen to be a downright rhyming poet, he may have sent a copy of verses adapted to the new fair one's name. Well, our young gentleman is over head and ears in love with our young lady, and *vice versa*, for at present it is much the same case with them both. But then comes a difference. *He* goes home or goes abroad; to college again; to a counting-room or a wareroom; into the army or the navy; goes away, in short, no matter where. He disappears from the eyes of our young lady; that is, from the eyes of her head, but not from her mind's eye—her memory. *She* nourishes a hopeless passion, pines, and *dies!* This, at least, is what she ought to do, if she follows the example set her in all the histories of all the forsaken maidens she has ever read of. Nobody ever felt as she felt. Mrs Anybody's grief for the loss of a husband, or Mrs Somebodyelse's lamentations over the grave of a child, are nothing to hers. Her father and mother are a worthy happy couple; but what can they have known of love? "What a commonplace, unromantic person mamma is! and old contented aunt Betty, can she ever have had a lover or a disappointment?" What a complete want of *true feminine* feeling it would be in our afflicted heroine, ever to forget her woes, and be good for any thing again in this world! And, yet, is there not a great deal more of fancy than of affection here? We like to borrow the language of poetry to give advice in:—

> "Rouse thyself, and the weak wanton Cupid
> Shall, like a dew-drop from the lion's mane,
> Be shook to air."

Here is another disappointment! A male flirt, without further intention than to gratify his vanity, feigns a passion, or, perhaps, feels just enough to enable him to feign well, excites both love and hope in the breast of a woman, draws her on to betray them, and then leaves her. Should she die? Dear young lady, you have been ungenerously, nay, unjustly treated. We don't say, Be on your guard for evermore. The chance of your ever again meeting with such an injury is but small; but were it greater, it is better to be deceived than to grow suspicious. Take a lesson, however, from your disappointment, which even you may require. Never let your vanity, or mere desire of pleasing, entrap you to lay traps for others. Think how much more respectable it is to be deceived than to deceive—how much you have, in fact, the superiority over the vain man you are aggrieved by—what a bad husband he would have made. We don't recommend that you should hate him. Life is surely too short, and all human beings too unfortunate, as well as imperfect, to allow of your indulging in such an unchristian-like feeling; but you will be agreeably surprised to find in how short a time you will become *indifferent*, if you will only give yourself fair play, and not suppose that you were born to fall a victim to man's arts. Make no boastful show of this indifference, nor lower yourself to enter the race of vanity with your faithless swain, for the purpose of mortifying him. The triumph of virtue will then be complete, and, let romancers say as they please, you will live to enjoy its reward.

Treachery of a more open and decided kind than that we have just been considering, may amount to a breach of promise of marriage, and may occasion a serious disappointment. This sort is not so strictly an affair of the heart; and the variety of disappointments it is attended with, rather weaken, as we conceive, the force of it on the whole. It is shared by a family too, and there are sympathy and indignation and resentment, sometimes revenge, to console the sufferer. The legal fiction (that remnant of feudal barbarism), by which only a breach of promise of marriage is made punishable, is not favourable to female delicacy; for, when the rank and character of the aggrieved party puts personal injury or pecuniary loss out of the question, what shall we think of a compensation in money being accepted for her unrequited affection, or, worse still, the alternative of an unwilling husband?

It is plain, that, when a compensation cannot be made at all adequate, it should not be attempted. On this pretence, therefore, there seems no plea for damages, and indeed it seems to us very doubtful whether the peculiar breach of faith that regards marriage can be reached in any manner by law. If, however, for the purpose of deterring men from it, still more of preventing others, when under the influence of a just resentment, from taking the law into their own hands, some punishment is thought desirable: one of disgrace, such as fine or imprisonment, seems at once more suitable and more certain than the present one. *Our* business, however, is not with the law, but with the ladies; and we say to them, Even should no other promise without a breach in it ever occur to you, you are still well rid of a man who has either deceived you or himself.

A word or two on the subject of *Indifference*. Falsehood, perjury, cruelty, selfishness, are so constantly associated by poets and novel-writers with any falling off in passion in a lover, that we scarcely expect to get young ladies to believe that indifference *may* arise without deserving such hard names. Long-tried friendships, where esteem, good offices, and mutual interest, cement an union, are not indeed liable to this sudden death; but the fancy of a moment, excited by difficulties, may be vanquished by another fancy. There may be occasion for pity on the one side, but not much for blame on the other. All we can suggest of consolation is, that the sudden fit of *no love* which has come upon your lover, might have happened to you the complainant, and a consideration of this circumstance ought to mollify your resentment. Besides, are you, the forlorn fair, no way blameable in souring the affection of the individual who has declared himself your admirer? We leave this trying question to be solved by your own feelings and recollections.

There is a disappointment very common in real life, and which the Gems and Amulets make very pretty stories of; we shall call it the disappointment *by prudence*. Papas and mammas disapprove of a connection, and use their interest to prevent its taking place. Both sexes are liable to disappointments from this cause: but the female mostly so—woman being, from her dependent situation, more under the influence of the advice and authority of friends. To what degree she ought to be subjected to this influence, is a question foreign from our present consideration. It is certain that parents have often attempted to exercise a very unjust control over the affections of their children, sometimes from a tyrannical disposition and interested motives for themselves, but much oftener from a view of benefiting their children, forcing them, as it were, to be happy. When Richardson attempted to give parents a lesson of warning against improper interference, in his admirable novel of Clarissa Harlowe, his descriptions of domestic tyranny might not, and we believe did not, appear exaggerated to our grandmothers; but we have an agreeable proof of how much times are changed in their seeming to us so unnatural. The old and the young will never, however, in any stage of the world's improvement, be quite of the same way of thinking; for they look on the same object with the very different eyes of fear and hope. It is only by mutual sympathy, by laying together romantic feeling and worldly prudence, that the old can make their experience of any avail to the young.

Poverty is in real life the commonest obstruction to early marriages; and poverty is not, as the romantic young lady may conceive, a mere privation of personal comforts and luxuries, which she may assert truly are nothing to her. It is never endured alone, and when it exists to a great degree, is a cause of mental suffering of the most constant and harassing, if not of the most exquisite kind.

Say that a maiden has given her heart to a man who proves unworthy. Villains are not so common in life as in poetry; but there are faults which, once discovered, make it impossible to go on loving. This situation occasions a most painful revulsion of feeling; for not only must we call in all the tenderness which was wasted upon an undeserving object, but have the mortification of finding that we could be so mistaken. It is a shock to pride of every kind. It may even endanger our belief in virtue; for where shall we seek it if we have not found it in him whom we adored? It is natural for the young to embody what they admire in whatever chance object finds favour in their sight. After such a bitter disappointment, the cherished idea of the beautiful and

Digitized by Google

the good will with difficulty be realised again; the judgment will be on the watch to guard the affections. So far, perhaps, is well; but it would be a pity to grow so *wise* as never to be able again to feel a partiality. Suppose the faults discovered are less atrocious, less decidedly fatal to love. "The idols we made, we may find clay," but should we "love through all things?" Shocking absurdity, and lowering to the female character. To attempt to love or live with any sort of low and degrading vices, is no merit, and is not a duty even in a wife.

There is the disappointment both of vanity and affection; when a girl has construed some unmeaning civilities on the part of a man into serious attentions, and admiring and approving of him, first discovers, on hearing of his marriage with another lady, that she has been mistaken, and at the same time that she has been in love! Well, what then? She must lock the secret for ever in her own bosom, say all the authorities on the subject, and "let concealment, like a worm in the bud, feed on her damask cheek," &c. This is very pretty in poetry, but not to be made a rule of conduct in life. There is a degree of pride which *humiliates*; feminine dignity may not allow of the confession of unrequited affection, but need not wither inwardly at having conceived it. If you have known, fair forlorn one, what it is to love, and, making allowance for human infirmity, to love purely and tenderly, you have gained something in experience, in feeling, in humanity, though you may have lost a lover. New sources of enjoyment have been opened to you; you will have learned better to appreciate the charms of poetry, of painting, of music, above all, of nature; you will be a better and a wiser woman for the rest of your life, and therefore may become a happier one. Then, why die? Feminine dignity does not require that, though the "Albumers do."*

SKETCHES OF SUPERSTITIONS.

WITCHCRAFT.

Like man himself, with all his prominent habitudes, opinions, and prejudices, witchcraft seems to have taken its rise in the East, and at a very early period of the world's history. In ancient times, however, this superstition differed considerably from the one recognised under the same name amongst modern nations. In eastern and southern countries, witchcraft was regarded as the power of magical incantation, through the agency of familiar spirits of good and evil propensities, or through certain mysterious and secret influences in nature, which are manifested in dreams, omens, meteors, and other phenomena bearing no particular signification to the uninitiated eye and mind. Thus considered, it operated not only as a heavy bondage of fear over the human intellect, but tended grievously to repress the progress of learning and science; for any unusual achievement in these departments was almost sure to be ascribed to a secret practice of witchcraft, or the art magical. From an early era, it was taken up and pursued as a trade by knowing wretches, who found it possible to thrive better by playing upon the weaknesses of their fellow creatures, than by following any more useful employment. In ancient Rome, whither these delusions were imported from Egypt and Greece, there were many practitioners of this order, who usually took the character of conjurors or fortune-tellers, and exercised a most baneful influence on society at large.

According to the Roman civil code, however, the practice of supernatural arts was a crime. For example, it was a capital offence for any one to increase his rural produce by magical incantations. Pliny narrates a remarkable trial which took place under this law. Cresinus, a laborious and skilful husbandman, was charged by his envious neighbours with having crops of such abundance that it was manifest they could be produced by no other means than the power of magic. The sturdy agriculturist met the accusation by bringing into court his implements of husbandry, oxen, horses, servants, and also his daughter, who formed an able assistant; and he assured the judge that these were "the only witchcraft which he had used." This intrepidity had the desired effect; the accusers were covered with shame and confusion, while Cresinus was dismissed with honour from the tribunal. How many similar cases occur in modern times, in which the success that rewards the skilful and industrious is ascribed to "luck," "fortune," or any other cause than the real one! Let the slothful and envious remember the defence of Cresinus, the Roman husbandman.

The practice among the Greeks of ascribing powers of supernatural vision to the Sybils and Pythonesses of the sacred oracles, appears to have introduced and familiarised the idea of female magicians, and of witchcraft being an art less congenial to the male than the female sex. It is at least certain that sorceresses and their arts are frequently alluded to by the Roman poets. Thus, Tibullus, in describing the wonderful powers of a female necromancer, tells us that

> She plucks each star out of his throne,
> And turneth back the raging waves;
> With charms she makes the earth to mone,
> And raiseth souls out of their graves:
> She burns men's bones as with a fire,
> And pulleth down the lights from heaven,
> And makes it snow at her desire,
> E'en in the midst of summer season.

Virgil likewise speaks of a witch who, by the use of certain herbs, could transform herself into a wild animal, fetch up souls from the dead, and work divers wicked pranks on the crops of the husbandman.

It is to be observed, that neither among the Romans nor the Pagan nations of northern Europe, was witchcraft deemed an offence against *religion*; in some instances, indeed, the witch was supposed to derive her powers from spirits friendly to mankind, and her profession, though feared, was held in honour by her infatuated dupes. Upon the introduction of Christianity, witchcraft assumed a new form, though retaining all its old attributes. Instead of ascribing the supernatural powers of the practitioner to the gods, to Odin, to spirits of good or evil qualities, or to supposed mysteries in nature, the people imputed them to the great fallen spirit mentioned in Scripture. This potent being, from a wicked desire to destroy all that was good and hopeful in man's destiny, was believed to enter into a compact with the aspirant witch, in which, for an irrevocable assignment of her soul at death, he was to grant all her wishes, and assist in all her malevolent projects. These new features in witchcraft, as we shall speedily perceive, thoroughly changed and prodigiously extended the superstition throughout Europe. From being rather a sportive kind of jugglery, or trick in practical magic, and at most only a civil offence, it was recognised as a crime of the deepest dye, meriting the most severe chastisement which the ecclesiastical and civil power could inflict.

We must here notice, however, that the demon or master-fiend of the witchcraft legends was a very different being from that great fallen spirit, held, in a graver view of things, so deeply to influence the best interests of humanity. As this superstition gained force in the Christian world, which it did by slow and successive steps through the whole of the middle ages, or from the fifth century till about the fifteenth, the devil—for it is impossible to avoid the mention of this emphatic name, disagreeable as it is commonly said to be to ears polite—gradually lost many of the former features of his character; or, rather, a different being was substituted for him, combining the characteristics of the Scandinavian Lokke with those of a Satyr of the heathen mythology—a personage equally wicked and malicious as the sterner spirit of evil, but rendered ludicrous by a propensity for petty trickery, and by such personal endowments as a pair of horns, a cow's tail, and cloven feet. There can be no doubt that the demon of the middle ages borrowed these attributes from his human representatives in the old mysteries and plays, where a laudable endeavour was made to make the evil one as ugly as possible. We are told, it is true, that he could at will assume any specious disguise that suited him, but the eye of the initiated observer could readily detect the "cloven foot"—or, in other words, penetrate his true character. Such as he was, he played an important part in the annals of modern witchcraft, which was supposed to rest entirely on the direct and personal agency of himself and the imps commissioned by him. Nor was this supposition confined to the illiterate, or to persons of peculiarly credulous temperament. Authors, distinguished for sense and talent, record with great seriousness, that the devil once delivered a course of lectures on magic at Salamanca, habited in a professor's gown and wig; and that at another time he took up house in Milan, lived there in great style, and assumed, rather imprudently one would say, the suspicious yet appropriate title of the "Duke of Mammon." Even Luther entertained similar notions about the fiend, and, in fact, thought so meanly of him as to believe that he could come by night and steal nuts, and that he cracked them against the bed-posts, for the solacement of his monkey-like appetite.

The powers ascribed to this debased demon were exceedingly great. The general belief was, that through his agency storms at sea and land could at all seasons be raised; that crops could be blighted and cattle injured; that bodily illnesses could be inflicted on any person who was the object of secret malice; that the dead could be raised to life; that witches could ride through the air on broomsticks, and transform themselves into the shapes of cats, hares, or other animals, at pleasure. An old writer, speaking of the powers of witches, says—"1. Some work their bewitchings only by way of invocation or imprecation. They wish it, or will it; and so it falls out. 2. Some, by way of emissary, sending out their imps, or familiars, to crosse the way, justle, affront, flash in the face, barke, howle, bite, scratch, or otherwise infest. 3. Some by inspecting, or looking on, or to glare, or peep at with an envious and evil eye. 4. Some by a hollow muttering or mumbling. 5. Some by breathing and blowing on. 6. Some by cursing and banning. 7. Some by blessing and praising. 8. Some revengefully, by occasion of ill turnes. 9. Some ingratefully, and by occasion of good turnes. 10. Some by leaving something of theirs in your house. 11. Some by getting something of yours into their house. 12. Some have a more speciall way of working by severall elements; earth, water, ayre, or fire. But who can tell all the manner of wayes of a witch's working; that works not only darkly and closely, but variously and versatilly, as God will permit, the devil can suggest, or the malicious hag devise to put in practice?"

In the present age of comparative intelligence, it is difficult to understand how human beings could be so deplorably ignorant as to entertain such a gross superstition. We must, however, recollect that the belief was greatly fostered by religious impressions, and that it was long considered a mark of impiety to doubt the existence of witches. Various other circumstances helped to cherish and magnify the error. The true causes of the majority of natural phenomena were unknown. The nature of the atmosphere, and of certain meteoric appearances—of the laws which regulate storms at sea, and tides—of human maladies and their remedies—were enveloped in obscurity. Natural causes being unknown, and the very doctrine of them unacknowledged, the weak and easily terrified mind flew to the conclusion that all evil proceeded from a power malignant to man, and that by certain impious dealings it was possible for man himself to direct that power against his neighbour.

The superstition seems to have approached its height about the end of the fifteenth century. In his bull of 1484, Pope Innocent charged inquisitors and others to discover and destroy all such as were guilty of witchcraft. This commission was put into the hands of a wretch called Sprenger, with directions that it should be put in force to its fullest extent. Immediately there followed a regular form of process and trial for suspected witches, entitled *Malleus Maleficarum*, or a Hammer for Witches, upon which all judges were called scrupulously to act. The edict of 1484 was subsequently enforced by a bull of Alexander VI. in 1494, of Leo X. in 1521, and of Adrian VI. in 1522, each adding strength to its predecessor, and the whole serving to increase the agitation of the public mind upon the subject. The results were dreadful. A panic fear of witchcraft took possession of society. Every one was at the mercy of his neighbour. If any one felt an unaccountable illness, or a peculiar pain in any part of his body, or suffered any misfortune in his family or affairs, or if a storm arose and committed any damage by sea or land, or if any cattle died suddenly, or, in short, if any event, circumstance, or thing occurred out of the ordinary routine of daily experience, the cause of it was witchcraft. To be accused was to be doomed, for it rarely happened that proof was wanting, or that condemnation was not followed by execution. Armed with the *Malleus Maleficarum*, the judge had no difficulty in finding reasons for sending the most innocent to the stake. If the accused did not at once confess, they were ordered to be shaved and closely examined for the discovery of devil's marks; it being a tenet in the delusion that the devil, on inaugurating any witch, impressed certain marks on her person; and if any strange mark was discovered, there remained no longer any doubt of the party's guilt. Failing this kind of evidence, torture was applied, and this seldom failed to extort the desired confession from the unhappy victim. A large proportion of the accused witches, in order to avoid these preliminary horrors, confessed the crime in any terms which were dictated to them, and were forthwith led to execution. Other witches, as has been said, seemed to confess voluntarily, being probably either insane persons, or feeble-minded beings, whose reason had been distorted by brooding over the popular witchcraft code. A few extracts from the work of Dr Hutchinson will show the extent of these proceedings:—

"A. D. 1485. Cumanus, an inquisitor, burnt forty-one poor women for witches, in the county of Burlia, in one year. He caused them to be shaven first, that they may be searched for marks. He continued the prosecutions in the year following, and many *fled out* of the country.

About this time, Alciat, a famous lawyer, in his *Parergis*, says, 'One inquisitor burnt a hundred in Piedmont, and proceeded daily to burn more, till the people rose against the inquisitor, and chased him out of the country.'

A. D. 1488. A violent tempest of thunder and lightning in Constance destroyed the corn for four leagues round. The people accused one Anne Mindelin, and one Agnes, for being the cause of it. They confessed and were burnt.

About this time, H. Institor says, one of the inquisitors came to a certain town, that was almost desolate with plague and famine. The report went, that a certain woman, buried not long before, was eating up her winding-sheet, and that the plague would not cease till she had made an end of it. This matter being taken into consideration, Scultetus, with the chief magistrate of the city, opened the grave, and found that she had indeed swallowed and devoured one-half of her winding-sheet. Scultetus, moved with horror at the thing, drew out his sword, and cut off her head, and threw it into a ditch, and immediately the plague ceased! and, the inquisition sitting upon the case, it was found that she had long been a reputed witch.

A.D. 1524. About this time a thousand were burned in one year, in the diocese of Como, and a hundred per annum for several years together."

From other authorities it is learned that the devastation was as great in Spain, France, and northern Germany, as it was in the Italian states. About the year 1515, five hundred witches were burned in Geneva in three months, and in France many thousands. An able writer in the Foreign Quarterly Review,* sums up the following particulars respecting the executions for witchcraft in some of the German states.

"In Germany, to which indeed the bull of Innocent bore particular reference, this plague raged to a degree

* A phrase from "The Doctor."

* No. XL. 1839.

Digitized by Google

almost inconceivable. Bainberg, Paderborn, Wurtsburg, and Treves, were its chief seats, though for a century and a half after the introduction of the trials under the commission, no quarter of that great empire was free from its baneful influence. A catalogue of the executions at Wurtsburg for the period from 1627 to February 1629, about two years and two months, is printed by Hauber in the conclusion of his third volume of the Acta et Scripta Magica. It is regularly divided into 29 burnings, and contains the names of 157 persons, Hauber stating at the same time that the catalogue is not complete. It is impossible to peruse this list without shuddering with horror. The greater part of this catalogue consists of old women or foreign travellers, seized, as it would appear, as foreigners were at Paris during the days of Marat and Robespierre: it contains children of twelve, eleven, ten, and nine years of age; fourteen vicars of the cathedral; two boys of noble families, the two little sons of the senator Stolsemburg; a stranger boy; a blind girl; Gobel Babelin, the handsomest girl in Wurtzburg, &c. And yet, frightful as this list of 157 persons executed in two years appears, the number is not (taking the population of Wurtsburg into view) so great as the Lindheim process from 1660 to 1664; for in that small district, consisting at the very utmost of six hundred inhabitants, thirty persons were condemned and put to death, making a twentieth part of the whole population consumed in four years.

How dreadful are the results to which these data lead! If we take 157 as a fair average of the executions at Wurtsburg (and the catalogue itself states that the list was by no means complete), the amount of executions there in the course of the century preceding 1628, would be 15,700. We know that from 1610 to 1660 was the great epoch of the witch trials, and that so late as 1749, Maria Renata was executed at Wurtzburg for witchcraft; and though in the interval between 1660 and that date, it is to be hoped that the number of these horrors had diminished, there can be little doubt that several thousands fall to be added to the amount already stated. If Bainberg, Paderborn, Treves, and the other Catholic bishoprics, whose zeal was not less ardent, furnished an equal contingent, and if the Protestants, as we know, actually vied with them in the extent to which these cruelties were carried, the number of victims from the date of Innocent's bull to the final extinction of these prosecutions, must considerably exceed 100,000 in Germany."

While these horrors were transacting on the continent, the superstition was attended with similar effects in Britain; but of these we postpone any notice till a future occasion.

LIKE FATHER, LIKE SON.

A SIMPLE STORY.

Some years ago there lived in a little town in one of the southern counties of England, an old watchmaker and his son, the latter a person of twenty-five or twenty-six years of age, and bearing the name of Hugh—Hugh Barton. The father, named Simon, was a widower, and laboured hard at his trade along with his son, the two sticking to their employment from sunrise till bedtime, whenever they had work to stick to; and this was almost always the case, for there are comparatively few instances of a thoroughly willing and good tradesman being long in want of employment. Nevertheless, in spite of their incessant toiling, and although they never went into company, Simon and his son were always miserably clothed, and lived in the very meanest way. Hence, the people of the town formed the idea that they were avaricious, and given to pinching and hoarding at the cost of all the comforts of life. They gave to Simon the familiar name of "the Miser." As for Hugh, they thought no better of him; and whenever they spoke of him, their common sneer was, "Like father, like son."

Near to the humble dwelling of the watchmakers, there lived, in a still humbler dwelling, an old beggar and his daughter. Old Michael Blane was a mendicant of the better order, and lived rather upon stated and voluntary charity, than upon casual and courted contributions. Yet he was poorly enough off, to be sure. His residence and usual begging station being close by the habitation of the Bartons, the attention of the neighbours used to be arrested by this juxtaposition of *real* and *factitious* indigence, and many remarks were made, very unfavourable to the watchmakers, and, on the other hand, very advantageous to Michael Blane. They gave their pity and their pittance to poor old Michael, but their contempt to his neighbours. The former was almost loved and respected by them, being thought poor because he could not help it; while the watchmaker and his son were despised as being willing slaves to privation and misery. They pointed the finger at the "mean old hunx," as they called Simon, on all occasions.

Simon Barton seemed to care nothing for all this; he bore it coolly and stoically. He pursued his own way, without swerving aside for an instant on account of the jeers he was subjected to. He wrought hard, spent nothing that he could keep, and gave away not a penny in charity, either to Michael Blane or any body else. Hugh followed the same course; but it was noticed that the young man sometimes spoke to the old mendicant's daughter, Mary, and even made her presents of some little ornamental trifles of his own workmanship. Mary Blane was pretty; and such was the odium which the silent and reserved young watchmaker had incurred with the public, though chiefly on his father's account, that they hesitated not to say he had evil intentions with respect to the poor girl. Some very good-natured people went the length of saying so to Michael, and bade him take care. The old man did appear affected and influenced by the suggestion, as Hugh Barton was seen to speak less afterwards to the beggar's girl.

Many years had passed over the heads of these parties, and they still remained in the same condition, separately and relatively. At length (as the story was told by those who knew the circumstances well) Mary Blane came running one evening to the house of the clergyman of the place, and, with tears in her eyes, bade him come to her father, who was dying. The good parson hurried to the beggar's dwelling, and there found old Michael stretched on his humble pallet. He seemed to be in a state of the greatest distress, though of a mental as much as a bodily character. He expressed the greatest fears to the clergyman on the subject of death, declaring himself unfit to die, and certain of dreadful punishment afterwards. His spiritual attendant tried to bring him to a state of greater calmness; and, finally, Michael became composed enough to disclose the source of his uneasiness and fears.

"Oh! sir," said he, "I am a guilty wretch! For ten years, now, that I have been in this town, I have basely usurped the esteem and charity of the good people around, and have allowed scorn and insult to fall on the head of poor Simon Barton, the watchmaker! Yes, sir, I have stolen the respect that was due to him alone, and have sat down in quiet, and seen injuries heaped through me on his honest grey hairs! But I will make some amends—I will do him right yet, as far as I can.

Simon Barton, sir, lived in the same town with me, before either of us came here. He there suffered heavy pecuniary losses—by a misfortune no man could avoid—at a time when he was in my debt for a very considerable sum. We both came hither, he to work, and I, who was fully younger than he, and had less occasion, every way, to take such a step—I came to *beg*. Good, honest, and industrious, Simon imposed on himself and his son the severest labour, and the proceeds of all their toils he brought to me, with the exception of the smallest pittance to keep himself and his boy in life. No mortal knew the full extent of the privations to which they subjected themselves for this end; and how patiently they bore the insults which were heaped upon them, by those who were ignorant that the men they abused were acting upon a principle of self-denial of the noblest kind! Simon would not undeceive them; I had done him a favour when he became my debtor, and he would not reveal what would have turned the tide of abuse from himself upon me."

The old beggar paused for a moment, with an expression of shame and remorse upon his countenance. "Simon Barton," he then continued, "was still more sharply tried, and still through me. You remember, sir, when this place, where I now lie, took fire, some two years ago. The debt of Simon was then more than half paid. The watchmaker and his boy were the first to come to my aid; but in place of feeling grateful for this service, I adopted, Heaven forgive me for it! an evil suspicion against them. Simon, I thought, had wished to destroy my proof of his debt, and had set fire to the house himself. In reality, after the flames were extinguished, I could not find the document establishing my claim against him. I was greatly alarmed, but said nothing, for obvious reasons. Some days passed away, and then Simon came one morning to me, holding in his hand a scrap of half burnt paper. 'Look at what the wind had blown away, Michael,' said he; 'I found this in the ditch behind our house.' I looked, and saw that it was the very paper missing; but it was useless—the fire had burned the essential part of it, and I knew that I had no legal claim against the watchmaker.

In the rage of the moment, my suspicions being strengthened, I grasped Simon by the collar, and exclaimed, 'Rascal! you have robbed me—you did all this mischief on purpose!' What more I said, I do not know; but I clutched Simon as if I would have strangled him, till, being necessitated to do so, and being much stronger than I, he shook me off, and set me down on a seat. 'You do not know me,' said he, with the greatest calmness; and taking a considerable sum of money from his pocket, he laid it down before me, saying at the same time, 'I have had good work these two months past, and here is the money for it. This clears a good part of what now remains of my debt; and as for the rest—of which the destruction of that paper would acquit me—see here!' He then held out a slip to me; it was a new and proper acknowledgment, which he had drawn out, for the remainder of the debt!

Ah, would you believe it, sir?" continued the dying beggar; "I was as suspicious and hard to Simon Barton afterwards, as ever! He continued to toil on, and bear patiently with the appellation given to him of 'a mean miser,' though it was on me, whom every body countenanced and treated well, that that name should have fallen. *Avarice* has been my evil spirit. Simon paid up his debt. The last payment was made within these few weeks, and I believe that it is from my ceasing to look with the greedy suspicion of a creditor upon him, that I have at last been led to reflect on the real nature of his conduct and of mine, and to do him justice. I have become ill, both in body and mind, from thinking of these things, and feel that I am now dying.

I have but one thing more to say. Hugh Barton is a good lad, and has been his father's friend and confidant. My poor girl, who has been a friend to *her* father too, but who has never till this hour been—and well for her—his confidant—at least in some part of his actions—she is liked by Hugh, and she likes him. I formerly forbade her to speak to the lad. Now, it is my dearest wish that she should marry him. Perhaps Simon will then forgive me. Lift the corner stone out of the wall on the right side of the fire (the old man pointed to the spot), and you will find all my money. Part of it was gained before I was a beggar, and from fair earnings. Simon's money is also there. Mary (continued the old man, addressing his weeping girl), you will be happy with Hugh; he has been taught in a good school—'Like father, like son.'"

Michael Blane had the pleasure, before he died, of receiving Simon Barton's forgiveness. As he wished justice to be done openly to the good name of the watchmaker, the story was told by the clergyman, with as much tenderness as possible to Michael's memory. It soon spread abroad. The tide of public opinion underwent an instantaneous revulsion, and the Bartons became every where as much honoured as they had been despised. They took the praise as calmly as they had borne the scorn; having done what they did, not for the applause of others, but for the gratification of their own sense of honour and rectitude. Hugh Barton, after being married to Mary Blane, did not belie the words of her father. To him was ever applicable, through life, but in a very different sense from that in which it had once been applied to him, the proverbial saying, "Like Father, like Son."

SPITALFIELDS AND ITS WEAVERS.*

The district of Spitalfields, now included within the north-eastern boundaries of the metropolis, is the oldest seat of the silk manufacture in England, and though in a greatly fallen off condition, still employs several thousand looms. Anciently the district was an open space of ground without the city walls, belonging to the Hospital or 'Spital of St Austin—hence its present name—and it was not till about the beginning of the last century that it became fully covered with houses, or was made a seat of the silk manufacture. The immediate cause of this change in its condition was the revocation of the edict of Nants in 1685, when at least 50,000 refugees, most of them weavers and other craftsmen, arrived from France, and threw themselves upon the charity of the English nation. In consequence of previous religious persecutions on the continent, many thousands of silk weavers had arrived in England and been permitted to reside and carry on their trade at Canterbury; the new host of refugees, having spread to the metropolis, were permitted to settle in Spitalfields, and relieved from immediate starvation by a parliamentary vote of L.15,000 per annum. We should suppose this munificent donation did not require to be long continued, for the weavers of Spitalfields quickly became very flourishing; and in 1713 the silk trade had attained such importance, that upwards of 300,000 persons were maintained by it in England.

For a considerable time the population of Spitalfields might be considered as exclusively French. That language was universally spoken, and even within the memory of persons now living, worship continued to be performed in French in the chapels originally erected by the pious refugees. The district, though a suburb of London, might not improperly have been called Petty France. French songs were sung in the streets, there were French coffee-houses, and all social intercourse was strongly marked by French manners. The houses, also, had a dash of the old French style about them; many of them had porticoes, with seats at their doors, where the weavers might be seen on summer evenings enjoying their pipes, and chatting in their own language upon subjects which

* The above article is drawn up from Dr Mitchell's Report to Parliament on the Condition of the Hand-Loom Weavers, a document written with much ability, and from which we have already made some interesting extracts.

Digitized by Google

employed their leisure hours. This very agreeable and old-fashioned state of things lasted through the greater part of the last century. But the golden age of Spitalfields, like every other golden age, had its day, and the time came when French was scarcely heard spoken, when the coffee-houses were transformed into tap-rooms, when the porticoes and summer-seats were removed from the doors to make way for straight lines of pavement and lamp-posts, and all else peculiar was vulgarised down into modern English expediency. Before proceeding, however, with the history of the decline and ultimate prostration of Spitalfields, let us pause one moment over the glorious old French era, when prices were prices, and the intellectual and physical condition of the Spitalfieldians was something very different from what it is in these degenerate days.

The weavers of Spitalfields were long noted as a class for their sprightly and intelligent character. They were artists in their profession, addicted to scientific studies, and cultivated a number of harmless and exhilarating amusements. Many men who attained eminence in different branches of practical science, were originally from Spitalfields. The well-known Dollond, senior, the improver of the telescope, was at one time a weaver; Simpson and Edwards were also weavers, and from this employment they were taken by government to teach mathematics at Woolwich and Chatham. Respecting Mr Simpson, the following anecdote is told; it affords an example of modest merit happily discovered and rewarded. "After the publication of his Treatise on Fluxions, in 1737, and while living and working as a weaver in a garret in Angel Alley, Bishopsgate Street, he was waited upon by a gentleman to engage him as a teacher of the mathematics to the cadets at Woolwich. The gentleman gave a lad a few halfpence to find out Simpson, and tell him that he wished to speak with him. Simpson came down from the loom in a green baize apron, very meanly dressed. The gentleman said, 'I want to see Mr Simpson;' to which he replied, 'I am Mr Simpson!' 'But I want to see *the* Mr Simpson,' said the gentleman. 'I am *the* Mr Simpson,' was the reply. 'But I want to see the Mr Simpson who wrote the work on fluxions,' said the still incredulous gentleman. 'I am the Mr Simpson who wrote the work on fluxions,' was the reply, 'and if you will come up stairs, I will show you the manuscript at the loom.' The gentleman did so, was satisfied, and engaged him; and on asking when he would commence, was answered, 'When I have finished the piece of goods in the loom.'" After Mr Simpson's appointment to the professorship of mathematics at Woolwich, he wrote and edited several works on geometry and algebra, which are still among the best extant.

With such men as Simpson among them, the Spitalfield weavers of these times originated a number of scientific and other societies. The Spitalfields Mathematical Society was second in point of time to the Royal Society, and still exists. There was an Historical Society, which was merged in the Mathematical Society. There was a Floricultural Society, very numerously attended, but now extinct. The weavers were almost the only botanists of their day in the metropolis. They passed their leisure hours in their little gardens in the environs, and there generally the whole family dined on Sundays in small summer-houses about the size of modern omnibusses, with a fireplace at one end. There was also an Entomological Society, and they were the first entomologists in the kingdom; the society exists no longer. They had a Recitation Society for Shakspearian readings, as well as reading other works, which is now almost forgotten. They had a Musical Society, but this also has perished. There was a Columbarian Society, which gave a silver medal as a prize for the best pigeon of a fancy breed, chosen by the society on show; this society is extinct, but the fondness for pigeons still remains, and a few flights are kept, more for profit than amusement. Many anecdotes are told of the extreme attention paid by the weavers to their pigeons, and their fondness for them. They were great bird-fanciers and breeders of canaries, and still in some instances keep a few songsters to cheer their quiet hours at the loom. Some cultivated a particular breed of spaniels called splashers, which they delighted to exercise at odd leisure hours; but the number of these animals is much diminished.

The existence and strong support of such societies and amusements as have been described, prove that in former days the weavers were in comparatively easy circumstances, and were, for their rank in life, a refined body of men. We are not, however, to suppose that the whole of them spent their time and money in this way. With a large portion of the weavers, the animal enjoyments adapted to their condition were the chief objects of desire. One of the old weavers still alive mentions that "Monday was generally a day of rest; Tuesday was not severe labour; Saturday was a day to go to the warehouse, and that was an easy day for the weaver. In those times we could afford to have balls, and to go and spend money at fairs, and we could afford to take our wives and families to a tea-garden; but it is as much as we can do now, working hard all the week, and sometimes on Sunday besides, to be able to get a bare living, and such as work so many hours destroy their health and strength."

There is still a remnant of the love of gardening among the Spitalfields weavers. On the east of Bethnal-Green is situated an enclosure of about six acres of ground, called Sanderson's Gardens. This space is divided into 170 small gardens, some larger than others, and each separated by palings from the others, as well as from the intersecting pathways. In almost every garden is a neat summer-house, where the weaver and his family may enjoy themselves on Sundays and holidays, and where they usually dine and take tea. Much care is bestowed on the cultivation of these spots. When visited in June 1838, some of the gardens had cabbages, lettuces, and peas, but most of the cultivators had a far loftier ambition. Many had tulip beds, in which the proprietors not a little gloried, and over which they had screens which protected them from the sun and from the storm. There had been a contest for a silver medal amongst the tulip proprietors. There were many other flowers of a high order; and it was expected that the show of dahlias for that season would not fail to bring glory to Spitalfields.

Having given an account of the weavers in former times, we now turn to a sketch of their recent and present condition. The first fact which it is important to notice, is, that the number of Spitalfields weavers is very greatly reduced from what it was at any time last century. According to the investigations of Dr Mitchell, the following was the number of looms, and individuals employed upon them, in July 1838. Looms worked by men, 5098; by women, 3395; by boys, 440; by girls, 296; by apprentice boys, 61; by apprentice girls, 12; total, 9302 looms, which belonged to 4299 families. Of these 9302 looms, 2527 were employed in weaving velvets; 24, jacquard velvets; 499, jacquard or figured goods; and 6252, plain goods. There is no doubt a small additional remnant of looms and weavers beyond what has been ascertained, as some individual weavers work towards Stepney and Poplar, and a small number at Greenwich; but, estimating the whole, it does not appear that there are more than 10,500 looms employed in the silk manufacture in and about London.

The weavers of Spitalfields are employed by manufacturers, or persons who deal in velvet and other silk goods, and from these they receive certain weekly wages for their labour. The introduction of machinery at Manchester and elsewhere, and the excessive competition among employers to produce low-priced goods, also changes in taste, have conspired to abridge the number of weavers, and to lower their wages. In July 1838, the highest average weekly earnings were for the finest work, waistcoat velvets, 20s., and, the lowest, for plain work, light satins, 8s. 5d. But from these and all intermediate prices, 3s. are to be deducted for the weaver's necessary expenses, thus materially lowering the exact amount of earnings. It appears from the tabular statements given in by employers, that the individual weekly wages vary from 4s. 1d. to 17s.; but that from 9s. to 12s. is more commonly paid. "Mr Cole, and a committee of weavers, handed in a list of 20 plain weavers, employing, between them and the members of their families, 37 looms, and whose united wages amounted to L.14, 14s. 11d.; this would give nearly 11s. 6d. a loom, and deducting 3s. expenses, would leave 8s. 6d. as the net earnings per loom per week." With respect to the 3s. for expenses, this is in most cases gained by the children of the family; so that it is often no real deduction from the family income. Some parents let out their children at from 1s. 8d. to 2s. 2d. per week each. The child receives the odd 2d. in these sums.

"Mr Thomas Heath, of No. 8, Pedley Street, has been represented by many persons as one of the most skilful workmen in Spitalfields. He handed in about forty samples of figured silk done by him, and they appear exceedingly beautiful. This weaver also gave a minute and detailed account of all his earnings for 430 weeks, being upwards of eight years, with the names of the manufacturers and the fabrics at which he worked. The sum of the gross earnings for 430 weeks is £322, 3s. 4d., being about 14s. 11¼d., say 15s. per week. He estimates his expenses at 4s., which would leave 11s. net wages; but take the expenses at 3s. 6d., it is still only 11s. 6d. He states his wife's earnings at about 3s. a-week. He gives the following remarkable evidence:—

Q.—Have you any children? *A.*—No; I had two, but they are both dead, thanks be to God!

Do you express satisfaction at the death of your children?—I do; I thank God for it. I am relieved from the burden of maintaining them, and they, poor dear creatures, are relieved from the troubles of this mortal life.

There are many persons who represent the earnings of weavers at your branch as much higher than what you state?—Many persons deceive themselves by omitting to take into account the time which they lose by 'play;' that is, the time which we are unemployed. I took home a piece to-day, which I had wove in six days, and I got 30s. for it. Some people would say that my earnings were 30s. a-week; but it is no such thing. I paid 4s. expenses, which reduces the amount to 26s., and then it will probably be a week of play before I am set to work again. The manufacturer will wait until he can get an order for what I am doing; he will do no work on the chance of sale; so it will be only 13s. a-week. I have been as fortunate as most of my trade. I have never been discharged altogether; I have always been attached to some warehouse; but then I have had a great deal of play, as others have had. I have not been able to buy a coat for these five years.

What rent do you pay?—A more proper question would be, what rent ought I to pay? Paying rents is become an unusual thing with the weavers. I ought to pay 5s. 6d. a-week; and that is one hardship on the trade, that we must pay so much rent. A bricklayer or a carpenter can get a place to live in for 1s. 6d. a-week; but we must have a large house, well lighted at the top, to enable us to do our business. I was obliged to get an opening made in the ceiling, which was only eight feet high, which is the usual height of the rooms, in order to place my jacquard machine, which requires a height of ten feet. My place is quite out of repair, and I can get nothing done.

What does your landlord say?—He says, that as he can get no rent, he cannot afford to do any repairs. I have heard that a great many landlords in Bethnal-Green have considered that, after paying all the outlay, their property was not worth holding, and have abandoned it accordingly."

All concur in representing the houses and streets inhabited by the weavers as of the poorest and most unwholesome description. The houses are generally of two stories, built of brick, and having damp foundations. The streets are mere roadways, composed of earthy and soft rubbish, and destitute of common sewers or drains. Living in such wretched places, and insufficiently fed, the weavers of Spitalfields exhibit a physical condition marked by general feebleness and liability to disease. The long hours of labour in ill-ventilated apartments have the most detrimental effect on the health. The work being often at intervals, great diligence is required to make up for necessarily idle time. Mr William Garland being asked, "What hours do you work?" he replied, "When I have full employment, I work in the summer from six in the morning until dark; and in winter I work from daylight frequently to eleven at night." From this, however, hours for meals are to be deducted. Another weaver says he works, when fully employed, thirteen hours a-day; and he adds, "Some work much longer. You will sometimes hear the looms going at two or three in the morning; and besides that, in some of the back streets and courts and alleys, where the poorest class of weavers dwell, you will see lights and hear the looms on Sunday evenings."

From other evidence it appears that the weaving population, male and female, are by no means indisposed to work on Sundays, for few attend any place of public worship; some excuse themselves from going to church on account of a lack of proper clothing, but the greater proportion are above this piece of hypocrisy, and flatly say they wont go, as they prefer spending their time otherwise. A very common way of spending Sunday, as we are told, consists in "sitting together to talk on indifferent subjects, and accompanying their conversation with occasional sips from a pot of porter." The weaver's wife, unfortunately, is too often engaged in working as well as her husband during the week, and therefore Sunday is adopted by her as the only day for washing, mending clothes, and executing other duties in her household, all which has also a tendency to lower the moral tone of the family. Notwithstanding these degrading circumstances in the weaver's condition, as well as a general inability to read or receive any instruction from the products of the press, it is gratifying to find that the Spitalfields weavers are, upon the whole, a well-behaved body of men, and remarkable, in particular, for their honesty. Dr Mitchell, in the Report before us, offers the following statement on this point:—

"From all the information which I have been able to obtain, the impression on my mind is, that there is far less embezzlement than previous accounts, and the reports respecting such matters in the north of England and in Scotland, would have led me to expect. Many of the manufacturers are ready to speak highly of the honesty of the operatives as a body; and when it is recollected how often the weaver is in deep distress, and has a portable and saleable property under his absolute control, it is no small trial of his virtue under such circumstances to restrain himself. There is undeniable evidence that amongst some select bodies of weavers, the embezzlement is so small as to be almost an invisible fraction." To ensure care in the management of the property of manufacturers, the weavers have societies among themselves, and the protection which these afford against embezzlement reduces the loss to the merest trifle. In the case of the weavers of one society, the deficiency is little more than 1d. per L.100 of property committed to the weavers' care; and, as observed by Dr Mitchell, "honesty beyond this we can hardly expect ever in this world to find."

Within the Spitalfields district there are a number of schools, supported partly by religious bodies or societies, and at which the usual fee for instruction is 1d. per week. The schools are pretty well attended, though only by a fraction of the juvenile population. Of 14,000 children, between the ages of five and fourteen, in the parish of Bethnal-Green, there are less than 3000 receiving daily school instruction, or an average throughout of 1 in 5. It is alleged that the small fee of 1d. per week acts as a serious bar to the greater spread of education among the weavers' children; but this we have great reason to doubt. The chief impediment here, as elsewhere, to education, seems to be the necessity which the parents are under to make

Digitized by Google

something by the labour of their children, in order to eke out the means for the family subsistence. Be this as it may, the case is deplorable, and well deserves the public attention. The instruction which is given to the fraction who attend school, is meagre in the extreme, and has no sensible effect in elevating the intellectual capacities of the people.

OCCASIONAL NOTES.

LIVING ON THE CONTINENT.

MANY persons enjoying but moderate incomes have a desire to follow the example of numerous absentees of fortune, by going to reside somewhere on the continent. In those cases in which the comparatively severe climate of Britain produces an injurious effect on the health, it may be advisable to proceed abroad; but in almost all other cases, as, for instance, for the sake of cheap living, a permanent residence in a foreign country is not to be recommended. It is of importance to make our meaning clear on this point. In many places upon the continent, certain articles of meat and drink, as bread, beef, vegetables, wines, and spirits, are considerably lower in price than in any part of England; house rent is also much lower; but most other things are either dearer, or cannot be had at any money. The comforts we daily enjoy consist of innumerable trifles; and unless these be obtained with tolerable ease, it matters little that a few pence, or it may be a few shillings, are saved weekly in the purchase of bread, and one or two other necessaries.

The English, generally speaking, who reside abroad, are not to be envied. For the sake of cheapness they may have planted themselves in one of the neat little German towns on the Upper Rhine, or in some part of France; but we doubt very much if in the long run they save money by being absentees, or if their comforts, all things considered, be equal to what they could have procured at home. The following are the drawbacks to which they must in general submit:—Winters of more intense cold than in Britain; houses built more for show than comfort, and extremely ill adapted for the severities of the cold season; no coal; wood for fuel very dear; many small luxuries or necessaries, of tropical product, not to be had, or excessively high-priced, being loaded with duties from England; all kinds of furniture of a poor description, as, for example, plain rush-bottomed chairs; carpets, none; no grates, fire-irons, or fenders, brick stoves being generally used; many houses without bells; the towns at night badly lighted; malt-liquors execrable; needles, pins, nails, and all kinds of metal articles, either imported from England and dear, or of bad native manufacture; most kinds of clothing, ditto. To these disagreeable points may be added—the prevalence of a strange tongue, manners, medical practice, and religion. The matter can scarcely be said to be mended where there is a pretty numerous circle of English residents, because it may happen that some of these are persons who have gone abroad for the mere sake of enjoying a cheap indulgence in certain kinds of liquors, gaming, or some frivolous species of amusement, and with whom it might not be agreeable to associate.

In all points of view, a permanent residence in any part of continental Europe is not to be recommended, on the score of great cheapness of living, health, or general comfort. There are, doubtless, many places where a foreign residence may be rendered agreeable in the way of variety, and change of scene, but only for a few months in summer or autumn. Those who wish to make a small income go as far as possible, have an opportunity of doing so to good advantage within the compass of the United Kingdom. There are places in Wales, Ireland, and Scotland, fully as healthful, far more comfortable, and, probably, as cheap as most of the crack places of living on the continent. The truth is, many rush to the continent to do that by *compulsion* which they could as well do *voluntarily* at home. They will submit to privations in Germany, which would be considered too great a degradation in England. The same cheapness of living may be attained here as abroad, provided we sink to that stage of comfort which the continent generally yields. There are few cottages of our peasantry which are not more comfortable, take them all the year round, and all that they usually contain, than the palaces in most parts of the continent; their bedding, their furniture, their cooking and eating apparatus, even the handles of their doors, and window fastenings, are all superior. It is evident, therefore, that cheapness is only of comparative value, and may be procured at too dear a rate. This, as well as the preceding hints, we leave to the consideration of those who may have formed a design to leave their native country for a foreign residence.

USE OF FLANNEL.

No modern improvement in dressing has proved so beneficial to health, as the use of a woollen garment next the skin. This simple expedient has saved many lives, and would save many more, if adopted to a greater extent, and better understood. The subject is to the last degree commonplace; but as it involves a question of very serious importance, we hope to be allowed to say a word or two regarding it. In our variable climate, although we know nothing of extremes of heat or cold, we are constantly liable to be chilled or overwarmed, both within and without doors, and it is of importance that we should adopt such clothing as will suit either of these conditions, and prevent us from feeling the change. Flannel effects this desirable object. It keeps our persons warm when exposed to cold, and in the case of heat relieves us by becoming an absorbent for moisture, which it throws off insensibly, leaving the skin in a state of comparative comfort. Linen utterly fails in accomplishing these points. Flannel is thus equally useful in summer as in winter. Some persons imagine that it should be employed only in the winter and cold spring months, and they consequently throw it off on the approach of summer. This is a dangerous fallacy. Flannel should be worn all the year round, never left off for a single day on any account. If thrown off from an idea that the weather is getting warm, the skin becomes immediately exposed to the atmospheric influence; the perspiration, if any, cools on the person; the unprotected pores shrink and close; catarrh, or some other disease, under the general name of "a bad cold," ensues; and the victim of imprudence perhaps barely escapes with his life. We strongly recommend all persons whatsoever to avoid this great error, as they value their health or their lives. To wear flannel properly, it should remain upon the person both day and night, and be shifted only once a-week, or thereabouts, according to circumstances. Too frequent shifting is injurious. When employed in this careful manner, and when the tepid bath is also occasionally used, the person is preserved in that comfortable and proper condition, exteriorly, which is most conducive to health and longevity.

MR P. E. TURNBULL'S TRAVELS IN AUSTRIA.*

MR TURNBULL, accompanied by his brother, employed the years 1834-5-6 in making a tour of various countries of Europe; and he now publishes his observations on the Austrian Empire in two volumes, the first being descriptive of his journeyings and what he saw of the external features of the country, while the second is devoted to a view of its social and political condition, under the various heads, religion, education, finances, jurisprudence, domestic and foreign policy, &c. He is evidently no hater of the present forms of society and government under the three great monarchies of Eastern Europe; at the same time, he seems moderate and candid, and is probably, therefore, no unfaithful reporter. His second volume is by many degrees the more valuable of the two; but its contents are the least calculated for notice in the present place, and we therefore pass it entirely over. The volume of travels is the cheerful narrative of a man of good education and respectable powers of observation, and one who, from his allusions and his general tone, may be presumed to have moved, abroad as well as at home, in what is called good society.

One of the most interesting parts of the volume relates to a visit which the author paid to the exiled royal family of France, at a retired country-house which they occupied about thirteen English miles from Prague. As a friend of the Baron de Damas, governor to the Duc de Bordeaux, Mr Turnbull had been admitted to familiar intercourse with that young prince before the Revolution, and he still looked back with melancholy pleasure to those days. "Puschtierad," says he, "is a valuable domain belonging to the Grand Duke of Tuscany; but its value consists in the abundance of its products, not in its natural beauty or artificial decoration. The country around is cheerless and bare of trees.

The rude shrubberies immediately near it can hardly be dignified with the name of pleasure-grounds; and the chateau itself is a large long building of two stories in height, generally of one room only in depth, with all the windows fronting the north, and the doors opening into corridors, which on the southern side run along the whole extent of the façade. On arriving there, I found on the doors of each room along the corridors, except those immediately occupied by the royal personages, cards affixed with the names of their respective tenants. No attendant appeared about the passages, or the rooms within, or the courts without—all was still and silent, and gave the idea of a monastery rather than a palace.

In this gloomy and cheerless dwelling, which seemed to harmonise too faithfully with the fortunes of its present inhabitants, were now assembled the old King Charles X., the Duke and Duchess d'Angouleme, Mademoiselle, and the Duke de Bordeaux; together with a few attached adherents, who still followed the fortunes and formed the little court of him whom they regarded as their lawful sovereign. The Cardinal de Latil had lately taken his departure for Rome. The Baron de Damas and the Duchess de Gontaut, who had directed the education of the prince and princess, had been compelled by circumstances of a peculiar and painful nature, to quit their charge, and had retired into France. Some others who were properly members of the establishment, were absent in other parts; and those now at Puschtierad were the Duke de Blacas, the Duke de Polignac, the Count O'Hegerty, the Abbé Fraissinous, M. de Barante, the Countess d'Agoult, and one or two other ladies in attendance on the Duchess d'Angouleme and Mademoiselle. My first visit was to the young duke, who was now in his fifteenth year. When I had seen him at Paris, and afterwards immediately on his arrival at Lulworth, he was of slim and delicate form, full of vivacity, but, in appearance at least, of rather doubtful health. I now found him a fine stout healthy youth, with the Bourbon features strongly marked, and a clear ruddy complexion. He was by no means tall for his age; but his figure was broad and thick-set, and gave indications that in this respect he would rather resemble his father than his grandfather. On his intellectual powers, our interview was too short and too constrained to allow me to form any accurate judgment; for that frank and free communication which I might have expected under the high authority of M. de Damas, was not permitted by the gentleman now acting as his tutor, who remained by his side during the whole of my visit, and to whom I was personally a perfect stranger. The young prince expressed pleasure at seeing me, although it is not very probable that at his age he would have remembered with any distinctness the smaller circumstances which had occurred several years before; but it appeared to me, from some indications, that he felt a painful consciousness of the change of his condition, and of the altered circumstances under which he was now placed. Be this as it may, the tutor seemed decidedly desirous to repress rather than to encourage his observations, by interfering to assume the conversation to himself; and thus leaving me little more than the opportunity of forming a general opinion, that he was altogether a fine and promising boy. In the Duchess d'Angouleme, to whose apartments I next proceeded, I saw little change. She was suffering from a severe cold, but otherwise her health was good; and to say that her general tone was melancholy and dejected, is only to say that she was, in the exile of Puschtierad, what she had been in her brightest hours at Paris. She spoke much of her nephew, of his clearness of intellect, and his close application to his studies—but without the expression of any sanguine expectations of the future; and, indeed, the sad retrospect of her own past life would afford little encouragement for the illusions of hope. However opinions may differ as to this princess, with reference to the political tendencies of her character, it is impossible to reflect on the sorrows of her life without a sentiment of deep compassion. After a childhood of royal splendour, her earliest remembrances are those of the prison and the scaffold. She saw her parents led forth to public execution—she was herself conveyed from the cells of the Temple to pass twenty years in exile, little alleviated by domestic happiness. Her entrance into Paris after this protracted banishment was rendered to her a period of anguish; for, by some unfortunate arrangement, she was made to pass over the site of the prison where herself and her parents had been immured; and I well remember (for I was a spectator of the scene) the agitated and almost convulsive expression of her countenance, during the celebration of the Te Deum at Notre Dame, which preceded her approach to the Tuileries. Short was the interval after she had resumed her position in the palace of her ancestors ere she was again driven forth into foreign exile; and I now beheld her, after her third emigration, in the dreary monastic solitude of Puschtierad. Her main support here was that strong and deep religious fervour, which, during the short period of her prosperity, may have been sometimes lamented as excesive, but in which she now found a firm and unfailing consolation.

Strongly contrasted with the appearance and demeanour of this unhappy princess, were those of the aged monarch. I was introduced into his apartment by the Duke de Blacas, and was honoured with a very long and agreeable interview. His tall thin figure looked even more lank than in former days, owing to the long brown frock, or rather greatcoat, in which he was arrayed, which closed tight round his slender form, and descended to his heels. He stooped much; but otherwise, although now in his seventy-eighth year, he showed little marks of age, and his countenance and manner were lively and animated. Charles X. was still, as he had ever been, a fine specimen of the old French gentleman—kind and familiar in his address, polished but easy in his manner, and gay in the midst of adversity. With him, was neither restraint nor melancholy; and, as he chatted familiarly of France, and Spain, and England, of the events of his own past life, and of the fortunes which he trusted might hereafter beam upon his house, I am willing to hope that he may have de-

rived a momentary satisfaction from the visit of disinterested respect thus paid to him by one, who, however comparatively lowly in station, and however discordant from him in many important points of opinion, still retained a grateful remembrance of the kindnesses and hospitalities received within the walls of his palace, during the days of his royal domination. The French volatility with which he passed rapidly from subject to subject, was sometimes tempered with a feeling, not mournful but pensive, with which he alluded to his own advanced age, and the doubtful expectations he entertained (for he seemed not wholly bereft of hope) of another restoration for himself. His anticipations in favour of his grandson were expressed in more sanguine terms. He spoke of him with much affection, and said that the great object of himself and his family was to render the young prince worthy of any destinies that might await him. His favourable reception in England, and the attentions shown to him in Scotland, were subjects on which he evidently liked to enlarge, for he recurred to them more than once. He was full of anecdote as to the events of his residence at Holyrood, in the first emigration, and some of them were singular enough: but the circumstances on which he dwelt with most evident satisfaction were those of his favourable reception at Poole and other parts of Dorsetshire, on his last arrival from France; in all of which he had been made to apprehend that he would have met with insult and outrage. His political observations on individuals and parties in the different countries of Europe, would perhaps be of little interest to the reader; but, whether such were the case or not, I cannot permit to myself the publication of opinions and feelings, however in themselves unimportant, expressed in a casual interview by an exiled king. I will only observe, that, in speaking of the existing rulers of France, no unkind expression escaped his lips; and that a sentiment of compassion only, not of anger, appeared to exist in his mind towards those who had been his subjects. More than once I made my half inclination to depart, but the good-natured old sovereign was so full of vivacity, that he still prolonged the interview; and I believe it was owing to some suggestion of the Duke de Blacas, who had, during the whole time, remained in silence near the royal person, that I ultimately received my dismissal.

Charles X. was still in possession of great bodily power, and every autumn enjoyed the pleasures of 'la Chasse' on the domains of certain high Bohemian nobles, with all the relish, and almost all the vigour, of his early years. His confidential friend and principal counsellor was the Duke de Blacas—a nobleman of great wealth and large possessions both in France and Germany, and who sacrificed the pleasures and the luxuries of life, to attend on the person of his former sovereign. As the duke was minister of a kingdom bounded by a garden wall, so Count O'Hegerty was grand-master of the horse to a prince without a stud. The royal establishments were on the most limited scale. The servants were very few; the carriages were hired when required; and of horses, Charles X. was possessor of two only, which were kept for the exercise of the Duke de Bordeaux."

Mr Turnbull remarks with surprise that this poor court was split into two factions, the source of contention being the question whether Charles X. or Henry V. was the legitimate king of France. Charles, it seems, had taken some scruple respecting his abdication, which he could not now be prevailed on to ratify; and this was one cause why the Duchess de Berri succeeded so ill in her enterprise in La Vendee, many royalists refusing to concur in a scheme which had for its object the advancement of the king's grandson to the exclusion of the king himself. Charles X., we are told, afterwards engaged a journal in the south of France to advocate his rights, and the Duchess de Berri immediately bought another to defend the claims of her son. So much was the court of Puschtierad torn by these contentions, that some of the individuals composing it actually refused to sit at table with each other! Mr Turnbull seems inclined to fear that the education of the young prince has been conducted on a narrow scale.

Our author's descriptions of Vienna, Prague, Trieste, and other large cities, as also his accounts of the mines, particularly those of Idria, are prominent parts of his book; but we have only space for a short passage relative to the first of those capitals, in which a curious and we should suppose authentic anecdote is given of one of the most remarkable of the present reigning sovereigns of Europe. "One object more I shall mention, before ending the subject of Vienna. It is the vault below the Capucin monastery, in which repose the mortal remains of eighty members of the imperial family, each under his monument of marble. They are chiefly ranged along the walls. A more central spot is occupied by the tomb of Maria Theresa, and not far from it is that wherein are deposited the remains of the late Emperor Francis II. On the 2d of November, All-souls Day, this chamber of death is open to the public; and I have seen it then crowded with curious and well-conducted spectators: but the occasion of my mentioning it at present, is a visit paid to it while we were at Vienna, and which well exhibits the active habits and rapid movements of another imperial personage. One day early in October (1835), when walking in the Herrengasse, one of the principal streets, I noticed the arrival of two open calèches or britzkas, in post, which, after a short halt near the palace of Prince Liechtenstein, proceeded to that of the Russian embassy. The circumstance of the first of these light open carriages having so many as six horses, attracted notice; and it was soon known that the two gentlemen in it, muffled up in cloaks against the rain and cold, were the Emperor Nicholas accompanied by Prince Charles of Liechtenstein, whose attendants followed in the second calèche. The Austrian emperor was at this period absent; accompanied by the imperial princes, and the officers of state, he had been making a tour of inspection through his Bohemian provinces, at the close of which he had met the sovereigns of Russia and Prussia at the conferences at Teplitz, and had returned with them from thence to pass a few days at Prague.

This sudden and rapid visit of the Russian emperor to the Austrian capital at such a moment, was made the subject of singular political speculations, not only at Vienna, but also in most of the foreign journals—all of them, as I believe, without the slightest foundation. The simple fact appears to have been this. Long years of confidential intercourse had produced, in the late and present Russian emperors, a warm personal affection for the late Emperor Francis, whom Alexander used to flatter with the title of his political father. Being so near as Prague, Nicholas determined to visit the tomb and the widow of his departed friend, and he carried this determination into effect with his usual rapidity of movement, and aversion to ceremonious preparation. Calling, one morning, on the Austrian emperor at Prague—'I am come,' said he, 'to ask your majesty's commands for Vienna.' 'How!' said the astonished Ferdinand. 'Are you going to Vienna? When?' 'Immediately—the carriage is at the door;' and he immediately departed, declining the offer of an avant-courier, to make preparations. He took with him Prince Charles of Liechtenstein, as a companion, or aid-de-camp of honour. A courier was dispatched by Ferdinand to announce the important guest; but Nicholas reached Vienna five hours before him. He drove first, as I have observed, to the Russian embassy, where he changed his dress (it was then four o'clock), and proceeded to Schönbrunn, three miles from Vienna—remained some time with the imperial widow who there resided in the greatest seclusion, and returned to pass the evening with the Princess Metternich, whose husband was at Prague. The following morning, having seen two or three persons of his acquaintance, he paid a reverential visit to the tomb of Francis—beside which he continued some time on his knees apparently in prayer. He then went to several shops and bought small articles—called for a few minutes on the archduchess, and on Princess Metternich—went out again to Schönbrunn, and dined at half past one with the empress mother—returned to Vienna, and left it at five o'clock for Prague; which he reached on the third day of his absence, and while Ferdinand was still there."

FALCONER AND BRUCE,

AN EDINBURGH FIRESIDE STORY.
